In what remains to us of the work of Sophocles there is hardly any trace of Orphism, and the lyric poetry of the 6th cent. had comparatively little influence on his work. His materials are drawn chiefly from the epic cycle. On the subject of immortality his position is intermediate between Homer and Plato. That the Eleusinian mystic alone lives happily in Hades is strongly asserted in one fragment (753). But the feeling of Antigone is rather that of the pathetic funeral monuments in the Ceramicus. Affection looks beyond the tomb. Souls meet again in that still realm, and 'longer is the time which we shall spend with them than with the persons who surround us here' (*Ant.* 74, 75). Although the language is not consistent, the continuance, not of a mere shadow, but of the conscious self in the unseen world is on the whole anticipated. Not the body, as in Homer, but the soul is *αἰὼς*. And while the place of departed spirits is generally spoken of as 'Hades,' in one passage, according to a later mode of thought, the dead are imagined as entering the 'vast æther' (*Ajax*, 1192; cf. the inscription over the Athenians who fell at Potidæa, B.C. 432, ἀθρὴ μὲν ψυχὰς ἑνὲ δέφατο). The case of Ædipus is peculiar. He lives, like Amphiaraus, a semi-divine life, in the darkness beneath the ground. Amphiaraus, too, retains in that under world the fullness of his mind, *πάμπυχος ἀνδρῶσι*.

It remains to speak of the dramatist's conception of irreligion. Creon's impiety, like that of the generals in the *Ajax*, consists in his defiance of the burial rite. But Jocasta's case is more typical. She and Laius had disobeyed the oracle, and then sought to evade it by an unnatural deed. For a moment she tries to smother her own and her husband's anxiety by a conventional act of worship. But when her hopes are revived by false intelligence, she defies not only the prophecy but the gods who gave it, until, on the sudden revelation of the dreadful truth, she dies in despair.

Some recrudescence of pessimism, such as we find in Euripides, is reflected in some passages of the latest plays. Philoctetes, when at the lowest of his fortunes, complains that in praising divine attributes one finds evil in the gods (*Phil.* 451, 452); and the elders of Colonus descendant upon the vanity of life and the infirmities of age (*Æd. Col.* 1225 f.). But these depressing sentiments are contradicted by the main tenor of both dramas.

In the last *Ædipus* there is a depth and range of religious feeling which is not equally present in the other tragedies. The magnanimity of Theseus discards the superstitious fears and scruples of the elders of the deme. Not the ritual itself, but the prayer accompanying it, is the important thing. Not the details of the ceremonial, but the pure intention of the ministrant, secures divine acceptance. Innocence of heart commends itself, in spite of involuntary pollution. And the great spirit, in passing from the upper air and light of

day, is surrounded with an atmosphere of religious peace.

SOTERIOLOGY.—In the article SALVATION (Christian) an attempt was made to trace the experience of salvation to its origins in the religion of Israel, and to depict it in the life of the disciples of Jesus and of the members of the Christian community during the apostolic age. In this article an attempt will be made to trace the idea of salvation as it manifests itself in successive periods in the history of Christian thought.

I. THE FACT OF THE CHRISTIAN SALVATION.

—Salvation as presented in the NT consists fundamentally in a work wrought by God through Jesus Christ. In Him God gave the perfect revelation of Himself, and through Him fulfilled His saving purpose towards mankind. The saving work of God, however, is not complete as a bare fact of history. It operates as an abiding power in the experience of men, under the condition of trustful surrender to Jesus Christ, the personal Saviour and ever-living Lord. Certain features of this experience as presented in the NT are noteworthy, and determine essential elements in the Christian conception of salvation.

1. The continuity of this experience.—It stands in direct succession to the religion of Israel, not distinguishable from it in any other sense than consummation is from the earlier stages of one vital process. It begins a new development of God's saving work, whose centre and spring is always the same, viz. the exalted and living Lord; nor can its bounds be delimited, because they are continuous with nothing less than the holy love of God. Christianity is to be identified, not by the intellectual or institutional forms with which it has been in different ages accompanied, but by the experience of salvation, which has been evoked, maintained, and furthered by trust in Christ as Redeemer and Lord. The life of the Church in salvation is continuous and forms a unity recognizable in variety. Its power of development is renewed, maintained, and defended by 'a constant spiritual return to Christ.'

2. Its differentia as a religious experience.—It is sharply distinguished from two forms of the higher life of man: (1) moralism, in which salvation is achieved by man through diligent obedience to the moral imperative; (2) mysticism, in which salvation, conceived as immediate union with God, is achieved by man through special exercises of soul which vary from the magical to the contemplative. In deep contrast with these divergent types, the Christian salvation is grounded in, and warranted by, the divine initiative and the divine sufficiency. Its origin is in the love of God, conceived as a ruling purpose aiming at a kingdom or realm in which the holy will of God shall be done. This love appears in human experience as grace, i.e. the action of God, in the history of the race and the individual, directed towards the salvation of man. This salvation is not the work of man, but the work of God in man, and always it evokes in man, not self-congratulation, but the sense of constraint, as of those who find themselves in a bondage which is, nevertheless, perfect freedom (2 Co 5¹⁴). At the same time, this attitude towards

the divine salvation is the very reverse of quietism. Its distinguishing note is the sense of power. The OT and NT alike present a picture of life thrilling with activity and crowned with victory. Out of this experience there arises a twofold interest or passion: a passion for righteousness and a passionate longing for fellowship with God. Moralism and mysticism alike come to their rights in Christianity. They take their place within the Christian salvation. They are its expression and its outcome. They are not an achievement of man; but they manifest what human life may become through the saving action of God in man.

3. Its goal: the Kingdom of God.—Salvation is never, in the Biblical literature, statically conceived. It is always described in terms of power and action. It is true that salvation consists in a transition from one state or condition to another; and descriptions abound of the misery of the one and the blessedness of the other. But both states are conceived as determined by a power governing and animating human life. The one is the condition of man in 'the world,' or the present 'age.' Here man is subject to a power of evil, which masters him, drives him, and holds him in bondage. The other is the condition of man in the Realm of God (Col 1¹³). Here man is subject to the sovereignty of holy love and penetrated by the power of the Holy Spirit. This realm of power and love is conceived as a divine reality, a supernatural order, which is not, however, abnormal. It is nature, human nature, which is in an abnormal condition, and in this abnormality physical nature shares (Ro 8¹⁹⁻²²). The divine order is the truth of man and the universe, and overhangs this spatial universe, impinges upon it, and is ever ready to intervene in it, if we may use figures, which, however, wholly fail to combine ideas that are really disparate, viz. a world above time and sense, and a world conditioned by time and sense. The Realm of God, being thus conceived as a fact of a divine supersensuous order, has three aspects: it is present, progressive, and future.

(a) It is present to the need and the faith of men. It is to be received as an immediate gift of grace, and entered in deep humility (Mt 18³), through such a reversal of aim in life as amounts to a new birth (Jn 3³⁻⁵) or a new creation (2 Co 5¹⁷).

(b) It is progressive as an enterprise to which God has devoted Himself and all His resources, and in which His honour is involved. To a share in this enterprise He summons all who will be saved. They are to serve it to the last limit of devotion, counting all things but loss for the glory of this achievement. Apart from a service which springs out of death to the old world and the old nature and may involve actual suffering and death at the hands of the enemies of God, there can be no salvation. Those who in one aspect are 'saved' in another are 'being saved.'

(c) It is future inasmuch as its victory depends on an act of divine intervention. It is impossible to omit this from any picture of salvation as an object of Christian faith and hope in the 1st cent., or in any subsequent age of the Church's history. Men cannot build the Kingdom. The Kingdom comes. Questions of time and manner are secondary and not essential to the Christian faith. The first generation of believers thought of the Kingdom as immediately to appear, and framed pictures of a literal millennium, mistaking symbolism for prediction. The point of value is that the Realm of God exists as 'the highest order of life and power in the universe.'¹ In endeavouring to represent the relation of this spiritual order to the world of time and space, it must always be conceived as imminent and described as 'at hand.' The Christian enterprise, which is, fundamentally, the vindication of the divine sovereignty in the whole domain of human life, derives from this imminence its source of urgency and its note of confidence. In preaching the gospel, in perfecting holiness in the fear of God, in waging war on behalf of righteousness, Christian men are not striving to win a salvation which is in doubt. They are building, not on the sands of human fancy, 'but on the bed-rock of that Order which, however deeply it is hidden from common observation by the course of outward events, yet stands to religious faith as the most secure and final truth' (Mt 7^{24f}).² Salvation, therefore, lies always above and beyond and before the Christian. The paradox of a Kingdom 'come' and 'coming,' a salvation at once possessed and expected, may

defy logical solution, but has never seriously perplexed those who, moving through the world of time and space, have seen, and entered a region of values and powers where earthly measurements do not apply.

II. THE IDEA OF SALVATION IN THE MYSTERY-RELIGIONS.—In the Hellenic-Roman world, at the time when Christianity began its missionary career, there was proceeding what cannot be termed less than a revival of religion. The religious worship of the Olympian deities had lost whatever moral and spiritual power it ever possessed. That devotion to the city which was 'the real religion of the 5th century'¹ necessarily passed away when the independence of the city-states perished under the might of a world-empire. But religion itself never perishes. Where ancient forms of religious life have failed, the demand of the human spirit for a satisfying salvation is only the more intense and urgent.

In the 1st cent. of our era men were going behind the more formal and cultured religions to the practices and ideas of primitive times. It seems a terrible relapse into barbarism that the inheritors of the splendid Hellenic culture should seek salvation in the blood of a divine bull. Yet, in a sense, this return to a cruder and less sophisticated age was really an advance. There was a wide-spread 'failure of nerve,' as Gilbert Murray has phrased it.² But, when man reaches the depths of his helplessness, he is near the sources of religious strength and hope. He turns passionately to any religion, however crude its ceremonial or outrageous its mythology, which will offer confidently enough the great boon without which life is unendurable—salvation. The mystery-religions and the Gnostic sects are all of one religious type. They are avowed religions of salvation. They are dissociated from race or nationality. They pass through the organized forms of civic or political life and reach down to the single soul. They are at once individualistic and universal. They are not so much separate religions as, at bottom, the ultimate religious need and susceptibility of man, turning away from traditional and stereotyped forms and plunging into depths of psychic experience where the human and the divine seem to be blent, or perhaps confused, in a unity too mysterious for thought or speech. While they are thus rooted in mystery, they share certain views of the nature of God and man and the world, of sin and evil, and of deliverance and blessedness which amount in fact to a fairly coherent doctrine of salvation.

(i.) God, or the divine nature, is conceived or felt to be a being or substance, far beyond apprehension or determination by human thought. He is not personal and cannot be named. Only this is certain, that, if the human spirit could attain to oneness with this ultimate divine nature, it would be emancipated from all ill and would enjoy an ineffable experience of peace and freedom and rest. (ii.) Beneath or over against God is the world, to which He stands in no living relation. It is occupied by powers which reign in the whole region inhabited by man and hold him in subjection, so that the soul is haunted by fear, and life becomes one great cry for deliverance. (iii.) Man carries within him a seed of the divine. He is at once greater and less than these sub-divine principalities and powers—greater because he is himself divine and holds, as it were, a fragment of the divine nature in himself; less, because he, i.e. the divine in him, is enclosed in a material fabric, which holds him at an immeasurable distance from God and is subject to all the influences which govern and tyrannize over the material world. Salvation, on its negative side, means deliverance from matter, from sense, from all that is not God. (iv.) The powerlessness of man requires a helper, redeemer, saviour. Such an one appears in all these religions, with a various ancestry, with cloudy mythologies, decorated with titles of honour, but always claiming victory over the powers that hold man in bondage. (v.) The method by which this victory is won is variously depicted in the myths. Deep through them all, however, is the thought of life won through death. The old religion of nature, glorifying the succession of winter's death and spring's resurrection, returns with fresh power to hearts weary of the artificialities of state ceremonial. Such primitive conceptions,

² *Ib.* ch. iii.

too, relate themselves to profounder and more ethical ideas, of lives surrendered to shame and death and yet found again in the increased values of the welfare of the community. (vi.) Our sympathy with the mystery-religions up to this point is deep and our expectation great. It is disappointing to find that, when we ask under what conditions the individual was supposed to reach union with the divine, the reply flings us back, not merely on symbolism, but on magic, not merely on self-discipline, but on semi-physical ecstasy. The commonplace of Greek religion through this whole period is the process whereby the spark of divinity in man is reunited to its source: (a) ceremonial, making keen appeal to the emotional and sensuous nature; (b) ascetic practices, aiding the religious susceptibilities and repressing (it was hoped) the urgency of lower instincts; (c) ecstasy, produced by fulfilling certain physical and psychic conditions and superinducing a state of sub- or supra-consciousness in which the soul knows itself to be united to God, sunk in God, and filled with God. These are the outstanding features of the way of salvation opened to seeking souls in the mystery-religions, which were the 'fore-runners and rivals of Christianity.' (vii.) When we examine the salvation itself, the result is disappointingly meagre. In phrase it is magnificent, 'deification.' In reality it disappears in vagueness. Negatively it is deliverance from mortality; positively it is union with the divine, conceived mainly as a blending of a particle of being with its abyssal source. Experimentally salvation is the mystic state, bearing the marks which William James has noted—ineffability, noetic quality, transiency, passivity. This is the real heart of the mystery-religions.¹

Applying the ethical standard, the only valid test, we must assign to these mystery-religions a very moderate value. Their emphasis is not on morality at all, but on escape from elemental powers, a flight of the soul to the divine, which is conceived mainly through negations. In this deliverance morality is only a step, valuable not in itself, but as an introduction to a condition in which moral good does not survive, being succeeded by some psychic state which is held to be the highest blessedness of which man is capable. Morality, too, even in this secondary position, is left without dynamic. There is no inner constraint, no self-forgetful inspiration. A man is to be pure, and just, and chaste, in order that he may reach a state beyond the sphere of moral values altogether. We should not deny that the mystery-religions served religious ends in the experience of multitudes of adherents. The salvation they offered was a fragment, an element, or an instalment, of the true good. They expressed a demand and increased a desire, preparing the way for a religion which more perfectly uttered the one and responded to the other.

When we compare the ideas of salvation set forth in the mystery-religions and in Christianity respectively, we are impressed with the features common to both.

(i.) Both conceive man's highest blessedness as union with God. (ii.) Both trace man's distress to separation from God. (iii.) Both take a lofty view of one side of man's nature, as indicating affinity with the divine. (iv.) Both present the radiant figure of a Deliverer to the fainting spirit. (v.) Both trace life to its roots in death. (vi.) Both connect the deepest religious experiences with certain ritual acts. (vii.) Both place salvation in the return to God.

To infer, however, from these undoubted resemblances that Christianity was itself no other than a mystery-religion is a mistake. The hypothesis of borrowing, or even of unconscious infiltration, is not required by the facts, which, at the same time, make impossible the conception of Christianity as a bare revelation, standing naked and alone in the history of the human spirit. All religions spring from sources deep in the nature of man. Historically, however, the great religions have followed separate paths. The mystery-religions represent the highest point reached on one line of development. Christianity is the culmination of another and wholly distinct line. It is the religion of Israel, growing by continuous evolution out of the experiences of the prophets and of those, their associates and successors, who received and responded to the actings and communications of the divine love in its redeeming,

¹ See, further, art. MYSTERIES.

saving work. The primary fact in the NT Church is the experience of salvation entered into by its members; and that experience is unique and distinctive. Its implications are essentially different from those of the mystery-religions. It is *sui generis* and cannot be explained as a composite. Christian missionaries borrowed in the 1st cent., as they do in the 20th, phrases of speech and forms of thought. How else were they to be intelligible? But they did not borrow their message; and they did not copy from foreign sources the religious experience which they sought to evoke and deepen in the lives of their converts. Between Christianity, with its distinctive view of man's case, its own special message, and its typical experience, and the mystery-religions at their highest and best there is a deep line of demarcation. On the one side, the deepest concern is ethical and personal, and the highest result is a character conformed to that of God, conceived as the impersonation of love and holiness. On the other side, the problem is primarily ontological or cosmological, and the solution is found in an experience in which the ethical and the personal are subordinated to the psychic and the ineffable. The Christian missionaries accepted the challenge presented by the mystery-religions, or rather they availed themselves of the opportunity offered in these noble and pathetic approaches towards God. Their claim was that what they had to offer took up into itself all that was best in these religions; and they invited every seeker to share in a good which satisfied a need deeper than the mystery-religions ever knew. Each point of contact noted above reveals also the breadth of separation.

(i.) *The idea of God*: to the mystery-religions a vague, remote, impersonal, unknowable, divine nature; to Christianity a living Being, with a character and purpose, personal in His actions and manifestations, known in history as loving and righteous, achieving by His own doing and suffering the redemption of man.

(ii.) *The distress of man*: to the mystery-religions mortality and subjection to hostile influences in or above the world—a separation conceived almost locally and physically; to Christianity a moral separation from the holy God, produced by man's own act involving guilt and judgment and ruin.

(iii.) *The dignity of man*: to the mystery-religions the possession in mortal frame of a veritable spark of divinity, which ever seeks reunion with its source; to Christianity a moral likeness to God, which has been defaced by sin, and yet is capable of being renewed, so that man can be restored to divine uses and fellowship.

(iv.) *The person of the Deliverer*: to the mystery-religions a mythical figure, supra-human, whose history moves in a non-human region of endeavour and achievement; to Christianity a real human being, with a genuine human experience, the reality of whose life and death constitutes the gospel, inasmuch as they are the means through which God in Him redeemed the world.

(v.) *The method of redemption*: to the mystery-religions a death which belongs to another region than that in which men suffer and die; to Christianity a death real and tragic, an actual dying, in which the utmost need of man is felt and met by One in whom divine love fulfils its redeeming function.

(vi.) *The conditions of salvation*.—In the mystery-religions there is no living relation between what the Deliverer effects for men and what men achieve for themselves. The process of salvation in reality does not need a Mediator at all. It consists in experiences which are evoked by sacraments or dramatic symbols. Such experiences are effective in proportion as they pass beyond conscious apprehension or articulate expression; and they culminate in an ecstatic state, in which the desired union with God is attained. The difference between this and the way of salvation provided in Christianity is horizon-wide. The Christian message concerns a saving action of God, which is carried out by His Son Jesus Christ. It concentrates the salvation of men in the person of Christ. The one essential condition of salvation on the part of men is that they receive, with trustful surrender, the love of God as it reaches them in Christ. This is what the Scriptures of Christianity, whether OT or NT, mean by faith. It is not a mystic state. It is radically different from ecstasy. It is not ineffable; for it is genuine only as it makes confession of its inward experience. It has 'noetic quality' only in the sense that it 'knows' by experimental acquaintance the living object of its trust. It is not 'transient,' but is the constant energy of life. It is not 'passive,' but is the inspiration of service. Everything in salvation is controlled by this exercise of faith. The ultimate object is always God. If Christ is designated as the object of saving faith, it is because God is not known at all in His saving

power apart from Him, and because He is inseparable from God in the believing apprehension of those who are the subjects of the divine salvation. The experience in which man, in his need, commits himself to the God who comes to him in Christ is the deepest, richest, and most fruitful of which the human spirit is capable. It embraces the whole complex of human power. It cannot, therefore, be unemotional. Precisely at this point Christianity and the mystery-religions approach most nearly and at the same time stand most widely apart. The Christian, like the devotee in the mysteries, has moments in which great tides of feeling sweep through his being, sometimes elevating him to a region of truth and reality too sacred to be disclosed to any human being. The difference lies in the source and quality of such emotional experiences. To the Christian they are privileges granted as helps to faith; but they are not, in themselves, identified with faith. They are states; faith is an action. They are products, by-products, of faith, and are not to be confused with it or prized as though they were more precious than it. The expression 'faith-mysticism' is, strictly, a self-contradiction. The act of faith is incompatible with the impersonality which is the characteristic note of the mystic state. The degree to which emotion will be the accompaniment of faith's activity will vary endlessly in individuals. The occasions too will vary. Ordinarily, however, feeling will be stirred when in symbolic action the objective saving deeds are presented to the view of believers. The so-called 'sacraments' of the Christian Church and the rites performed in the mysteries belong to different universes of religious thought and practice. Symbolism in Christianity has reference to a historic redemption and is meant to ratify the message of the divine salvation. It becomes effective in experience only on condition of faith directed to God. It has no saving power in itself. No doubt, already in NT times, there were adherents of mystery-religions who, in entering the Church, carried with them ideas of the *ex opere operato* virtue of ritual actions. But it is certain that such were not the views entertained by the leaders of the Church. W. Morgan, who is not slow to assign large influence to the mystery-religions in the developing theology of the Church, denies that the apostle Paul held any such idea of the ordinances he prized so highly. 'A memorial of Christ's sacrificial death, a means of proclaiming it—that and that alone is what the Supper signifies for Paul.'¹ The aim of the ordinances is to express and confirm faith, not to produce an ecstatic state in which self shall be absorbed in God. Paul, who was an expert in practical psychology, valued highly the raptures of religious feeling, but he was well aware of the dangers attendant upon them; and he bequeathed to the Church such a careful evaluation of the emotional element in religion as saved Christianity from being merged in the mystery-religions and from sharing their moral impotence and subsequent doom.

(vii.) *The scope and contents of salvation.*—The mystery-religions break down at this point. Escape from sense, deliverance from demons, final absorption in God are not themes which permit of enlargement. Salvation as thus conceived cannot be articulated—for the simple reason that there is nothing in it. In wide contrast, Christianity moves in a world of historical fact and ethical values. On one side, salvation is the wealth of the divine love, unfolded and conveyed in the Christ of history. On the other side, salvation is the progressive appropriation of what divine love means in life. This is all, and this is everything. There is no divine beyond that which operates in Christ. He is the *Pleroma*. He is not a step towards a union with God which, in its metaphysical abstraction, is supposed to be superior to the concrete spiritual realities of forgiveness, reconciliation, and moral renewal. No doubt, the people who pressed into the Church were obsessed with fear of demons and of death, and it was certainly part of the Christian salvation that they should be delivered from such torment; but this, like every other benefit, was only an issue of the new relation in which men stood to God through faith in Christ. There is no getting to an end of what may be possessed in faith; and there is no getting beyond Christ. The convert was taught that all things belonged to him, because he belonged to Christ, and Christ belonged to God. Paradoxically, Christianity, which offered a full salvation for immediate acceptance, did not proclaim itself to be the final stage of God's redemptive acting. The salvation of the mystery-religions was at once individualistic and final. Christianity, true to its Hebrew origin, was social and dynamic. Its ideal is still the Kingdom of God. Till that Kingdom shall have come, salvation is not complete. Christianity, therefore, is bound to the conception of a coming of the Redeemer to which there is no real parallel in the mystery-religions. The belief in the *Parousia* is an element in the essentially historical character of the Christian religion. It is a religion of the acts of God, and these acts are not closed. The greatest of them is yet to come. It will be the climax of a great redemptive movement, and in it humanity will be reconstituted and the Realm of God established in an environment suited to its divine nature.

These, then, are the elements in the Christian conception of salvation which distinguish it from that entertained in the mystery-religions—the personal, the historical, the ethical, the eschatological. To them Christianity owed its superior power and attractiveness and its final victory over its forerunners and rivals. Whether, in genera-

¹ *The Religion and Theology of Paul*, p. 224.

tions following the period of the first missionary enterprise of the Church, the mystery-religions did not win an unmarked but very real triumph, by entering into Christianity and giving it a distinct mystic quality, is another question. But that the religion whose literary record is found in the NT has its own essential qualities, placing it in a class apart from the contemporary mystery-religions and giving it religious and moral superiority over them, seems to be an ascertained historical judgment.

III. *THE IDEA OF SALVATION IN GREEK PHILOSOPHY.*—I. *Pre-Socratic.*—Reviewing the course of Greek philosophy in its three main periods, we note that pre-Socratic thinkers have scarcely faced the problem of their relation to religion. Their attitude towards the popular religion is scornful, as illustrated by the contempt poured by Xenophanes upon the polytheism of his day. This, however, means no more than that the Olympians were losing whatever divinity they had ever possessed and were passing to their doom of unreality. Philosophy itself is making direct contribution to the religious and theological inheritance upon which both Greek and Christian entered in succeeding ages. The idea of God, in Xenophanes and Parmenides, has already assumed the form which has clung to it to this day. The unity of God has become a fixed point for all subsequent reflexion—a unity conceived as the negation of all differences, an absolute principle, into which the whole intelligible world, and even the intelligence itself, is resolved and lost. Greek thought, in its first stage, has not realized the place of the self-conscious subject and has not found a spiritual unity to explain the fullness of experience and give man a position of independence and lordship in the world which hems him in.

2. *Idealist constructions.*—The second period of Greek philosophy is introduced by the great name of Socrates (q.v.). Socrates has been described as a 'philosopher by accident'; and yet he gave to philosophy and to theology at once the problem and the principle by which their course was to be determined for all time coming. He is the discoverer of reason, he gave to human subjectivity its rights. At the same time he is the fountain-head of an intellectualism which made the Greek solution of the problem of life one-sided and inadequate. Difficulties arise when we press for vindication of the positive proposition that virtue is the fruit of knowledge. It is a commonplace that knowledge in things ethical is not power; else why do we constantly approve the better and do the worse? A deeper source of difficulty is the implied relation of reason to what may be termed the raw material of the moral life—the instincts and impulses of the individual and the common practices of men acting together in society. Is there such a deep gulf between them that morality and religion will spend themselves upon a task which can never be finished, viz. the reconciliation of elements of experience which are fundamentally disparate? It can be foreseen that on such a dualism thought will ultimately break itself to pieces. Precisely this is the endeavour and the tragedy of Greek philosophy—to overcome dualism by the sheer force of dialectic and, when the task is seen to be hopeless, to appeal to supra-rational sanctions and to plunge into irrational experiences. The ethic of Socrates, illustrated by the splendour of his death, has all the nobility of a protest against unreason, all the significance of a fresh starting-point in the history of the human spirit. The individual is now the problem. His salvation becomes the vital concern, not only of religion, but of philosophy.

Plato and Aristotle (q.v.) take the torch from Socrates' falling hand and bear it into regions

which he never presumed to enter. The conception of an end determinable by reason bringing order into the moral life is by them extended to experience as a whole. Intelligence is treated as the ultimate source of all knowledge and all being. The ethic of Socrates is transmuted into cosmology, metaphysics, and theology. The problem of the individual, accordingly, is not explicitly central; and yet it is by reference to the individual that the grand sweep of Platonic and Aristotelian thought will ultimately be tested. Philosophy, as represented by Plato and Aristotle, reflects a form of life in which the individual personality has not yet received full recognition. Therefore the question of an adequate life for the individual remains unanswered, because it has not been asked with sufficient thoroughness. In this respect, therefore, Plato and Aristotle are not true Socratics. Their encyclopædic systems are, in a sense, a brilliant episode of thought. The true succession passed from Socrates to the era of individualism which succeeded that phase of life of which the idealism of Plato and Aristotle is the splendid record. At the same time that idealism was a necessary stage in the evolution of Greek thought; it stood as a final demonstration of the sufficiency or the insufficiency of intelligence to unify human experience and to be the dynamic of the moral and religious life of man.

In the Platonic view of knowledge and of life there are two movements—one towards concrete idealism, the other towards dualism and mysticism, the latter being proof that the former has failed to reach its goal. (a) Plato seeks to reach a principle of unity which will really underlie and explain the variety manifest in the universe. With respect to human life, the Platonic ideal is an organic unity, in which each individual will find his place and function and reach the perfection possible to him, through conscious identification with the dominant idea of the whole. On this side of his great effort Plato did not need to face the problem of individualism. The individual is simply found in the great whole and finds himself when he realizes where he is. There is no problem of salvation. (b) The other movement of Plato's thought, however, suggests quite a different view of man's place and destiny. It would appear now that the unity aimed at is not found in the differences. The ultimate reason is not wholly intelligible. The goodness of God is not adequate to its tasks, being confronted by unconquerable necessity; and this recalcitrant material makes evil an abiding quality of the scheme of things. Thus dualism and pessimism haunt an idealism which has over-emphasized the intelligence and turned it against the practical details of knowing and doing. As soon as dualism makes itself felt, the question of the individual and his salvation emerges; and its solution in one way—the way of negation and mysticism—becomes inevitable. Dualism and mysticism follow a beaten path—whether in the East or in the West, whether Indian or Greek or Christian. The rubric may vary; the essential mystery is the same, and, it cannot be too plainly stated, it is essentially different from the core of that religion whose literary expression is the Scriptures of the Old and New Testaments. The true nature of man is oneness with God. His present position is that of imprisonment within an irrational and material envelope. Immediately salvation becomes his primary concern and forms the supreme business of his life, and this salvation must always take shape as a purification (*κάθαρσις*) of the soul, its deliverance (*λύσις*) from the chains which bind it to earth and sense, culminating in that vision of the divine (*θεά τῶν ἁγίων*) which is, in the very act,

its reunion with the source of its true being. Phrases like these repeat themselves unendingly in the literature of mysticism. They revolve round one central idea, a universal that is abstract, without contents, union with which is denial of all the positive experiences of life. Over against this whole conception stands the Biblical idea of salvation as fellowship with the living God, realized in faith and love, manifesting itself in character and ministry, and culminating in a social order of which God is at once the head and the indwelling life.

The effort to overcome dualism fails even more conspicuously in Aristotle than in Plato. The moral life, as Aristotle portrays it, is simply a rescript of the best Greek life he knew, not ignoble by any means, but essentially narrow, and confined to a class which bases its wealth and power and leisure on the labour of those who can never share its culture and privileges. A really dominant unity ought to constitute humanity as an organism; but such an idea is repellent to the Greek spirit and is exhibited in Aristotle's social ideal. Reason uses the irrational and cannot transmute it. And, even when this ideal, such as it is, is reached, the irrational still clings to it. Virtue is not knowledge. The virtuous man has to deal with conditions which are not the creation of reason, and accordingly he can only do his best and reach, on the whole, a balance between reason and unreason. He can attain an art of living; but to reach the perfection of reason he must cease to live the normal life. It is a far cry from Athens to the Thebaid, and a farther still to Luther, doubting if he can save his soul in the world. But the abstract opposition of form and matter, of reason and sense, of the theoretical and the practical, is the philosophy which lies behind monachism and asceticism; and it is the bequest of Greek dualism, even in the hands of so concrete a thinker as Aristotle, to the Occidental world. A negative salvation achieved by flight is his message, which subsequent generations accepted only too submissively.

Plato and Aristotle reflect the life of the Greek city-state, which, already when they wrote, was showing that it could not be permanent. Its passing left the problem of the individual and his salvation in explicit and definite form. The mystery-religions met the need of the age with their own message and methods. Philosophy pursued its own path to a goal now distinctly discerned. If the great synthetic systems are gone, with the form of life they interpreted, if there is no outward organism in which the individual can find himself, there is nothing for him to do but to pass inward into his own inner life and endeavour to satisfy himself with that which he shall find therein. Here the Greek dualism suffers shipwreck. The elements which Plato and Aristotle had masterfully held together fall apart and are made the prize of opposing dogmatisms. Suppose the inner life yields us its secret and rational principle, which is also discernible as the very life of nature, then the result will be an individualism which is also a cosmopolitanism, and even a pantheism, and will be essentially religious. Suppose, however, the secret of the inner life be no more than sense and its satisfaction, the result may be delicate and beautiful, the joy of a cultured élite, or it may be gross and vile, the shame of the reckless and profligate; but it will conform to no standard of values which can approve itself objective and universal; and, whatever form it takes, it will be essentially non-religious. Between these two views of what the inner life could yield the thought of the age was divided. The latter was really a denial of the deepest demand of the human

spirit. The former became the real religion of all who sought the higher life of the soul, and did afford a standing-ground and a safeguard in the midst of an alien world.

3. Stoicism.—The Stoic conception of the universe and human life is essentially religious; and the great Stoics are men with a message to the world of their day which is the outcome of a genuine and very noble religious experience. Philosophically they are monists. They surmount the dualism which even an Aristotle could not exorcise by the denial of one of its alleged constituents. The difference between form and matter is, in point of fact, unreal. It is true that the universe may be read in terms of matter; but matter is spirit and life, and the material universe is spiritual to the core. It forms a unity, in the sense that there is but one element of being—not two elements confronting one another in irreconcilable opposition. The Stoic solution of the problem of life, accordingly, is greatly simplified. The universe manifests the presence and operation of the *λόγος σπερματικός*, a germinative principle, which is immanent in individual existences, or rather is so one with them that they are really parts of it. The Stoic has advanced beyond Heraclitus, from whom the *Logos* (*g.v.*) conception is derived, in that he defines it after the type of that reason which in man is reflective and self-conscious. The universe reveals the control of a Divine Providence, the constant energy of a universal life. In God all things live and move and have their being. Man has this privilege, beyond all other beings, that he can recognize the *Logos* as identical with his own true self. He can make himself the willing organ of a universal principle. He can rise above the separation of his mere individuality and, ceasing from all selfish endeavour, see himself to be member of a community which includes all human beings. In this vision of himself, which he reaches by leaving behind the mere externalities and accidents of his environment and entering into the secret of his individuality, he really attains spiritual universality and lives by the impulse of the broadest philanthropy. By accepting his place in the universe he transforms fate into freedom and enjoys an independence and integrity of which no outward circumstances can deprive him. This, then, is the Stoic 'salvation.' It turns from a world which no longer provided a rational life for man, and centres the whole interest on the individual. In him it finds the presence of the same reason which is the soul of the universe. It bids him awake to the consciousness of what he is, adopt that as the will of his life, and live in entire consistency with it, *i.e.* at once with universal reason and with his own nature, for these two are one. He thus stands secure against the assaults of unreason, whether they take the form of the fury of blinded men or the stirrings of blind passion. Even those losses and afflictions which belong to an existence in time and space do not greatly move him. He is pure reason; and all things, other or less than rational, remain outside the citadel of his soul. The task of his life is simple. Positively, it is to will the universal; negatively, it is to confront the irrational with absolute refusal. The Stoic saint is an ethical absolutist; and his moral judgments admit of no qualifications. It is altogether intelligible that the Christian salvation should show affinity with Stoicism, while with Aristotle and Plato the relation is almost wholly one of contrast. The metaphysical dualism of the Greek philosophies has no true parallel in the Biblical literature; neither the problem nor the solution enters into the Christian idea of salvation. But an ethical dualism and an active victory over it,

which are the central interests of Stoicism, form the very stuff of Christian experience. The incisiveness, the strenuousness, even the ethical intolerance, of a Stoic have their parallels both in Jesus and in Paul. Stoic virtue, at its sternest and most assured, might have recognized its counterpart in those 'who endured the cross and despised the shame.' A high-minded man, in the years when Stoicism and Christianity competed for the winning of souls, could have no other alternative. He must commit himself to the one or the other. Yet the defect of its Greek origin clung to Stoicism and turned its strength to weakness. After all, though it is a monism, it is born of dualism. Its unity is the unity of one element, which does not really transmute its opposite, and can do nothing with it but reject it. At its best Stoicism has the strength and weakness of asceticism. It can repress, but it cannot construct. It can command, but it cannot create. It has no inward spring of action, capable of continuous transformation of character and endless service of the ideal. It is law, not gospel. Like all honest legalists, the Stoic was bound to end in pessimism.

4. Philo and Plotinus.—The conclusion is that, since in Stoicism the guiding clue of Greek philosophy has failed us, we must seek some other. Plainly some deeper principle is wanted than reason, which can never subdue its opposite. The human spirit must seek for the ultimate unity, *i.e.* for God, not in the outer world of the universe or the inner world of the soul, but in a region that transcends both. It must cease to rely on pure thought as the instrument of its endeavour or the method of its approach. God must be held to be essentially transcendent. He cannot be immanent in it. His connexion with it cannot be immediate, but must be maintained through intermediaries. The *Logos* must be dethroned from its position of Lord of all and become at best the greatest of those intermediaries. Man cannot find God even by the highest form of spiritual energy hitherto practised. Philosophy itself can bring us no farther than the threshold, which can be crossed, if ever, only in ecstasy. Such an experience leaves even the purest contemplation hopelessly behind, and implies the death of the very self which irresistibly craves this final blessedness. This is the religion—it would be improperly called a philosophy—in which the Greek spirit finally sought satisfaction. It closes an epoch. In the same period Christianity is inaugurating a new experience and giving a new statement and solution of the age-long problem. These two forms of spiritual endeavour are contemporaries. Their interrelations dominate the subsequent history of thought. Greek philosophy does not stand alone at the point which it has reached. Indeed, it may be regarded as the expression of a movement which filled the Hellenic-Roman world. God was not to be found in the stereotyped religions and the systematic philosophies. He was in a beyond which must be reached, as it were, in a kind of desperation. This is the significance alike of the mystery-religions and of the closing period of Greek philosophy. The same stage, moreover, had been reached by a race whose mental qualities were widely different from those of the Greek. The religion of Israel stands apart from the theological conceptions of the Hellenic spirit. Its problem is primarily and essentially moral. It concerns the relation of man with a God who is not afar off, as a unity above all differences, but near in His righteous and merciful actions. He is not an Idea, with the impotence of impersonality, but a living Being, known in His doings. No Hebrew ever dreamed of discussing either the existence or knowableness of God—He has made Himself known; He is acting

in the history of His people. What is left for man to do is to read the lesson of history and enter into the redeeming purpose of God as it grows through the centuries. There came a time, however, when it was not so easy to hold the idea of God as living, active, and close at hand. The historical revelation ceased with the destruction of Israel as a separate nationality. The voice of prophecy is still. Its place is taken by a sacred book. In it is written down the absolute truth of God. Man's business is to learn the contents of the book and hold, and do, what is therein prescribed. But God Himself is not there. He is in a heaven above. From thence He will come in a great day and vindicate Himself and establish His sovereignty. The idea of God in His bare transcendence takes growing hold of the Jewish mind. The Jew has reached the point where the Greek mind stood after the failure of Stoicism was becoming manifest. Dualism, which had been alien to his religious consciousness, has laid its malign spell on him. He, like the Greek, has somehow to bridge the chasm between the absolute and the relative, the infinite and the finite, a principle of unity and the manifold of experience. He, too, has to provide a way of salvation whereby the exiled spirit of man may regain its home in God. When he reaches this point, the Jew becomes the pupil of the Greek and takes over the Greek solution of the problem, which is common to both. The Hellenizing of an Isaiah is unthinkable. The Hellenizing of Philo Judæus was inevitable. In point of fact, dualism arrives in the natural movement of the human mind. When it is stated in its metaphysical form, there is only one solution, after philosophical reflexion has sunk exhausted under a task too heavy for it. The solution consists fundamentally in two conceptions—mediation between the transcendent God and the finite world, and ecstatic communion between man and the God who cannot be reached by exercise of rational faculty. The scheme of religious thought, accordingly, throughout three centuries has the same outline, whether we study it in a Jewish or in a Greek representative. The details, of course, vary widely, but they come under three heads; (a) the idea of God as transcendent; (b) the relation of God to the world through intermediaries; (c) the salvation of man through an ascent, which culminates in ecstasy.

Philo, born about 20 B.C., represents the Jewish movement, while the Greek development has its finest exponent in Plotinus (A.D. 203-269). A brief summary will illustrate the resemblance between them.

Philo.—(i.) *The idea of God.*—The transcendence of God finds in Philo¹ such strong emphasis as at once imperils His connexion with the world and His relation to man. Anthropomorphism must be scrupulously set aside. In pure and reverent thought we rise to the conception of God as One who is wholly removed from all relations, and therefore cannot be defined. We know that He is. What He is can never be apprehended in thought. He has no attributes, and such predicates as we apply to Him express only the gulf which separates Him from the sphere of things relative and finite and His removal from the grasp of our thought—ἀπλούς, ἀργυρος, ἀκατάληπτος, ἀπείροτος, αἰδώς, ἀθάνατος. He is the simply existent (ὁ ὢν, τὸ ὄν); He is self-sufficient (ἐαυτῷ ἰκανός) and cannot directly sustain relations with any finite being.

(ii.) *The idea of mediation.*—Between a God thus conceived and the finite world some link must be found. God is not identical with the world, nor can His pure essence be brought into immediate contact with the world. Philo finds the bridge built for him, both in Greek thought and in Jewish theology. God operated on the world in virtue of powers which are His and yet in some sense are separable from Him. For the Jew these powers are personified attributes of God. For the Greek they are the Ideas which Plato held to be the truth of things, and which later thought tended more and more to hypostatize. These intermediaries Philo concentrated in the Logos, the one mediator between the transcendent God and the finite world. The Logos is all in all for Philo. Without the Logos there

could be no knowledge of God, nor any relation of God to man. The Logos is the first-born Son of God, or even the second God; and, from the other side of the contrast between God and the world, the Logos is the Heavenly Man, the Intercessor, the High Priest on behalf of man. To the Logos belong the great OT types of the divine presence and power, the manna, the living stream, the cloud, the rock in the wilderness.

The same great name, the same honorific titles, and the same typology are to be found in the NT; but the difference between Philo and the NT writers is profound. In Philo the problem is metaphysical and cosmological. The Logos links ontological opposites together. The Philonic Logos presupposes a distant Deity. In the NT the problem is moral and personal. The Logos crosses a far deeper than an ontological chasm, viz. that which yawns between two moral beings who were meant to live in harmony, one of whom has rebelled against the love which ought to have been his inward constraint and impulse. The NT Logos presupposes a God so near to man that He entered into the situation sin has made, and, as man, achieved the reconciliation. The problem is set to the divine love and to the human conscience, and it is solved not in idea, but in historic fact. The Logos of the NT is not a shadow cast by God, but the brightness of His glory, the express image of His person, not a vague speculative figure of which it is impossible to say whether it is God or other than God, personal or impersonal, but an historic personality, Jesus of Nazareth. It is with a kind of triumph not quite unmixed with scorn that the NT writers fling back on Alexandrian Judaism its august yet empty formula. The Logos? Certainly, we have heard and seen that word—not an empty name, but the living voice of a present redeeming God. 'The Logos became flesh, and tarried among us.' 'It is of what existed from the very beginning, of what we heard, of what we saw, of what we witnessed and touched with our own hands, it is of the Logos of life—it is of what we heard and saw that we bring you word, so that you may share our fellowship, and our fellowship is with the Father and with His Son Jesus Christ.' This is not philosophy at all. It is life, rising out of historic fact, fulfilling itself in experience.

(iii.) *The idea of salvation.*—On principles of dualism there is only one source of man's distress—his body, which is the tomb or prison of his soul. From the body, therefore, man must be delivered, and also from the whole activity of the soul as that is occupied with things finite; and, as action is necessarily occupied with things finite, deliverance can be accomplished only where the soul has sunk into passivity and yielded itself to the rapture of the beatific vision. The stages of this salvation are, practically, stereotyped for all these centuries. Philo named them ἀσκησις, διδασχῇ, φύσις, 'moral discipline,' 'contemplation,' 'ecstasy.' This is the way of salvation as conceived throughout the whole Hellenic world. There is in it no conception of an historic redemption wrought for men. Indeed, even the Logos ceases to be necessary and may be left out of account in the final step that brings emancipation. There is no call for faith, as an act of trustful commitment or as a life of personal loyalty. The contents of the Philonic salvation do not include the peace of forgiveness, the joy of reconciliation, the gladness of filial confidence.

Plotinus.—(i.) *The idea of God.*—The transcendence of God finds final expression in Plotinus.¹ What is present in Plato almost, as it were, against his will, what is the last result of Aristotle's great endeavour to present a truly organic view of the universe, what the Stoics were driven back upon, as they fought a rear-guard action against the irrationality of their environment, what Philo robed in the pieties of the OT, is for Plotinus the crown of religion and philosophy, the heart of his message to a world determined to reach God at any cost. As an idealist he climbs 'the steep ascent to heaven,' rising above every stage of existence and thought that is still mingled with the finite and the relative, seeking continually the unity which shall escape from difference. Then, when he has reached the top of the ladder, he finds it too short to reach the higher sphere, where the Absolute dwells inaccessible and unknowable. The Absolute is beyond existence, beyond good, beyond knowledge, beyond will. In the most literal sense the Absolute is ineffable. Even to ascribe unity to what is not an object for thought is an improper procedure, for to predicate is to limit. The Hebrew redeemer God says, 'I am that I am.' The Absolute of Plotinus, if He could declare anything, would say, 'I am not anything that can be expressed in any word that is intelligible to the ears of man.' The only truth that can be affirmed of such a God is that we can affirm nothing.

not the humility of a worshipper, no agnostic; it is the voice of philosophy cannot be found in difference itself the ultimate, the only of an epoch, finding utterance This is the secret thought the philosophical and religious endeavours of the day have attained their utmost in thus raising an altar Ἀγῶστω Θεῷ; and on this the race of men has laid as an offering its aspiration and its hope.

(ii.) *The idea of mediation.*—Plotinus is not a pantheist; the finite does not live in God, though, apart from God, it would not be. It is; yet, if we are to reach God, we must leave it behind. Out of God, in some sense, it comes. Yet God cannot have any direct connexion with it, either to make it or to sustain it. The relation of a transcendent God to the world cannot be conceived except through spatial metaphors. If God is

¹ See art. ALEXANDRIAN THEOLOGY.

¹ See art. NEO-PLATONISM.

the beyond, plainly a bridge is wanted to connect Him with what is on the higher side. It is at this point that Plotinus shows himself to be no true Platonist, and to be the exponent of a new Platonism, which is fundamentally a misapprehension of Plato. It is true that Plato did not succeed in showing that the two elements with which he worked implied each other, and that to separate them was to make the solution of the problem to place truth

For him, as in experience, it not indeed within knowledge, and the distinction which he accepts is plainly shown by his terminology to be a distinction of aspects within the intellectual or real world.¹ Plotinus does what Plato and Aristotle were too concrete in their thought to do: he separates truth from the world of experience and then has to build a bridge between them. For a conception of the divine immanence he substitutes a scheme of subordination, as follows: (1) the Unknowable Absolute; (2) the intelligence; (3) the world-soul; (4) the phenomenal world; (5) unknowable matter. It sounds mythological. It is mythology. It is the expedient to which a thoroughgoing dualism is necessarily reduced. When the extremes are held apart, an intermediary must be found which is not a real principle of union, but a third being externally related to each. This subordinationism pervaded the thought of the day. The attempt to make it the form of Christian mysticism, man, and salvation well-nigh

(iii.) *The idea of God* on principles of mysticism to understand the descent of man. But, valuing this, we can see what salvation of soul must be. It must be an ascent of man passing upward towards the fountain of truth and reality, which arises 'beyond existence.' Plotinus has nothing to add to the way of salvation which is common to all who seek to cross the chasm wrought by a dualistic view of God and the world. Its steps are stereotyped: (1) morality, conceived ascetically as purification of the soul; (2) contemplation, which thinks away all difference and apprehends the unity of the self and God; (3) ecstasy, the state, not necessarily accompanied by physical disturbances, in which the mind concentrates itself on God and reaches a condition which is indescribable, just as God Himself is ineffable. This is the beatific vision of which no report can be given, except that it is the 'life of the gods, and of godlike and blessed men, a release from all else here below, a life that takes no pleasure in earthly things, a flight of the alone to the alone.' This, then, is the highest that men can do. It is, at the same time, the exhaustion of the human spirit and the confession of its despair. The religious situation of the Western world in the first three centuries of our era presents a threefold choice: (a) unmitigated paganism, materialism, barbarism, in which the soul is 'lost' with an unmistakable and lamentable destruction; (b) the movement, of which the mystery-religions are the popular examples, and Neo-Platonism the final philosophical expression, offering a salvation for the soul, which is essentially an ecstatic experience of union with a blank and indeterminate divinity; (c) Christianity, the gospel of a divine love historically manifested in a human life and death, the experience of that love in the lives of men, reconciling them to God, forgiving their sins, binding them together in an organism indissoluble by force of persecution, by tyranny of space, or by the incident of death. It is true that Christianity conquered; that it still endures; and that, when the same alternatives are presented, it always wins. But it is also true that, in those very centuries in which it was winning its triumphs, it was being profoundly modified in the direction both of the mystery-religions and of Neo-Platonism. Its conception of salvation is never wholly lost. The personality of Jesus and the realism of His Cross make that an impossibility. Yet the simplicity of the gospel and the fullness of Christian experience are at once overlaid and impoverished by alien elements. Christianity becomes a mystery-religion, and theology owes more to Plotinus than to Paul.

IV. *THE IDEA OF SALVATION IN GREEK THEOLOGY.*—Recall the Greek non-Christian philosophy, which by this time was also the religion and theology of the cultured.² There is a wide contrast between it and the Christian religion of redemption. The NT is fully aware of this contrast. In the writings of Paul, in Hebrews, and in the Fourth Gospel we have the standpoint of men who were sufficiently acquainted with Greek thought to know that it belonged to a wholly different type of religious experience. They were perfectly willing to use its characteristic forms, if by this means they could win a hearing and present their Christ as the reality after which the best of the Greeks had earnestly sought. But they must be allowed to fill the forms with their own special message. Thus the Greek forms on Christian lips have little in common with the philosophy from which they are derived except

the bare terminology. The heart of the NT is not a Logos Christology, but a soteriology that is historical and experimental to the core. The case, however, is altogether different when we pass from the NT to the scientific theology which arose in the 2nd cent., grew for three hundred years to a portentous elaboration, and created a fabric of dogma within which the Church has dwelt even to this day. The authors of it did not perceive the chasm that separated Greek philosophy from Christian experience. The form of their thinking was Greek; the matter of it was Christian. Now, when form and matter are disparate and the attempt is made to bring them together, one or other of two things will happen—either the matter will break up the form and force its way towards some higher and more adequate category or the form will subdue to itself the matter and deeply alter its value and significance. The latter alternative describes the course of Greek theology. It was meant to expound and defend the faith. It is true that it did sweep from the field all intellectual rivals; but it is not true that the faith remained victorious. The faith itself was profoundly modified; and the idea of salvation that emerges is certainly not of the NT type, while it conforms closely to prevalent Greek conceptions. The ruling ideas which we have noted in Philo and Plotinus as representative of the whole movement repeat themselves in the leading Greek theologians.

1. *The idea of God.*—That conception of God with which Greek philosophy terminated, viz. the Absolute, the Transcendent, the Indeterminable, governs unquestioned in the domain of Christian thought. The Fathers fall back on this abstract notion, with which to interpret the Christian faith in God, who is known in Christ, whose children believers in Christ are. It is a metaphysical envelope, in which is enclosed a religious experience. A metaphysic, essentially dualistic, is used to express and interpret a life whose glory consists in ethical oneness with the God to whom through Christ there is direct access, and of whom in Christ there is immediate knowledge. This metaphysical conception of God prevailed in Greek theology till the Council of Chalcedon closed that epoch of constructive work. It has remained to this day in spite of the reversion to the NT which marked the Reformation, in spite of that destruction of dogmatism with which Kant inaugurated the modern age; and still it confuses the issues for men who have travelled far from the conditions of Greek thought. God, as thus described, even by men who are seeking to defend Christian monotheism—Justin Martyr, Irenæus, Clement, Tertullian, Origen—is not, in the forms they use, the God and Father of our Lord and Saviour Jesus Christ, the God whose very essence is love, who by the inner constraint of His character must needs appear in human history and work out there in action and suffering the great salvation. Love and holiness, with the action and passion arising therefrom, are lacking to the Greek idea of God, and this defect makes that idea unsuited to act as the governing category of Christian soteriology.

2. *The idea of mediation.*—The shape which the problem of mediation will take is necessarily determined by the idea of God. With the Greek idea of God in their minds, the Greek theologians gave to the problem a distinctly cosmological character; and their solution took a predominantly metaphysical form. They have not indeed forgotten the human interest in salvation and the conviction of faith regarding the Saviour. But they have given soteriology a decidedly cosmological cast and have supposed that, if they could

¹ B. Bosanquet, *A Companion to Plato's Republic*², London, 1895, p. 248.

² See above, § II.

solve the problem of *being*, they had met the need of *salvation*.

The question, as they conceive it, is, How can God be connected with the world? In this question the whole of Greek dualism is involved, because 'God' is regarded as an entity of one kind, and the 'world' as a substance of so utterly diverse a kind that God can have no direct dealing with it, and therefore also man, as sunk in matter, can have no direct access to God. The only possible solution of such a problem is the building of a bridge between God and the world, and the question that divides the different schools, Greek and Christian, is as to the composition and structure of this bridge. Both schools indeed use one word: the bridge, or at least its central span, is the Logos. The differentia of the Christian answer is that the Logos is Christ. The main concern, therefore, of Christian theology is to contend that Christ, as Logos, is divine enough to reach the farther shore, where the Absolute dwells in the lonely splendour of His ineffable being. But by the logic of that dualism which was ineradicable in Greek philosophy it was impossible to say that the Christ Logos was *quite* God. Even supposing the distinction of *λόγος ἐνθάδε* and *λόγος προφορικὸς* were adopted, and a dwelling of the Logos in God were affirmed, yet the Logos appearing in the soul of Jesus cannot be on an equality with God. Lofty as is the rank of the Christ Logos, He is still one remove from the Absolute. There must be a subordination of Christ to God in respect of being, and therefore also of value. Precisely here, however, Greek dualism, even in Christian guise, found Christian faith sensitive, alert, and armed. The common sort of believers were perfectly certain that the Logos (whatever that might be in philosophy) was Jesus, and that Jesus, as Saviour, was as divine as God. This was a 'value-judgment' of faith, whatever theology might make of it. Yet faith had this inherent weakness, when it tried to say what God is, and what by consequence the Logos-Saviour is: it had no other idea to work with than the Greek conception of the remote and lonely Absolute. By such a presupposed dualism of God and the world, of form and matter, and by such conflicting interests of head and heart, the course of Christian thought is determined, till Nicæa, nominally at least, drove Greek philosophy from the field. The oft-told story runs in three chapters.

(1) *Subordinationism in control*.—Christ is an intermediary needed to connect God with the world. Christian faith, indeed, rejoiced to think of Jesus as the Son and Servant of God, entering the world on a redemptive mission and carrying out the Father's will of love, in life and death, thereby securing forgiveness, reconciliation, and fellowship. But, when taken up into Greek metaphysical and dualistic philosophy, this truth of religion attested in experience is turned into a doctrine of the person of Christ, which makes Him second from God in rank of being; and this is precisely the reverse of what faith meant to say. The Logos Christology is not the implicit faith of the NT, brought into clear consciousness by its own inherent logic. It is that faith stated, with the best intention, in a logic which did not belong to it. It is found in the apologists, to whom the Logos as a separate existence is numerically distinct from God, a second God, to be worshipped indeed, but not to be regarded as in the fullest sense God, subordinate to God, a kind of 'depotentiated God.' The point of these assertions is that they are not reached through a study of the inner life of Jesus and are not an attempt to enter into the secret of His self-consciousness. They are constructions based on an *a priori* conception of God which was not critically examined or experimentally evaluated. They are deductions of what the Logos must be; not a picture of the Jesus of history, who, for NT Christianity, is the Jesus of faith. Irenæus's doctrine of the person and work of Christ displays closer contact with the NT thought and life. He is clear on the fundamental Christian convictions 'that the Creator of the world and the supreme God are one and the same' and that 'Christianity is real redemption . . . effected by the appearance of Christ.'¹ But the atmosphere of the day cleaves to him. He is still

operating with categories supplied to him by the last phase of Greek philosophy, with their parallels in the mystery-religions. Salvation requires participation in the being of God, and it is primarily because this being is brought within reach by the Incarnation that Christ can be Saviour. Irenæus's account of the *ἀνακεφαλαιώσεις* is poetic and suggests truth deeper than he knew; but in him it has Neo-Platonic connotation and runs out into sacramentarianism and mysticism. The presuppositions are still ontological. Christ 'was made as we are in order that He might make us to be as He is.' It is still salvation by participation in divine essence, and to that extent it is Greek rather than Christian.

In the great Alexandrians we have the same combination of intense Christian conviction with the Greek metaphysic and the Logos Christology. Clement's description of God is as defective as anything in Philo or Plotinus. God is 'formless and nameless, though we sometimes give Him titles, which are not to be taken in their proper sense, the One, the Good, Intelligence, or Existence, or Father, or God, or Creator, or Lord'—a truly 'appalling definition.'¹ Appalling though it be, it is the climax of centuries of Greek thought, and, when it is used as starting-point, a satisfying Christian doctrine of God and of salvation becomes impossible. It is quite true that nothing was farther from Clement's mind than to attribute to Christ a reduced divinity. He desired to bring Him as close to God as possible—as close, say, as the Nous, or intelligible world, in Plotinus's trinity. Yet in the last resort Christ is not God Himself, in His own proper person, acting, suffering, saving on man's behalf. The Logos may be the immanent reason of the universe, and Clement is the typical 'Broad Churchman' rejoicing in a revelation of God to Greek as well as to Christian. But this reason has always God, in His essence unknowable, behind it. Subordinationism attends on the Greek idea of God, like its shadow. Thoroughly Greek, too, is Clement's conception of the work of Christ. Clement has not entered Christianity through the moral discipline of the OT. He is through and through intellectualist, in his views at once of need and of salvation. He 'himself had passed through no spiritual crisis; enlightenment rather than the need of forgiveness, intellectual unrest rather than an accusing conscience, drove him to the Christian faith.'² The source of man's distress is ignorance; hence comes the disease of sin, and man is doomed to death. The work of Christ, therefore, though Clement employs the classic language of sacrifice, is to give knowledge. This throws the actual experience of humanity into the shade, and Clement is constantly slipping towards docetism. All that is needed, from a Greek point of view, is enough humanity to convey ideas to men. Real identification with men is not needed, though, from a Christian point of view, it is the *sine qua non* of salvation.

Origen's loyalty to the full divinity of Christ is beyond question, but his scheme of thought is Greek, and it is through the Greek *a priori* conceptions that he apprehends the statements of Scripture. He is no avowed subordinationist; and yet the all but inevitable issue of his thought is subordinationism. His God is the Absolute, whom, however, after Plato, he conceives as good with inward *nisus* towards self-communication. Between this God and the world there are (i.) the Logos, produced by the will of God supra-temporally in an ineffable act of generation; (ii.) the Logos united with the pre-existent holy soul of Jesus; (iii.) these two inhabiting an incontinent body, born of a virgin; (iv.) along with the Logos, but without any inherent necessity, the Spirit, an adjunct, borrowed from Scripture and subordinate with the Logos, though superior to all other holy beings. This is not the Christianity of the NT. It is Christianity stretched on the rack of Greek thought.

The logic of subordinationism becomes explicit in Arianism. The issue of the Greek metaphysical conception of God is now made plain. Let God be conceived as the Absolute. Let Christ be regarded as the Logos, between God and the world, and the result is inevitable—a distortion of the Christian idea of salvation and an emptying of Christian experience of its rich ethical and religious contents. Clement and Origen were great believers; but they were too much under the dominance of Greek thought to do full justice to the Christian faith in Christ or to unfold and verify the Christian experience of salvation. In Arius we have a thinker who had gone one worse than any of his predecessors. In the guise of a Christian ascetic, he is plain Greek and pagan. In him the Greek religious philosophy, in this its latest phase, is making its final stand. It understands that it must make terms with Christianity. Its terms are these: it will accept Christ as of divine rank and will apply to Him any honorific title that may be proposed, and set Him far above all men and all angelic beings, at the head of the whole creation, but it will not, either as a philosophy or as a religion, treat Him as Himself God, or a real incarnation of God, or God living and working out man's redemption. He is at His greatest a *κρίμα* still; at best, a cosmological principle, but no Saviour from sin's guilt and power. This is the old heathenism, whatever its disguise. Christianity was at the crisis of its fate. To have accepted Arianism would have meant absolute defeat, the arrest of the whole movement of the human spirit Godward.³

(2) *Monarchianism, in vigorous defence of Christian monotheism*.—Monarchianism (*q.v.*) takes its rise as a protest against the attempt to make Christ an *Eon*, or intermediate being, and asserts the prevailing Christian interest in the unity and

³ Cf. artt. *ARIANISM*, *SUBORDINATION*.

supremacy of God. It rightly sees that salvation is God's act only, and that to transfer the mighty work to any Saviour, divided, however faintly, from the only God, is to invalidate it and leave faith no security. But this Christian interest was defeated by the Greek idea of God. The Monarchians too are Greeks. They are working with Greek categories—the Absolute, the Monas, and the like. They set themselves a task which was really impossible—to combine the divinity of Christ with that Greek conception. A choice of paths appeared to them. They might hold the individuality of Christ and regard the divine in Him as a quality or force; or they might hold the divinity of Christ in the fullest sense, but regard it as the very presence of the absolute God. The former alternative looks at Jesus as a man inspired by God, and so, by a special line, leads round into subordinationism and makes salvation a human achievement, accomplished by moral endeavour. The latter is much more fitted, in one sense, to express Christian conviction and might seem to be no more than what adoring faith will ascribe to its divine object. In point of fact, however, when traced to its Greek original, it is an almost complete denial of the Christian verities. Here is no living God, but an expanding and contracting Monas; no Mediator between God and man, Himself man, no living Saviour and Lord. The Son has no life of His own, and, when His temporary manifestation is over, He is retracted into the Monas and lost to faith. Tertullian's vigorous protest was of value in asserting the necessity of the historic Christ for the security of the Christian salvation. But Tertullian's own Christology is still caught in the Logos scheme and assigns to Christ no more than a *protio* of the Godhead.

(3) *The victory of Nicæa.*—The intolerable consequences of Greek dualism are met by Athanasius with a flat denial. For three centuries Greek 'Christian' thought had not ventured to declare that this was pure *a priori* prejudice, but gave a religious turn to Greek philosophy by declaring that Christ was such an intermediary, who, by the logic of this movement, would not be quite what God is. Athanasius is brave enough to say that the long-accepted dualism is no necessity of thought. God can create directly. There is no need of a *tertium quid*. It is true that God uses the instrumentality of His Son in the act of creation, but this is a secondary matter. The central function of the Son is not cosmological, but redemptive. His central significance in theology, as in Christian faith, is His agency in salvation. The object of the Christian worship is not the Logos of the philosophers, but the Son of God, the historic Christ, who was born, and lived, and died, and rose again. In Him God Himself entered into humanity. Therefore no phrase must be used which shall permit Him to be thought of as a creature, however near to God, or howsoever adorned with epithets. Human salvation demands that there shall be more than a bridge by which man shall pass to God; that there shall be in humanity a divine Being in becoming one with whom man shall reach oneness with God and so be saved. This, in fact, is the Christian message of salvation. 'He was not man, and then became God, but He was God and became man and that to deity.' The Son, accordingly, is not to be thought of as an intermediary, a second God. He must be regarded as having the same substance with the Father and constituting with the Father a unity. The symbol of Nicæa makes this position explicit: 'Begotten from the Father as only begotten God from God, i.e. from the very being of the Father (ἐκ τῆς οὐσίας τοῦ πατρὸς), sharing one being with the Father (ὁμοούσιον τῷ πατρί).'

Thus the long history of Greek philosophy is brought to a close by an intuition of faith discerning the value of a fact of history. Christ is the Son of God. No cosmological scheme can content the believing heart which has found in Christ, not an introduction to God, but God Himself in the fullness of the Godhead. A cosmological bridge does not meet the need of salvation. Suppose we climb to the end of the span formed by the Logos, what guarantee have we that it will really abut on God? Rather, it is certain that, if Christ be not truly God, there will still be a chasm to cross. Well might Athanasius say, 'We are fighting for our all,' when he stood against an Arian world. Therefore historians and theologians of every shade of orthodoxy have sympathized with Athanasius and have admitted that a diphthong may mark the whole difference between Christianity and paganism.

To do this, however, and even to accept *ex animo* the Nicene Creed as a confession of faith, does not mean to be satisfied with it as a doctrine of God or of Christ or of salvation. The use of the word *οὐσία* has unconsciously and unintentionally reintroduced the very philosophy it was meant to exclude. God viewed as *οὐσία* is a static Deity, such an 'unmoved mover' as Aristotle reached through his dualism of matter and form, such an

Absolute as Philo or Plotinus set in immobile and immortal blessedness beyond the manifold of experience. Such a God does not really live. He never acts. He cannot suffer. He has an *οὐσία* all His own. The Son shares that with the Father. Thus the affirmation of faith, that Christ is as divine as God, is construed to mean that He had a divine essence which is not man's. And, as soon as this passes into common belief, we have left NT ground and are occupying the position of the mystery-religions and of Neo-Platonism, viz. that salvation means participation in the divine Being, a participation that is effected in a supra-rational manner by vision or ecstasy. The victory which faith won at Nicæa was thus in great measure nullified by the metaphysic which remained uncorrected in the language of the creed. Faith is quite sure that Christ the Lord is as divine as the Father, whose Son and Servant He is, and as human as those whom He came to save. In that assurance there is implicit a view of divinity and humanity which thinks of them not as opposites or disparate essences, but as so related that a divine Being may have a human experience and be in the fullest sense God, being in the completest sense man, while manhood is perfected in the human experience through which God attains the ends of His holy love. This view, however, was rendered impossible by the metaphysical view of God which remained in the minds even of believing theologians, wholly uncriticized and uncorrected. The result was a theological *impasse*. The dualism which wrecked Greek philosophy has returned and has inserted itself in the doctrine of the person of Christ and in the conception of salvation bound up therewith. The Christological discussions of the 4th cent. represent the mind of man exhausting itself in alternative escapes from an impossible situation. Take the Apollinarian road and mutilate the humanity so that divinity may have room to act; take the pathway of Nestorius and place divinity side by side with its opposite and bind them together with a phrase; follow Eutyches and absorb the humanity in the divinity—in each case Greek dualism is driving faith whither it would not go, and, as soon as faith becomes aware of the coercion of logic, it revolts and, in defiance of logic, returns to its basal convictions. It cares nothing for logic; its one interest is salvation. If that be endangered, it will expel as heresy the most carefully devised Christology. This is, of course, what faith did in the symbol of Chalcedon.

'The definitions of ancient creeds . . . were an attempt to stake off the limits of that area which the Church had come to claim as reserved for faith and sacred to it; marking it off by certain assured points which she believed to be guaranteed at once by the witness of Holy Scripture and by her own consciousness of salvation in Christ.'¹

Our estimate of Chalcedon repeats that of Nicæa. It is a victory for faith, rendered fruitless by the employment of categories useless and misleading, if employed beyond the bare purpose of negating error. They are steeped in metaphysical dualism and are unfit to bring into clear consciousness an experience in which the supposed opposites of philosophy are held together in the grasp of a living synthesis. In the article just quoted Dykes thus sums up his review of the Chalcedonian formula:

'A Being who combines in an inscrutable fashion Divine with Human properties, and of whom consequently contradictory assertions may be made, whose single Person is Divine, while His dual natures hold an undefined relation to one another: this is not a scheme to satisfy either head or heart.'²

In point of fact, neither the head nor the heart of the Church was satisfied with the Chalcedonian orthodoxy. When divinity and humanity are placed in juxtaposition, without any real unity

¹ J. Oswald Dykes, *Expt* xvii. [1905-06] 7

² *Ib.* p. 10.

between them, both mind and heart will place the emphasis on divinity. The primal need is for God. It is God in Christ who saves. If, therefore, God be defined in terms which make a human experience for Him impossible, the inevitable result will be that the humanity of the Saviour sinks in value and reality. Cyril had the interests of salvation at heart. But he so conceived of God that salvation was imperilled, lost its distinctively Christian character, and took a specifically Greek form. Monophysitism, expelled in name, returns in power. Christ is so one with God that He shares the divine transcendence. Hence arises a double dualism: (a) within the person of Christ, between His divinity and His humanity, the latter being rendered by orthodoxy more and more unreal and ineffective; (b) in the sphere of salvation, between the divine Christ and human beings, who find it now as hard to get to Christ as ever Neo-Platonist did to reach the absolute Deity. Christianity had appealed to Greek philosophy, and it had received its reward. The God it had found in Christ was removed to an intolerable distance; and Christ, who was one with God, shared the remoteness of the Absolute. Once more the chasm yawned; once more a bridge had to be built, or, rather, the bridge reared by the speculative genius of Plotinus was still standing. This, therefore, the human spirit was constrained to use, giving it only a new facing of Christian forms and usages, not knowing or not heeding that, in so doing, it was reverting to something that lay farther back than Neo-Platonism, in the obscurities of primeval religious feeling, and was transmuting Christianity into a revived mystery-religion.

3. The idea of salvation.—The Greek scheme works out as follows. (a) *Man and sin*.—In his innermost essence man belongs to the sphere of the divine. As in Plotinus individual souls belong to the world-soul and are one in essence with it, so in the Christian application of this thought all souls are divine in being. Their reality and their blessedness consist in their participation in the divine nature. Their separation from it would be destruction, and their salvation would be reunion with it. The whole movement is apart from ethical relationship. The goal is a good that is above moral good. The salvation, in like manner, is a process which may have morality as a stage, but reaches towards a metaphysical issue, accomplished not through rectification of moral relations, but through changes affecting essence and being. This distinction between moral values and metaphysical reality goes deep into the Greek idea of salvation and marks it off from the NT region of thought. From a pristine state of oneness with the divine nature human souls have fallen. In harmony with the Platonizing thought of his day, Origen had held the pre-existence of souls. Whether in this theory or in that of creationism, the fall of souls is wholly unintelligible. Plotinus could not give a reason for the irrational. The descent was simply part of the working of his scheme—a far-off result of the distinction of matter and form, observable in all experience. In Christian thought the Greek regard for the determining power of reason is uppermost. Greek theology remains true to the freedom of man, conceiving it as bare power of the rational nature, a power inherent, incapable of being lost. In any case the descent has been made by Adam and is made by practically every individual soul. The descent, as in Greek thought, is into the region of matter and sense and mortality. In this position freedom cannot indeed be lost, but is considerably weakened, and the soul would need assistance of some sort in its

upward way, as it seeks its home in the supersensuous sphere and returns to its divine original. It is a simple and obvious situation, precisely that which Greek thought had been dealing with for centuries. Man is sunk in sense, with all its concomitant evils—mortality and subjection to demonic power. The one problem is the ascent of man. It is not the situation as the NT, with its roots in the OT, conceived it. For a mind trained in Hebraic modes of thought, for a conscience disciplined by the revelation of the divine holiness, the situation is that of man's revolt, in the pride of self-assertion, against the will of a holy, loving, and sovereign God. Greek theology is singularly lacking in its sense of the righteousness and holiness of God; and its soteriology suffers accordingly. Its captivity to Greek forms is conspicuous and disastrous.

(b) *Redemption*.—Plainly, what is needed by man, thus immersed in a region so foreign to his true being, is reinstatement in the sphere to which he belongs, i.e. the divine. The descent must be replaced by ascent, and the successful accomplishment of this process is termed 'deification.' Man must be lifted to the place to which he belongs and become what God is in His essential nature—i.e. immortal, free from all taint of sense. The central significance of this deification is the quality that is assigned to the divine essence. There is no rich ethical content filling the thought. Greek speculation defines God mainly by negations; and thus its conception of deification is also mainly negative. The aspiration of the soul is set on a mode of being of which nothing can be said, save that it is at the opposite pole from matter. True, this higher state is conceived as the only reality, for matter, in genuine Platonic fashion, is conceived as non-being. But, after all, mere being is scarcely a richer thought than non-being. Deification reaches being, and that is reckoned blessedness; but the contents of that blessedness are, like God Himself, beyond predication. Salvation, thus conceived as deification, can be only partial, as long as the soul has any material integument. It can never therefore be a possession. It is not, as in the NT, by a paradox, both possession and inheritance. It lies in the beyond only. Its instalments are not itself. They are only steps towards it. Only when the dead lift is complete, and the soul escapes from matter, does it reach salvation. The method of this deliverance is determined by the goal. The question for Greek thought is how to get the divine nature so near to man that man can unite himself with it and share its blessedness. There is no question of atonement and reconciliation, of a moral estrangement overcome by love, and a new moral relationship entered upon in faith. Baptized into Christianity, Greek thought proclaims the Incarnation to be the method of salvation. The divine life is in Christ—not indeed in His flesh: He has no more relation to flesh and blood than will allow the divinity, which is His only real being, to become accessible to man. The ruling thought is transformation of man's being, till he become what God is. Greek theology makes everything of the Incarnation. Yet the most damaging criticism upon it is that it does not make enough of incarnation. Deity retains its transcendence and remoteness even within the veil of flesh. It is in flesh only that man may be deified. There is no thoroughgoing human experience on the part of the Logos Christ. Even the *recapitulatio* of Irenæus, though it brings him in some aspects close to the gospel, is at bottom Greek. It means that the Incarnate One brings to actuality the divine mode of being, which is God's original plan for humanity, so that now human nature may be deified by being taken up

into it. Origen shows the real drift of the tendency, for, while recognizing rather than teaching various theories of atonement, he passes beyond them to conceive of salvation as consisting in being 'interwoven with the divine essence'—a condition reached by knowledge, revealed by Christ in His capacity as teacher and hierophant. Athanasius has rejected Greek cosmology. His profoundest concern is salvation, and this requires the full deity of the Redeemer. But, at bottom, the idea of salvation and the means of deliverance are Greek. Man's distress is his mortality. Repentance alone, therefore, cannot deliver him. Life must be brought to him, that he may partake of the very nature of the Deity. Athanasius is able to give a real place in redemption to the death and resurrection of Christ, but it is not the place assigned to them in the NT. It is still the question of deliverance from mortality with which he is dealing. In the death of Christ the law of death is abrogated, and in the resurrection of Christ incorruption is guaranteed.

'By death immortality has reached to all . . . for He made man that we might be made God, and He manifested Himself by a body that we might receive the idea of the unseen Father, and He endured the insolence of men that we might inherit immortality. For while He Himself was in no way injured, being impassible and incorruptible and very Word and God, men who were suffering, and for whose sake He endured all this, He maintained and preserved in His own impassibility.'¹

It is devout and very Christian in its sense of debt to Christ,² but its metaphysic, theology, Christology, and soteriology are Greek and not NT.

The condition under which salvation viewed as deification is obtained by men is necessarily union with Christ—i.e. oneness in being with His divine being. There is no question here of faith committing itself to Christ and receiving in the act His unsearchable riches. There is no union of two living personalities to be mutually possessed in love, each entering into the experience of the other. It is, in the precise sense of the age-long religion of Hellas, a mystical union, a participation not in the 'benefits of Christ,' but in His very being.

(c) *The process of salvation.*—In a way Greek theology was more dualistic, at least after the overthrow of subordinationism, than Neo-Platonism and more at a loss to produce an effective salvation. The divine in Christ has been so completely identified with the absolute Godhead that it cannot form the link between God and man. With the practical triumph of Monophysitism, the dualism is now as much between Christ and man as it ever was in Greek thought between God and the world. The chasm is still there. The question now is, How shall the divine Christ be made accessible to man? Where and how shall man find Christ and be made one with Him? The answer comes straight from the heart of Greek religion—that primitive religion which preceded and outlasted the intellectualized Olympians of the middle period of Greek development, and which in the last stage of Greek life and thought was found mingled in a confused syncretism with all manner of Oriental cults. The very word which carried the whole meaning of Greek religion with it is employed to designate the central element in the Christian salvation. Christ is brought to man in the 'mysteries,' of which the Eucharist is the chief. No theory of His presence as yet holds the field. The crudity of popular imagination, which regards the consecrated elements as the actual flesh and blood of Christ, is below the subtlety of Greek symbolism; and transubstantiation, as an attempt to make the mystery intelligible, is still far off. No theory is needed. Suffice it that

in the rite, with the aid of all well-devised circumstances, the mind of the worshipper is subdued, the emotions are stimulated, reason is silent, and the unknown Divine, too wonderful for intellectual definition, is felt to be somehow, inexplicably, there. At this point the function of the Church becomes manifest in all its soul-subduing sanctity. The Presence depends on the rite, the rite depends for its efficacy on the celebrant, and the celebrant depends for the due performance of the rite on his place in the Church. Behold the bridge between heaven and earth, the only link that can bring Christ and man together! Where is Christ? On the altar. What brought Him there? The power of the hierurge. All that Christ can do for the soul is done in the Eucharist. It is the medicine of immortality, the instrument of deification. Rapt in spirit before the altar, severed from all things of sense, in deep emotion beyond all processes of reason, almost above consciousness of self, the soul tastes salvation and almost enjoys the beatific vision, which will one day, in a moment, admit him to the immortal life and give him the object of his passionate aspiration—participation in the divine nature. This is the core of the Christian experience. Christianity stands forth confessed a mystery-religion.

It is not necessary to deny to this 'mystery' a definite religious value. Any one who has given sympathetic attention to the Russian Eucharist must have thrilled to the sense of the unseen conveyed by a ceremonial more splendid and more surcharged with inexpressible suggestion than even the Roman rite. Still it has to be noted that its ancestry is not in the NT, but in primitive Greek religion, as that was reproduced in the mystery-religions, and that its intellectual equivalent is not the teaching of Jesus or any of His apostles, but Greek philosophy, in the last stage of its development, when, as Neo-Platonism, it offered itself to every cultured intelligence as a revelation of God and a way of salvation. It is impossible also not to note the danger which haunts it—the danger that besets all mysticism—viz. the emphasis laid on the metaphysical and the reduction of the ethical to a secondary place and value. The salvation which does not find its climax in duty and virtue needs no theological acuteness to criticize it. It is condemned already.

The process of salvation, looked at from the human side, exhibits the same thoroughgoing Greek character. The question is, How shall the soul fit itself for the great moment of its deification? The answer keeps close to Neo-Platonic lines. The first step is morality. At this point Christianity presents itself as a new law; and its morality is a baptized Stoicism. The second step is knowledge. Here Christianity takes up into itself the older Greek idea of salvation by wisdom. The third step is that in which the soul goes beyond morality, and even beyond knowledge, and makes its transition from things earthly in an ecstasy. In this procedure two points of contrast with NT Christianity are to be noted. (1) There is no place for faith. The NT knows no other condition of salvation than trust in God. Whatever psychological concomitants it may have, it is a definite conscious act of the human personality in the exercise of its highest powers. A scheme which omits this trustful commitment of the sinner to the sin-bearing and sin-forgiving God is not Christian. (2) The relation of morality to salvation is inverted. Self-purification is, in Christianity, not a stage which is left behind in the final attainment; it is the issue, the consequence, and the test of the Christian salvation. A writer who has been held responsible for mysticism in Christianity declares: 'This is how we may be sure we are in Him: he

¹ On the Incarnation, liv. 3.

² So most eloquently in §§ 4, 5.

who says he remains in Him ought to live as He lived' (1 Jn 2⁶). A practical result of this inversion is seen in the two grades of Christians now recognized within the Church. The one remains in the world, to continue the race and carry on its business. The other devotes itself to the pursuit of salvation by those paths which are shut to ordinary traffic. Greek theology requires the solitary for the successful prosecution of the way of salvation devised by the Greek spirit. He alone can direct his soul, in entire withdrawal from sense, upon the divine, so as to obtain the vision of it and become one with it. And here is a strange, yet inevitable, thing. For the crowning experience the historic Christ and the actual Cross are no longer necessary. They themselves belong to time and sense and matter, and all these things are transcended. Salvation is gained in ecstatic contemplation, and that permits no object to be before it save the Absolute Deity. Unneeded, too, by the expert solitary is the Eucharist itself. Beyond all such things, linked as these are to the external, the soul passes inward and upward, till it is absorbed in God. When we have reached this point, we see that Christianity has lost all distinctiveness as a historical religion. It has ceased to have reference to persons or deeds. Even one unique Person and one atoning deed cease to have interest for it. It is manifest mysticism; and mysticism is identical in all its forms, whether Greek, Hindu, Muslim, or Christian.

V. THE IDEA OF SALVATION IN LATIN THEOLOGY.—The Western Church accorded to the East its special place and function as thinker and interpreter. In the controversies which marked the progress of dogma the West intervened, not as a rival specialist in speculation, but as a calm and just moderator. Chalcedon, though a settlement of Greek controversies, is a product of the Western mind, which is not versed in metaphysical subtleties, but is quite sure of the facts of faith and quite competent to say exactly what it stands for. The Greek conception of God, accordingly, passes over into the West uncriticized and unrevised. It lies behind Latin theology and its descendants and revives even after the Reformation has pointed out a more Biblical and more excellent way of thinking regarding God. That, moreover, which goes with the Greek idea of God—the conception, namely, of a salvation which consists in deification and is attained in ecstasy—remains as the highest grade of religious attainment. However elaborate the dogma, however rigid and detailed the discipline, however magnificent the cultus, the ideal of the finest religious experience remains as the mystic oneness of the soul with God, to which, ultimately, dogma and discipline and cultus are alike secondary and even indifferent. The solitary still stands above and apart from ecclesiastical Christianity and represents the highest type of the religious soul as such.

All this being presupposed and regarded as sacrosanct, Latin theology proceeds to interpret Christianity by means of its own characteristic modes of thought. These are political and social in their nature. If Greek theology was created by Greek philosophy, Latin theology was created by the Roman empire and had for its governing category the Roman imperial idea. While the idea of God, in formal Latin orthodoxy, is the Greek Absolute, taken over without revision, this empty notion is filled with contents derived from the person and authority of the Roman emperor. God is the Emperor of the universe. This is not merely a poetic image; it is a ruling principle in the theology and religion, and consequences logically derived from it are binding upon mind and conscience. God is essentially will. Will takes the

place of being as the deepest element in the idea of God; but it is will regarded as bare sovereignty. No doubt the Emperor of the universe will administer its affairs as the best type of Roman emperor managed his vast dominions, in the highest interests of His subjects; but the chief object of man's regard, as he contemplates God, is the tremendous operative force of His absolute will. If the universe, in one sense, is the sphere of God's imperial sway, in another the Church is His real and proper empire. As within the Roman empire, and there alone, peace and security prevailed, so only in the Church was there possibility of salvation from the evil forces that raged around it and from the unspeakable doom which awaited all beyond its pale. The heart of the empire grew chill at the thought of the barbarians, whose stroke, in those last days, had reached even the imperial city. In like manner the heart of the Christian was moved at the terror of a judgment that would surely befall him but for the sheltering walls of the city of God. His religion was a religion of fear; and salvation was deliverance from the power of Satan here and hereafter. The constitution of the Church, accordingly, becomes of first-rate religious importance. The Founder of the Church, its first great Imperator, could make no mistake. He fixed once for all its mighty ramparts. To touch them is not merely to cherish a wrong opinion, but to strike at the will of God and the very safeguards of salvation. The great security of the Church is the historic episcopate. The Scriptures, the cultus, the sacraments, all stand within the guardianship of the bishop and from him derive their salvation value and their spiritual effectiveness. The souls of men are his peculiar care. He is responsible for them to the great Head of the Church. They, for their part, have but one duty with respect to him, and that is obedience. The emperor has his double hierarchy—State officials from the loftiest to the lowliest, and the priests of the imperial worship duplicating the offices of government. So Christ has His hierarchy—bishops and presbyters, like the priests and Levites in the Jewish Temple, who are at once State officials in the ecclesiastical empire and the only celebrants in the action of Christian worship. Beneath stand the laity submissive and adoring.

Further developments follow inevitably. Salvation depends on obeying the laws of God, as they are administered by the Church. Sin means breach of these laws. Strictly speaking, sin is crime committed against the imperial majesty of heaven. Sin, therefore, like crime, must be punished, while obedience, at least if it reach large proportions, may be rewarded. Penalty and merit are brought into the relations of man to God. A man pays for his disobedience by the penalty he endures. A man's obedience is the price he pays for his security. Ominous phrases begin to be heard, 'satisfacere Deo,' 'placare Deum.' The whole system no doubt—the Church and its penitential discipline—has been brought into existence by the mercy of God. But within the system juridical and forensic principles and methods bear sway. Members of the Church live under a legal administration and have their spiritual state adjudged in terms of crime and penalty, good works and merit. In all this the NT does not come into consideration. Christianity has become the religion of the empire; but still more it has become an imperialism. We are moving throughout in a politico-legal atmosphere. The creator of the ecclesiastical soteriology is the heathen empire. In defence of the Latin theologians and churchmen it may be urged that they could scarcely help themselves.

*With the flood of new proselytes the Church acquired a constituency which could only be dealt with on legal principles: and such principles could be applied only in the way of enjoining

certain observances. That alone could be practically intelligible to the mass. The assumption followed, that when these observances were passively accepted, at least without disbelief or contradiction, they would do their work, would confer and accomplish the Christian salvation. On any other view, what must become of the mass of recognized Christians? The theory which this implied settled on men's minds like a fate. Christ has furnished us with a system of church ordinances which, if reverently complied with, do mysteriously effect salvation.¹

This way of salvation is expounded in Tertullian and Cyprian—the one a great apologist for the faith, the other a martyr; yet the scheme itself is not Christian. Gwatkin's blunt verdict on Cyprian exhibits the relation of a Church statesman to the ideas of his day:

'Saint he is, and martyr; and the Christian Church is justly proud of him; yet his general conception of religion is much more heathen than Christian. There is no sign that he ever troubled himself to think out the ideas on which it depends. Like a practical man, he takes them from the air about him, and assumes them to be not only true but self-evident, and concerns himself only with their practical applications.'²

In Latin theology proper, forensic forms are confined to the application of salvation to the souls that need it. The provision of salvation is not yet brought under these forms. The ominous *satisfactio* is not applied to the work of Christ either by Tertullian or by Cyprian. This extension of the idea, however, lies close at hand; and, when Latin theology merges into mediæval, this borrowed conception will begin its career as the key to the work of Christ.

Latin theology is systematized by St. Augustine, whose magnificence none will dispute; though, if we may adopt the expression of a much-tried Scottish king, employed by him in another connexion, he has been 'a sair sanct' to the Christian Church, whether Protestant or Catholic.

In Augustine's thought we have the blending of four great influences: (i.) a deep Pauline experience, (ii.) an experimental acquaintance with the truths of Scripture, (iii.) the dominance of Neo-Platonism, (iv.) the authority of the Church. It may be predicted that a system built up under this fourfold control will be suggestive rather than satisfying and will give rise to divergent streams of thought and life. From Augustine's experience and his sympathetic reading of Paulinism there have flowed evangelical experience and evangelical theology. The appeal to experience and the grounding of salvation in the love of God may well go back to Augustine, as Augustine went back to St. Paul, and St. Paul went back to the Cross of Christ. But, when Christian experience is interpreted both through Greek dualism and through Roman imperialism, we may be certain that its characteristic features will be distorted out of knowledge.

1. The idea of God.—The idea of God takes on the qualities of its double origin: God is the Greek Absolute and the Roman Will, in either aspect, beyond the reach of man's knowledge. God is the only real. Things that exist do so only by 'participation' in the divine nature. Reality is not in time and space. History is not real development; it is simply the translation into time of the immutable will of God. The Augustinian 'predestination' is simply the Greek affirmation of the transcendence of God, brought *ab extra*, and imposed on Christian experience. The conviction of the NT believer that salvation does not depend on human initiative, but on the everlasting mercy, belongs to a totally different region of thought and cannot properly be interpreted through a Greek category.

2. The idea of sin.—Sin is explained on the old lines that go back to Plato and were ineradicable in Greek thought. Augustine was keenly aware

of the guilt of sin; but his experience and the whole bent of his disposition led him to view it mainly in the aspect of disease, defilement, and moral impotency, to connect it with the body, and to lay enormous emphasis on carnality. His agony as a sinner was that he could not sever the bonds that held him, till he 'put on the Lord Jesus Christ.' Salvation was emancipation, and is interpreted chiefly as power. His problem as a man, a pastor, and a theologian is, How shall the slave of sin be set free and brought into a freedom which consists in identity with the will of God? It is because an exercised Christian knows this true liberty of the soul that Augustine defeated Pelagius; and it is because the semi-heathen knows nothing of it that Semi-Pelagianism is the working creed of a half-Christian Christendom. Yet the problem, as Augustine put it, is not stated in its real depth, and his solution is marred by intellectual puzzles.

3. The idea of the Church.—The Church confronts the soul that knows by bitter experience the helplessness of its will-power and the incapacity of its intellectual faculty. Augustine is recapitulating in his own mind the history of Greek philosophy. By the logic of Greek thought, reason is incapable of reaching God and so solving the problems of life and mind. The situation thus created demands an extra-rational authority, which shall meet the mind in its impotency, lift it into participation in the divine nature, and imbue it with divine power. This authority presented itself to Augustine and to the Latin mind in the guise of the Church, Catholic and Roman. It is the authority of God. Nothing has rights over man that is not in the hands of the Church. The gospel itself meets man with the *imprimatur* of the Church; and all redeeming and emancipating powers reach the soul through the channel of the Church's ordinances. Such a conception may be magnificent, but it is simply Roman imperialism, adapted to a use for which it is utterly unfitted and made the key to the salvation of man. It contains, too, an inconsistency with which the common man did not need to concern himself, viz. between predestination and the idea of the Church as the sphere and instrument of salvation. Augustine himself made various attempts, by distinction of the Church invisible and the Church visible and by referring all the elect to the membership of the Church, to overcome a difficulty which is really on the premisses insurmountable. Predestination and the saving power and absolute authority of the Church cannot be combined. Protestants had perfect logical right to use the one to destroy the other. In practice, however, the Church remains in the imperial position which Augustine gave it, for all who come to it with his *a priori* presuppositions.

4. The idea of salvation.—The way of salvation, as Augustine defined it, is plain and will be easy or hard in proportion to the seriousness and sincerity of the traveller. The principal points to be considered by him who would understand this matter of salvation are:

(a) *The idea of grace.*—This is conceived, in Greek fashion, as a divine substance or energy coming from above, descending into human nature, and working there as omnipotence in the sphere of things finite. Grace, in short, is a thing, and not a person—a thing almighty and mysterious, but still impersonal, as things are in distinction from forces personal and historic. Augustine is using a philosophical abstraction to cover the phenomena of a spiritual experience; and, in so doing, he has done all in his power to destroy it. As soon as grace is isolated in thought and regard from the historic Redeemer, the nerve of the

¹ R. Bainy, *The Ancient Catholic Church*, Edinburgh, 1902, p. 521.

² *Knowledge of God*, II. 167.

Christian salvation has been cut. After that we may get an intense religious experience, bearing fruit of its own, but it will have its roots outside the NT, and its real parallel will be found in non-Christian religions.

(b) *The sacraments.*—These are taken over from Greek theology, as Greek theology took them from the mystery-religions. They are the vehicles by which the divine vivifying substance reaches the dead soul. Theologians will discuss afterwards with endless subtleties the relations between this substance and the Eucharistic elements. No ordinary man need occupy himself with these scholastic disputes. The mystic fact remains that he gets that substance, with its divine energy, into his lips and somehow into his soul. The whole transaction is at once physical and suprarational and impersonal.

(c) *Faith.*—The nature and function of faith are defined by the relation of the soul to the Church. The Church is the object with which the soul has primarily to concern itself. The redeeming powers which will effect its salvation are administered by the Church. What the soul has to do, therefore, is to commit itself to the Church. This act of self-committal is faith. Self-commitment is, indeed, the very essence of faith, as described in the NT. But in the NT the object of faith is the personal Saviour. In Latin theology it is the Church.

(d) *Love.*—When faith attaches itself to the Church and devoutly employs the sacraments, grace is infused into the soul, the process being understood under the analogy of the healing art. That thing, salvation or energy, called grace is imbibed and passes into the system with healing and renewing powers. The sum and substance of these powers is love. What faith does in the NT love does in Latin theology. It is the medicament of the soul. In the strength of it the impotent man can arise, take up his bed, and walk. Nerveless before, he can now do works acceptable to God, which may properly be rewarded by the divine justice and crowned with the gift of salvation. Here is legalism to all intents and purposes. True, grace comes from without and gives power, revived from time to time in the sacraments. But the scheme itself is distinctly unevangelical and amounts to salvation by merit.

(e) *Mysticism.*—After all, legalism is only a stage, which suffices indeed for those who are in the world and must remain there. Their salvation is looked after by the Church. Experts, however, like Augustine and Monica, may go much farther. It is strange that the Christian salvation, as Augustine outlined it, was the introduction to an experience which is taken over from the religious philosophy which was Christianity's most powerful rival. The highest reach of religion is not attained by faith, and is even ultimately independent of the sacraments. It is taken in the final step, by which the soul abandons all earthly things, and even its own characteristic powers and exercises, and is taken out of itself in rapture. Quoting the great passage in which Augustine describes his last conversation with his mother, Edward Caird comments:

'How deeply Neo-Platonism must have sunk into the spirit of St. Augustine, when, in describing the highest moments of his religious experience, he adopts almost verbally the language in which Plotinus tries to depict the mystic ecstasy of the individual soul, as it enters into communion with the soul of the world!'

It would appear, then, that there are just two religions, properly so called, in the world. The one is mysticism, and the other is NT Christianity. The one offers a salvation which consists in mystic communion with the Absolute—salvation

by ecstasy. The other offers a salvation which consists in reconciliation to the living God and in a life of ethical harmony with Him in His character and redeeming purpose towards mankind—salvation by faith. Augustine presents the strange spectacle of a man who seeks to follow both religions and enjoy both salvations. The attempt is necessarily a failure. Evangelical faith has to be debased into legalism before the expert is free to enjoy his mystic blessedness. The common man is condemned to the one, that the religious specialist may concentrate on the other. The lamentable result is that Christianity, which was meant to reconcile men to God and to reconstitute humanity as a living organism, becomes the parent of endless dualism—the Church and the world, clergy and laity, secular clergy and the monks and solitaries. Instead of a salvation that is at once possession and inheritance, gift and task, there is presented a salvation from which the vast bulk of mankind is for ever excluded, to which those only can attain who isolate themselves from the very life which the divine purpose of mercy designed to redeem, regenerate, and restore.

From the point of view alike of mysticism and of predestination, there was no real need for a historic deed of atonement as the ground of salvation; and Augustine has not concentrated his mind on the work of Christ for men as he has upon the operations of divine grace in man. The exigencies of the Pelagian controversy absorbed his energies. Yet, as a sincerely Christian mind, he adoringly recognized Christ as the Mediator, and attributed saving power to what He did. His deepest thought here is the humility of Christ, in which the love of God seeks to subdue to itself the pride of man. But his attempts at a theory are vague and wavering. He accepts the impossible idea that the Devil had rights over fallen men. These rights the Devil forfeited when he killed Christ. So those who believe in Christ are freed from the power of the Devil, for over Christ the Devil had no right. Along with this he treats the death of Christ forensically and attributes to it penal significance, but, like Tertullian, without constructing a 'satisfaction' theory. As an inheritor of Greek theology, he also retains the idea of the Word sharing our mortality, that we may be made to share in His divinity. Along these lines, however, his constructive thought does not travel. The way to a view of divine action in the redemption of man is blocked by his ruling ideas of predestination and miraculous grace; and these are due to the strain of Neo-Platonism which enters so deeply into his thought.¹

VI. *THE IDEA OF SALVATION IN THE MEDIEVAL CHURCH.*—The interest belonging to that great stretch of European history from Gregory I. to the close of the 15th cent. can never be exaggerated or exhausted. Nations are being born with much travail. Vast experiments in political organization and social structure are being made at enormous cost of life and suffering. The human mind is being aroused out of decadence, or awakened out of unconsciousness, and prepared for undreamed-of enterprises. The destiny of the human race is being determined amid a welter of controversy and battle, the participants in which know not the aim and guess not the issue of the conflict.

The clue, however, to these multitudinous and confused happenings is, as ever in the history of the human spirit, a religious need, together with its doctrinal expression. 'Dogmatically expressed,' says Harnack, as the story draws to its completion, 'there was a seeking for a sure doctrine of salva-

tion.¹ The records of this quest cover the whole period, and the details are innumerable. The stages or aspects of it may be classed as three: (1) the function of the Church, (2) the problem of the work of Christ, and (3) the protest of mysticism.

1. The function of the Church.—This is twofold, in part political and in part specifically religious, though, in its political aspirations, it was striving to reach avowedly religious ends. (a) In the first place, then, the Church succeeded to the place and work of the Roman empire. The empire had been, in a very real sense, the saviour of the world. It was the barrier behind which human life could be carried on, secure from threatening destruction at the hands of barbarism and anarchy. Its splendour, its wealth, its power, its venerable age, gave the impression of superhuman dignity and seemed to be the operation in the material world of the sovereignty of God Himself. When it began to decay, men were stricken with fear. Its impending doom hung over their souls. This doom was delayed in the East for many centuries by the founding of New Rome. Because the Eastern empire stood, there was no room or need for the Church to take its place and assume its functions. The Church was confined to its hierurgical functions, and Christianity remained no more than a mystery-religion. The State, accordingly, remained supreme over the Church—a position which it maintained in Eastern Europe till the fall of the Russian autocracy set the Church at liberty; and the problem is yet unsolved as to how it will use its unaccustomed freedom. The situation in the West was very different. The empire was manifestly passing away. The later emperors did not live in Rome. Finally, even the shadow of the Western empire passed away. Nominally, the civilized world had but one head, the emperor who lived in Constantine's capital. Really, the Western world was without political unity and had no central authority. In those centuries when the empire was on its death-bed, its prestige and power began to pass to the Church. Its spirit was born again in the Church. The key to the course of European history from Gregory the Great (pope 590-604) to the dawn of the Reformation is the doctrine of the Church. In the NT the Church is a spiritual fellowship of believers with their Lord and with one another. The Church of those long and terrible centuries is a political organization framed on the model of the banished empire, controlling men by a legal system, administered by a highly centralized government. The task before it was one of appalling magnitude. On the one hand, it had to preserve whatever was of permanent value in the culture of the ancient world, while penetrating it with new ethical and religious ideas. On the other hand, it had to face the barbarian menace, to subdue those untutored races which were breaking through the crumbling walls of empire, and make them subjects of a supreme Holy Will, which might restrain their passions and renew their natures. It was, in fact, the missionary task of every age. If we can imagine India, the seat of an immemorial civilization, ringed round with savage forces threatening its destruction—an India without any British rule to hold back the enemy beyond the frontiers and to keep the peace within them—and can picture what the work of the Christian Church would be in such circumstances, we have some conception of the situation of the Church in Western Europe when the sceptre had dropped from the nerveless hands of the last Roman emperor.

Now, if the spirit of the first missionary to Europe had shaped the missionary policy of the Church at this time, it is certain that the Church

would not have adopted the method of political supremacy, but would have trusted to that power of the gospel of Christ on which St. Paul relied absolutely. But St. Paul's method of evangelism had long been forgotten. Externalism had had an increasing vogue for centuries. The Church had gone to school to the empire and had learned the imperial style. No other method was thought of than to oppose force to force—the force of Roman authority to barbarian force of terror and destruction. The only possible policy was supposed to be that of gathering the world under the dominion of Rome, binding the yoke of law more securely than ever upon Rome's old subjects, and riveting it on the new races that were occupying her domain and holding all alike for ever in bondage and tutelage. There is nothing ignoble about this dream of conquest and subjugation. The dreamers of it were among the greatest of men, noble in their devotion to an end which was power, but not selfish aggrandizement. Two remarks, however, are historically justified.

(1) This conception of the salvation of mankind differs absolutely from that set forth in the NT: in the NT salvation by faith; in the mediæval Church salvation by political domination and legal discipline; in the NT a salvation that operates from within by love and hope; in the mediæval Church a salvation that acts from without by force and terror. The one is the outcome of a long religious growth in which redemption is accomplished by a God so close at hand that He can be man and bear human burdens and gather humanity to Himself in a living fellowship, of which He is the inspiration, the energy, and the unifying principle. The other has its roots in Greek dualism and Roman imperialism and is effected by a God afar off, governing, controlling, subduing through the might of the pope, His earthly representative. We can see, by considering the course of events and the influences at work, how the one type came to be substituted for the other; but we are not warranted in concluding that the one evolves out of the other by an inherent logic, or that the mediæval Church is what Christianity was bound to become as it grew out of its NT germ.

(ii) The dream was never quite realized, and the hour of the Church's greatest triumph preceded its final downfall. From the beginning the Church realized the need of a secular instrument in dealing with the brute forces which had to be met and coerced. Accordingly, she called into existence a secular empire, to be the counterpart, on a lower level of spiritual value, of her own imperial constitution. The empire of the universe was to be governed by a world-priest and a world-king, each holding office and exercising authority under God, the unseen Emperor. Ideally, these two authorities ought to have operated in harmony. Practically, they never did. The true genius of the Church required its absolute supremacy, the secular State, even though nominally holy and imperial, being no more than the instrument to carry out the divine sovereign Will of whose behests the Church was the depository and revealer. Such a position the empire declined to take. The Middle Ages were filled with the strife of empire and papacy. In the end victory lay with neither. The empire was destroyed by the greater skill of its papal enemies. The Church lost its imperial position in less than a century after its most violent, and even grotesque, expression—if we may credit the story of Boniface VIII. with his brandished sword and his exultant cry, 'I am Cæsar, I am Emperor.' The rising spirit of nationality would not permit absolutism, whether imperial or papal. The Church had preserved much of the past. It had formed the beginning of a new world. But it had not saved Europe, and it had destroyed itself. The failure of the Church, in its political and social endeavour, is to be traced to its radical misapprehension of the religious need of man. On presuppositions of dualism, religious and philosophical, nothing better, probably, could have been devised than the papal system. The Middle Ages are proof, on a large scale, of the inaccuracy of the diagnosis and of the failure of the remedy.

(b) In the second place, the Church assumed the function of mediator of salvation to the individual soul. The way of salvation, as marked out by the mediæval Church, presents the curious spectacle of contact with NT ideas together with complete inversion of them. The NT Church is the communion of saints, i.e. the fellowship of believers, the individual being taken by his relation to Christ out of his isolation and made a member of a living organism, in which he finds his place and work, and is disciplined, trained, and helped in knowledge and virtue. The mediæval Church is an institute of salvation, by whose machinery heathen men are made Christians, and sinners are enabled to escape eternal punishment, and even, in rare cases, to

attain saintship. It stands, in its divinely imparted powers and its divinely designed mechanism, apart from and above the individual and proceeds to operate upon him with a view to his salvation. The NT Church summons men to yield themselves to Christ. The mediæval Church summons men to yield themselves to its authority. It incorporates them in its organization, supplies them with divine grace, and legislates for them as they proceed to work out their salvation.

'In the mediæval Church, the individual, *qua* individual, had little or no place. His salvation was conditioned from first to last by his belonging to a corporation, in whose privileges and functions he shared, through whose sacraments his life was nourished; by whose graduated hierarchy, though but the meanest servant of the Church, he was linked to the supreme Head; whose saints shielded him by their "merits," or helped him by their intercession. Through this corporation alone was he brought into touch with his Saviour. Outside the corporation his soul was lost.'¹

In this mediæval conception of salvation there is the practical and exquisitely skilful application of ideas which have occupied theologians from the days of Neo-Platonism, and of theories which have prevailed since Latin theology was constructed by Roman lawyers. The Church is the old Neo-Platonic 'bridge' over which the soul passes to the Absolute. The mediæval Christian knows nothing of immediate access to God. He is confronted at every turn by the Church, the mediator. All divine influences, regenerative, educative, directive, come through the medium of the Church, with whom alone the ordinary Christian has ever directly to do. Grace is not, as in the NT, a saving, operative, love of God to sinners, but a substance, as Augustine conceived it, capable of being communicated after the analogy of food or medicine, with physical and hyperphysical results of a magical kind. With such presuppositions, the process of salvation is elaborate, but quite intelligible and workable.

(i.) Grace is infused into the soul in the sacrament of baptism and the Eucharist. In the one, life is communicated, first of all, to a soul conceived of as dead. In the other, renewed communications of life are made from time to time. Properly speaking, the celebration of Mass should be accompanied by communion. But mysticism with its own logic intervenes to make non-communicating attendance a means of grace. The mystery becomes one for eye and ear, for æsthetic emotion and rapt adoring contemplation, and in this the union of soul with the divine is effected. Still the Eucharist holds its own as the peculiar medium through which the divine life is maintained in the believer; the dead soul, being now quickened with divine energy, is able to perform good works. These are meritorious in the sight of God, and by their practice the sinner is transformed into a righteous person. This progressive sanctification is crowned by justification. The way of salvation stretches before the mediæval Christian, arduous indeed and indefinitely prolonged, but plainly in view. Legal directions are abundant. A priestly director is always available. This way, accordingly, has strong attractions for pure and earnest souls who keenly desire the blessedness of union with God, are deeply aware of their ignorance and weakness, and are glad to pay the price of a humbled reason and a surrendered will. The difficulty lay in the nature of the authority to which the soul was required to bow. It was an external authority, and the method of salvation was legal and even commercial. It might well happen, therefore, to an earnest and determined spirit, as to Paul in earlier days and to Luther in the following age, that despair should settle down in darkness, unless a more excellent way were found. That way had been forgotten by the theologians of the Church. As far as mediævalism was concerned, the only alternative to legalism was mysticism—the way that plunges over a precipice into the depths of the unknown divine.

(ii.) Grace, when it becomes exhausted through human weakness and error, has to be restored. The loss of grace is an ever recurring fact. Machinery for its recovery is a pressing need. This need was met in the sacrament of penance (*q.v.*), which, for obvious reasons, becomes of prime importance in this institute of salvation, and, in fact, is practically the salvation itself for all ordinary believers. Suppose, then, that a soul has fallen into mortal sin, and so has lost the grace infused into it at baptism or Eucharist, what must be done that the loss may be recovered? First, there must be sorrow of heart, preferably *contritio*, though *attritio* with certain conditions appended might suffice; then confession to the priest, guided by interrogatories, in which psychological skill, gained by long dealing with the secrets of human nature, aids the halting self-knowledge of the penitent; then the priestly absolution, wiping

off the guilt of sin and delivering the soul from eternal damnation; next, the 'satisfaction' (*q.v.*), or the task imposed by the priest, whereby the justice of God, pursuing sin with temporal punishments in this world or the next, is 'satisfied.' By absolution, granted in view of the satisfactions which are to follow, the soul is returned to a spiritual condition which makes it fit for further infusion of grace, and the interrupted course is resumed—grace, good works, merit, justification.

A serious complication is introduced into the scheme by the granting of 'indulgences' (*q.v.*). These are the remission of the temporal punishments by authority of the pope, to whom is committed the wondrous treasury of the merits of the saints. This addition to the scheme was necessary to make it tolerable. Indulgences express the pitiful heart of the Church, refraining from legal exaction and devising means whereby God's banished ones may be restored to Him. At the same time, an indulgence, in the midst of legalism, is fraught with moral peril; and of this the practice of indulgences in the last years of the 15th cent. contains ample illustration. The mistake did not lie in the intention of the Church, but in the invincible dualism which externalized all the relations of God and man and in the end made salvation a compromise between justice and mercy.

As the centuries rolled on, the limitations of the mediæval Church became more and more evident. Profound dissatisfaction and wide-spread unrest characterized the religious life of the closing period of the Middle Ages. But deeper than discontent with the incidental features of the ecclesiastical system was the demand for a revision of the theological presuppositions on which that system rested and for a reversion to the primal redemptive forces in the might of which Christianity from its birth-hour had gone forth conquering and to conquer.

2. The doctrine of the work of Christ. — Doctrine always follows experience, reacting upon it and giving it a stereotyped form. The mediæval doctrine of salvation, accordingly, is the mediæval practice rationalized, illuminated, and fixed.

The idea of God which governs mediæval soteriology is that philosophical abstraction of being or substance, blent with the idea of political absolutism, which we have seen at work in Latin theology. The one element is Greek—the unconditional and transcendent nature of God. The other is Roman—the will of an absolute monarch. A God of this character stands outside of His world, which is entirely dependent upon Him, while its coming into existence at all remains inexplicable. Its relation to Him, at any point of its career, is that of an empire to a distant, inscrutable, and almighty prince. In His regulation of the affairs of His dominion God is governed by no other considerations than His own absolute will. This He utters in the form of law, and the maintenance of law He delegates to designated ministers—*i.e.* the hierarchy of the Church—whom He suitably endows and equips for the unique responsibility.

Breaches of law are crimes. To meet the case of those who are guilty of breach of law but who are nevertheless the objects of the inscrutable election of the divine mercy, the penitential discipline of the Church has been divinely instituted. In the 'satisfactions' rendered by the penitent law is upheld and the conscience is awakened to a reverential sense of its demands. At the same time, this is procedure merely. It is a dealing with individuals only, and is, so to speak, empirical, and not absolute or final. Upon what does the penitential discipline rest? It must be warranted by, and be an application of, the divine dealing with the whole empire of God. That storehouse of merit, upon which the sinner ultimately depends for forgiveness and sanctification, cannot be left liable to depletion. It must be secure and inexhaustible. There must be an absolute and final vindication of the divine law and the divine honour by which God's government of the universe can be made inviolable and His preferential dealings with individuals be ratified. God, it was plain, must intervene in the history of His world so as once for all to exhibit the supremacy of His law, the unassailable dignity of His name. What

¹ Workman, *Christian Thought to the Reformation*, p. 190.

is that act which possesses such momentous import? Experimental faith had always fastened on the death of Christ. Tradition enshrined the Passion of the Redeemer in the central articles of the Creed. Once the question, therefore, was raised as to the validity of the Church's procedure in granting absolution to sinners, it could be answered only in one way: The Cross is the act which vindicates the divine law and honour and validates the Church's procedure. The awakening mind of man, however, as it seeks to make faith conscious and clear, is not content with the bare fact. It presses for a theory. What gives the Cross of Christ this amazing significance? The difference between this question and that which was the central problem of Greek theology has to be carefully noted. The Greek question is: How shall man, corrupt and dying, be united to, and made participant in, the divine nature, and so be 'deified'? The question which Latin thought made inevitable, and which now in mediæval theology was asked in the most searching form, was this: How shall man, a convicted criminal, escape the doom which follows inevitably upon transgression in the court of divine inexorable justice? Putting the matter broadly, Vernon Bartlet and Carlyle say of the Latin temper:

'Its typical product was not metaphysics but jurisprudence; and it was from this standpoint that man's relations even to God were regarded.'¹

And these writers proceed to illustrate by quotation from Sir Henry Maine:

'Almost anybody who has knowledge enough of Roman law to appreciate the Roman penal system, the Roman theory of the obligations established by Contract or Delict, the Roman view of Debts and of the modes of incurring, extinguishing, and transmuted them, the Roman notion of the continuance of individual existence by Universal Succession, may be trusted to say whence arose the frame of mind to which the problems of Western theology proved so congenial, whence came the phraseology in which these problems were stated, and whence the description of reasoning employed in their solution.'

With special reference to the problem of salvation, the required form lies close at hand. For offences against law there must be satisfaction. The wrong-doer must make amends. This, however, in the nature of the case is impossible. Man is finite; but his offence is infinite, for it has been committed against an infinite Being. Infinite, therefore, must be the satisfaction. The need of satisfaction is met in the person and work of Christ. He is divine, and therefore His work has the required note of infinitude. He is human, and therefore His work can be viewed as rendered to God by man. His redemptive work is His death—a deed of superabounding merit; and this, since the Son has no need of it for His own purposes, is available for those whose own merits so sorely need to be supplemented. The issue of this abounding satisfaction is twofold: Godward, it makes ample amends to the divine honour—the Lord of the whole earth has made His Name to be had in reverence of all His creatures; manward, it supplies what is needed to enable the sinner, impotent in himself, to do good works, to obtain the reward of merit, and to become progressively sanctified and in the end justified. The death of Christ creates the treasury of grace and fills it with an inexhaustible supply of merit. Grace is a transferable quantity, which God employs for the benefit of His elect. By means of it He first starts them on the way to sanctification, in the sacrament of baptism; and then from time to time, in the sacrament of penance, He replenishes this store. Thus does the theory of satisfaction, as applied to the work of Christ, arise from and return to the praxis, as observed in the Church. The one interprets the other. The mediæval mind found in the satisfaction theory the very mirror of itself, a Christianity

intelligible to it, because it was simply the universal practice of piety, expressed in terms of thought. Precisely at this point, however, a danger threatened the theory and indeed ultimately dissolved it. Reason has undertaken to give a rationale of the work of Christ. But what are the rights of reason? It may be the handmaid of faith, or the equivalent of faith, or a power independent of faith; and, if reason be ever pitted against faith, the human spirit will be divided within itself. This is, historically, the course of scholasticism as a whole and of the satisfaction theory in particular.¹ In Anselm the satisfaction is a necessity flowing from the relation of God to the world. In Aquinas it is a method, not strictly necessary, but the most suitable for the end in view. In Duns Scotus it is grounded only in the absolute will of the Supreme Being; and the death of Christ has just the value which God chooses to put upon it. The defects of the mediæval satisfaction theory are obvious. They all flow from the non-Christian idea of God which mediæval thinkers took over from Greek thought. Mediæval thought is penetrated by dualism and is congenitally incapable of yielding an adequate interpretation of Christian experience. Its God is the Absolute and cannot act within His world. He must have a delegate. What is achieved by this Other is presented to Him, and He enjoys the satisfaction rendered to Him. He is shut out of the sacrifice He demands. Its Christ is monophysite; and incarnation is so delimited as to be made unreal. Christ is just human enough to be able to die. The sole point of interest is His death, the death of an infinite Being, from which His life falls apart, neither giving value to the death nor receiving significance from it. This whole drama of divine redemption goes on apart from humanity. It is set in operation at the Cross and is maintained in action by the Church. The Church is the proximate object of the sinner's regard. With Christ he has nothing directly to do. Faith is directed to the Church; it is assent to an outward authority conceived as the delegated authority of God; it is not a direct relation of the soul to the Saviour. The Christian life, accordingly, is treated legally. Forgiveness is not the *prius* and the motive of the believer's experience, but its difficult and precarious goal. Union to Christ is sacramental and occasional, not abiding as inward spring and energy. It belongs only to the higher substance of which man is composed and can be reached only when the dualism of matter and form has been conquered by the suppression of the one and the sole survival of the other. So closely are mediæval piety and mediæval theology bound up with a philosophy which was radically alien to the spirit of Christianity.

The satisfaction theory did not pass unquestioned even in the Middle Ages. Abelard has been much praised and also severely blamed for rejecting it and substituting for it a 'subjective' or 'moral influence' theory. He has been regarded as far in advance of his time. When all is said, however, he remains mediæval still. He has not critically revised the idea of God, which remains still involved in the dualism in which Aristotle, as well as Plato, left it. His God is still transcendent. It is true that Abelard reacts strongly against the idea of law. Over against law he sets love. But the function of love is simply the function of law with respect to the world. It is a device to secure the submission of men. The satisfaction theory keeps the world going by means of a legal discipline. For the legal discipline Abelard substitutes the exhibition of the divine love. An appeal is made to the tenderest emotions of the human

¹ Christianity in History, p. 420.

¹ See art. SATISFACTION, SCHOLASTICISM

heart. That appeal reaches its utmost poignancy in the Cross. There is no reason to doubt the sincerity of Abelard's personal response to the love of which he discourses so movingly. At the same time, he is still within the sphere of mediæval praxis and mediæval piety. The merit of Christ—*i.e.* the love manifest in His death—stimulates human action and makes possible merit of the same sort. Yet, of course, such merit is never sufficient and has to be supplemented by the intercessions of the Redeemer. In truth, so long as the idea of God remains where Greek thought had placed it, the theological account of redemption must remain arbitrary and unreal.

3. The protest of mysticism.—The term 'mysticism,' commonly employed to denote any religious experience which is very intense and emotional and cannot be formulated in intellectual utterance, properly implies a dualistic metaphysic—the effort to reach a unity which shall rise high above both the elements which have been set in mutual contrast.

'God, for the Mystic, is the One who is presupposed in all, God as God, as the unity above the difference of subject and object, to which everything is related and which itself is related to nothing . . . for Mysticism, the negative so decisively preponderates over the positive relation, that God and the world cannot be included in one thought.'¹

The religion based on this philosophy gained classical expression in Plotinus and entered, essentially unchanged, into Christianity. It governed the theology of the Church. When, accordingly, we observe the phenomenon of mysticism arising in the Middle Ages, we are not to imagine that it is a protest against the piety of the mediæval Church. It is that piety in its purest form. Every mediæval Christian has before him the mystic experience of a union of substance with the divine—a union which he can never effect by any effort except the effort which is the cessation of all action; an experience which is supra-rational and supra-ethical, ineffable and incommunicable. The experience belongs to an inner region, where the soul, withdrawing from all finite things, matter, the world, the Church, and its own separate existence, finds God and is content. A mystic is out of place in any religious communion which does not ground its theology in the Neo-Platonic idea of God. Yet even that communion is not his resting-place. He will be in it and use its sacramental system. But his goal is beyond the Church and its institutions.

The mediæval Church, however, was Latin as well as Greek. If its goal is a mystical salvation, it had a legal discipline to serve as a stage on the way. The exigencies of life compelled the ordinary type of believer to remain the slave of an external system. The Church, too, was bound to keep the vast majority of its subjects in this servile condition. If every soul was a solitary, how could the Church rule the world? The Church, therefore, as the institute of salvation in the midst of a lawless world, was bound to be a legal system, holding down the individual by constraint of an external authority. But such suppression of the individual is, in essence, profoundly irreligious, for it surrenders the idea of bringing the ordinary man into immediate relation to God. The protest against externalism is mysticism, which is 'religion in its most concentrated and exclusive form . . . that attitude of the mind in which all other relations are swallowed up in the relation of the soul to God.'² The mediæval Church, accordingly, held within itself, side by side, legalism and mysticism—both alike the products of a non-Christian conception of God. The mediæval theologian's philosophical presuppositions rendered him helpless.

² *Ib.* p. 210.

VII. THE IDEA OF SALVATION IN THE THEOLOGY OF THE REFORMATION AND IN SUBSEQUENT THOUGHT.—Scholasticism reached the height of its power in Scotism, and thence began its long decline. The history of four centuries of Christian life and thought is filled with one long endeavour to remove the static Absolute from its supremacy in philosophy and theology and to find some conception of God more adequate to the realities of religious experience. The details of this history are multitudinous. The main line, however, can be followed plainly enough; and the great epochs stand out clearly. They may be named and briefly characterized in their relation to central Christian experience as follows.

1. The return to experience.—While mediæval dualism was subjecting all human interests to the control of an absolute authority, which was held to express the sovereignty of God, these interests themselves were growing in value and were demanding a more ample recognition and satisfaction. In every department of human life and action the feature of a confident and exulting appeal to experience is most marked. Nature stands out in its endless wonder and charm, with promise of amazing rewards to all who will diligently seek them. Eager explorers give the world to humanity as the sphere of action and achievement, wherein the mind of man may grow to its maturity. Human history thrills with interest, as it records the attainments and the triumphs as well as the agonies and tragedies of real men. Nations become conscious of themselves, not as pupils of Church and Empire, but as independent personalities with careers of their own. Above all and deeper than all, the human spirit seeks to break through forms which were ostensibly means of access to God, but had proved to be barriers. Formally, the movement we know as the Reformation (*q.v.*) was an effort to purge the Church of abuses, clear away its mythology, and rectify certain points in its theology. Really, it was something other, and more, than an intellectual, or even an ethical, demand. It was a quest for reality, and the direction of this quest was towards the New Testament. In essence the Reformation was a revival of that primitive Christianity which had, indeed, never wholly faded from the Christian consciousness. Along with the piety whose roots lay in the old mystery-religions there had come down through the ages a religion whose gospel was the Gospels, whose salvation was the historic Christ, the living Lord, whose creed centred in the redemptive facts of His life, death, and resurrection, whose piety was an immediate access to Him and an endeavour to be like Him.

When absolutism, ecclesiastical and dogmatic, proved untenable, this religion became aware of itself, found human voices in which to utter its message, and stood forth out of the wreckage of the past as essential Christianity, changeless as the unchanging love of God. Such a religion reaches back to ultimate unities of history and of experience which no dualistic logic can express. The Christianity of the NT, long overlaid by dualism, is a synthesis of elements that are intelligible only when grasped in their interrelations. Its note is always unity, the unity of life. Salvation comes to the individual when he finds himself in this unity, not absorbed or lost or suppressed, but lifted out of a false separation, and so, for the first time, justified in his individuality and guaranteed in the fullness of his personality. This salvation is seen in Christ. We find God in Christ. Christ is the incarnate love of God. He is the divine forgiveness, operating in the completeness of God's moral character amid the conditions of human sin and misery. He is this because of what He actually

was, and did, and suffered. Yet His existence and His power are not limited to a few years of time. He meets men always at the point where their need of God is deepest. Christianity is the historic Christ, but the historic Christ is timeless. The salvation thus presented in Christ is possessed in faith. What faith meant in Christian experience could not be understood by a theology governed by Greek and Latin presuppositions. In such a theology faith was only a preliminary step to a salvation carried on by a legal procedure and issuing finally in the beatific vision. But faith, as it deals with the personal Redeemer, is an action neither mainly intellectual, as in assent, nor emotional, as in ecstasy. It is the action in which a soul, in full self-consciousness with sober self-judgment, commits itself trustfully to the everlasting mercy, conveyed in the person and work of Christ. It is the act in which a soul passes from self-assertion to self-realization, through surrender to, and identification with, the love which, in the life and death of Jesus, authenticates itself as divine redemptive efficacy. No activity of the human spirit could be more unlike surrender to a system or ecstatic plunge into a sea of being. It has no affinities with Roman legalism or Neo-Platonic mysticism. It implies a historic revelation and a personal relation to God. It permits no machinery of mediation and has no use for either hierarchy or hierarchy. In it the soul has immediate access to the Son of God and in Him finds the Father. This experience is the direct gift of God in Christ and confers on men that priestly privilege which non-Christian religions, and the mediæval Church after them, had confined to a special and narrow caste. Without any apparatus of mysticism, the exercise of faith carries with it the blessing which is the eternal quest of the human spirit—union to God; and that not as an impossible blending of substances, but as a relationship in which the man who gives himself to God gains fullness of personal life, while he draws increasing wealth of knowledge and power from the communications of the divine Word and Spirit. Faith is generically distinct from passivity. It is an energy of the soul. It is the whole energy of the soul in the moral sphere, needing no supplement to make it a condition in man of the experience of salvation. Faith sets the soul on that moral enterprise whose goal is the accomplishment of the purpose of divine love, revealed and guaranteed in Christ. The relation of faith and works is not a problem for faith. There can be no faith which is not a dynamic issuing in service. There can be no gift of salvation which is not at the same time the summons to a redemptive task.

This salvation is accomplished as a life in the Spirit. Neither Greek mysticism nor Latin legalism had any room for the work of the Spirit. Theology added a *locus* regarding the Spirit, because of a clause in the baptismal formula and because of certain texts which it was impossible to ignore. But the application of dualism to Christianity made the NT idea of the Spirit, with its intensely Hebraic associations, utterly unintelligible. What philosophy ruled out and theology could not interpret Christian experience grasped as the simplest, divinest fact. To believe in Christ is to have the Spirit. The Spirit is not a proposition to be admitted; it is a power to be received and exulted in. In the reception of the Spirit the Christian apprehension of God reaches its deepest religious truth. God, and Christ, and the fellowship of believers are included in an experience of which the indwelling Spirit is the source and power. The Christian life is not lived outside of God, in a region where human effort is occasionally reinforced by infusion of grace. It is not drawn into the

divine Being or Substance, so that a unity is reached by the suppression of man's individuality. It is lived in God as the career of a personality which has a moral function in God's universe and is called on to discharge it with entire consecration, the energy for fulfilment being supplied continually by the immanent Spirit of God. It is a life of intense and growing intimacy with God, in which self-realization becomes complete in proportion as God is discovered to be the source and sum of all moral values and powers.

The NT is full of the boldest synonyms, equivalences, and correspondences, which Greek theology could make nothing of, in which, however, Christian experience finds at once its interpretation and its nourishment. God and Christ; Christ and the Spirit; the Redeemer and the redeemed; the love which is God giving Himself to man, and faith which is man answering the approach of God; forgiveness and the new life; reconciliation and sanctification; salvation and service; salvation, present and to come—all such seeming contrasts, or even contradictions, are held together in the unity of a living experience. From the point of view of any logic known to the ancient world, Christianity was one vast paradox, an absurdity with which it was difficult to deal seriously. When, accordingly, that logic was adopted by the Church as the instrument of its self-expression, the result could not be satisfactory. The incompatibility of that logic with Christianity is registered in Chalcedon, makes Augustine the fountain-head of divergent streams, and turns the mighty structure of mediæval theology into an intolerable burden. The disappointing thing in the theology of the Reformation is that this incompatibility was not discerned, and no effort was made to substitute for the older forms others more adequate. The new life which was moving in the Church of the 16th cent. 'would have required a wholly new theology to match it, but to the production of such a theology the Protestant Church was for the time unequal.'¹

2. The continuity of mediæval forms of thought.—Of the two strands of systematic thought which formed the traditional dogma it may be said, broadly, that in Lutheranism we have the continuation of Greek and Alexandrian theology, while Calvinism continues the line of Latin theology. In Lutheranism we have the mystical union of Christ and the believer, the *communicatio idiomatum* as a theory of Christ's person, the doctrine of the Real Presence in the Eucharist, all conceived in the vein of Greek theology. In Calvinism we have the governing principle of the divine sovereignty, conceived in the style of Roman imperialism. By means of this organizing idea a systematic theology was constructed which appealed to the interest of dogmatic completeness and was able to meet Roman dogma with a dogmatism as finished and masterful. In virtue of this conception also an ecclesiastical polity was devised which carried into the new age the old idea of the Church as an independent and imperial body, representing in spiritual things the supremacy of God, strong to resist aggression and insistent in its claim, not merely to be supported by the State, but to give to the State guidance and rule in all things pertaining to the Kingdom of God.

Lutheranism, with its individualistic and mystical tendencies, made the Church, as in the old Greek empire, subservient to the State, with portentous results in the history of Germany. Calvinism made men and nations strong to resist despotism and created nations whose passion is liberty. The retention by Calvinism, however, of the Latin idea of God made impossible any thorough revision of dogma. In the history of the

¹ Denney, *Christian Doctrine of Reconciliation*, p. 92.

attempt to make mediæval thought serve the purposes of Reformation experience there are three leading phases.

(a) *The 'satisfaction' theory.*—This is intended to solve that central problem of soteriology which Anselm was the first to face explicitly: *Cur Deus homo?* Particularly, why was the Cross necessary or, at least, divinely chosen, to meet the situation created by sin and form the warrant of human salvation in face of the judgments of a holy God and the sentence of an accusing conscience? The category of *satisfactio*, supplied by the old Latin theology and applied by mediæval theology to the work of Christ, is taken over by Calvinism without any sense of its inadequacy to represent NT truth and life. Indeed, the Calvinistic use of it is more rigidly Latin even than that common in mediæval theologians. In Anselm satisfaction is not punishment, is indeed an alternative to it. In Aquinas satisfaction is punishment of a sort. In Calvin the satisfaction made in the suffering of the Redeemer is explicitly and fully penal. The imagery is that of a court of justice—in this case divine justice—absolutely unerring and altogether inexorable in judgment. We must not allow the terror of this scheme to confuse us as to its moral quality. A Roman emperor, administering the affairs of the world in accordance with a system of law which he has ordained, is a far better God than an oriental despot whose will is caprice, or a feudal monarch punctilious as to his honour, or a pope dispensing grace for a consideration. Calvinism is making thorough work of the forensic form of thought. The real demand raised by the logical perfection of the Calvinistic scheme is for a reconsideration of the idea of God. Is the God of Jesus a magnified Roman emperor? Is this the God whom the penitent and the believing find in Christ? Is salvation purchasable by punishment or by any other device known to law? Is the Redeemer a divine Being, who is just human enough to transact business with God on a basis of strict legal satisfaction? Is justification so forensic that sanctification is only a required addendum to be carried on, out of court, by extra-legal directions and incentives? The Christian consciousness awakening to such questions will leave the scheme as such on one side, go back to the NT, live over again the experience of the first believers, and make a new discovery of Jesus, and of God in Him.

(b) *The Socinian criticism.*—Historically, the most acute and yet the most fruitless criticism of the forensic theology comes from Socinianism (*q.v.*). Socinianism is the continuation of mediæval thought in its last stage of abstractness and formalism. Its God is the Scotist impersonation of *dominium absolutum*. His will operates in a moral vacuum. Sin is no more than a private debt. Atonement is superfluous. The Socinians are simply Scotists who have no barrier of ecclesiastical authority to prohibit them from pursuing the logic of mediæval thought to its bitter end. Their system is mediæval orthodoxy turned inside out. Socinian criticism of the satisfaction theory accordingly is directed from the point of view of that absolutist view of God which was behind the Latin theology, and had not been questioned in the Reformation theology, and is a formally consistent application of it. But, since that idea is not the Christian idea of God, the Socinian criticism does not touch the heart of the Christian experience. It may be formally correct to say with Socinianism that satisfaction and remission exclude one another, that grace and merit are contradictories, but no man has experienced the divine forgiveness apart from the love that suffered on the Cross; and all the redeemed grasp in the unity of experience the *gratuito* and the *propter Christum*. It may be

logically absurd to say that God made satisfaction to Himself when Christ suffered on the Cross. But the faith that receives salvation is profoundly aware that God is in that action and passion and is charging Himself with the cost of redemption. The satisfaction theory may commit the grave ethical and theological error of holding the divine attributes apart, and specially of pitting holiness and love against one another; but an experimental knowledge of God passes by all such impossible dissection and sees in Christ the whole character of God, holy in love and loving in holiness. Socinianism is individualism. Its method is that of formal logic, deducing its conclusions from assumed premisses. The strength of the satisfaction theory was its sense of the necessary relations of God and man in a moral universe. Its weakness lay in its conception of that universe as an imperial realm, governed by an absolute monarch and administered by strict judicial procedure. The Christian consciousness has accepted this conception in lieu of a better, because it has felt that here, rather than in Socinianism, moral values and redemptive forces were secured.

(c) *The Grotian compromise.*—Grotius (*q.v.*) sets out to defend the Catholic doctrine of satisfaction against the Socinian criticism. Yet he shares with Arminianism the Scotist conception of the *dominium absolutum*. God is under no obligation to inflict punishment for breach of His law. Grotius rejects the category of private right, according to which sin was a debt which it was open to God to remit at His own discretion without satisfaction. But he remains within the circle of Latin thought in regarding God under the analogy of head of the State. The State, however, is not an empire, and God is not a feudal lord; He rules with enlightened and constant regard for the welfare and happiness of His subjects. Wisdom and benevolence determine His dealings with His people. They sin, no doubt, but their sins cannot really injure God; neither His honour nor His justice requires that He shall punish sin; but, as a beneficent ruler, He cannot allow the presence of sin in His dominions. He employs penalty, accordingly, simply as the proper means towards the end in view. That end is the preservation of order and the restraint of transgression. The whole conception exactly reproduces the ideal of statesmanship, when absolutism in politics is giving way to the modern conception of a well-ordered realm, where human life and happiness are reasonably secure. It belongs to God's surpassing wisdom that He did devise an adequate scheme, by which the benefits of penalty could be secured to His realm, without the odious necessity of inflicting the extreme penalty of the law upon law-breakers. Suppose His Son, the heir to the divine dominion, Himself guiltless of any offence, were to receive in His person, not, of course, punishment, but such pains as might be a vivid and awful symbol of punishment, would not this make such a profound impression on the mind of beholders, conscious of what was appointed them by the law of the State, that they would recoil from sin and avoid those dreadful consequences of law-breaking which had received in the passion of the Redeemer so tremendous an illustration? Faith can draw nourishment from faulty metaphors and ill-drawn pictures. But surely there never was a worse doctrine of salvation than that which represents the Cross as a triumph of administrative wisdom, securing a condition of public order in which people may live leisured and pleasant lives, undisturbed by the malign activities of criminals and revolutionaries. The worst features of the Greek and the Latin conceptions of God, with the Abelardian impressionism thrown in, are reproduced in the Grotian

reading of the satisfaction theory. Analogy for analogy, that of civil government is worse than that of the court-room. The latter suggests at least the inevitableness of a moral order. The former is coloured by the changeableness of political expediency. The obvious criticism upon both is that they are mere analogies, or metaphors, or illustrations, which do not and cannot express the whole Christian truth.

3. The disintegration of dogma.—The Grotian theory is the death-knell of scholasticism, whether mediæval or Protestant. It represents the exhaustion of forms of thought which had come down through the ages uncriticized and unrevised. The great upheaval of the Reformation is beginning to tell in the region of doctrinal reflexion. At first, however, the endeavour after a new theology takes destructive form. The disintegration of the dogmatic system constructed under Greek and Latin influence proceeded along various lines of thought with intensifying force, till Kant's drastic criticism re-stated the whole problem of man's relation to God and the world and demanded a new solution. Three movements within this period are of special interest and importance.

(a) *Pietism* is a peculiarly Continental phenomenon, which has its English parallel in Revivalism. Pietism is a revolt against three forces which had oppressed the human spirit and had hindered the deepening of Christian experience: against intellectualism, which had turned faith into the acceptance of dogmatic propositions; against institutionalism, which had subjected the individual to an external authority; against professionalism, which had made theology the province of experts and had excluded the lay mind from the privileges and responsibilities of reflective thought. It demands piety as the test of Christian standing. It asserts the need of an individual relation to God and the right of the individual to the dignity of a child of God and a freeman in the realm of spiritual realities. It stands independently related to dogma and places upon it a pragmatic valuation, according as it ministers to the wealth of the soul's inner life. In all this pietism was occupying Reformation ground. At the same time, it did not occupy precisely the same position towards dogma as did the theologians of the Reformation. They believed in systematization and were consciously constructive in their efforts. The pietists disregarded system and concentrated on those doctrines which were distinctly experiential in their import and were susceptible of psychological exposition. If they had generalized this method, they would have anticipated modern thought in a remarkable degree. As it was, their chief interest lay in the experiences of the individual soul; and their main theological work was done in connexion with the fact of conversion and the process of sanctification.

The merits and defects of pietism and its English equivalents in more recent times are patent. They awoke the conscience and appealed for faith with prophetic fervour and power. They inspired magnificent evangelistic and missionary enterprises. They set in operation humanitarian work, which endured long after the special religious conceptions that attended its beginning had been forgotten. At the same time, their conception of salvation was narrowly subjective and tended to concentrate attention on states of the soul's inner experience and to erect as standard of Christian perfection æsthetic and emotional delights rather than righteousness and truth. Such a salvation omits three-quarters of life from its purview and makes duty and virtue an annex to Christian experience rather than its product and its verifica-

tion. This subjectivism has resulted, too, in a lowered conception of the Church as the sphere and instrument of the Christian salvation and in a tendency to revert towards separatism and quietism (*q.v.*). The result has been to deprive the Church of its richest and most vital elements and to condemn it to barrenness and futility. Men have been repelled alike by the narrowness of an individualistic piety and by the abstractions of dogmatic theology and institutionalized Christianity.

(b) *Mysticism*.—Formalism and externalism in all ages produce mysticism, and the essence of mysticism is ever the same. Accordingly, when we note the ominous development of Protestant scholasticism, we eagerly await the appearance of the mystic protest. Nor are we disappointed. Mystics confront the Protestant ascendancy and invite elect souls to draw apart from institutional Christianity and find God in the depths of their own souls. The most interesting and influential of these intense spiritual individualists were, undoubtedly, the Quakers, who found in a Scotsman, Barclay of Ury, their ablest systematic thinker. This Aberdeenshire laird dared to oppose the Calvinism which held the great majority of his fellow-countrymen in what he believed to be gross darkness. He did not mean, indeed, to deny the objective ground on which the traditional orthodoxy, Roman and Reformed alike, had based the fact of salvation. But he placed alongside of the historic fact an inward mystery, whose singular value tends to make the other unnecessary.

There is a 'two-fold redemption': the first 'performed and accomplished by Christ for us in His crucified body without us,' the other 'wrought by Christ in us, which no less properly is called and accounted a redemption than the former.' By the first 'we are put into a capacity of salvation.' By the second 'we witness this capacity brought into act.' The historically procured 'capacity,' however, is really not needed. God has given Christ as a Light which 'enlighteneth the hearts of all for a time, in order to salvation . . . and would work out the salvation of all if not resisted.' This Light is 'a spiritual substance which may be felt in the soul and apprehended.' This Light is seen in the historic Christ, yet the history and the mystery of Christ fall apart. 'The history is profitable and comfortable with the mystery and never without it; but the mystery is and may be profitable without the explicit and outward knowledge of the history.' 'In regard Christ is in all as in a seed, yea, and that he never is nor can be separate from that pure and holy seed and light which is in all men, therefore may it be said in a larger sense, that he is in all.' Salvation, therefore, is not bound up with any historic facts; and Christ becomes other than the Jesus of history. He is the λόγος σπερματικός of old Greek thought. 'As many as resist not this light, . . . pure and spirit; . . . 3, purity, and al e to God.' 'This inward birth of Christ in man' is that by which we are 'made just' and so justified; for justification means 'making one just, and not reputed one merely such, and is all one with sanctification.'¹

The good laird's interest in righteousness is deep and true, and his protest against the 'satisfaction' theory is intelligible. But the background of his thought is none other than Neo-Platonism. His conception of salvation would be as blank and empty as the mystic plunge into the Absolute, were it not for the accident that Barclay was a devout believer in Christ, deeply exercised in Christian experience. Quakerism has lovely fruits and has a strong fascination for all who have felt the fruitlessness of intellectualism. But in itself it has the instability and incommunicableness of the mystic rapture. The Christian salvation cannot be separated from the redemptive action of God in history. Mystics abound throughout Christendom during the 17th and 18th centuries. They provide a refuge in the midst of that dogmatism which their influence tended to destroy. They are intensely interesting personalities. But there is no advance in their thought beyond the point reached

¹ *An Apology for the True Christian Divinity*, London, 1678, prop. vii. § 31.

by Plotinus, and the differences between them do not obscure the identity of their central positions.¹

(c) *Rationalism*. — Reflective thought has a necessary function in reference to religious experience. This function it does not exercise alone, but always in conjunction with conscience, feeling, and will.

Knowledge in the NT is 'not an abstractly intellectual view of Christianity . . . not only a deeper comprehension of the Christian revelation itself, but a deeper insight into its practical significance and obligations. . . . Some such thing—not in the sense of a speculation *a priori*, without ethical inspiration, but in the sense of an expression and interpretation of Christian faith, which shall be pervaded throughout by the spiritual virtue of that faith—seems to be set before us by the NT writers as the ideal of "knowledge."' ²

Suppose, however, the intellectual element in this complex function of the mind were isolated from all other elements and erected into a standard of the truth and value of a living religious experience, it is plain that the result would be defective. The tendency to such false isolation and elevation of intellect lies close at hand, and theology in all ages has felt it as a temptation. When the temptation is yielded to, the result is rationalism (*q.v.*). Practically, it means 'salvation by wisdom.' Religion is cast into propositional form. The acceptance of this form is treated as the condition of salvation. Salvation is intellectualized and thereby, of course, emptied of its vital force. In post-Reformation thought prior to Kant rationalism reigned supreme. On the one side, it assumed the form of dogmatic orthodoxy and professed to be a formal and systematic presentation of saving truth. The more rigorously the logic of the understanding was applied to the fullness of religious life, the more elaborate the system became, and the less able it was to sustain its own weight. Controversies broke out, sects multiplied, weapons of mutual exclusion were employed, and salvation was disfigured by the very process that was meant to defend it. On the other side, rationalism appears as criticism of dogma. At first the movement is not directed against the content of the Christian revelation. Men like Baxter among the Nonconformists or the Cambridge Platonists among the Anglicans are in full sympathy with evangelical Christianity. But they are repelled by the Protestant scholasticism. The Cambridge men, in particular, occupied the position of the Alexandrian theologians. They are seeking to do a genuinely constructive work in theology. They have borrowed their ruling principles, however, from the Alexandrians—just as the Alexandrians borrowed from prevalent Greek modes of thought. They did not estimate correctly the nature and issues of the principles they were thus assuming, and they were brought near the result that ever haunts Greek thought, viz. the undervaluing of the historical basis of redemption and the relapse into mysticism. Their Platonism is really Neo-Platonism. Their chief value is that they created an atmosphere in which the Christian soul might grow in sweetness of spirit and tolerance of judgment. After all, however, theirs was a cloistered virtue. They were not able to interpret Christianity afresh to a generation under the control of dogmatism. The critical process took further and more aggressive shape in the movement of which English Deism (*q.v.*) is the best-known representative. This movement is as intellectualist as the orthodoxy it combated. Its aim is not to dispense with dogma, but to reduce the dogmatic system to an easier compass. Christianity is still *gnosis*; but its propositions can be cut down to a few brief statements. Salvation is still by wisdom; but the opinions offered for acceptance

are such as will find the minimum of opposition from the human understanding. Such reduction of dogma has no religious value. Rather, it accentuates the essential evil of all dogma. It accentuates that 'usurpation of the understanding' which makes rationalism so strong in its attack on orthodoxy and so useless as a contribution to the higher life of the spirit. Further, a rationalism that cleaves to a few dogmas is powerless against an application of its own rigorous method, which discards all dogma and delivers the human mind once for all from all bondage to external authority. Christianity was never so near extinction as in the period which began with the Protestant dogmatic and ended with dogmatic atheism. The root of all the evil is plain. Theology has lost touch with life. It has ceased to be a real soteriology. It has betaken itself to system-building and has forgotten its true task, the interpretation of the Christian salvation as an actual experience of living men.

4. The movement towards reconstruction.—In place of decadent scholasticism there came a great return to experience. In every department of thought there is an abandonment of scholastic methods and a recurrence to the facts of life. Physical science enters confidently into its kingdom. The historical method of study, critical in its approaches, constructive in its aim, governs procedure in philosophy and theology. Literature emerges out of pedantry and formalism and becomes vivid, human, free, and varied. Social and economic forces gain increasing practical and scientific recognition. Deeper and more influential than all these efforts after reality is the revival of religion which characterized the second half of the 18th cent., continued during most of the 19th cent., and spread through all lands occupied by daughter churches of the Reformation. As in that century when Christianity was born and in that which saw the collapse of mediævalism, so now men became deeply penetrated by a sense of the need of divine redemptive power to deliver them from the moral evils which afflicted them. All problems of life and thought were seen to run back to the ultimate problem of man's relation to God. Salvation, as in the 1st cent. and in the 16th, was an imperious demand of the human spirit. As in those two great epochs of religious history, the response to this need came in a new proclamation of the love of God, manifested in the life and suffering of the historic Redeemer. Christianity was, as it were, reborn in the consciousness of men, and something of the gladness and power of NT days re-visited the fainting Church.

Theology and philosophy in this period alike address themselves to constructive work. In such an endeavour the activities and results of the past could not be forgotten. All the greater forms of ancient thought are reproduced. Yet there are deep lines of demarcation which separate modern thought from those typical forms which, after eighteen centuries of dominance, perished under the criticism of Hume and the yet more thoroughgoing criticism of Kant. The broad distinction consists in this: that, whereas ancient thought, in its Greek and Latin forms and in its mediæval continuation, is governed by metaphysical dualism, modern thought, in all its forms, has abandoned the attempt to construct a universe out of two opposed elements. The Greek idea of an Absolute, out of relation to the finite, to be reached by a supra-rational endeavour of soul, is finally surrendered. The Absolute, however defined, must be conceived as manifesting itself in the fullness of life, to be apprehended, therefore, not by going outside of experience, but by penetrating to the heart of experience and reaching that which is at once the highest value and the supreme reality.

¹ E.g., William Law and the Quakers; cf. J. H. Overton, *William Law, Nonjuror and Mystic*, London, 1881, pp. 418-420.

² Denney, *HDB*, art. 'Knowledge.'

The problem, in one word, is reconciliation. How is man to discern and appropriate the fundamental unity through which all human interests are to be reconciled and harmonized? It is the underlying problem of economics, of social and political science, as well as of philosophy in its broadest range and of theology in its specific task. Salvation is conceived as essentially functional and organic. The effort is made to combine two aspects of salvation which had been often held apart. The one is the objective and historic: the unifying of life cannot take place, in idea merely; it must be wrought out for men in a history, if it is ever to be appropriated by men as an inspiration and a power. The other is the subjective and experiential: the action in which reconciliation is achieved cannot be an isolated historic incident. Salvation is not a transaction. It is an action indeed, but such an action as is continued in the experience of men and does really organize human life into a living unity. The 19th cent. is remarkable for its interest in history. It is the period of 'lives of Christ'; so confident is it that what it needs is to be found in Him, if only He were properly understood. It is remarkable, also, for its intense concern with human welfare. The constant political upheavals which mark its course are subordinate in importance to the goal of social improvement which they are supposed, often mistakenly, to attain. No way of salvation which does not issue in the moral uplift of the individual and of society can make successful appeal to the modern mind. Atonement must be real at-onement, of man and God, and of man with man. When from the standpoint of our own day we survey the field and note the many volumes and all their plans and schemes, we perceive that, amid this bewildering variety, there is one controlling quest, viz. for a secure doctrine of salvation. This does not mean that the modern mind will ever bind upon itself the intolerable yoke of a dogmatic system. Still, as it surveys a century of varied and intense activity, as it finds all gains and values imperilled in the great disaster of a world war, as it looks forward to an era of reconstruction, it does require that the forces of redemption shall be understood, so that humanity shall be saved with a salvation which shall atone for unspeakable wrong, repair intolerable waste and injury, and comprehend all nations in mutual service and helpfulness.

Success in the effort to reach a truly organic idea of salvation has been very varied. Certain types of doctrine may be distinguished in the leading thinkers of the period. Affinities with past conceptions may be noted, with a constant reaching out after more concrete modes of thought.

(a) *Salvation by wisdom.*—The old Greek intellectualism has its modern representatives in Hegel and the great English thinkers who carry on the idealist tradition. Let the idea of God be conceived as that of a self-differentiating unity. Let the element of difference appear in the individual's intense consciousness of himself, with separate rights and claims. It is plain, then, what sin and salvation mean. Sin is the turning of the self against the unity which alone gives it meaning. Salvation will be the dying to this selfish self and the affirmation by the self of its oneness with the universal Self, in whose completeness all elements of difference lose their separateness and are reconciled to one another. 'Die to live' is the gospel which each individual must preach to himself. In the act in which he thus dies he enters a new life. In the life thus reached by death his sin is seen to be lifted from him. It has been already borne by the universal consciousness, of which he is by nature a partaker, to which he owes both the possibility of sin and the power of redemption.

Historic Christianity sees this unity with the divine exhibited supremely in the consciousness of Christ. The ordinary man will do well to attach himself to that great discoverer of the way of salvation. But the salvation is not dependent on Jesus, and there is no need or room for trust in Him. The salvation is the discovery by the individual of his oneness with God; and it is made by sheer force of thought.

No philosophy was ever more religious. It is Neo-Platonism purged of dualism. It is Platonism interpreted, corrected, enriched. But it is not Christianity. The dualism it supposes itself to have transcended is sunk too deep in human nature to be exorcized by a formula. God is more than an idea, even than 'the Idea.' Christ is more than an illustration of a process of thought. Salvation by wisdom is for an intellectual élite. It is neither universal, final, nor effective.

(b) *Salvation by feeling.*—Intellectualism never fails to produce the protest of feeling. Over against the makers of systems and the keen-witted destroyers of systems stand continually the great company of the mystics. Jacobi, stirred both by the success and by the failure of Kant's critical philosophy, maintains that the mere understanding can indeed bring us only to phenomena. The realities of God and the spiritual life are inaccessible to its procedure. They are not, however, on that account out of reach. Another faculty, which sometimes he calls 'faith' and sometimes 'reason,' conducts us to the supreme realities and gives us a direct perception of them. The same mystical vein is present in Schleiermacher (*q.v.*), combined with a strong sense of the value of the historic redemption in Christ and of the organic fullness of the Christian life. Religion is neither philosophy, nor theology, nor ethic. Its source is deep beneath intellect and will. It consists in a state of soul wherein ordinary activities are suppressed and the whole being is surrendered to the overwhelming sense of the presence of the Infinite. This condition is the very essence of salvation. The Christian religion owes its supremacy to the fact that in it this sense of the Infinite and the soul's absolute dependence upon it is evoked, and maintained, in a unique degree. Christ holds the central place in this religion because He lived habitually in this consciousness of God's presence. The Church, as the fellowship of those who trace their new life to the spirit of Jesus, is the organ whereby Christ's consciousness of God is to be disseminated throughout humanity. In Ritschl's words:

'Redemption is the actual liberation of believers from the sin that prevails in them, by communication of the power of His consciousness of God, which the individual receives in the fellowship of those who resemble Him.'¹

Schleiermacher's message was life from the dead to a Church dying of intellectualism. It was pietism lifted out of a narrow groove and applied to the widest problems of philosophy and religion. It communicated an impulse to theology which has never ceased to act, recalling it to its real function as interpreter of the Church's life. It was a determined effort to deliver mysticism from the twin errors which continually haunt it—the undervaluing of history and the isolation of the individual. Christ and the Church are brought within the scope of the mystic experience and are made essential to it. Yet, after all, religion, as Schleiermacher conceives it, is essentially mysticism. It implies the dualism which is the pre-supposition of Neo-Platonism and which recurs even in Spinozism. The Infinite does in effect absorb the finite. Salvation does mean the dissolution of the soul in the rapture of its sense of

¹ *A Critical Hist. of the Christian Doctrine of Justification and Reconciliation*, Eng. tr., Edinburgh, 1872, p. 467.

the Infinite and the Eternal. The power in virtue of which man reaches the Infinite is not the intellect or the will; neither is it faith, in the NT and Reformation sense of *fidelucia*. Religion is not action, nor does it urge men to activity. It is the soul feeling itself as one with God. God, in such an experience, is not viewed as personal. Schleiermacher, like all mystics, shrinks from the popular language which makes of God an individual like all other individuals, only bigger and stronger. But he carries this reverence to the characteristic mystical position that 'omnis determinatio est negatio'; and in this denial of predicates to God personality too is lost. With it there is lost also the conception of a divine end, and a divine historic action, and a redemption which is an achievement of love. In spite of the Christian doctrinal construction and the beautifully Christian spirit, we are still at the point where mysticism resolutely abides, at which salvation is an ineffable and incommunicable experience of the individual soul, not merely immediate, but unmediated by any Saviour or any saving deed. At this point mysticism and Christianity part company. It is significant that in the exhaustion which attended the close of the 19th cent., and the destruction of all institutional forms of life which has marked the second decade of the 20th cent., there has prevailed a deep and wide-spread interest in mysticism. Its historic representatives are being sympathetically studied. Its psychological elements are being analyzed. To it, as to the essence of religion, men are being recalled, and in it, it is hoped, they will unite in a community of soul which disregards divergences of ecclesiastical connexion. Sects are springing up in which—e.g., 'Christian Science' (*q.v.*)—in spite of the grotesque ignorance they display, we can see that a mystic influence is at work, giving them any real value they may possess. The net result is the same as in any other era in which mysticism has arisen. Its value lies in its protest. Its weakness lies in its dualism and individualism. Its presuppositions are not those of Christianity, and its salvation is radically distinct from that with which Christianity meets the need of man—in the 1st cent., in the 16th, or the 20th.

(c) *Salvation by power of will.*—Stoicism, like mysticism, stands strong in a period of intellectual impoverishment and moral anarchy. It differs, at least in its primary form, by being the assertion, and not the despair, of self. Mysticism carries the denial of things finite one degree farther than Stoicism and denies the sufficiency of the finite subject. The lesson of the history of thought is that mysticism diagnoses the need of man more thoroughly than Stoicism. It is precisely within the self that the root evil lies. The self cannot be its own redeemer. Yet Stoicism has a nobility and valour of spirit lacking to mysticism. It acts as a moral tonic, when destructive criticism is rampant and religious feeling seems to have no care for the wounds inflicted by a ruthless logic. In the heart of the 18th cent. Butler proclaimed the autonomy and supremacy of conscience. Conscience is like a king issuing commands to turbulent and ill-conditioned subjects. Unfortunately, its authority is not combined with power. Any individual who chooses, however, may make conscience supreme in his own life, and, if he does, virtue will follow and be his reward. This idea of conscience is crossed in Butler with other ethical conceptions, as self-interest and the love of God. His attempt to combine them, however, would have required another psychology than was at his disposal and a different reading than he attained to of man's need and of divine redemption. As it is, he stands, a lonely figure, amid the crowd

of destructive thinkers. The world of his day honoured him with a bishopric, but left his message severely alone. Not to him, but to John Wesley, on whom, it is to be feared, he looked with some degree of contempt, was the moral uplift of his generation to be due. Stoicism has no gospel, bids each man be his own Saviour, permits no objective mediation of salvation, stands erect, great, somewhat grim, and a total failure.

In Kant (*q.v.*) the destructive criticism of the 18th cent. is carried to its most drastic issues. The whole structure of dogmatism crumbles beneath his blows. He had finally demonstrated that that power of the mere understanding and that method of logical process by which the great dogmatic systems had been reared are incompetent to reach the sphere of things real. By the same rigid criticism he also demonstrated that the attack upon dogmatism is open to the same condemnation as dogmatism itself. If dogmatism is incompetent, so also is scepticism. Never was so great a destroyer. But, with him, destruction is only a preliminary step. In heart he is a builder. He belongs in intention to the period not of disintegration, but of reconstruction. He himself, however, scarcely advances beyond Stoicism; nothing is more interesting in him than his attempt to make Stoicism Christian, though, in effect, all that he does accomplish is to turn Christianity into a Stoic philosophy. Above the world of phenomena, to which alone the intellect conducts us, there is the region of ethical value, which is the sphere of reality. In the former man is an empirical object, and therefore not free. In the latter he is free, because freedom means the determination of the self by its own law; and the noumenal self gives the law to itself. Suppose, however (what is indeed the case) that man has ceased to be his real noumenal self and, by an act which on Kantian principles is really inexplicable, has allowed himself to be determined, not by the law of his real being, but by things sensuous and empirical, how shall he deliver himself? What shall he do to be saved? Kant has no answer to give except, 'Obey the moral law.' It is the law of the moral subject as noumenon. But it is his law only as an individual. It is not the revelation of God in him and in mankind. It has no regenerative force.

'Because he stops short of this latter conception, Kant necessarily rejects as Mysticism, or as involving the negation of moral freedom, that very idea which gives its great moral power to Christianity, viz. the idea of a real objective mediation, by which the individual is raised above himself.'¹

It is deeply interesting to note how Kant employs Christian phraseology, 'Son of God,' 'substitute,' 'Redeemer.' But, with his presuppositions, all this is picture language only. There is no God but the good will, no gospel but the categorical imperative, no salvation save man's obedience to law, no Saviour but his own unaided power.

Kant's view of salvation suffers from his dualism, which involved a really unintelligible distinction between man noumenal and man phenomenal. It shuts man up to his subjectivity and makes impossible any real reconciliation of man to God and of man to man. Ritschl's view of Christianity is Kantian in its thoroughly ethical quality; but it seeks to get above the Kantian moralism in these two respects: it seeks to ground man's salvation in a work of God; and it exhibits salvation as fulfilment of a social task.² (a) God has before Him one purpose in His dealings with men—the creation of a Kingdom, which is the Kantian 'realm of ends,' treated not as a deliverance of the moral law, but as a fact of religious experience, and filled with the positive content of

¹ E. Caird, *The Critical Philosophy of Kant*, Glasgow, 1893 II. 619.

² See art. RITSCHLIANISM.

mutual relationships and service. (b) This Kingdom is constituted by obedience to the divine will. It is, accordingly, a synonym for salvation. Salvation, or justification, or adoption means moral harmony with God. (c) This Kingdom has a history, inasmuch as God does in all ages labour for its realization. In that history Christ has a unique place. He perfectly obeyed God, was entirely faithful to His calling as Son and Servant of God, and carried His obedience to the point of death rather than forgo His oneness of will with God. On His fidelity the Kingdom depended. It is due to Christ that it exists. Salvation is a fact in human experience, which owes its permanence to Christ's loyalty to His Father. Therefore humanity is in debt to Christ and is saved only through the grace of Christ—i.e. through Christ's perseverance in His vocation. (d) The individual is saved in and through His place in the Kingdom. Salvation is membership in the community which Christ gathered about Him, and which has existed ever since, the members of which share Christ's relation to God. The Kingdom, or salvation, is prior to the individual and is a gift to him. But it is his only as he makes it his task and devotes himself to doing the will of God, which will include serving his neighbour. Unquestionably, all this is moralism of a very noble kind. Its recoil from a hard, forensic, or transactional view of the work of Christ and of man's salvation is entirely intelligible and has proved most fruitful in all subsequent soteriology. When all is said, however, it remains moralism still. It does not view sin in the aspect which it has always borne for the Christian consciousness, as a fact of such overwhelming magnitude that it involved God in the unspeakable anguish of enduring it as a load upon His heart. For Ritschl 'the sin of the world is a separable accident of the mission of Jesus.'¹ Faith, accordingly, has not the note of trustful self-commitment to the mercy of God in Christ which is struck in the NT and re-echoed in the praises of the Church in every age. It becomes 'the permanent direction of the will to the final purpose of God and Christ which the believer for his own sake maintains.' A. E. Garvie, who quotes this passage, adds, 'Individual faith is social loyalty.'² Thus has Ritschl separated fruit from root. Or, rather, the fruit of character grows from the root of individual moral capacity and owes to Christ and His Church no more than indirect assistance. It is an unpleasant issue of Ritschlianism that a salvation, thus conceived as moral task, seems open only to those nations which inherit Western culture. What becomes of the rest of the world does not appear; and missionary enterprise does not seem to be one of the ministries of the Kingdom.

It is significant, too, that Ritschl has omitted any place or function of the Holy Spirit in the salvation of men. Yet so deep-seated an element in the experience of the NT Church ought surely to have been embraced in a theory which turns upon the fact of the Christian community. Where, however, the work of Christ for us, and upon us, or in us, is inadequately interpreted, because of invincible subjectivism, there can be no occasion for the idea of divine power operating directly within the human spirit. Ultimately man is self-sufficient in salvation.

(d) *Salvation by process.*—Throughout the whole movement towards reconstruction one characteristic is most marked, the recoil from the static view of God, which had reigned unquestioned in Greek and Latin theology. Even Hegelianism did not intend to present for acceptance a motionless

and impassible God, but did desire to bring the facts of life and movement into the idea of the Absolute.

Two phases of recent thought have given voice to this reaction from a static view of God. One is the magnificent activity of science in unfolding the facts of development in the universe. The other is the emphasis which is increasingly laid on social facts, forces, and ideals. The governing idea of evolution, and the prevailing social emphasis, could not fail to have profound effects on theology and to produce far-reaching influence upon older conceptions of God and of salvation. When the first shock was over, it was thought that no great harm was done. It was hoped that theology could take into itself the evolutionary view of nature and yet retain all the advantages of the old absolutist view. In like manner, theology, it was considered, could be democratized and socialized, while God could still be worshipped in His solitary supremacy. Of late, however, it has become apparent that the theological revolution cannot be accomplished so smoothly. The static Absolute is not to be so easily transmuted. If the static view goes back to Parmenides, some of the leaders of the revolution are inclined to go back to Heraclitus. Instead of a universe rigid and fixed, we are invited to behold a growing universe and to discern at its heart a growing God.¹ Instead of a God conceived as an omniscient Planner and an omnipotent Doer, we are offered a finite God, not omnipotent, but doing the best He can to overcome forces hostile to Him and gradually, very gradually, with toil and pain, winning satisfactory results. A God of this kind, we are assured, is quite intelligible and much more adorable than the distant Divinity of older thought. Human salvation, accordingly, takes on a wholly different cast from anything we have believed in hitherto. It is not a victory of divine love already won, which we appropriate and carry out into issues which God had in view when He undertook the making of the world. It is a process in which God and man are both engaged, the issue of which is by no means a certainty either for God or for man. On the whole, there is reason for hope. If we cannot be optimists, we can at least be meliorists. Things are moving; and God has grown so wise and strong, and has increased so much in moral intuition and moral power, that we are reasonably sure He will win in the end, provided He gets the help of all high-minded persons. There can be no doubt that the intellectual atmosphere is charged with ideas like these. Even before the war men like William James and Hastings Rashdall were insisting on the worthiness of the conception of a finite or limited God, who is not the Absolute. To Ward the Absolute is 'God-and-the-world.'² McTaggart's Absolute is a society conceived after the analogy of a College!³ H. G. Wells harks back to the analogy of a hero King, 'a young and energetic God, an Invisible Prince growing in strength and wisdom, who calls men and women to his service, and who gives salvation from self and mortality only through self-abandonment to his service.'⁴ The idea of a 'young God' suggests obvious questions. Did he then come into existence, and when and how? Is his present rate of progress fixed, or, with added experience, will he be able to increase his speed?

The difficulty of attributing growth to God is intensified, if we are meant to include in it development of character.

² *The Ritschlian Theology*, Edinburgh, 1899, p. 321.

'It is not clear,' says Pringle-Pattison, 'whether this God is morally perfect to begin with—in which case the development and progress would consist simply in the moral enlightenment and betterment of human beings and similar races in other regions of the universe—or whether the finite God is himself conceived as growing in insight and in moral wisdom through the lessons of experience, and working out his own character as he proceeds with his beneficent work. In the latter case, one is at a loss to see why the title of God should be bestowed on an individual essentially of the human type, though, no doubt, on a larger scale and at a higher stage of development; and one is bound to conclude that such a developing demigod would give the same account of his own development as the moral and religious man among ourselves. He would describe it as a new insight into the nature of things, due to the leading of a higher God, who would be God indeed. It seems to me impossible to override the testimony of the religious consciousness on this point.'¹

That testimony is unquestionably that God is the source of salvation, which is with Him an accomplished victory, which men presuppose in all their own moral warfare. Commenting on William James's description of his position as 'moralistic religion,' Pringle-Pattison says:

'However it may be with popular religion, the deeper experiences of religious faith and emotion—the utterances of the saints, the religious experts—appear quite irreconcilable with the pluralistic conception of a finite God, an unfinished world, and a dubious fight. In fact, it is not too much to say, with Mr. Bradley, that "to make the moral point of view absolute" is to have "broken with every considerable religion." The victory for which morality fights is for religion already, or rather eternally, won; and it is the assurance of this victory which inspires the finite subject with courage and confidence in his individual struggle. . . . As experience abundantly shows, the assurance of victory won and reconciliation achieved is the most powerful dynamic that can be supplied to morality.'²

The motives which prompt this hypothesis of a finite God are no doubt altogether admirable—the desire to give reality to man's moral history, and to God's sympathy with him in it, as well as the hope of clearing God's character in view of the miseries of mankind. And it may very well be that those ends cannot be served so long as we hold a static view of the Absolute. But is there no alternative to such a static Absolute except a finite growing God? It is certain that the alternative did not present itself to the saints and seers of the OT or NT. They believed profoundly in the sympathy of God with man and included suffering in the divine experience. But the background of this thought was not a demigod, fighting his way to a dubious issue. Rather it was a God of omnipotent love, realizing in time a purpose that is eternal, and doing so by Himself entering into human experience and achieving once for all the redemption of the world. Men enter on this redemption as a possession—they fulfil it in an experience of toil and suffering, in which they have the presence and sympathy of their Redeemer, and they inherit it as a completed salvation, a Kingdom that cannot be shaken.

Speculatively, the doctrine of the finite God depends on the success of Bergson's philosophy; and that stands or falls by his theory of time. It may be permitted to doubt whether that theory will hold the field against criticism. It seems as though, in his view of the future, Bergson himself has fallen a victim to the metaphor of space, and is thinking of time in the old way as a prolongation of a line into an unknown region where nothing is certain and anything may happen. Such, in any case, is the speculative implication in the theological idea of a young and energetic God, whose success is quite unpredictable. Suppose he were to fail! In that case he would himself need a Saviour, like any other beaten soul. In allowing that such a fate is thinkable we have abandoned the point of view of religion altogether and have arrived at a profound and comprehensive scepticism.

(c) *Salvation by historic redemption.*—We stand too near to our own period to expect co-ordinate

work among the crowd of expert scholars and eager students, or to hope for such a comprehensive statement of results as shall express the Christian verities in a form adequate to the needs of men in this new age. The significant fact is that, within the generation which has not yet passed from the arena of conflict and endeavour there has been a prevailing Biblical idea of salvation, presented with careful exegetical work and with ample ethical and psychological emphasis.

Salvation is conceived broadly and deeply as personal and moral, including fellowship with God, the elevation of individual character, and the service of men in righteousness and love. This salvation, inexhaustible in redemptive and restorative power, is recognized as due to God's action in the historic Christ. The debt of humanity to Christ is regarded as unique and incomparable. By writers and preachers of every variety of theological opinion men are being summoned to Christ as the fountain-head of the influences which are to renew humanity at its centre and inaugurate, after the discipline of war, an era penitent, humble, and at the same time more wisely ordered and more hopeful. It is being perceived also, even more clearly, that God's revealing action in Christ must be accompanied by suffering. Any view of Christ which omits the element of suffering as essential to His vocation and to His abiding influence is recognized to be less than Christian. There is a growing impression that the suffering of love is the mightiest redemptive influence known to man, and that, in the winning of salvation by divine act, suffering must have the central place.

The doctrine of atonement, which modern intellectualism had neglected, is attracting earnest attention, and Christian thought is concentrating upon the Cross of Christ.

As we survey the work of Christian thinkers of the latter part of the 19th cent., to the verge of the Great War, we find that the death of Christ has been presented mainly in three aspects.

(a) *As a transaction.*—From this point of view, 'the atoning Christ acts on God for man.'¹ Hitherto this transaction has been described after commercial or forensic analogies. Grotius had led the way to a view of the work of Christ coloured by the idea of a modern State administered by a just and wise prince. This last type of thought harmonized with much that was burning in the hearts of Englishmen. The political revolution was proceeding. Democratic ideals were being realized. The conception of a State in which every citizen has his place and function guaranteed in law was being made the goal of practical politics. No man wrought harder in the cause of ordered liberty than R. W. Dale of Birmingham. It was natural, therefore, that his theological thinking should be controlled by the ideas which inspired his social and political action. His governing category is law, not made by man or exploited in the interest of individuals or classes, but a law of righteousness, without caprice or variableness, untouched by time or change. The Kingdom of Heaven is an eternal order. Human welfare depends on the maintenance of this order. 'In this kingdom Christ is the Moral Ruler . . . His voice is the voice of the eternal Law of Righteousness.'² Law, however, is threatened by the uprising of human pride and arrogance, which would upset the order and make life intolerable. Law must be vindicated, and there is no way of vindicating it save by the sequence in which suffering inevitably follows law-breaking. It belongs to the Moral Ruler in the Kingdom of Heaven to vindicate the

¹ J. K. Mozley, *The Doctrine of the Atonement*, p. 173.

² *The Atonement*, London, 1878, p. xxxil.

¹ *The Idea of God*, p. 382f.

² *Ib.* p. 395f.

law which is His own voice. He has done so, not, however, in the person of the offenders, but in His own, 'not by inflicting suffering on the sinner, but by enduring suffering Himself.'¹ This is the gospel. When we lie under conviction of sin's sinfulness and are feeling the pressure of the divine judgments, we are enabled to rest on the death of Christ as 'the perfect expression and fulfilment of that submission which we know ought to be manifested by ourselves. . . . He endured the penalties of sin, and so made an actual submission to the authority and righteousness of the principle which those penalties express.'² The redemption of man rests on the endurance by the Moral Ruler of the actual penalty of sin. The fact of sin is so real and terrible that only a fact as tragic in its agony and as measureless in its significance as the Cross of Christ can meet it. But whether the value of that death is adequately or even fittingly expressed in terms of law and penalty, and whether Christ's relation to the Kingdom of Heaven is properly stated where He is described as its Moral Ruler, may gravely be questioned. Dale himself strove earnestly to avoid the hardness of these forms by dwelling on the unity of Christ with God and His relation to men as their representative. But surely, if these true and great thoughts are to be present in a doctrine of the Atonement, they ought to be regulative; and, if they are made so, legal categories must not be treated as determinative. Something of the old dualism remains when the love of God is confronted by His law as a power to be reckoned with. Love does not break into an order constituted by law. It is itself the basis of the order and is supreme within it.

(b) *As a demonstration.*—From this standpoint 'the atoning Christ acts on man for God.'³ If the 19th cent. was marked by a great movement towards political emancipation and the reconstitution of society, it was also characterized by an intense humanitarian instinct. Love, no less than justice, was its passion. Men were becoming imbued with the spirit of pity. The hapless lot of multitudes 'damned into this world' moved noble and self-denying souls to life-long ministries of compassion. Legislation was devoted to the improvement of the position of the less favoured masses. Criminals were regarded not merely as wrong-doers, but as unfortunate in the conditions of their birth, inheritance, and social environment, or even as themselves grievously wronged by the conditions of their life. The idea of punishment was reconsidered, and prison management was revolutionized. Discipline, and not penalty, became the regulative principle for society's dealing with its outcasts; and the great end was definitely conceived as the restoration of the offender to the ranks of citizenship. Political science, the system of education, church machinery and enterprise, were controlled by moral and social ends. Internationalism was scarcely yet born; but the ideal of an organized world was growing in the minds of statesmen and political thinkers. Thoughts like these could not fail to have a profound effect on theology. They are really occupied with the redemption of men; and that is the heart of the Christian faith. The Christian salvation can be nothing, if it is not ethical and social. The great doctrine of the Atonement, admittedly the very core of Christian thought, must be thoroughly moralized and must be interpreted through that spirit of love which has awakened to such glorious efficiency in modern society. The moral theory of the Atonement, accordingly, which had never ceased as a protest against legalism and particular-

ism, was revived in richer form than could be found in Abelard or the Socinians.

What does the world need—so the argument runs—in its sorrows, agonies, sins, but a demonstration that God loves His wayward children to the uttermost? Once a soul is convinced of this, its hardness will melt; it will turn from its sins in penitence: it will respond in love to the appealing love of God. But what can produce this conviction? The answer is: The presence of Christ in the world, in the character that was His, in the life He lived, and the death He died.¹ The sight of Christ crucified produces in the beholder repentance; and repentance is regeneration. The Atonement is 'a moral atonement, offered to repentance.'² This state of soul, in which the sinner's heart is broken because of sin, 'is not a condition precedent to being forgiven; it is itself forgiveness—forgiveness which separates the sinner from his past self as far as the east is from the west.'³ It is on the basis of this state of mind being genuine that God proceeds in forgiveness.⁴ The Christian life, having been thus inaugurated, is carried forward under redemptive influences, which stream from the exalted Lord. Deeply Christian as this statement is, it does not seem to have made any doctrinal advance upon Abelard.⁵ The question recurs: How does the death of Christ demonstrate the love of God? Surely the force of that demonstration must lie in itself, prior to, and independent of, our response to it; and that independent value can attach to it only if in the death of Christ the love of God deals effectively and finally with the fact of sin.

(c) *As an experience.*—Mozley's phrase in this connexion is: 'The atoning Christ acts on God as man.'⁶ Deepest of all interests in the 19th cent. was the sacred mystery of personality. A dualistic philosophy was never able to do justice to the idea of personality, either in God or in man. It translated personality by individuality, concentrated selfhood in the bare act of self-assertion, arrayed the divine Self against the human self, and viewed the relations of God and man as those of two self-centred individuals. Proceeding upon individualistic presuppositions, theology could make no more of salvation than an arrangement between two individuals—one very great and powerful, the other very small and helpless—carried through by a third, who is externally related to each of these. The Atonement is a transaction in which God inflicts suffering on Christ, and Christ endures it, the result being assigned to man, or to some men, by divine decree. Plainly this is wholly inadequate to the Christian experience of redemption through Christ and leads to such perversities of thought as that God inflicted punishment on the Son of His love, and that there was a quantitative equivalence between the sufferings of Christ and the pains which sinners would otherwise have to endure. Individualism ran its course in the French Revolution and in the commercialism which exploited the idea of individual liberty. Most of 19th cent. thought has been an effort to get away from individualism. Much of it has been vague. The study of personality has not yet reached conclusions. Two points, however, may be regarded as fixed in modern thought, turned against individualism and absolutism respectively. The one is the individual's power of sympathetic self-identification with selves other than his own, making their concerns his, with an appropriating energy to which experience presents no limits. Individuality and finitude are only margins, which fade for ever before

the impulse of self-communicating love. This is the essence of personality. The other is the self-realization of the individual through this continuous surrender. He is not 'lost' in the process. He finds himself and reaches a fullness of being which is his own, an indefeasible possession, gained and retained in self-surrender. The self that is thus surrendered is inseparable from that to which, and for which, the surrender is made. Alone, it is a fragment whose existence is its doom. In union, it lives its own true life in power and joy. This idea of the personal life could not fail to be applied to the person and work of Christ. We need not apply to Greek or Latin theology to supply explanatory forms of thought. Love is its own interpreter. Within the experience of Jesus are to be found at once the fact and the interpretation of atonement. The key to the problem is as simple and as mysterious as sympathy—a perfect sympathy with God, and a perfect sympathy with man. This sympathy is found in Christ. This, in its manifestation and exercise, is the Christian salvation. There has been born into the heart of humanity One who gathered into His own soul the guilt of man and felt it as no sinner can, and at the same time held inviolate the holiness of God. His experience is the Atonement—a veritable sin-bearing, in which the whole character of God is at once expressed and satisfied, and through which the love of God moves triumphant over sin to its goal in the great redemption. The situation created by sin has been fully met. God in Christ has reconciled the world to Himself; and this accomplished reconciliation is offered to the acceptance of faith. The old distinction of objective and subjective, as descriptive of theories of atonement, no longer holds good. This is demonstration of love, by love's deed; but the deed is the experience of Jesus.

The often quoted language of McLeod Campbell is the classical expression of this theory of the Atonement, which, in the mind of its chief exponent, is not so much a theory as a reverent entrance into, and a devout valuation of, the experience of Him who passed through deepening pain to the supreme sacrifice of the Cross.

Christ, in this experience, uttered 'a perfect Amen in humanity to the judgment of God on the sin of man. . . . He who so responds to the divine wrath against sin, saying, "Thou art righteous, O Lord, who judgest us," is necessarily receiving the full apprehension and realisation of that wrath, as well as of that sin against which it comes forth into His soul and spirit, into the bosom of the divine humanity, and, so receiving it, He responds to it with a perfect response,—a response from the depths of that divine humanity,—and in that perfect response He absorbs it. . . . By that perfect response in Amen to the mind of God in relation to sin is the wrath of God rightly met, and that is accorded to divine justice which is its due, and could alone satisfy it.'¹

With this insight into the conditions of redemption the history of the doctrine of salvation has reached its climax as far as our generation is concerned. Nothing of fundamental importance has been added to the ideas which McLeod Campbell suggested in his epoch-making book. Criticism attaches mainly to his description of the experience of Jesus as 'repentance'; but a defective phrase does not invalidate the truth of the description itself.

Commenting on this phrase, Denney, while admitting that it is an unhappy one, maintains the soundness of McLeod Campbell's central position:

'It is a description of facts in the experience of the Saviour, and of facts on which His power to reconcile us to God is essentially dependent. If He had not thus seen and felt what sin is to God, if He had not thus acknowledged God's justice in condemning it, we could never have been brought through Him to the same insight and sorrow, to the same confession and acknowledgment, apart from which the reconciliation of sinners to God is self-evidently an impossibility. For to be reconciled to God means at all events that God's mind about

sin, which is revealed to us in Christ, through Christ becomes our own.'¹

Later writers have supplemented McLeod Campbell at certain points: Moberley, by including the work of the Holy Spirit in the winning of the Christian salvation; Forsyth, by emphasizing Christ's confession of God's holiness as the element in His experience which gives it atoning value; Denney, by extending the experience of Jesus to include the act of dying, because short of this 'we do not get to that in the experience of Jesus which, as the most unfathomable proof of love, has both supreme value to God and supreme influence with men.'² All of them, however, are at one in their point of view. They hold all they conceive to have been valid in the older 'objective' theories, but they are seeking the ground of atonement, not in anything that happened to Jesus by mandate of an external power, but in the experience wherein He embraced the whole fact of sin and held fast the mighty and inseparable interests of the divine love and holiness. They are at one in seeking to get rid of the last remains of dualism and to exhibit the vital connexion between what was wrought for man on the Cross and what is wrought in man by the Spirit. They all vindicate the Christian salvation as being far more than the rescue of individuals, as being indeed the constitution of a redeemed humanity, in which, through the service and sacrifice of faith, individuals advance in fellowship with God and in likeness to Him. Together they express a universal human intuition that the sorrow of the world can be healed only by the infinitely greater sorrow of God.

VIII. CONCLUSION.—The impulse of Christian thought in every stage of its evolution has been the need of a secure doctrine of salvation. Theologians of the East and of the West, mediæval schoolmen, and men of the modern period have had no other task than to interpret the Christian experience of salvation through the eternal principles which make it valid, and so to vindicate its value and power in the redemption of humanity.

The broad lessons of this long history can scarcely be missed: a steady distrust both of intellectualism and of emotionalism; a constant return to experience and an earnest evaluation of its ethical significance; a confident appeal to Christ as the standard and test of the faith which He Himself awakens; the value to be ascribed to Scripture, because it presents a record of God's saving acts and searchingly exhibits both human need and the principles on which divine love proceeds in dealing with it; the validity of the historical method in the study of Christian doctrine for the correction of inadequacies and as an instrument of advance; and to these we may add the guidance to be got from a comparison between the Christianity of the NT and the religions which, in all places whither it has come, have met it as its rivals, and in part also its anticipations and its heralds.

In particular, it is plain that, in order to win a satisfying doctrine of salvation, thought will need to deal afresh with its great determining conception, viz. the Christian idea of God. Philosophic thought has been much concerned with the Absolute, the ultimate Unity, which may be conceived as holding together the manifold differences which appear in human experience. It has had before it, in constructing its idea of the Absolute, an ideal of logical simplicity: and so, in bold speculative adventure, it has conceived God as bare transcendence or as barren immanence—a Being so utterly above the finite that, in com-

¹ *Christian Doctrine of Reconciliation*, p. 229f.

² *Id.* p. 270f.

parison with it, the finite loses all meaning and value; or so completely unified with the finite that, in this identification, the Infinite loses all significance and power. In revenge upon these cold abstractions pluralism mocks at the Absolute and gives us a God who is frankly finite and growing. Christianity has suffered many things at the hands of philosophers and has been far too docile when they insisted on presenting to faith a ready-made idea of God. Its own primary concern has not been with the Absolute at all. Its own special problem is neither logical nor ontological; and it cannot afford to wait till speculative discussion has come to an end before proclaiming its remedy for the abiding distress of man. Yet it may well be that its own problem is the ultimate problem of the universe, and that its own salvation contains implicitly a philosophy of God's relation to the world.

Christianity begins with human experience in its concrete fullness. It does not separate elements supposed to be incompatible and then painfully put them together again. It starts with the fact of life. It asks: What is the meaning of life? What is the direction and goal of its endeavours? What is its inherent value? What hinders, and what may achieve, its consummation? If we care to call it a philosophy, it is a philosophy of value; and, in realizing ultimate values, it believes itself to have attained ultimate reality. Christianity is human experience interpreted and reproduced through the supremacy of its highest value. What is that value? Christianity has one clear and definite answer: The Cross of Christ—life won through death. The Cross is the sum of Christianity. It is the Christian salvation, as message, as experience, as doctrine.

Christianity does not seek for proofs that God is. Its vital interest is the character of God. It is confident that it can recognize God when it sees Him; and then proof of His existence will pass aside as needless. God, seen in the Cross, is recognized as love. God is, in His inmost character, One who lives in the energy of self-giving. Christianity has never entangled itself in precarious discussions as to time and its relation to eternity. But it is perfectly certain that, in the Cross, it has touched the eternal—yes, the absolute—being of God. God is love. What He does and endures in time is the outcome of the inexhaustible fountain of the divine love. Human life is the exploration of the divine being. Time is deeply significant, therefore, and history is a real movement. It is, on the one side, the progressive revelation of God and, on the other, the progressive discovery by man of the wealth of the divine character. In either aspect time is real; but in neither does it move away from God towards an unknown beyond His ken and man's. It lies within God and is comprehended by Him in its completeness in a manner untranslatable by us whose transient lives are part of its flow. But at any point, and in any experience, we touch the Eternal whose 'moving image' time is. Supremely in the Cross we reach God and know what He is in His eternal being. The epithets 'immanent' and 'transcendent' are a foreign language to Christianity. Yet, if 'immanent' means that God is always giving Himself to His world, and thereby sustaining it in whatever degree of reality belongs to its successive stages, then the God of Christianity is 'immanent,' with an intensity and seriousness which leaves Spinozism far behind. And, if 'transcendent' means, in plain words, that God knows what He is about, that He is preparing a world capable of receiving His perfect self-communication, then the God of Christianity is 'transcendent,' with a glory that belongs not to

the Greek Absolute or the Roman Imperator. 'Personality,' in like manner, is a term which Christianity has not needed to express its thought of God, not because it was too concrete to apply to Him, but because it was not concrete enough. But, if by 'personality' we indicate a capacity, which men possess only in degree, of making each moment a stage towards the realization of the organic fullness of life, then the God of Christianity is personal, in a measure far above what is competent to any individual member of our race. God, understood through the Cross, is a Being capable of a human experience. His 'immanence' and 'transcendence' make Him capable of a human experience immeasurably richer and deeper than that of any individual man can possibly be. He can know what is in man as no man can know it. He can be man as no man can be. His progressive revelation is the fullness of His own inner life unfolded in and to the world. This revelation, in the very action of which God lives, makes possible, and requires for its completion, an experience of the life of man in its central depths. Incarnation is a divine necessity. Theology has never had, in connexion with this great mystery of love, the courage of its convictions. Through fear of Sabellianism it has ascribed the Incarnation to a Being who, after all is said, is not quite the same as God, and has excluded the Father, the very fountain of Godhead, from the possibility of love's supremest manifestation. Faith sees God in Jesus, 'the whole of God, who has kept nothing back which He could have given us. It is very doubtful whether the framers of the old creed ever grasped this thought. The great expounder of the old theology, Augustine, certainly did not. The failure to enter into it showed itself not merely in the doctrine of God, but also in the theories of grace.'¹ The doctrines of God, of the person of Christ, and of salvation come together at this point. The Atonement is God's experience of what sin is and of what it has wrought in His universe. This experience, which is the salvation of the world, He purchased on the Cross. In His pain, the agony of sin-bearing, the condemnation of sin is absorbed, and love flows uninterrupted to the sinner. This is God, the very God, God manifest in flesh, Himself making atonement, offering Himself a sacrifice, commending His own love, reconciling the world to Himself. Here are not two, dealing with one another across the prostrate figure of the sinner. Here is One only, the living and true God, who is love, who is wholly in Jesus.

God who thus bore the Cross did not, even in that supreme action, exhaust the possibilities of His love or cease from His immanence and retire into motionless transcendence. The same vein of thought as separated God and Christ removed the Spirit a degree farther away and made this third article in the creed an appendix rather than a climax. Yet, if we trust the NT as the classic of Christian faith, the Spirit is not separable from God. The Spirit is God in His deepest immanence and His most glorious transcendence. It is strange that to many minds the work of the Spirit is a superfluity of feeble piety, whereas in the NT writings 'the reception of the Spirit is the whole of Christianity.'² The blame must lie with those who sought to make the Greek Absolute do duty for the Christian idea of God. The moral universe, constituted in the love which achieved a final victory on the Cross, is sustained by the same divine energy. As God is in Christ, so God-in-Christ is in the Spirit. This is not a subtlety of the analytic Greek mind. It is the synthetic

² See art. 'Holy Spirit,' in DCG.

utterance of faith, which knows in one experience 'the grace of the Lord Jesus Christ, and the love of God, and the fellowship of the Holy Spirit.'

To the idea of God as love there corresponds in man the function of faith. The idea of the Absolute drives religion into mysticism. The idea of God-in-Christ centres religion in the act of faith. Between the mystic state and the act of faith there is this radical distinction—that the former presupposes a God transcendent, incapable of incarnation; while the latter has for its object a God immanent, who, to be Himself, must needs enter human history and, in a sinful world, must needs be a suffering Saviour and hang upon a Cross. To speak of 'Christian mysticism' is, strictly speaking, to continue that confusion of Christianity and Neo-Platonism which has diverted Christian experience from its real fountain-head and given the Christian salvation a definitely non-Christian character.

If we are to keep to the Christian standpoint, we must regard the divine love in its action towards man and faith in its action towards God as being in the deepest sense correlative. All of God's saving action is concentrated in Christ. Upon Christ, accordingly, is concentrated the whole action of man in faith. All of Christianity, as the disclosure of God's being and character, is in Christ. All of Christianity, as a human experience, is in faith. Faith is fundamentally action, and is not to be defined through intellect or through feeling. The act of faith takes place when man meets God in Christ. In that supreme moment of life's discipline the love of God is revealed in Christ as the crown of all that is highest in human aspiration and the remedy of all that is deepest in human need. Man on his part makes reply by committing himself, in the fullness of his personal being, absolutely and for ever to this redeeming and perfecting love. This action is entirely simple. The analysis which resolves it into a complex of state and feelings disguises its true nature. It cannot be dissected because it is the man in action—the man in that action which sums up the full value of life. It is also all-inclusive, and underlies and comprehends the whole experience of salvation. Mediaeval dualism had to add works to faith, if it was to make up the compound which was all it could think of as salvation. Protestant theologians even have anxiously explained that the faith that saves is a faith that 'works by love.' Of course it does! Not, however, as though the faith that works by love, and therefore is saving in its quality, were one among several forms of faith. It is faith itself, in the only sense which is possible in view of the saving action of God.

It saves because it carries the man from the standpoint of an individuality which strove to maintain itself apart from God to a position in which the individual, responding to the love of God, finds his need met, his nature satisfied, and the self which he has surrendered restored to him in fullness of power and certainty of victory. Faith is therefore an act which unites the man to Christ, in a sense deeper than mysticism can ever know. A union of being or substance, so far from being the loftiest and most religious of ideas, is one of the emptiest and least significant. The vital union is that of will and character, when man shares with God His thought, purpose, and power. And this union takes place, and can take place only, in faith. God gives Himself to man in Christ. Man gives himself to God in faith. Christ is the point of union.

The language of the NT outdoes mysticism in the daring with which it affirms the continuity of the divine saving action. Love saved the world once for all in sacrifice. Love saves the world still by

the same sacrificial ministry. Faith never swerves from its acknowledgment of the finality of the Cross. But it never hesitates to declare that, in believing, the soul is united to the dying and undying Christ. The man who has given himself to Christ has been crucified with Him, and therefore he lives, with a life which is really the presence of the indwelling love. Therefore also he has this rank and function, that through him the redemption of the world is proceeding still towards its assured consummation. Love never loses its vocation. It is always redemptive, always vicarious and sacrificial. The salvation of the world is the sacrificial ministry of Jesus continued in those who in their persons 'make up the full sum of all that Christ had to suffer.'

The confidence that that divine sacrifice will be crowned by the fulfilment of God's eternal will of salvation is the religious ground of the hope of immortality and the expectation of the Parousia.

This idea of God and this function of faith are not forms of thought imposed by theology on the Christian salvation. They lie within it, as the very secret of Christianity. They came into the world in Christ. They created Christian experience in the 1st cent. and are renewing it in the 20th. The Great War, amid all its darkness and agony, illumines the eternal being of God and verifies the abiding conditions of man's salvation. The love of God, sealed in sacrifice and reproduced in sacrificial service, is the redemption of the world.

The deepening experience of the Church requires a new effort of thought to express its vital meanings. A new theology must be the issue of the growing experimental knowledge of God.

The theology of the Cross requires a reconstruction of doctrine, in which the great Christian ideas of God, Christ, the Spirit, the Atonement, Salvation, Grace, Faith, the Church, and the Last Things shall be re-stated under the governance of one principle—the love that lives in sacrifice. The reign of the Greek Absolute is over. The unity which is the perpetual problem of thought and the abiding demand of the heart is given in Christ, in whom God is present in His fullness. Through Him, also, there is open to man that union with God which is the abiding demand of the human heart, and the realization of which in the act of faith is the Christian salvation, as a present possession, an unailing energy, and a sure and certain hope.

LITERATURE.—The student must consult the primary sources, dictionary articles, and monographs dealing with outstanding names. On the leading aspects of the theme the following will be found helpful:

SOUL (Primitive).—The English word 'soul' (and its equivalent in cognate European languages), in its primary meaning, designates an entity conceived as the cause or vehicle of the bodily life and psychical activities of the individual person. The soul is assumed to exist as a spiritual substance, in rather sharp antithesis to material substances, thus giving form to the contrast of soul and body (as constituents of man) and the assumption of their separability. This is, of course, a metaphysical conception, for which, in the range of primitive culture, there is no precise equivalent. Nevertheless, there are among primitive men forms of belief (so nearly universal in occurrence that they may be said to exist by a kind of instinct of the human intelligence) closely analogous to the metaphysical conception of the soul. The contrast under regard, in the more primitive intention, is not that of material and spiritual substances (for neither of these categories is recognized), but it is very near to the reflective distinction between form and energy; the primitive man everywhere makes a quick discrimination between the perceptual aspects of things and their powers or strengths: of the former he is suspicious; the latter he fears or strives to control by magical suggestion, by persuasion, by his own occult force; everywhere his interest centres in the hidden powers of things, which are for him their prime realities, and it is no marvel to find that everywhere he figures these powers under some evanescent analogy of the senses (the blood, the breath, the shade). It is these analogic figures of the primitive imagination that bear the names usually transcribed by the word 'soul'—itself, doubtless, originally, like *anima* and other classical equivalents, a term of the same class. Nor is it surprising that beliefs so bodied forth should assume various and fantastic guise, somewhat distorting their real identity.

1. **Animism.**—In the animistic *fond* of human thought there is recognized in nature no aristocratic class of soul-possessing beings: everything dignified by thinghood has its own power or function—however insignificant—and therefore its own soul. Indeed, what is designated by the name of a thing, as distinguished from the perceptual image or sense-object, is in a fair sense always its soul; for the foundation of naming is the discrimination of characteristic functions or powers; so that, in the broad truth, the nouns of a language represent the congregation of those souls in nature which the people speaking it has come to recognize. This is no merely primitive trait, but is true of all practi-

cal thinking, as distinguished from speculative analysis.

Hebrew.—See 'Semitic.'

Hindu (J. N. FARQUHAR), p. 742.

Iranian (L. C. CASARTELLI), p. 744.

Roman (W. WARDE FOWLER), p. 747.

Semitic (G. A. BARTON), p. 749.

Teutonic (B. S. PHILLPOTTS), p. 753.

There is nevertheless, even for the raw animist, a certain position of privilege for human souls. They are by no means the most powerful in nature, either for good or for bad; but they are distinctly of the most concern and the most precious to their possessors. Moreover, they are the measures of the qualities of all other souls. It is true that, in a degree, they are distorted by fantasy; but, if the essence of primitive thought be disengaged from its figures, it will invariably be found that the measures of all other spiritual activities are human psychical activities, which are in the very truest sense the substantial powers of the human soul. One might fairly say that the primitive interpretation of nature (perhaps the mature interpretation also) is best represented by a harmonic proportion in which three terms are known and one is deduced; of the known terms, the first extreme is man's mind (chiefly his conations), while the means are first his own body, as the instrument of desire, and second other bodies, or sense-objects, viewed as the instruments of those animating desires of all nature which form the inferred extreme. Indeed, it is in direct harmony with all that we know of human psychology to affirm that the immediate foundation of belief in souls is the disparity between desire and realization: the 'I' which wants what it has not is distinct from the 'I' which is engrossed in what is, and, if the latter is a physical reality, the former must be a spiritual. If the desires of the conative 'I' were never balked or obstructed, probably there would arise no conceptions of other than human souls—which, when they do arise, naturally take on the colour of what they oppose. The body itself, in its weaknesses, assumes something of this obstructive character, and thus tends to sharpen its own fission from the animating desires and idealities which define themselves as its soul, while, again, in a sort of fantastic by-play, it becomes, as it were, the host of a whole group of disharmonious spirits—animal, passionate, intellectual—each striving, with no small malice, for the mastery.

2. **Idea of the soul.**—The distinction of embodied soul and disembodied is no easy one. Even in speculative philosophies there is usually involved change of quality with the change of state—a distinction preserved, in general, by the differing connotations of the English words 'soul' and 'spirit.' There are, in fact, three groups of conceptions of the soul, differing in relation to the body. The embodied soul—variously imaged—forms the key to the first

group, the disembodied soul, or spirit, to the second, while intermediate between these is the twofold group, comprising the idols, or doubles, of living bodies and the ghosts, or haunters, of dead ones. All three are common to the most primitive stages of human thinking—among living races of men, at least. For the sake of convenience, and as having a natural priority, the embodied soul, which is in some sense the body's life, may be treated first, and primarily with reference to the figures by which it is most commonly imaged.

(a) *The life*.—Fundamentally, the soul is the 'life' of the body. In primitive thought this is shown in custom rather than in expression, and more particularly in those customs which show an inability to conceive soul and body in disunion. South America, Africa, and Australia contain the world's most primitive populations and most utter savages. Cannibalism is found in all three continents, and in all three it is associated with the conviction that he who eats of another man's body receives into himself the life or strength of his victim. The yet more repulsive custom of devouring the bodies of dead kinsmen (also found, sporadically, in the same continents) is based upon a similar notion, namely, that the life of the kindred is thus transmitted without loss from generation to generation. Innumerable funeral customs illustrate the primitive man's inability to separate in thought the visible body from its invisible life—indeed, the whole fact of burial or other funeral honours rests upon this confusion. John Fraser's monograph¹ gives a number of striking illustrations: a son was found supporting the body of his dead father on his chest and abdomen, for the purpose, as he explained, of keeping him warm; a mother bore the mummy of her son about with her for four years; another carried the dead body of her child until it fell into decay. These are but illustrations, at the savage extreme, of that feeling that the dead body is still not inanimate which must have underlain the burial impulses of palæolithic man, as it certainly did the elaborate rites of Egyptian funerals, and in some vague sense survives in modern consciousness.

(b) *The life-blood*.—One of the most natural of the tropes by which the 'life' is represented is the blood (*q.v.*), the 'fountain of life.' 'But flesh with the life thereof, which is the blood thereof, shall ye not eat' (Gn 9⁴)—only, in most primitive societies, the command is the reverse, and for a sacramental reason: he who partakes of the blood, be it of man or of animal, thereby imbibes the life and the strength, and the enemy whose blood is drunk is totally conquered. It is the blood, again, that 'cries for vengeance,' and, according to the old belief, gushes from the murdered corpse at the approach of the murderer. Finally, exsanguinate shades from the world below and gods in the heavens above alike delight in the odours of blood—in good sooth a spirit, which serves to invigorate their paler being. This is the blood of sacrifice and the blood of atonement, which is, in fact, the blood of life. The most astonishing of all developments of this idea was that of the Aztec, who believed that the sun is maintained in its course and the world in its order solely by the unceasing effluvia of human blood drenching altars and shrines. Nor is there any idea more ubiquitous in literature than that of blood symbolism.

(c) *The heart*.—Probably closely related to the preceding trope, and equally physical, is the conception of the heart as the seat of life. Whether this is because it is the 'bleeding heart' or the throbbing heart is difficult to determine. Certainly in aboriginal American rites, where the ritual use

of the heart attained its greatest extravagances, the association with the blood is very close. The burial customs of the Egyptians, with a special vessel for the heart, are only an example of a wide spread custom which has survived down into civilized Europe. Of course, in later times, the added symbolism of the heart, as the seat of the higher emotions (courage, love), may be partially related to classical psychology; but the foundation of the image is certainly primitive and many-sourced. The heart is sometimes conceived as having a special soul of its own; the American Indian prophet Keokuk commanded from his followers prayers for the heart, along with others for the family, name, life, etc.

J. F. Cunningham¹ could find among the Manyema little trace of a belief in souls. 'All the Manyema would admit was: "We know there is something living in a man during his life, because we can hear it beat. If that something is the soul, we know it no longer exists in a man when he dies. That is all we know." Walter Roth,² reporting on the Guiana Indians, says that among them 'originally, not only the shadow, but also the heart, the head, and the more perceptible of all the parts of the body where there is a pulsation of the arteries, as well as perhaps the blood, the spittle, the footprint, and the bone were each regarded in the light of a Spirit or Something that was part and parcel of the body, and took its departure at the material death. . . . The Warrau expression for the shadow is *amêh-ko-i*, while *ak-ôbi* is their word for "heart" or for the heart's Spirit which, leaving the body at death, becomes their *Hebu*, or Bush Spirit. . . . The Island Caribs . . . held strong beliefs in a connection between spirits and an individual's heart- and pulse-beats: "they talked of the latter as the Spirit of the Hand; they spoke of the Spirit-something near the heart as *Gonanni* or *Lanichi*." This one at the heart was the principal one, which after death went to the sky in company with its *Icheiri*, or *Chemin*, to live there with other Familiar Spirits, and change into a young and new body. . . . Koch-Grunberg makes the interesting suggestion that certain procedures connected with some of the death festivals point to a belief in the bones constituting the real and final resting-place of the Spirit after the dismemberment (*Zersetzung*) of the body.' But the skeleton is more intimately connected with ghost-lore than with vital souls.

(d) *The breath*.—'And the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul' (Gn 2⁷). That the conception of the life as the breath is one of the most universal is attested by the great number of terms (שָׁרָף, ψυχή, πνεῦμα, *anima*, *spiritus*—to cite Hebrew and classical examples) for the soul having 'breath' or 'wind' as their primary meaning. 'To breathe' and 'to live' are virtually literary synonyms. The Roman custom of a kinsman catching the last breath of his dying kin is doubtless but a more refined form of the superstition which causes a number of groups of savages to devour sacramentally the bodies, or parts of the bodies, of dead kindred. The wind-like character of liberated souls is expressed everywhere in ghostly literature. Job 7¹, 'Oh remember that my life is wind,' surely has a double intention; as also Ezk 37⁹, 'Prophecy unto the wind, prophesy, son of man, and say to the wind, Thus saith the Lord God: Come from the four winds, O breath, and breathe upon these slain, that they may live.' Primitive equivalents are not far to seek. In many American rites the aspirate, as an element in ejaculation, appears to symbolize an intensification of the 'breathing life' which it represents. 'Heru! Hotoru. He!' is a Pawnee appeal to the winds. *Hotoru* is not the ordinary word for winds, but refers to them as supernatural powers.

'They are,' say the priests, 'from the breath of Tira'wa [Father Heaven] and they give life to man . . . they bring to man the breath by which he lives.'³

Even the universe, in some early philosophies, is conceived as having a windy soul.

The Tepehuane, according to C. Lumholtz,⁴ place the seat of the soul between the stomach and the chest, and regard its

nature as breath. This is an interesting psycho-physiological belief for a primitive tribe. A Navaho legend tells of the creation of man and woman; 'It was the wind that gave them life. It is the wind that comes out of our mouths now that gives us life. When this ceases to blow, we die. In the skin at the tips of our fingers we see the trail of the wind; it shows us where the wind blew when our ancestors were created.'¹ Another legend tells of the death of a woman; the body was buried, but 'they all wondered what had become of her breath; they went in various directions to seek for its trail, but could find it nowhere.'² One of the most interesting passages in this connexion is in the myth of 'Isis and Yaulilik's Daughters.' Isis is told that his first child is dead. "'I don't want to live in this world. Bring me the other boy,' he says. When the younger wife brought her child, Isis took it in his arms, put the top of its head to his mouth and drew a long breath. He took the breath out of the child and it was dead. He put the second child by the first, and said: 'These children are half mine, and half yours. The breath is mine, the body is yours. I have taken the breath into myself. You can have the bodies.'³ Very curious, for its suggestion of introspection, is an image in a Pima myth which likens sorrow to 'a wind four times twisting' about its object.⁴

These American examples might be paralleled from the lore of other races.

(e) *Flame*.—That the living body is warm and the corpse cold is a fact which in itself is sufficient to suggest that the 'life' is of the nature of fire.

'The life in your body and the fire in your lodge are the same and of the same date,' said the Shawnee prophet to his followers; 'if you suffer your fire to be extinguished, at that moment your life will be at its end.'⁵

The brand of Meleager is a Greek analogue, as, no doubt, is the sanctity of the hearth and its fire everywhere. Swamp-fires and other phosphorescences are almost universally objects of superstitious dread, being regarded as released souls. In sacred art the flammula, nimbus, and halo all come back to the notion that spirit is luminous; while the body lives, we speak of 'the fires of life' as burning, but the freed soul is as a tongue of flame. The Zuni say of a death that the man's 'light is cut off.'

(f) *The shade or phantom*.—Considered as the body's life, life-blood, breath, or vital flame, the soul is not readily thought of as enduring in separation from its physical host; but, viewed (as almost universally it is) as the body's shadow (*σκια*, *umbra*) or as its phantasmic likeness (*εἰδωλον*, *simulacrum*), it is with difficulty that it is conceived except in some degree of separation, as the body's friendly companion (*hospes comesque corporis*) or as its bloodless and boneless shade, after death. In myth and in literature, from the classical onwards, such visualized images of the soul naturally play a large rôle, but there are multitudes of instances in superstition and in nomenclature indicating the like ideas among the most savage peoples. Tylor⁶ gives Tasmanian, Algonquin, Quiché, Arawak, Abipone, Zulu, Basuto, and Old Calabar examples of identifications of 'soul' with 'shadow,' and this list might be far extended.

The Zulus, explaining, say that people have souls which are not entirely confined to the body; 'they may occupy the roof of a man's hut, and if he changes his abode his soul fits also. The people often use the word *zitunzela* (from *zitunzi*, "shadows") to express their ideas of human spirits.'⁷

Superstitions about shadows cast by the body in sunlight (noon is a particularly perilous hour, when the shadow is small) and reflexion shown in the water are common, and figure frequently in myth. Probably, also, superstitions about the eye—the evil eye of the living, the glassy eye of the dead—are intimately associated with the notion that the images caught or reflected therein are souls. It is only a developed phase of this belief

which leads to veneration for crystals and the practice of mantic crystal-gazing, as well as to dread of the mechanical eye of the camera, or to pictured representation of one's form and features.

'Warraus assure me that on looking at a mountain for the first time the eyes are shut to prevent the person attracting or drawing the Shadow of the Spirit toward him. When one person looks at another, the former draws or drags the latter's shadow toward him, a principle on which these Indians explain the taking of a photograph. The Island Carib corpse is laid out with two weights on the eyes, that he may not see his parents, thus making them ill. Catlin gives an amusing

Amazon of the local medicine-men more portraits by exhorting things are a great mystery,

but there you are, my friends, with your eyes open all night—they never shut: this is all wrong and you are very foolish to allow it. You never will be happy afterwards if you allow these things to be always awake at night. My friends, this is only a cunning way this man has to get your skins; and the next thing they will have glass eyes, and be placed among the skins of the wild beasts and birds and snakes." (The medicine-man had been to Para or some other place where he had seen the stuffed skins in a museum.) For a pregnant woman to look at the face of a corpse will draw trouble on her unborn child. It is possible that, perhaps on principles analogous to some of the preceding, most European races have adopted the practice of closing the eyes when in the attitude of prayer.¹ Curtin gives a Modoc myth describing the resuscitation of a dead man: 'All the bones were dead but the eyes were living'²—and from this life the whole was reanimated.

(g) *The name*.—Superstitions about names and name-souls are as wide-spread as any. It should be observed that the name is quite as physical a thing for the unlettered as is the phantasm; it is an auditory or motor-auditory image, just as the phantasm is a visual image, and it possesses a perceptual reality quite different from that of the lettered symbol of book-learned peoples; *fatus vocis* is a nominalist phrase for a word, but it is just the vocal breath (above all in the chant) which is to the primitive one of the most powerful and compelling of all agents. Says J. W. Fewkes:

'When a Tusayan priest addresses a supernatural being of his mythology he believes he must do so through the medium of some object as a prayer bearer; he breathes his wish on meal and throws this meal to the god. The prayer bearer is thought to have a spiritual double or breath body which carries his wishes.'³

So the name is a kind of breath-body, though not so intimately joined to the man as the breath itself. Le Jeune⁴ says that the Indians sometimes change their name on recovering from a severe sickness, and the Bellacoola believe that souls receive a new name, and speak a new language, when they reach the next world. Normally, children are not truly named until they reach a certain age and are capable of discretion. V. Stefánsson⁵ gives a most interesting explanation of Eskimo beliefs connected with this custom:

'As the child grows up the soul with which he was born (the *nappan*) gradually develops in strength, experience, and wisdom, so that after the age of ten or twelve years it is fairly competent to look after the child and begins to do so; at that age it therefore becomes of less vital moment to please the guardian spirit (*atka*), and accordingly it is customary to begin forbidding children and punishing them.'

The guardian-spirit which controls the child previous to this age is supposed to be some ancestral soul, and all the child's words are the utterance of this soul up to the age when its own soul assumes sway, and it is called after a name of its own. Frequently it is supposed that the name of the guardian is known, and the young child is called by this name. One of Curtin's⁶ Modoc myths tells of a babe that cried continuously until addressed by its true name. These beliefs are, of course, associated with the almost universal primitive belief in rebirth, especially of very young

children (the Aztec, *e.g.*, had a special limbo for souls of babes, who alone can be born anew). Ancestor-worship is naturally closely associated with name-souls. Probably this was what was meant by the Indian who told Le Jeune¹ that 'the body has a soul of its own which some call the soul of their Nation.' In the far Orient the Annamites at least address prayers to the clan ancestor, to the spirits of parents and grandparents to three generations, and then collectively to the soul of the family as a whole.² Naturally all worship of the *manes* tends to become associated with the clan name. See artt. NAMES.

3. Psychology.—The course of historic psychology has been from a psycho-physiological (such as Aristotle's) to a predominantly psychological type of theory; older speculations on the constitution of man distinguished a group of souls (nutritive, passional, intellective, and the like) associated with the several parts of the body; later theories came to assert the unity of the spiritual substance and to make of psychology, not a description of the several souls for which the body acts as a single host, but an account of the several powers or 'faculties' of the single soul. Primitive theories belong to the older type: the whole man is looked upon as composed of a group of entities, physical and psychical, which disperse with the dissolution of his body. Death is rarely regarded as the liberation of an imprisoned spirit to a more glorified existence; rather the future existence of the immortal parts is at best a kind of mutilated existence, and not even Elysium is a fair compensation for the loss of that completer manhood which is truly realized only in the flesh. The very ancient and wide-spread notion that the souls of the departed await in a kind of neutral limbo the day of their reincarnation as men is surely a reflexion of the feeling that the disembodied is somehow dismembered, while the equally common conception of the ghost as vengeful and malicious but pictures its own dissatisfaction with its unhappy state. To the primitive mind the normal man is the physical man, whose souls (for he commonly owns several) are in the nature of more or less dispensable baggage—something that he *has*, rather than *is*.

In the passage cited from Roth's account of Gulana Indian beliefs³ it is pointed out that along with the shadow there are souls for head, heart, blood, spittle, and even footprint. Indeed, there is hardly a part of the body that is not somewhere believed to own a spiritual double, which is its life, so that the whole bodily life may be said to be possessed, as it were, in severalty. The bones, the marrow of the bones, the eyes, the hair, the belly—all are parts with which a residential soul is found associated in primitive thinking. An interesting Iroquoian conception, recorded by J. N. B. Hewitt,⁴ regards the brain as the seat of the soul, and death by braining is held to render the soul stupid, implacable, and capable of committing excesses. The Maoris of New Zealand are a Polynesian instance of a primitive people seating the soul in the head. Le Jeune⁵ says of the Canadian Indians: 'They distinguish several souls in one and the same body. An old man told us some time ago that some savages had as many as two or three souls; that his own had left him more than two years before, to go away with his dead relatives—that he no longer had any but the soul of his own body, which would go down into the grave with him'—nor is it difficult to imagine that, to a desolate old man whose kindred and friends were gone, his life should seem but the soul-bereft shadow of what it had been.

Belief in a plurality of souls, as associated with the one body or forming the one person, is very wide-spread, and is, indeed, a natural consequence of the variety of tropes employed to designate the spiritual entity. The heart, the flesh, the life, the name, the family, were distinguished by Keokuk. The Iroquois have separate words for the mind, soul, ghost, life, strength, brain-soul. The Haida distinguish mind, ghost, discarnate soul, and have

two words for embodied soul. These are sporadic American examples. Some of the Melanesians believe that a man possesses as many as seven souls, of differing types; and belief in the possession of two or more is frequent among the primitive. An amusing instance is the Bagobo notion that man has two souls, a good and a bad, which respectively pass to paradise and hell in the hereafter; we may suspect that the moral terminus comes as a result of foreign influence. Such ideas endure into higher cultural stages. The Egyptian is notable, with its distinction of *ka* (genius), *khaibit* (shadow), *khu* (life or intelligence), *ba* (soul proper), *ran* (name), together with something like animistic personification of the mummy, heart, strength, form. But hardly less complex is the old Persian spiritual dissection of a man into body, life, form, soul, and *fravashi* (genius); or the Roman, which in addition to the *genius* of a man (fem. *juno*), distinguished the tomb-haunting *umbra*, the *manes*, descending to Orcus, and the *spiritus*, climbing to its ethereal element above, and more or less identified with the mind-soul, *anima*. Even for near moderns 'the constitution of the soul . . . is conflate of the mind, spirit and animal soul, or idolum';¹ while there is to-day a degree of separation of psychic entities implied in the meanings of 'soul,' 'spirit,' 'mind,' 'consciousness.'

The converse of the idea of the possession of multiple souls is the notion of the existence of soulless men. This is by no means an uncommon primitive notion. There are tribes, especially in Africa, apparently with no belief in souls, at any rate as in any sense separable from the body; while in numerous African and Polynesian instances women and lower-caste people are regarded as soulless. Cunningham gives a humoresque incident:

'A chief pointed at a poor peasant and said: "He have an immortal soul? I cannot believe it; but I will admit that perhaps Wakoli or Luba had a soul. Wakoli had four hundred wives!"'²

Obviously, in cases of reported disbelief in souls among primitive men, what is commonly meant is disbelief in a separable entity endowed with immortal life; and as to this dogma primitive men are hardly more in agreement than are civilized. On the other hand, some discrimination of body and soul, or, more exactly, of the body and its indwelling life, is as universal as is the animistic apprehension of nature. Even among peoples like the Fuegian Yahgans, among whom there is no clear evidence of a belief in the existence of gods of any sort, there is still a lively apprehension of the wandering (and more or less physical) simulacra of men.

4. Discarnate souls.—It has been remarked above that the phantasmic soul, or double, is less intimately bound to the body than are other forms. Even during the life of the body it may journey abroad, appearing to those gifted with the second sight as the co-walker (fetch, wraith, double-ganger, idolum) of the living, and visiting in dreams those for whom its master has a message or upon whom he meditates inimical action. Shamans make great use of their souls as messengers, to seek information from places remote, while prophets use them for the similar purpose of visiting the abodes of the dead or the homes of the gods. It is even advisable at times for a man setting out on a perilous task to have his soul extracted by a competent shaman and kept at home to ensure his own safe return; while sickness is caused not only by the body's becoming the host of unwelcome foreign spirits (which the shaman must extract), but often by the inconsiderate *Wanderlust* of the patient's soul, which the medicine-man's own spirit must

hale home in order to ensure a cure. Sometimes, even, there are stationed on the road to the home of the dead, wardens whose business it is to turn back souls which are leaving the body before the appointed hour, while, again, a man may, by desperate effort, recover his own departing soul.

De Smet¹ gives a striking Chippewa story to this effect. A chief, left on the battle-field for slain, accompanies the war-band home, trying to make himself known to them, but all his solicitations and commands are unheeded. Arrived at the home camp, he finds his wife in mourning; he shouts in her ear, 'I am hungry! I am thirsty!' She thinks she hears a rumbling sound, but she sees no one. Frustrated in his attempts, he turns back to the battle-field, but, as he hears it, he finds a fire in his path, which moves as he moves, ever thwarting his approach. In despair he cries: 'I also am a spirit; I am seeking to return into my body; I will accomplish my design. Thou wilt purify me, but thou shalt not hinder the realization of my project. This day I will triumph over thee, Spirit of Fire!' And with a desperate effort he darts into the flame, to awake, as from a long trance, in his own weakened body.

But death itself does not result in a complete separation of soul and body—or perhaps it would be truer to say that the errant soul and the body-soul, or ghost, pursue different destinies. De Smet² says that many of the Indians believe in two souls, one of which is admitted to their paradise, while the other, the body-soul, hovers near the burial-place; and in another connexion he remarks that 'nothing but the hope of gain could ever induce an Indian to go alone in a burying-ground at night.'³ Probably the original of the Bagobo belief in dual souls was of this nature—which is, in fact, the popular belief of uneducated Europeans. As among Europeans, too, it is common everywhere to find the ghost associated with the skeleton, or as wearing the pale or mutilated aspect of the dead body. Numerous tales have for their motive accounts of the commerce of the living with their dead kindred, who are skeletons by day but phantasmal ghosts by night. Not only do men meet and converse with these departed beings, but there are marriages between the dead and the living, and children are born to them, though never normal children. A Bellacoola tale of such a child describes it as a bodiless head which must never touch the ground; when it does so, it disappears into the under world. One of the most enlightening of these tales is recorded by F. Boas.⁴

A man visits the bones of the dead, which at night assume the forms of his kinsmen; their boats are full of holes and covered with moss, and they take in their nets dead leaves and twigs, which to them are fish. The man discovers that by speaking aloud—for the spirits all speak in low voices—he can reduce them to the condition of skeletons. This he does, to their annoyance, so that they send him back to the land of the living. But, disobeying their commands, he dies; and now, coming as a shade into the land of the dead, he finds that the ghosts, their canoes, and the fish that they take are like the full-bodied beings of the life that he has left.

This is an interesting effort, on the part of the aborigines, to imagine the state of the dead, which to themselves is altogether like that of the living, and only from the standpoint of the latter is seen as a form of mutilated existence.

The notions that ghosts speak in whistling voices, that they nibble feebly at food left for them, that in stature they are manikins or doll-like, and that generally they are given to a kind of panic fear of embodied men are all found, not merely in Homer, but throughout the primitive world. Sometimes these ghosts are corpse-like in appearance; and this is especially true if the body has been mutilated. In such cases the ghost is usually vengeful, ready to wreak ill where it can. Often, however, the ghosts simply reflect the bodily condition, without any necessary malice.

The Pawnee have a special class of ghosts of scalped men, who avoid the abode of the happy dead and the eyes of the living for the same reason—shame of their condition. They form a sort of society of disconsolates, and address one another by terms descriptive of their estate as 'One-Hair,' 'Forehead Hair,' etc. The Zuñi, more humanly, expect to see their ancestral spirits in their natural guise.

'The old men too feeble to walk will come leaning on a cane, the mother with her son walking before her, her child led by the hand, her younger child carried on her back, the infant in her arms, and her unborn child'⁵—all not in the flesh, but in the ghost-self, just as in nature.

Sometimes the ghost, or body-soul, hovers near the burial-place in the form of a bird, an insect, or a small animal. It is interesting to find the butterfly occurring as such an embodied soul in the lore of N.W. America.⁶ The same insect is common in Aztec art as a symbol of the breath, or breath-soul, shown on the lips of goddesses. From such a notion to the conception of reincarnation in animal form is but a step—a step which has been taken by primitive men the world over. Nocturnal creatures, like owls and bats, or earth-dwelling animals, such as beetles, serpents, and even worms, are forms in which souls are likely to be re-embodied. In not a few tribes these re-embodiments go progressively down in the animal scale, and may end by final departure from the earth or utter obliteration. Here, however, we are encroaching upon the field of beliefs in the future state of souls, for which the reader is referred to the art. BLEST (ABODE OF THE), ESCHATOLOGY, INCARNATION, STATE OF THE DEAD, TRANSMIGRATION.

5. The powers of souls.—The primary function of the soul is, of course, to keep the body in life; the soul is the life of the body; and, although soul and body may be temporarily separated, as in sleep or trance or even with the body still wakeful and active, with no damage incurred, none the less their lasting separation is death. Further, it would appear from a considerable variety of beliefs that the soul's comfort and the fullest exercise of its powers depend upon its connexion with some sort of body. Souls haunt, in ghostly forms, even mutilated and decaying bodies; they strive, in the form of familiars or demons, to obtain an entrance into and a partial control of the bodies of the living, from which they sometimes succeed in ejecting the native owner (for the plight in which Dante pictures Friar Alberigo—soul in hell while his devil-animated body still moves in the world of men—is no marvel to the primitive imagination); while, finally, discarnate existence in the other world is commonly represented as a kind of limbo in which the spirits await rebirth as full-bodied men; or, if it be an Elysium, there is in its pallid joys always an element of dissolvent illusion. Even artificial and substitute bodies which men supply—carven blocks and the like—are attractive to the unhoused spirits, who may be lured or charmed into them, there finding a new contact with the life of men, whose idols or tutelars they become. The Indians of the N. Pacific Coast occasionally carve portraits of deceased persons, as mortuary or other memorials;⁷ and they are not without legends of spirits of the deceased taking possession of these. One such legend, truly affecting, is recorded by J. R. Swanton.⁸

A young chief had lost his wife, but kept by him, dressed in her clothing, a portrait image which, out of pity for his sorrow,

a carver had made for him. 'One day, while he sat mourning very close to the image, he felt it move. . . . At first he thought that the movement was only his imagination, yet he examined it every day, for he thought that at some time it would come to life. . . . One day, after the chief had had it for a long, long time, he examined the body and found it just like that of a human being. Still, although it was alive, it could not move or speak. . . . The woman moved around very little and never got to talk, but her husband dreamed what she wanted to tell him. It was through his dreams that he knew she was talking to him.'

This incident is surely illuminating, both as to the motives which lead to art among primitive peoples and as to those which lead to idolatry. Here it is clearly the power of love which lures the departed soul to the man-wrought body; the complementary form, where magical compulsion is the force employed, is best illustrated by the account given by R. E. Dennett¹ of the W. African making of a 'Fetish-into-which-Nails-are-Driven':

'A palaver is held, and it is there decided whose Kulu [soul] it is that is to enter into the Muamba tree and to preside over the fetish to be made. A boy of great spirit, or else, above all, a great and daring hunter, is chosen. Then they go into the bush and call his name. The Nkanga priest cuts down the tree, and blood is said to gush forth. A fowl is killed and its blood is mingled with the blood that they say comes from the tree. The named one then dies, certainly within ten days. His life has been sacrificed for what the Zinganga consider the welfare of the people. They say that the named one never fails to die. . . . People pass before these fetishes (Zinkiki Mbowu), calling on them to kill them if they do, or have done, such and such a thing. Others go to them and insist upon their killing so and so, who has done or is about to do some fearful injury. And as they swear or make their demand, a nail is driven into the fetish, and the palaver is settled so far as they are concerned. The Kulu of the man whose life was sacrificed upon the cutting of the tree sees to the rest.'

Mediumistic powers are nearly akin to the soul's yearning for embodiment. Virtually all primitive men believe in such powers, though it is commonly supposed that they come by special endowment and preparation—the latter often strenuous to a degree—in many instances through death and resurrection, as is assumed. Primitive mythology abounds in tales of men acquiring supernatural strength by the thorny road of bodily destruction and restoration. By such means the soul of the medium, or shaman, is supposed to acquire the faculty of direct intercourse with the world of spirits, and usually to have as his especial agent or 'control' a genius, tutelar, or familiar spirit, whose powers reinforce his own. Indeed, it is not a little remarkable to discover virtually all the phenomena of modern spiritualism (if it be modern) among savage peoples, remote in time and place. Le Jeune's description of a Montagnais shamanistic performance, written in 1634,² would hold, *mutatis mutandis*, for a spiritualistic séance in central New York: there is the medium's cabinet, the darkened room, the singing, the winds, voices, and 'physical phenomena,' and along with these prophecies of life and death. The shaman (although Le Jeune believed him to be a great rogue) was obviously sincere. 'Enter thou thyself into the tent,' he said, 'and thou wilt see that thy body will remain below, and thy soul will mount on high.' The Seneca Indians of New York State still continue similar practices,³ as do the Chippewa tribes in their Midé society.⁴ The Zuni have a curious belief that in the old times the souls of the dead used to return in the flesh to converse with the living, but their presence caused a great mortality; now they come as spirits, and only those gifted with a superior sight, their mediums, can see them.⁵

Apart from preserving the body in life, the important powers of the soul are curative and

clairvoyant. As clairvoyant, the soul is a kind of scout, able to penetrate times, places, and substances closed to the body.

A curious Cree tale, narrated by de Smet,¹ tells of a war party being guided on its course by a girl with blindfold eyes; 'the manitou of war was supposed to guide her.' The Chippewa have an interesting legend of having once numbered among them a flying man, a powerful magician whose 'medicine' was a feather which he could cause to enter his body, thereby enabling him to fly and spy out the enemy.²

Crystal-gazing is suggested in numerous rites and myths.

The N.W. Coast Indians tell of a man to whom a serpent gave a transparent stone which led him through all lands; the Spanish chronicles tell of an obsidian mirror in which Montezuma saw ominous images; the Cakchiquel employed a similar stone in testing the guilt or innocence of accused men; the Inca Yupanqui is said to have been given a crystal by the sun, in which he saw whatever he desired to discover—these are widely separated American examples.

Belief in telepathy is evidenced in many tales: 'All spoke with their hearts; hearts spoke to hearts, and lips did not move,' is a Zuni expression.³ Stories of 'veridical hallucinations' and prophetic visions are numerous. Of the former J. S. Polack⁴ gives a number of examples—but the account of savage instances of this phenomenon would be bulky. Prophecies by shamans or mediums are still more numerous in primitive lore: there is a whole group of legendary American Indian prophecies of the coming of white men and of disaster to the native life recorded in the Spanish annals; much of this may be supposed to be apocryphal, but it is at least striking that Cortes should have been discovered by watchers posted on the coast at Montezuma's orders, on the look-out for the coming of the prophesied god, and that the first presents which the emperor of the Aztec sent to the new-comer were mainly the appropriate apparel of this god, Quetzalcoatl. Gifted souls, however, see not only into the future, but also into the past; it is thus, at least, that Mohave shamans explain their knowledge of creation; they were present at the beginning of the world, as in a dream. This belief is, of course, entirely consonant with the theory of transmigration. Naturally, in the main, clairvoyant powers are called into play to satisfy more immediate interests: to discover the fate of the absent, to recover stolen property, to find food or treasure. Dreams are regarded as great aids in all this (for the soul journeys in dreams—this is the common explanation), but, when the search is difficult, the shaman is called into service, with his more potent or active faculties.

A striking example, where the seeker was a white man consulting a Zulu doctor, is given by David Leslie:⁵

The white man's eight hunters were overdue, having been long gone on an elephant hunt, and at the solicitation of his native servants he consulted the doctor. 'The doctor made eight little fires—that being the number of my hunters; on each he cast some roots, which emitted a curious sickly odour and thick smoke: into each he cast a small stone, shouting, as he did so, the name to which the stone was dedicated; then he ate some "medicine," and fell over into what appeared to be a trance for about ten minutes, during all which time his hands kept moving. Then he seemed to wake, went to one of the fires, raked the ashes about, looked at the stone attentively, described the man faithfully, and said: "This man died of fever and your gun is lost." To the next fire as before: "This man" (correctly described) "has killed four elephants," and then he described the tusks. The next: "This man" (again describing him) "has been killed by an elephant, but your gun is coming home," and so on through the whole, the men being minutely and correctly described; their success or non-success being equally so. I was told where the survivors were, and what they were doing, and that in three months they would come out, but as they would not expect to find me waiting on

them there so long after the time appointed, they would not pass that way. I took particular note of all this information at the time, and to my utter amazement it turned out correct in every particular. It was scarcely within the bounds of possibility that this man could have had ordinary intelligence of the hunters; they were scattered about in a country two hundred miles away.¹

If this narrative is to be trusted, it certainly outdoes all that is ascribed to the tested clairvoyants of the civilized world.

The curative or psycho-therapeutic powers of souls appear in every variety of use of suggestion and hypnotism, and amid practically all peoples. These functions have their obverse use in the power to inflict disease, or even death, upon an absent or unconscious victim. All such practices are interbound with ritual and magical observances; and, indeed, they can hardly be dealt with except in connexion with such customs. See artt. DISEASE AND MEDICINE, DIVINATION, MANA, PSYCHO-THERAPEUTICS, SHAMANISM, SPIRITISM.

LITERATURE.—The literature dealing with primitive conceptions of the soul is enormous, being co-extensive with the study of primitive religion and superstition. In general, it may be said to fall into three classes: (a) reports on the beliefs and myths of particular tribes, from travellers, missionaries, and anthropological field-workers—abundant both in book form and in the ethnological journals (notably *JAI [JRAI]*, *FL*, *JAFI*, *RHR*, *ZE*, and *Anthropos*); (b) critical and comparative studies of primitive religious ideas, of which the most important, probably in any language, are E. B. Tylor, *PC*, 2 vols., London, 1891; A. Lang, *Myth, Ritual and Religion*, 2 vols., do. 1899; and J. G. Frazer, *GES*, 12 vols., do. 1911–16; with these should be named E. Durkheim, *Les Formes élémentaires de la vie religieuse*, Paris, 1912, Eng. tr., London and New York, 1915; (c) briefer résumés of the subject in works on comparative religion and descriptive or comparative ethnology, few being better conceived than the introductory lecture of S. Reinach, *Orpheus: Hist. général des religions*, Paris, 1909, Eng. tr., London and New York, 1909. See also the 'Literature' and bibliographical references of the artt. cited in this art.; also 'Literature' of artt. ANIMISM, GOD (Primitive and Savage), PRAYER, COMMUNION WITH DEITY. Probably the most comprehensive study since Tylor's *PC*, centring upon the idea of soul in primitive religion, is A. E. Crawley, *The Idea of the Soul*, London, 1909, containing much bibliography. The volumes of *The Mythology of All Races* (Boston, 1916 ff.) will be found of use as giving conceptions classified by racial groups.

H. B. ALEXANDER.

SOUL (Buddhist).—Few words are more ambiguous than 'soul,' as any dictionary will testify. Nor is there any one word in the religious literature of Buddhism which can be said to coincide with it in either extension or intension. The principal terms in the canonical literature which translators have rendered, sometimes or always, by 'soul' are *jīva*, *attan*, *satta*, and in the Abhidhamma section *puggala*. In the somewhat later *Questions of King Milinda*, *jīva* is preferred, and with it the rare word *vedagū* ('sentient one'). The other three terms are used, in connexion with their contexts, only when canonical passages are quoted.¹

Jīva is literally 'living thing.' It is a term imported from the staple terms of religious schools opposed to Buddhism, and occurs only² in the title of one among many debatable propositions classed as erratic or heretical:

'Is the *jīva* the same as . . . (or) . . . a different thing from the bodily frame (*aññāṇ jīvaṃ aññāṇaṃ sarīraṃ*)?'³

It may thus be fairly rendered by 'soul' in the Hebrew sense—'and man became a living soul.' But the Buddhist canonical books do not select

the term *jīva* when they are uttering doctrines concerning man's spiritual nature as contrasted with his bodily and sensuous faculties. They choose one of the other three terms—*attan* (nom. case, *attā*), *satta*, *puggala*. The last two mean a (living, intelligent) being, a person, and are used in ordinary discourse simply to represent any fellow-being.¹ The first is also closely connected with 'living thing' in that it means breath (Skr. *ātman*; cf. *वेदमा*, 'spirit'). In ordinary discourse it means self,² and in the Abhidhamma *Piṭaka*, the *Milinda*, and the *Netti* it rarely occurs in any philosophical argument. But the earlier *Sutta*-literature uses *attā* repeatedly in controversial discourse concerning a right conception of what we should call soul or spirit. At the same time, the *Suttas* show an unhesitating acceptance of the term wherever we should say 'self.'³ These contexts lead us to infer that such discourses were uttered at a period when the speakers were making a strong protest, not against man's spiritual nature, but against a certain religious or philosophical attitude in vogue in their time, concerning that nature viewed as *attā* or *ātman*. It needs but a glance into Vedāntic literature—e.g., the *Upaniṣads*, notably those reckoned to be pre-Buddhist, and the *Bhagavad-Gītā*—to find everywhere a unique cult of *ātman* (called also *Brahman*). It was regarded as divinity universally immanent, but especially so in the human organism. Conceived materialistically as a fine substance, located in the heart, and compared as to size and shape to a variety of small objects,⁴ this microcosm was held to possess, like the macrocosmic divinity, the essential qualities of permanence (quitting the impermanent body at death), immutability, bliss, and omnipotence. And to discern the essential identity of microcosm and macrocosm was to attain true insight.

E.g., 'in that subtle essence . . . all that exists has its self. It is the true. It is the self, and thou art it. . . . The infinite is bliss . . . is the self. He who loves the self . . . becomes a self-ruler; lord and master in all the worlds. The self is without decay, death, grief.'⁵ 'The embodied one which is eternal . . . is not born, nor does it ever die . . . unchangeable, primeval . . . all-pervading, stable, firm.'⁶

It is on this point of soul or spirit or self, as a thing different in kind from the rest of the individual, that Buddhism joins issue with Vedāntism. To such a dualism it is in fundamental antithesis. Its philosophy of life may be said to be based on the axioms, *sabbam aniccaṃ*, *sabbam dukkhaṃ* ('all is impermanent,' 'all is [liable-to] suffering'). In no constituent of the living being was any exception to this rule of nature to be found. And, since *attā*, as currently taught, was essentially permanent, unchanging, blissful, powerful, there could be none of *attā* so conceived in the living being:

'What think ye then? Is body, is mind permanent, or impermanent?' 'Impermanent, sir.' 'Is that which is impermanent liable to suffering or not?' 'It is liable, sir.' 'But is it proper to say of that which is impermanent, liable to suffering and to change, This is of me; I am this; this is the soul (self) of me?'⁷

The individual is entirely phenomenal, governed by the laws of life. Were there in him a microcosmic emanation of the superphenomenal *ātman* or *Brahman*, he would have the power of deity to remould himself 'nearer to the heart's desire,' and thus at will to transcend those laws—

¹ Animals are never so referred to. They would be included under the yet wider name *pāṇa* ('breathing thing'). But *deras* (spirits, deities), who are for Buddhists reborn mankind, would be included.

² See art. SELF (Buddhist).

³ E.g., as prefix in compounds, and in oblique cases.

⁷ *Majjhima Nikāya*, li. 19 f., and elsewhere.

¹ *The Questions of King Milinda*, tr. Rhys Davids (*SBE* xxxv.), Oxford, 1890; on pp. 41, 48, 86, 132, *jīva* is used; on pp. 86, 111, *vedagū*; on p. 45, *satta* ('being'); on p. 67, *attā*; on p. 40, *puggala*. Three centuries or so later Buddhaghosa has reverted to the use of *attā* (cf. *Sumangala Vilāsinī*, i. 194 f.). The need for protest mentioned below may no longer have been pressing—he wrote in Ceylon—but he was commenting on canonical arguments. He also uses *vedaka*, *kāraka* ('feeler,' 'agent'), for the soul or self-entity (*Vissuddhi Magga*, xvii., xx.).

² Rhys Davids, *Dialogues of the Buddha*, Oxford, 1890–1910, li. 359 f., uses *jīva*, but the Buddhist origin of this *Sutta* (*Pāṇāsi*) is doubtful. Cf. the term in Jainism (see art. JAINISM, 4. i. (b)).

³ *Dialogues*, i. 204, 254; *Samyutta Nikāya*, 215, 258, etc.

'If the body . . . if any of the four mental factors were the soul (self), the body . . . the mind would not be subject to disease, and we should be able to say: Let my body . . . my mind be, or not be, so and so.'¹

Into a complex or congeries of these five varieties of functionings or faculties called *khandhas* (Skr. *skandhas*), or groups, the individual can be analyzed without residuum. In fact, according to Buddhaghosa,² it was in order to effect an exhaustive analysis for the rejection of ātmanistic dualism that the teaching at its outset adopted this fivefold classification. And, living personality being thus resolved, the teaching proceeded to repudiate any identification or coincidence of an extra-phenomenal self or soul with any one of the five. Immanence was equally rejected:

'The well-taught disciple . . . regards not the bodily qualities as *attā*, nor that they have *attā*, nor are in *attā*, nor that *attā* is in them. Neither does he hold any of these views regarding the *khandha* of feeling, nor of perception, nor of mental activities, nor of consciousness. For him each one of these *khandhas* changes, becomes other, he does not get thoughts [which bring about] a recurrence of changing *khandhas*.'³

The *khandhas*, bodily and mental, were thus declared to be 'empty' (*suñña*) of any unchanging essence.⁴ That which was wholly impermanent and liable to suffering was also inevitably *an-attā*, 'soulless,' or, as we should prefer to say, 'without *Ātman*.'

It should not for a moment be inferred, on this account, that Buddhist teaching countenanced any belief in a total annihilation of body and mind at death. Beside the error of eternalism (*sassāta-vāda*), or indwelling immutable entity, it set the error of annihilationism (*uccheda-vāda*).⁵ Beside the doctrine of *anicca* it set that of *kamma*, or the transmitted force of the act, bodily and mental.⁶ The self or soul is the *khandha* complex, ever changing but ever determined by its (or their) antecedent character. Hence the long-drawn-out line of life is a fluctuating curve of evolving and degenerating experience, into which it is logically unthinkable to intrude an immutable factor. But annihilationism was not as prevalent an error as was eternalism. Had it been so, we may feel confident that, to the oft-repeated trio, *anicca*, *dukkha*, *an-attā*, Buddhist teaching would have added a fourth, such as *punabbhāva* ('renewed becoming'), or the like. The future state of the living is constantly referred to, but the teaching is not so much that there will be rebirth as of what kind, because of the present life, it is likely to be. And the *an-attā* doctrine is logically so much a corollary of *anicca* that, had it not been for the exaggerated eternalism of the *ātman* doctrine, we should scarcely have found *an-attā* in the rank it occupies. It would have been overshadowed by, and taken up into, *anicca-vāda* and *kamma-vāda*. We may even venture to affirm that Buddhism, in the emphasis with which it combats a tendency at once mythological and mystical in the land of its birth, has weakened itself as a doctrine for all lands and all times by not building up a more positive teaching on the spiritual nature of man.

Be this as it may, Buddhism had no quarrel with any term for the living person as a whole—*attā*, *satta*, *puggala*—so long as in these terms we see labels, binding concepts, conventions in language, holding together, for economy in thought and word, the compound that a living person at any given moment, past, present, or future, is

¹ *Vinaya Texts, Mahāvagga*, I. vi. 33 ff. (SBE XIII. [1881] 100 f.).

² *Vs. Magga*, xiv., tr. in H. O. Warren, *Buddhism in Translations*, Cambridge, Mass., 1896, p. 166.

³ *Samyutta*, III. 17 f.

⁴ *Dialogues of the Buddha*, I. 271., 46 f.; *Samyutta Nikāya*, II. 20 f.

⁵ Cf. e.g., *Samyutta Nikāya*, IV. 132: 'Kammaṃ,' with the three following Suttas.

"'Being'! (*satta*) Why dost thou harp upon that word?"

Mere bundle of conditioned factors, this.

No "being" can be here discerned to be.

For just as when the parts are rightly set,

The word "chariot" ariseth in our minds,

So doth our usage covenant to say

"A being" when the aggregates (*khandha*) are there.'¹

¹ For these, *Chitta*, are merely names, expressions, turns of speech, designations in common use in the world.'²

In this way all these terms are frequently used in the *Suttas*. Wherever the individual was living, unless it was in the very dimly conceived spheres called the unconscious and the immaterial, he or she was still and was always a compound of *khandhas*, the body-factor varying in grossness or refinement and other qualities according to the sphere inhabited and the mental factors no less. Thus, if you were in the *Brahmā* heaven, you had to assume a grosser body before you could pass into and act in the lower heavens.³ Ever the 'soul' was the compound, always changing, growing out from, and the inevitable result of the souls (or selves) that had been. And, so long as the earnest inquirer bore in mind this distinction between self, soul, spirit as the mutable, growing organism, revealed by philosophic truth (*paramattha-sacca*), and the name-label, suggestive of a fictitious immutable entity, as used in the social convention of language (conventional truth, *sammuti-sacca*),⁴ he thought in conformity with the mother-tradition of his religion. The *Suttas* show no hesitation in using conventional language in connexion with man as surviving not one death only, but any number of dyings. Available words, in fact, were so utterly inadequate, during the early centuries of Buddhism (as they are still), to discourse of what is commonly called transmigration that practically no choice was left. Survival was spoken of, by *Brāhman* and Buddhist alike, in terms of bodily acts and states. We are at a loss to conclude which was the more remarkable—the reaching out by the mind of Gotama Buddha to ideas which it needed the philosophic growth of a later period to make more clearly articulate by new terms, or the apparent failure of his opponents to discern how very badly the current terms of transmigration, such as they used, applied to an immanent being who was eternal and immutable. In the latest book of the canon, the *Kathā-vatthu*, in the great opening discussion on the soul (*puggala-kathā*),⁵ we find the materially conceived views of transmigration criticized with a mainly negative emphasis. Terms for a constructive theory seem to be still lacking.

E.g., after much discourse to show dialectically that it is impossible to find, among the ultimates of our conscious experience, a soul or person (*puggala*) apprehended as 'a real and ultimate fact,' the argument proceeds to reject any such ultimate in the mysterious but accepted procedure of rebirth:

'*Heterodox Qy.* Then is it wrong to say, "A soul (*puggala*) transmigrates from this world to another world, and from another world to this?"

Orthodox Ans. Yes'

the latter speaker having elicited the admission that there is neither an identical soul that is reborn, nor a different (i.e. quite other) soul, nor both, nor neither.⁶

Passing on to the *Milinda*, we find there the germ-doctrine of the founder—viz. that man, in his entirety, is never the same, yet ever the resultant of his fore-existing self,⁷ stated with a growing maturity in thought and diction.

But it is not till the times of Buddhaghosa⁸ and his successors that we find, grown out of the too negative conception of *anicca*, a positive view, made articulate by certain newly applied terms, of

the ever-changing being of man conceived as a causally determined series of forces and resultants, and as a growing series, in which the now passing moment is wrought up into the coming moment.

Even then, discussion on a subject so inaccessible and mysterious is still stiff and halting. Further knowledge of mediæval Pāli literature may reveal further advance in theory. But we know enough to show that Buddhist doctrine as to soul and survival has logically reconciled *anicca* and *kamma*. My 'self,' as changing constantly, undergoes at death but a relatively deeper change; my new 'body' (*rūpa-khandha*), determined by my *kamma*, becomes one fitted to that new sphere, wherever it be, in which my past thought and will have determined that my new thought, call it soul or spirit or mind, be renewed.

SOUL (Christian).—I. INTRODUCTION.—(a) The term 'soul' is, in this article, taken in its most comprehensive sense, as denoting the whole 'self' or personality, the essential principle of human nature, the basis of conscious, continuous, individual existence. It is clear that study of the Christian idea of the soul in this broad sense involves the psychological interpretation of all characteristic data of Christian experience. We may speak of this study as 'Christian psychology,' because there are particular groups of phenomena at different periods with which Christianity is specially concerned (notably those of the NT period), and because there are certain real or alleged aspects of human nature in which Christianity is specially interested. But the method of the study must be that of psychology in general, i.e. purely historical and scientific, without dogmatic presuppositions, though the ultimate problems of all psychology pass into the realm of metaphysics.

(b) The psychological terminology and ideas of the NT are, as we might expect, largely continuous with those of the OT and the subsequent Jewish literature. The relevant ideas of the OT may be summarized as follows:

'The idea of human nature implies a unity, not a dualism. There is no contrast between the body and the soul, such as the terms instinctively suggest to us. The shades of the dead in Sheol . . . are not called "souls" or "spirits" in the Old Testament; nor does the Old Testament contain any distinct word for "body," as it surely would have done, had this idea been sharply differentiated from that of "soul." Man's nature is a product of the two factors—the breath-soul (*נֶפֶשׁ*) which is his principle of life, and the complex of physical organs which this animates. Separate them, and the man ceases to be, in any real sense of personality; nothing but a "shade" remains, which is neither body nor soul. If this seems but a poor idea of human nature, we must set over against it the great redeeming feature, that there is an aspect of this nature (*רוּחַ*) which relates man to God, and makes man accessible to God.'¹

The non-canonical literature of Jewish thought shows that this fundamental idea was subsequently modified in two primary ways, chiefly in relation to the new eschatological emphasis. One was the accentuation of individualism; the detachment of the individual from the corporate personality of his social group, already declared by Jeremiah and Ezekiel, was more sharply presented against the new eschatological background of moral retribution in the life after death. The other, closely related, was a clearer recognition of the ethical problems of human nature, such as those arising from the tendency to evil which is in all men as it was in Adam. On the other hand, the OT doctrine of the Spirit of God fell into practical neglect, to the great impoverishment of the doctrine of

man. It is, in fact, through the recovery of this doctrine that the most characteristic advance of the NT anthropology is made (i.e. in the Pauline interpretation of Christian experience).

(c) It is necessary to emphasize the fact that the NT psychology is, in general, continuous with that of the OT and the Apocrypha, because some scholars (e.g., Holtzmann, Lüdemann, Sokolowski) have tended to exaggerate the Hellenistic influences, especially in regard to the Pauline contrast of the inner and outer man. They interpret the contrast as a dualism, though this is essentially untrue to the Hebrew basis of Pauline thought. It is, of course, true that the reproduction of the Hebrew psychological terms through their Greek equivalents gave easier access to the Hellenistic influences of the age. But the resultant modification has been, in fact, much less than we might have expected. The Greek terms of the NT are filled with an essentially Hebrew content; the two new terms, *νοῦς* and *συνείδησις*, are really specializations from the psychological usage of 'heart' in the OT, and are not used with a Greek connotation.

II. NEW TESTAMENT.—1. The psychological terms.—The group of writings known as the NT, though emanating from a single generation, presents at least three types of psychological usage, viz. the Synoptic, approximating most closely of all to the OT; the Pauline, offering the most important and original development of the OT conceptions; and the Johannine, apparently dependent on the Pauline usage, but moving in a circle of its own. We may conveniently review the use of the chief terms in each group separately, reserving for a fourth class other noticeable occurrences in the NT. The chief terms to be considered, in order to reach the general NT idea of human personality, are four, viz. *ψυχή*, *πνεῦμα*, *καρδιά*, and *σάραξ*, corresponding respectively to *נֶפֶשׁ*, *רוּחַ*, *לֵב*, *בָּשָׂר*, in the OT.

(The attached numbers signify the approximate number of cases of each usage.)

(a) *Synoptic.*—*ψυχή* (37) denotes physical life (Mt 22²⁹), or the subject of emotional states (Mk 14³⁴), as in the OT, but in eleven cases (as Mt 10²⁸) it refers to the continuance of life after death, a usage to which there is nothing corresponding in the use of *נֶפֶשׁ*. *πνεῦμα* (78) is used chiefly of the Holy Spirit (34, as Mk 11²), and of demonic influences (32, as Mt 8¹⁶), but in three instances it denotes the principle of life (Mt 27⁵⁰, Lk 8⁵⁵, 23⁴⁶), and in seven the psychical side of life (Mt 5³, 26⁴¹, Mk 23³¹, 14³⁸, Lk 14²⁶), though on a higher level than that denoted by *ψυχή*. *καρδιά* (49) is used especially of personality, inner life, and character (18, as Mk 7²¹), also of emotional (2, as Lk 24⁴⁷), intellectual (12, as Mk 2⁶), volitional (9, as Mt 5²⁸) life. *σάραξ* (11) is used of the physical part of human nature, with the suggestion of weakness and limitation (Mk 14³⁸; cf. Lk 24³⁹), and thus in contrast with divine power (Mt 16⁷). Except for the use of *ψυχή* in reference to life after death, all these usages could be directly classified under the corresponding OT terms, the connotation of which they continue, though the Christian emphasis on the inner life in contrast with the outer (cf. *καρδιά*) is naturally marked in NT teaching.

(b) *Pauline.*—*ψυχή* (13) is a term very little used by Paul; of the four instances with psychical content three denote 'desire' (Eph 6⁶, Ph 1²⁷, Col 3¹⁰), and one denotes simply the emotional side of consciousness (1 Th 5²³). His use of the adjective *ψυχικός* (1 Co 21⁴, 15⁴⁴) shows that for him the *ψυχή* is no more than the animating principle of the body of flesh, and the basis of its emotional experience. *πνεῦμα* (140) is the most important word in his psychological vocabulary, whether as denoting supernatural influences (116, as Ro 15¹⁵), or the higher nature of a Christian man under the influence of the Spirit of God (14, as 1⁹), or a normal element in human nature (16, as 8¹⁶). This distinction of *ψυχή* and *πνεῦμα* further develops the tendencies already noticeable in the later OT usage of *נֶפֶשׁ* and *רוּחַ*. *καρδιά* (52) denotes the inner life (15, as 1 Co 14²⁰), the seat of emotional (13, as Ro 9⁷), intellectual (11, as 1²¹), and volitional (13, as 2¹) psychoses, continuing directly the usage of *לֵב* in the OT, except that the two Greek terms *νοῦς* (21, as Ph 4⁷) and *συνείδησις* (20, as Ro 2¹⁵), denoting 'mind' and 'conscience' (ethical judgment), cover usages which the OT would have expressed through *לֵב*. *σάραξ* (91) is used to imply physical or intellectual weakness, or some limitation in value (19; see 2 Co 7⁵, Ro 6¹⁹, Ph 3⁷); in 35 instances there is some ethical reference to the connexion of 'flesh' and sin

¹ H. W. Robinson, *The Religious Ideas of the Old Testament*, London, 1913, p. 83.

(Ro 7⁵²), though not so as to involve a fundamental ethical dualism of 'flesh' and 'spirit.'

(c) *Johannine (Gospel and Epistles).*—Here the usage of *ψυχή* (13) offers no marked difference from that of the Synoptics, except that it once includes the inner life on its higher side (3 Jn 2), as *πνεῦμα* also can (Job 16⁴). *Πνεῦμα* (34) is almost confined to supernatural influences, whilst never used of demons. In one instance it is used of the principle of life (Jn 19³⁰), and in two psychically, of anger (11³³, RVm), and of trouble (19²¹). *Καρδιά* (11) follows the Synoptic usage. In the usage of *σάρξ* (16) the Synoptic contrast with *πνεῦμα* is further emphasized in the Pauline sense (11³ 36 603 815, 1 Jn 216), in accordance with the Johannine fondness for antithesis; the spiritual birth of the believer means the impartation of a principle of new life.

(d) Among other NT usages calling for notice, Petrine psychology (1 P) is interesting by its contrast with the Pauline. For Peter, *ψυχή* (6) denotes the whole personality, including its highest aspects (122 211); *πνεῦμα* (8) is used of the soul or spirit after death (318¹ 46); in one instance *πνεῦμα* denotes a meek and gentle 'disposition' (34), as imparted by the Holy Spirit, but never a normal element in human nature, as it does in Paul's usage. *Καρδιά* (3) follows the usual Hebrew and Pauline usage, with reference to the inner life as contrasted with the outer; *σάρξ* (7) is used in a purely physical and non-ethical sense, unlike the Pauline characteristic connotation. The usage of terms in James follows that of the OT. In Hebrews *ψυχή* and *πνεῦμα* are named together as normal elements of human nature (412; cf. 1 Th 5²³), and *πνεῦμα* is used of 'spirits' (angels, 14, men, 122³; cf. 12⁶). The psychology of the Acts, like that of the Synoptics, shows clearly the general continuance of the OT thought and usage, apart from the use of *πνεῦμα* in the sense of a disembodied 'spirit' (238^c; cf. 759); *ψυχή* represents the more emotional (15³⁴), *καρδιά* the more volitional (11²³; cf. 432 for both) aspect of personality, whilst *πνεῦμα* is used like *נֶפֶשׁ* of the special 'energies' of personality (1716 1825 1921 2022).

From this survey it will be clear that the fundamental ideas of personality in the NT are derived from the OT; the most important advance is in the belief that essential personality, whether called *ψυχή* or *πνεῦμα*, survives bodily death. This continued personality, however, still implies a body (cf. the Greek idea of the immortality of the soul), whether the present body (its ghostly counterpart? Mt 5²⁹, 10²⁸) or the 'pneumatic' body of Pauline anticipation (1 Co 15²⁵⁻³⁸), more adapted to the needs of the spirit (cf. the body of the Risen Christ, which possesses new powers). The body is conceived as an integral part of the personality, whose consciousness is diffused throughout it, and differentiated into the local consciousness of its particular members (1 Co 12^{12a}), as in Hebrew psychology. Thus the eye, hand, mouth, etc., have psychical and ethical qualities of their own; since the writers of the NT, like those of the OT, knew nothing of the nervous system, they could not link up sensory and motor phenomena with a central organ, as we do, or assign to the brain its true function. In regard to the psychical side of this unified life of body and soul, the survey shows that no hard and fast division was made by the NT writers; the inner life might be called *ψυχή*, *πνεῦμα*, or *καρδιά*, though usually, and on the basis of Hebrew usage, with more or less suggestion of emotional, 'spiritual,' and volitional activity respectively. We are not warranted, therefore, in speaking of a 'trichotomy' of body, soul, and spirit, or even a 'dichotomy' of soul (spirit) and body; a soul (spirit) may be temporarily disembodied, but full personality ultimately involves the union of body and soul, here and hereafter.¹

2. *Spiritual influences.*—Further light is thrown on the NT idea of the soul by relating it to its environment of general and Christian belief. First in importance ranks the belief that the soul is accessible to 'spiritual' influences of the widest range, from those implied in the crudest demonology up to the Holy Spirit as conceived in the Pauline doctrine. The cosmic environment of the soul is constituted by hosts of demonic powers, which seek to make it their battleground.² Christ

has entered the world armed with spiritual powers (Ac 10³⁸, 1 Jn 3⁸), to overthrow Satan and his hosts—'I, by the Spirit of God, cast out demons.' In fact, Origen ascribes the progress of Christianity up to his time to the decrease in the number of demons, owing to their defeat by Christ.³ To an extent that we can hardly realize, the soul was conceived by the early Christian as the arena of opposing spiritual forces, so that the doctrine of the Holy Spirit claims a unique and primary place among the ideas of early Christian anthropology. We owe to Paul the fullest elaboration of this doctrine, though it is more or less common ground to the NT writers. In the Pauline anthropology the cruder demonology of the time is replaced by 'sin,' conceived as an objective and almost personalized force, enabled to enter the human personality through the relatively weaker resistance of the 'flesh.'⁴ This is not conceived dualistically, as the source of evil, but as the 'base of operation' of sin (*ἀφορμή* [Ro 7⁵ 11; cf. vv. 17, 18]). The full significance of this idea is apparent only when we remember the fact indicated already, viz. that the 'flesh,' including all the members of the body, is an essential part of the personality, possessed of a quasi-consciousness of its own. Against sin, then, operating through the flesh, the Holy Spirit wages unceasing war, working from the higher side of personality, whose essential spirituality (Ro 7²²) it successfully reinforces (8³). The whole course of the victorious campaign in the arena of the soul, whose higher nature is linked with God through faith, produces Christian experience in regeneration and sanctification. Paul has thus lifted the function of the Spirit from the popular level of tongues and miracles of healing to the ethical plane, as is seen in his recapitulation of the 'fruit of the Spirit' (Gal 5²²). He is not concerned with the ethical and metaphysical problems of this moral development; it is enough for him that all is of God and all is of man (Ph 2¹⁵); as Deissmann says:

'Determinists and indeterminists can [both] appeal to him; Paul himself was neither one nor the other: to him the oars meant as much as the sails.'⁵

The entrance of the soul into this higher experience is by its faith, accompanied as this is by the baptism of the Holy Spirit outwardly enacted in, or accompanied by, water-baptism. But this baptism implies a new relation to all baptized believers, who are thereby constituted the unity of the Church. In the 'corporate personality' of the Church, forcibly depicted in the Pauline parable of the human body (1 Co 12^{12a}), the old social consciousness of Israel re-appears. This corporate personality, whose vital energy is the Spirit of God, forms an essential factor in the NT conception of individual personality; the soul of the baptized believer is what it is by virtue of its relation to the whole, though the complementary truth must not be forgotten, that there is direct individual access to, and fellowship with, God through Christ in one Spirit (Eph 2¹⁸; cf. 1 Jn 1⁹).

3. *Summary.*—We may distinguish the essential features of the NT idea of the soul from the local and temporary forms of its expression by saying that this idea assumes the unity of human nature in its material and immaterial elements, which it does not so clearly distinguish as we are inclined to do; that it emphasizes the worth of human personality, especially by the appeal to its eternal destiny; and that it finds the realization of this worth in the moral values of a society 1903, bk. I. ch. III.; J. Weiss, 'Dämonische,' in *PRE³* iv. 411-419.

constituted through the corporate and individual surrender of personality to the Spirit of God (or Christ). The NT characteristically shows little consciousness of the problems inevitably arising within the circle of this idea of the soul, such as the method of the soul's origin, the relation of the soul's activity to God's (freedom and grace), the degree of moral development required for membership in the Church, the mediation of spiritual energies to the soul by institutions or truths respectively. The gradual emergence of these problems in the subsequent course of Christian thought has profoundly affected the history of the Church.¹

III. PATRISTIC AND MEDIEVAL.—When the Christian gospel passed out through the gate of the Jewish synagogue into the arena of the Roman Empire, an idea of the soul fundamentally Hebrew was transferred into an environment of Greek thought, with no slight consequences in the process of adaptation. Patristic thinkers were usually men trained in Greek philosophy, and they could make their apologetic and constructive work intelligible to a Greek-thinking world only through the established terms and conceptions of Greek psychology. The fundamental difference of outlook has been clearly stated by Siebeck:²

'For the Greeks, the soul is a product of the world, and the rational soul primarily exists to know the world as it is, and actively shape it; the soul was consequently the means to an end or ends assigned to it by the world. To the Christian, on the contrary, the world is a means for the end of salvation, which springs from the independent and characteristic nature of the soul; for him, accordingly, the soul is not a product of the world, but a creation of the transcendent God, conceived after the analogy of spirit.'

The transference brought both gain and loss—gain, in that a more scientific analysis of the Christian consciousness became possible; loss, in that some of the religious values conserved by the more primitive Hebrew and NT idea of the soul were more likely to be obscured. One general result was the development of a distinction between soul and body in marked contrast with the unity of the Hebrew idea (cf. Philo's dualism owing to similar influences), though this was usually accompanied by the retention of the Jewish doctrine of the resurrection of the body, which became an established Christian tenet.

1. Tertullian and Origen.—The influence of the Stoic and Platonic psychology on Patristic writers may be illustrated from Tertullian and Origen respectively. Tertullian (160–220), whilst naturally ascribing the soul of the first man to the divine inbreathing, follows Stoic teachers in asserting that the human soul is corporeal, and is handed on from parent to child, being begotten with the body (Traducianism). But the unity of the soul, with *ratio* as its highest function, stands over against the body, so that Tertullian is a 'dichotomist.' When the soul is seen in vision, it has the shape of the body, and even a certain tangibility. His formal definition may be quoted:

'The soul, then, we define to be sprung from the breath of God, immortal, possessing body, having form, simple in its substance, intelligent in its own nature, developing its powers in various ways, free in its determinations, subject to growth by opportunity, in its faculties mutable, rational, supreme, endowed with an instinct of presentiment, evolved out of one (original).'³

Origen (185–254), like the Alexandrians generally, follows the Platonic idea of the soul as incorporeal and eternal; he regards it as pre-existent to the present life. From Platonic influence comes also that 'trichotomy' which Greek thought could so easily, though without warrant, read into the NT reference to 'body, soul, and spirit' (1 Th 5²). A third Patristic theory of the origin of the soul, which became dominant from the time of Jerome

onwards, is creationism, according to which 'God is daily making souls,'¹ whilst bodies alone come by human generation.

2. Augustine.—Augustine (354–430), whilst deeply influenced by Neo-Platonism, claims a unique place in Patristic psychology by the originality and importance of his work. He is the first to realize fully and adequately that the inner life is *sui generis*, with its own intrinsic claims to introspective study; in his analysis of the mind as memory, intellect, and will he gives the primary place to the will, instead of to the intellect; his deep conception of the freedom realized through divine grace stands in sharp contrast with the superficiality of contemporary Pelagianism. His influence is supreme through the subsequent centuries until Scholasticism brings in the reign of Aristotle, and 'the Aristotelian conception of the soul as life-energy mingles with the Platonic idea of the body as the instrument of the soul.'²

3. Aquinas.—Aquinas (1224–75), the foremost representative of Scholasticism, combined the Augustinian anthropology with Aristotle's general idea of the soul³ and rejected the Platonic dualism, but 'ecclesiastical dogma demanded such transformation of the Aristotelian distinctions as amounted to a religious dualism.'⁴ In the elaborate system of Thomas man became a central point of contact between the two great realms of 'form' and 'matter'—the microcosm which unites them both.⁵ Metaphysic thus gave support to the Christian doctrine of the soul's worth, though its formalism failed to do justice to the soul's content.

4. Eckhart.—Side by side, however, with the more rationalistic view of Scholasticism there is an approach to the realities of the soul made by mystical religion, which is of great significance for Christian thought. Thus Eckhart (1260–1327), gathering up the soul's powers into unity with God, holds that 'there is something in the soul uncreated and uncreatable,' through which the divine birth within man takes place (cf. the *synteresis* of Scholastic psychology).⁶ In this return to God, involving, on the negative side, the withdrawal from sensational life, the soul's salvation consists. A natural outcome of such views would be pantheism, though Eckhart perhaps saves himself from this.⁷ The insistence on the surrender of the soul to God as the source and unity (*unitas*) of its life is characteristic of mysticism (*q.v.*), and may be studied in the *Theologia Germanica*, which so profoundly influenced Luther. In fact, mediæval mysticism forms one of the principal tributaries of the Protestant Reformation, with its new emphasis on the experience of the individual soul and on the work of the Holy Spirit.

IV. MODERN.—**1. Lines of approach.**—From the Renaissance and Reformation onwards the characteristic feature of inquiry into the nature of the soul has been its specialization along different lines, pursued more or less independently; Christian thought tends more and more to concentrate on the religious significance of the soul.

(a) *Religious.*—The new emphasis on religious experience which characterized the Reformation illustrates the more subjective spirit of Protestant religion in general. The necessary objective complement of this was found in the doctrine of the Holy Spirit, as the supernatural basis of the soul's experience, though usually in intimate relation to

the canon of Scripture.¹ A wider application of the doctrine of the Spirit is to be found in the Quaker doctrine of the 'Inner Light,' which Barclay defines as 'a real spiritual substance, which the soul of man is capable to feel and apprehend, from which that real, spiritual inward birth in believers arises, called the new creature, the new man in the heart.'² From the teaching of George Fox³ we can see that this meant the religious evaluation of the moral consciousness—a most suggestive contribution to modern apologetic.⁴ At the other end of the scale of spiritual experience we find Wesley's doctrine of the 'witness of the Spirit.'⁵ Between these two experiences—the sense of morality on the one side and the glow of Christian certainty on the other—are to be found the distinctive interests of Protestantism and the tribunal of its doctrines, to whatever degree the Scriptural record of similar experience remains the formal court of appeal. A new era in the study of the soul in its religious interests was initiated when Schleiermacher (*q.v.*) recognized this. The consequent emphasis on religious experience as the basis of inquiry into the soul is one of the most significant features of present-day theology, in full agreement with the contemporary scientific interest in the psychology of religion.

(b) *Psychological*.—The scientific interests of 17th cent. thought, seen in the philosophy of Descartes (1596–1650), Spinoza (1632–77), and Leibniz (1646–1716), and culminating in Locke (1632–1704), involved the differentiation of physiology from psychology, and of both from the religious or metaphysical ideas of the soul. Psychology acquired the character of a distinct science, and has tended more and more in recent times to confine itself as such to the study of the actual phenomena of consciousness, whilst remitting to the theologian and the metaphysician all theories of an alleged substratum or 'soul.' No objection can be raised to this limitation, provided that it be not construed as a denial of soul or personality, in the sense of the theological or ontological postulate of the states of consciousness which the psychologist studies. In this connexion it should be noted that the assumption by Locke of a 'closed consciousness,' accessible through the physical senses alone, still tends to create a prejudice against those spiritual influences which the Christian idea of the soul essentially maintains. Against this prejudice the modern study of telepathy has exerted a useful influence, by showing the possibility of mind influencing mind, apart from the normal link of sensational knowledge. Indeed, the study of abnormal psychology (hypnosis, multiple personality, dreams and visions) may still have important contributions to render to our knowledge of personality. The modern recognition of the 'sub-consciousness' has done much to clear up certain phenomena of normal life, quite apart from the further question of a subliminal self.⁶

(c) *Historical*.—In our own generation a further line of approach has been opened up by the comparative study of anthropology and religion. Australian totemism, African fetishism, the psycho-physiological ideas and practices of the ancient Egyptians, the demonology of Babylonia, the metaphysical ideas of the soul current in Indian religion—all these can contribute to a clearer knowledge of the Christian idea of the soul, if only by throwing into contrast its distinctive features. Before the rise of this modern study

we were more or less confined to a Græcized approach to Biblical ideas, and, in particular, the psychology of the Hebrews was misunderstood. We can now see the alien origin of 'trichotomies' and other assumptions, and recognize the essential unity of man's nature in the Hebrew-Christian idea, and its contrast with Greek and other dualisms (Chinese, Zoroastrian); the emphasis of this idea on man's dependence on God, for creation, preservation, and salvation, in contrast with the scientific or philosophical interests of Greek thought; the fundamental Christian assumption of individuality, in contrast with the ultimate denial of this by Buddhism.

(d) *Philosophical*.—The history of philosophy in all periods shows how intimately its progress affects the theological ideas of God and man. In the modern period we may trace a growing approximation to, or recognition of, the demands of Christian faith, as seen in the rejection of materialism and naturalism, and the recognition of the reality of 'spirit.' The decline of absolute idealism, largely through its inadequate account of individuality, and the rise of personal idealism and of various forms of pluralism show that the Christian insistence on the value of the individual soul is not without its philosophic basis. The importance of the idea of 'personality' is more fully recognized in modern philosophy, and the Kantian emphasis on the essential reality of ethical experience harmonizes with the Christian claim that the moral side of personality is its highest development and supreme 'value.'

2. *Values and problems*.—The essential features of Christian anthropology—the religious data or 'values' which any system of thought is called on to interpret—are 'its emphasis on the worth of man to God as spiritual personality, its practical recognition of an individual self, possessing moral freedom and responsibility, its condemnation of sin as that which ought not to be, its assertion of human dependence on divine aid for the realization of spiritual possibilities, its definition of personal development in terms of social relationship.'⁷ The problems of the Christian idea of the soul gather chiefly around the primary postulate of the soul's reality, its relation to the body, and its relation to God.

(a) The term 'soul' must be taken to mean, not the unknown substratum of certain phenomena, but the spiritual entity which is in its distinctive activities and qualities. Such are its possession of a unique individuality, of the freedom of real initiative, of non-material content. Its development in time is part of its reality, though its ultimate nature may be conceived as timeless. Total human personality is obviously more than the self of self-consciousness at any moment, if only because of the fact of memory. Moreover, the relation of the Christian self-consciousness to other selves and to God may suggest that the soul is an entity larger than past or present experience exhibits.

(b) The relation of soul to body in the Christian conception of personality involves the rejection of dualism and the recognition of the body as integral to human nature, at least in the sense that the powers of the body belong to and are finally gathered up into the life of the soul. This, of course, does not mean that the soul depends on the body for its ultimate being, or dies in the physical dissolution of death, but simply that the connexion of soul and body is not artificial, temporary, and alien. The historic Christian conception of life beyond death has accordingly

⁸ H. W. Robinson, *The Christian Doctrine of Man*², p. 344.

been based on the Hebrew doctrine of resurrection, rather than on the Greek doctrine of immortality. The non-Hebraic idea of pre-existence (*q.v.*) has failed to find a genuine home in Christian thought; as a speculation in regard to what lies beyond all experience, it hardly admits of proof or disproof. Christian emphasis falls on the theistic idea that soul and body alike owe their creation to God; the fact that they are in present experience so intimately interwoven suggests that they have been brought into existence together, and are complementary expressions (on different planes) of the one entity of personality. Such a view implies no surrender of the faith that the soul survives bodily death; the apparent cessation of intercourse with other embodied selves on earth would find sufficient explanation if the present relation of brain to mind be one of permissive or transmissive, not productive, function.¹ This view of the body as an integral factor, though not, in its present form, a permanent element, in the slowly-evolved self of personality, would agree with the whole evolutionary history of the world, in which human personality offers the highest values attained, and gathers up so many factors of the process. Philosophically, this implies the spiritualization of the body, as against the materialization of the soul; but both elements, body and soul, are real, and form a unity for Christian anthropology and ethics.

(c) The relation of the soul to God in Christian thought demands the rejection of any form of monistic absorption, as clearly as of naturalistic degradation. Notwithstanding the quasi-panteism of some forms of Christian mysticism, and the adoption of quasi-pantheistic systems by some Christian thinkers, the normal testimony of the Christian consciousness is to a clear-cut individuality, carrying with it a real freedom, in upward as well as downward relations. On the other hand, the deeper experiences of Christian fellowship with God point to a relation of the soul to Him so intimate that the completer the surrender of the soul to its Creator and Redeemer, the fuller and richer is the soul's individual life. Whilst the process of salvation may be defined as 'God in us,' its goal is 'we in God.' The doctrine of the Holy Spirit (*q.v.*) here becomes of cardinal importance for Christian anthropology. Through 'the law of the Spirit of life in Christ Jesus' human personality realizes its larger life by voluntary surrender to God:

¹Psychologically, it is the setting of the mind on Christ, in the revelation of His graciousness and of the infinite love of God in it, that makes it possible for the Spirit of Christ to act unto the soul's complete deliverance.²

The repeated discovery is made by the Christian that the true life of the soul is hid with Christ in God—i.e., that it is waiting for personal appropriation. This truth of experience shows the significance of fellowship, human and divine; in practice and in theory corporate fellowship must be held to be fundamental to the life of the soul.

The Christian idea of the soul, whilst always implying a metaphysic, is not dependent on any particular system of metaphysics, past, present, or future. All that we are entitled to say is that a metaphysic of personality adequate to explain the Christian experience must, on the one hand, do justice to the moral freedom which alone gives reality to sin and guilt, and significance to the soul's surrender to God, and, on the other hand, show the soul's kinship with God, and its constant relation to the 'Father of spirits,' so that its whole development in time becomes at once a divine as well as a human activity. To develop such a

metaphysic obviously lies beyond the scope of the present article.

SOUL (Greek).—When we attempt to understand the development of Greek ideas about the soul (*ψυχή*), we are faced at once by the difficulty that there appears to be no bridge leading from the views implied in our earliest literary record, the Homeric poems, to the religious practices and beliefs of later ages. These are in many respects much more primitive, though it is also true that popular beliefs were much affected by Homer, since most Greeks were brought up on him from childhood. On the other hand, we find that the clearest thinkers among the Greeks, while they naturally rejected popular superstitions about 'souls,' were even more emphatic in their condemnation of the Homeric doctrine. In fact, the Homeric poems appear to be an intrusive and disturbing factor in the normal development of Greek belief. That is why, so long as the *Iliad* and the *Odyssey* were regarded as primitive popular poetry, it seemed impossible to account for later Greek ideas about the soul except on some hypothesis of Oriental influences. At the present day, however, it is generally agreed that the *Iliad* and *Odyssey* are not popular poetry, but court poetry, and it is perfectly certain that they are not in any way primitive. Archaeological research has shown that there was a highly developed civilization in the Aegean at least 2000 years before Homer, and it has also shown that the people to whom this civilization belonged were conquered, some centuries before Homer, by invaders who probably came from the north. The civilization which Homer describes is not the old Aegean civilization even in its latest period. The Mycenae unearthed by Schliemann is not the Mycenae of Agamemnon, but that of his predecessors of the older race. What Homer does

¹ Cf. W. James, *Human Immortality*, London, 1906, p. 32.

² G. Steven, *Psychology of the Christian Soul*, p. 264.

describe is the civilization of the new-comers, whom he usually calls Achaians, and of these only after they had already settled themselves firmly in the chief seats of the old Ægean kingdoms. It is clear, however, that these Achaians did not occupy the whole of what was afterwards called Hellas or Greece, and we may also assume that the new-comers would be numerically inferior to the older inhabitants almost everywhere, and would be gradually assimilated and absorbed. That is why, as becomes clearer every day, the later Greek civilization was in the main a revival and continuation of that which existed before the coming of the Achaians, though it was profoundly modified by Achaian influences. Hesiod was still conscious of the break. In his account of the ages of man¹ he interpolates a fifth age, that of the heroes who fought at Thebes and Troy, between the bronze age and the iron age, to which he himself belonged. That is the age with which Homer deals, and, if we remember that the heroic age is an interlude which stands by itself, it will be much easier for us to understand the development of Greek ideas about the soul. It has also to be borne in mind that Homer knows nothing of the Dorian conquest of the Peloponnese, and that, in the time of which he sings, the region later called Ionia was still in the hands of 'barbarians.'

x. Early beliefs and practices.—It is, of course, obvious that we cannot know with any certainty what the old Ægean population thought of the soul, so long as their writing remains undeciphered. We can only draw inferences from the remains of tombs, etc., that have come to light, and these may easily be misleading. Even if the inscriptions could be read, we might make mistakes. It would not be safe to infer from the inscriptions in a Christian churchyard what is really believed about the soul to-day. Still, there are certain broad statements which may be regarded as assured. The kings of Cnossus and Mycenæ were buried in elaborate state, not cremated like the Achaians of Homer; and, in early times at least, that generally points to a difference of belief about the soul. The great distinction between such beliefs depends on the answer given to the question whether the soul remains attached to the body after death or goes to a place of its own. If this question is answered in the first way, we naturally find that the body is buried in such a manner as to secure it against corruption as long as possible, and that along with it are buried weapons, implements, etc., which may be of use to the soul in its life below the ground. There will also be a mortuary cult of some kind, the main purpose of which will be to provide the soul with appropriate nourishment. All these features are met with in the Mycenaean tombs,² and we may fairly infer that, in those days, the 'soul' was supposed to dwell in the tomb. This is the belief we know best from Egypt, where it was carried out with rigorous logic, and where great precautions were taken to secure the preservation of the body after death. At Mycenæ the face was covered with a thin gold mask, so that we still know the features of some of the old kings; and the Egyptians also tried to make their mummies life-like. It seems to have been felt that the outward appearance of the man was the essential thing, and, so long as that was preserved, the soul could still enjoy the offerings brought to the grave. In Egypt this idea was still further developed when the image of the *ka*, or 'double,' was placed in the tomb, but we have no clear indication of that in the Ægean. The sarcophagus of Hagia Triada does, however,

furnish us with a representation of the mortuary cult, which seems to prove that a belief similar to the Egyptian prevailed in Crete, and we shall see that the later Greek practices and beliefs must have been developed from some such origin.

2. Homer.—When we come to Homer, everything is changed. The 'soul' is called *ψυχή* and is identified with the last breath, the 'ghost' which a man 'gives up.' That is obviously separated from the body at death, so there can be no question of trying to preserve the body or its likeness, or of a mortuary cult. On the contrary, it is desirable that the body should be destroyed as soon as possible, so that the 'soul' may be quite free to depart. It seems to be feared that, so long as the body is there, the soul will be in a measure bound to it. Cremation is an obvious corollary of this view, and there can be no thought of offerings at the grave.

It was not to be expected, however, that this belief should be developed to its logical conclusions in those early days, and there are a good many survivals in Homer of something more primitive. Above all, the soul is still thought of as in some sense a 'double' of the self, and the self is frankly identified with the body. The soul, however, must somehow retain the outward appearance of the man 'himself,' since it is obviously possible to dream of the dead. This comes out best in *Il.* xxiii. 106, where we are told that the soul (*ψυχή*) of Patroclus stood over Achilles all night long, 'and it was marvellously like himself' (*εἴκτο δὲ θέσκελον αὐτῷ*). Indeed, the whole funeral of Patroclus as here described, with its human sacrifices and libations, is quite unlike anything else in Homer and reads like a survival from earlier times, with this great difference, however, that it is not to be repeated, and that no mortuary cult is to be instituted, after Patroclus 'himself' has once been burned.

It is important to observe, in the next place, that the soul (*ψυχή*) is not of the slightest importance during life. Homer has many descriptions of conscious processes, whether of the nature of thought, will, or desire, and he has an unusually large psychological vocabulary, as we should call it. He uses words like *φρήν* (*phrēnes*), *ἦτορ*, *κῆρ*, *νός*, *βουλή*, *μένος*, *μῆτις* with considerable precision, but these things are all parts or functions of the body. There is not a single passage where any conscious process whatever is ascribed to the soul (*ψυχή*) of a living man. No doubt there are places where we may translate the word by 'life,' but even then it only means life regarded as a thing to be lost.¹

As the soul is not the seat of consciousness in life, it follows that it can have no consciousness when it has left the body, and that is the normal Homeric view. The departed soul has no midriff (*φρένες*) and no heart, so it is impossible for it to be conscious. It is only real enough to be capable of appearing in the dream of a living man. The souls of the dead depart to a barren, gloomy region, called 'the home of Aïdes' (i.e. 'the unseen one'), which is thought of as lying in the far West, and there they have only a dream-like simulacrum of life. As Apollodorus put it in his work on the gods:

Homer 'assumes that souls resemble the images appearing in mirrors and arising in water, which are made in our likeness and imitate our movements, but have no solid substance to be grasped or touched.'

That is why the departed souls are called 'shades' (*σκιά*) or 'images' (*εἰδῶλα*).²

¹ Cf. *Il.* xxii. 161: *περὶ ψυχῆς θεόν, Od.* xxii. 245: *περὶ τοῦ ψυχῆον ἐμάχοντο, Il.* xiii. 763: *ψυχὰς ὀλέσασθαι*. A Homeric hero fights for his *ψυχή*, or risks it or loses it, but he does not live by it. In *Il.* ix. 401 *οὐ ψυχῆς ἀντάξιον* means 'no compensation for the loss of life.'

² The *locus classicus* is *Il.* xxiii. 104: *ᾧ πόποι, ἦ ῥά τίς ἐστι καὶ εἷν' Αἴδαιο δόμοισι | ψυχὴ καὶ εἰδῶλον, ἀτὰρ φρένες οὐκ εἶν'*

¹ *Works and Days*, 108 ff.

² See art. *FOOD FOR THE DEAD*, vol. vi. p. 66*.

All apparent exceptions to this normal Homeric doctrine of the soul are of the kind that prove the rule, since they are clearly attempts to adapt certain older ideas to it. The most remarkable is that of the seer Tiresias, whose departed soul is said to retain its consciousness. That, we are told,¹ however, was a gift of Persephone, who 'granted him a mind (*νόον*) even though he was dead.' It is, therefore, a special miracle, which only confirms the general rule. The whole story of the Nekyia in *Od.* xi. depends on the view that the souls must drink blood before they can become conscious. The blood gives them, as it were, a temporary body while it lasts, and therefore they can speak with Odysseus. Obviously, however, as Rohde says, the poet would hardly have thought of putting the matter in that way, if it had not been for the memory of the old blood-offering to the dead (*αἱμακόρυφα*). The most startling survival is the promise which Odysseus makes on the instructions of Circe² to offer a sacrifice to the dead when he gets back to Ithaca. According to the usual Homeric view, such a sacrifice would be altogether meaningless. We see, then, that even in Homer there are traces of an older theory of the soul than that which prevails in the poems.

The few favourites of heaven who are carried away to the Elysian field and the few great sinners who are punished in Tartarus form, on the other hand, no exception to the rule. They have been made immortal; but for Homer that means that they retain their bodies. They have become like the gods; but a god for the Greek is an 'animal' (*ζῷον*) and has a body. Neither the punishment of Tantalus, Tityos, or Sisyphus nor the delights of the Elysian field would be possible for disembodied souls. Immortality consists just in exemption from the separation of soul and body.

3. Hesiod.—In Hesiod we find, as might be expected, still more numerous survivals of earlier ideas. The men of the golden age became *δαίμονες* after death, while those of the silver age are called 'the subterranean blessed,' and we are expressly told³ that they too 'are attended by honour' (*τιμή*). We are apparently to think of an earlier time, when men might become gods upon earth, and of a later time, when they might become chthonian divinities like Amphiarus and Trophonius. All that, however, was very long ago, and no such lot is possible for souls now. The souls of the bronze age men went 'nameless to the dank house of chill Hades.'⁴ Some of the souls of the next age, that of the heroes, share the same fate, while others are carried away to the 'isles of the blest,' which correspond to Homer's Elysian field.⁵ So far as the present race is concerned, there seems to be no hope of any real life after death.

4. The cult of heroes.—When we come to times of which there is any real historical memory, we find everywhere a cult of 'heroes' subsisting alongside of the worship of the gods. These heroes are plainly souls which have their dwelling in the grave. It is impossible to believe that this is an innovation, or that the name 'hero' (*ἥρω*) has been adopted from Homer, who often uses it merely in the sense of 'free man.' It seems rather that the word has been secularized, as it were, by

the Achaeans, and that the cult had survived among the older population to emerge once more into the light of day when the invading Achaeans had been absorbed. This view is confirmed by what we learn from Hesiod. As we saw, he knows that in distant days there were departed souls which received a cult, but he uses the word 'hero' in the Homeric sense, and therefore he cannot apply it to the 'subterranean blessed ones,' to whom it properly belongs. However that may be, the cult was always sharply distinguished from the worship of the gods. To sacrifice (*θύειν*) to the gods on an altar (*βωμός*) was to send the sweet savour (*κνίσρα*) upwards, while to sacrifice (*ἐναι(σ)τεν*) to the heroes on an *εσχαρία* was to permit the blood and libations to sink into the earth. The archaeological evidence shows that the latter practice was known at pre-Homeric Mycenae. It is quite plain that the heroes were regarded as the souls of departed men, though only a few of the departed become heroes. It is also clear that the cult of the heroes is localized at their graves, which implies that their souls dwell there. That is why the bones of heroes are transported from one place to another. The cult can take place only where they are.¹

5. Conflicting ideas.—(1) At Athens, in historical times, we find great confusion of ideas about the soul. Attica had not been overrun by the invading northerners, and the older ideas had never been displaced by such theories as are implied in Homer. Accordingly, burial and not cremation was the orthodox Athenian method of disposing of the dead. It was prescribed and regulated in the laws of Solon, and it is the only practice strictly consistent with the due observance of the 'customary uses' (*τὰ νομιζόμενα*), i.e. the mortuary cult. On the other hand, all Athenians were brought up on Homer and necessarily had the Homeric beliefs impressed on their minds. That may be the explanation of the fact that cremation was quite common at one period (7th cent. B.C.) and was always regarded as a possible and proper method of disposing of the dead. There was, in fact, a divergence between the things an Athenian did in connexion with departed souls and the things he believed about them. The mortuary cult implied that the souls were in the grave with the body, and we know from Plato's *Phaedo*² that ghosts were believed to have been seen in the neighbourhood of tombs. At the feast of the Anthesteria departed souls or ghosts (*κῆρες*) were supposed to be released from their graves and to revisit the houses in which they had dwelt. They were solemnly dismissed at the end of the festival with the words, 'Out, ghosts, the Anthesteria is over!' (*θύραζε, κῆρες, οὐκέτ' Ἀνθεστήρια*). All that is quite primitive; but, if an ordinary Athenian had been asked what he believed about the soul, he would doubtless have answered by talking of its departure 'to Hades's' (*εἰς Ἅιδου*) and of Charon and the Styx—things which imply quite a different belief. This confusion is well marked by the representation of Charon and his boat, much as he is depicted in Lucian and Virgil, on a piece of black-figured pottery which must belong to the 6th cent. B.C. This piece of pottery was evidently intended for use in the mortuary cult, and yet it is ornamented with a scene quite inconsistent with the necessary presuppositions of that cult.³ The fact is that we should have very little knowledge of the mortuary cult at all, if it had

¹ The point of view is well brought out by the account of the bringing of the bones of Orestes from Tegea to Sparta in Herodotus (i. 67 ff.). As late as 476 B.C. the bones of Theseus were brought from Scyros to Athens (Plut. *Cim.* 8, *Thest.* 36; Paus. iii. iii. 7).

² 81 C.

πάμπαν. It must be remembered that *Ἅιδης* (Att. *Ἄιδης*, whence Hades) is a person, not a place. The name of the place is *Erebos* ('Gloom'). The quotation from Apollodorus, *Περὶ θεῶν*, given above runs thus (ap. Stob. *Ecl.* i. p. 420, ed. C. Wachsmuth, Berlin, 1884): ὑποτίθεται τὰς ψυχὰς τοῖς εἰδώλοις τοῖς ἐν τοῖς κατόπτοις φαινόμενοις ὁμοίως καὶ τοῖς διὰ τῶν ὑδάτων συνισταμένοις, ἃ καθάπαξ ἡμῖν εἰσέκασται καὶ τὰς κινήσεις μιμεῖται, στερεομένη δὲ ἐπὶ ὑπόστασιν οὐδεμίαν ἔχει εἰς ἀντιλήψιν καὶ ἀφήν.

¹ *Od.* x. 494.

³ *Ib.* 167 ff.

³ *Od.* xi. 29 ff.

⁴ *Ib.* 153.

not been of importance in cases of inheritance, so that orators like Isæus had to mention it. The Athenian acquired such beliefs about the soul as he had from Homer, but he continued to honour his dead 'after the manner of his fathers' (κατὰ τὰ πατρία).

(2) The Eleusinian mysteries were another source of confusion. It is not at all probable that any particular doctrine about the soul was originally implied in these; but, as Demeter and the Maid were both chthonian goddesses, it seemed natural that they should be able to secure for their votaries a more satisfactory existence in the under world than that of a Homeric 'shade.' We find that idea already in the Homeric *Hymn to Demeter*, and it was obviously capable of development. On the whole, however, it does not appear that there was any mysticism in the 'mysteries,' and the nature of the life to come which they promised was clearly modelled on Homer's Elysian field. It will be seen that, strictly speaking, this would imply that the initiated retained their bodies after death, but it is not necessary to suppose that the average Athenian troubled himself on this point.

(3) So far, we have come to nothing that can rightly be called an immortal soul. The gods alone are immortal, and that is because they have immortal bodies. It was only with the spread of the worship of Dionysus that a new idea of the soul as essentially divine, though fallen, gradually emerged. The worship of Dionysus was distinguished by its insistence on divine 'possession' (κατοκωχή, ἐνθουσιασμός) and 'ecstasy' (έκστασις, 'stepping out' of the body). In that there is nothing startling or beyond the range of primitive peoples. What was new was that it suggested to some Greeks an entirely new view of the soul and its relation to God. We know from the Orphic gold plates discovered at Thurii and Petelia that the soul of the departed Orphic saint (δσιος, καθαρός) claimed actually to be a god and to have won release (λύσις) from the 'grievous wheel' of birth by strict observance of the precepts of purity. From this point of view it followed that what we call life is really death, and that the body is the prison or tomb of the soul. Now, the followers of Orpheus were certainly numerous at Athens from the time of Pisistratus onwards, and we have always to take account of their influence. It is not clear, however, that they really went much farther than primitive spiritism in their theory of the soul. At any rate, Pindar, who was certainly influenced by the doctrine and insists that the soul alone is 'from the gods,' also calls it 'an image of life' (αἰῶνος εἰδωλόν) which survives death—a thing Homer might quite well have said—and he expressly lays down that it 'sleeps when the limbs are active' (εὐδρεῖ δὲ πρᾶσσόντων μελέων).¹ It is only in dreams that it shows its true nature during life, and it appears to be quite dissociated from the normal waking consciousness. It is not clear that an Orphic believer would naturally speak of his soul as 'I' before he died. It is rather a supernatural guest whom he entertains. The Orphic doctrine, then, is more important in this connexion for what it suggested to philosophers than for itself.

(4) Another influence, which began to make itself felt at Athens early in the 5th cent. B.C., was that of Ionian science. It must be remembered that Ionia was, comparatively speaking, a country without a past. There was no 'usage of the fathers,' as there was at Athens, to keep up the memory of older beliefs. The traditional doctrine of the soul was obviously unsatisfactory from the scientific point of view. It is true that the

Ionians were led by a natural human impulse, which seems to have given rise both to science and to religion, to seek for something 'ageless and deathless' (a Homeric phrase adopted by Anaximander), but they looked for it in the world around them. Their central belief was that all the changing things of this world must be forms of one undying substance, which they called 'god'—a word which they had completely secularized. In its developed form Ionian science held that this primary substance was 'air' (i.e. vapour), and the soul was regarded simply as a portion of the boundless air which happened for the time being to be enclosed in a human, animal, or vegetable body. This is not, of course, to be identified with the dream-consciousness like the Orphic soul. Diogenes of Apollonia regarded the 'internal air,' which was 'a small portion of the god,' as the seat of our ordinary consciousness, and Heraclitus (who regarded the soul as fire) insisted specially on its identity with our waking life. On the other hand, it has no permanent reality of its own; it is nothing that can be called 'I' or even 'this.' It is introduced into the body by respiration, and, if it is called immortal, that merely means that it returns at death to the undying air outside us.¹

(5) Neither the Orphic 'soul' nor the 'soul' of Ionian science was a *self* any more than the Homeric. So far as we can judge, it was Pythagoras who first regarded the soul in this way. If we are right in referring to him the doctrine of reminiscence (ἀνάμνησις) and connecting it with that of reincarnation (παλιγγενεσία), it seems to follow that he must have regarded the soul, which is the seat of knowledge, as something with a permanent individuality of its own. If so, however, his followers were not very faithful to their master's teaching. Those of them who emphasized its scientific side soon came to regard the soul as an 'attunement' (ἁρμονία) of the elements constituting the body, and of course such a theory is wholly inconsistent with its immortality, or even its individuality. The soul is simply a function of the body. Pythagoreanism, then, only added to the existing confusion of ideas.

In these circumstances, it is easy to see how it was that the Athenians of the Periclean age had no definite views about the soul at all. They continued to perform the customary rites of the mortuary cult, and they continued to use the wholly inconsistent language of Homer. Down to the very end of the century the word *ψυχή* is hardly found in any but its Homeric sense of life as a thing to be lost. Even in the passages where it seems to be used of the seat of feeling—what we call the 'heart'—the feelings attributed to it are always of the inarticulate kind which belong rather to the dream-consciousness than to the waking life. The idea of a real life of the soul after death is quite unknown. The orators sometimes use such phrases as 'if the departed have any consciousness of the things in this world'; but they speak very doubtfully, and it is obvious that they are thinking chiefly of the souls in the grave which were the objects of the mortuary cult. In the funeral orations delivered over those who had fallen in battle it was customary to introduce a 'consolation' for their parents, but it is never suggested to them that the souls of their sons have perhaps departed to a better life. Under the influences which have been described above, the only formula that seemed satisfactory was 'Earth to earth and air to air,' and that this was considered quite orthodox is proved by the fact that it was

¹ Cf. Theophrastus, *de Sens.* 42 (of Diogenes of Apollonia): ὅτι δὲ ὁ ἐντὸς ἀπὸ αἰσθάνεται, μικρὸν ὃν μέρος τοῦ θεοῦ, κ.τ.λ. For Heraclitus sleep was just being cut off from the surrounding fire.

¹ Frag. 181 (98), quoted by Plutarch, *Consol. ad Apoll.* p. 120 D.

employed in the epitaph on those who fell at Potidæa in 432 B.C. Plato, therefore, is historically justified when he represents the companions of Socrates as startled when they hear that their master believes the individual soul to be immortal. To them the very idea was quite unfamiliar.¹

6. Socrates and Plato.—In the 4th cent. all this is changed. Isocrates speaks of the soul very much as we do, and it is freely identified with the normal consciousness. It is the seat of knowledge and ignorance, and it is the seat of character. It seems, then, that some one must have set forth a new view of the soul in the latter half of the 5th cent. B.C., and it is hard to think of any one who is likely to have done so except Socrates. Now it is certain from the jests of Aristophanes that Socrates was well known in 423 B.C. as a man who taught strange doctrine about the soul (*ψυχή*). His disciples are referred to in derision as *ψυχὰι* in the *Clouds*,² and he himself is said to practise *ψυχαγωγία* in the *Birds*.³ It is improbable that *ψυχαγωγέι* at this date can mean anything else than 'calls spirits' from the other world; and, unless the joke is to be regarded as intolerably frigid, we must suppose that Socrates was commonly known at this date (413 B.C.) to teach the immortality of the soul. Now, in the *Apology*, Plato makes Socrates state twice over 'with great emphasis that the purpose of his mission was to get men 'to care for their soul' (*ἐπιμελίσθαι τῆς ψυχῆς*) and to make it as good as they can. It does not seem possible that he could have made Socrates say this unless the fact had been well known, and it is certain that, if Socrates did say this, he was using the word 'soul' (*ψυχή*) in a sense it had not hitherto borne. We gather that he described it as 'that in us which has knowledge and goodness' or their opposites,⁴ and that he insisted that it was our true self and demanded our best care (*ἐπιμέλεια*), 'not only for the time of this life, but for all time.'⁵

Such, at any rate, is the doctrine which Plato always ascribes to Socrates and which even Xenophon has tried to express in his own way.⁷ Plato himself adopted it and gave it a scientific form. For him 'soul' was above all the source of motion (*ἀρχὴ κινήσεως*). It was the only thing which could move itself and other things without being itself moved by anything else. It was, therefore, 'prior to the body' (*πρεσβύτερον τοῦ σώματος*), and the efficient cause of everything good and bad. There are, as a matter of fact, bad things as well as good, and therefore there must be more souls than one. It is not easy to dis-

tinguish in Plato's dialogues those parts of the doctrine of soul which he inherited from the Pythagoreans and Socrates and those which reveal his own convictions, but the teaching of his immediate successors and the criticisms of Aristotle prove that the point chiefly emphasized by him was that the soul is the only 'self-mover.'

It is specially to be noted that the doctrine of the 'self-mover' does not occur in the *Phædo*, and this seems to indicate that it is Platonic rather than Socratic. On the other hand, Socrates is made to expound it in the *Phædrus*¹ with perfect clearness and precision. That, however, is in a strongly Pythagorizing passage, and it may be that the Pythagoreans had to some extent anticipated Plato's theory. That seems to be suggested by what we know of the doctrines of Alcmaeon, a younger contemporary of Pythagoras, who taught that the soul was immortal because it resembled immortal things, and was always in motion like the heavenly bodies.² Plato implies in the *Phædo*³ that Socrates had been interested in Alcmaeon's view that the brain, rather than the heart, was the seat of sensation, so he must certainly have known his theory of the soul. We may infer, however, from the silence of the *Phædo* that this aspect of it did not appeal to him as strongly as it did to Plato. It is important also to notice that in Plato the soul is always distinguished from the 'forms' (*εἶδη, ἰδέαι*). It is just the existence of souls that makes it possible for the 'forms' to enter into the world of becoming.

If these views are correct, it follows that what is called the soul from the religious and ethical point of view was clearly apprehended for the first time by Socrates, and that it became the central thing in Plato's system. To him the existence of souls was the only possible explanation of the existence of a world. The movements of the heavenly bodies implied that there was a soul of the world, which was an animate creature (*ζῷον*), and God could be understood only if He were regarded as a soul. The soul of the world, the souls of the heavenly bodies, and the souls of men, animals, and plants were all created by God; but, once created, they would never be destroyed, because that would be inconsistent with the goodness of God, who can only desire that they should become as like Himself as may be. That is, in brief, the doctrine of the soul which we owe to Greece.

7. Aristotle.—It only remains for us to say something of the reaction which followed at first on the proclamation of this doctrine. It begins at once with Aristotle, though, as usual, we can distinguish two conflicting strains in his thought. He is, in the first place, an Ionian, and he therefore rebels against the spiritual interpretation of nature. On the other hand, he had been carried away, in spite of himself, by the teaching of Plato, and the beliefs he really cares about are just those which cannot be reconciled with the rest of his system or expressed in terms of it. He begins with the body, to which the soul is related as form to matter. It is not, however, a mere function of the body, and Aristotle will have nothing to do with the doctrine that it is an 'attunement' (*ἁρμονία*). On the contrary, the body is the instrument (*ὄργανον*) of the soul; for matter is only a potency and exists only in so far as it is necessary for the realization of a form. Even so, however, soul is inseparably bound up with body, and can have no life apart from it. So far it is easy to follow, but then we are told, without any real explanation at all, that, while the most developed form of soul is mind (*νοῦς*), this mind is purely passive. There is another sense of mind in which it is 'separable from matter,' and this alone is 'immortal and everlasting.' The conflicting interpretations of this doctrine given by Alexander of Aphrodisias, Averroes, and St. Thomas do not concern us here. The fact remains that Aristotle himself gives no intelligible account of the matter, and that he puts us off with a metaphor, as he usually does when he has gone as far as his own system will take him without coming to the beliefs that he really cherished. Even the metaphor is instructive. He tells us that this

¹ For the hesitation of the Attic orators on the subject of the soul see H. Meuss, 'Die Vorstellungen vom Dasein nach dem Tode bei den attischen Rednern' (*Jahrb. für klass. Philologie*, v. [1889] 801 ff.). The usual phrase is 'if in any way the dead should acquire a consciousness of what is now happening' (*εἰ τινες τῶν τετελευτηκότων λάβοιεν τρόπον τινὶ τοῦ νῦν γιγνομένου πράγματος αἴσθησιν*). This explains also the doubtful way in which Plato makes Socrates refer to the subject in the *Apology*. In this, as in other matters, he outwardly respects the conventions of the Athenian law-courts. No inference can be drawn as to his real beliefs about the soul, and in the *Apology* itself these are made sufficiently clear, as we shall see. The absence of all reference to a future life in the consolatory passages of the *ἐπιστάφιοι λόγοι* was pointed out by C. Lehms (*Populäre Aufklärung*, Leipzig, 1856, p. 331). The epitaph on those who fell at Potidæa says simply (*CIA* i. 442) αἰθήρ μὲν ψυχὰς ὑπέδεξάτο, νόματα δὲ ῥῶαν, with which we may compare Eur. *Suppl.* 533: πνεῦμα μὲν πρὸς αἰθέρα, | τὸ σῶμα δ' ἐς γῆν. For the surprise with which the companions of Socrates receive the announcement of his doctrine of soul cf. esp. *Rep.* x. 603 D: Οὐκ ᾔσθηται, ὦ δ' ἐγώ, ὅτι ἀθάνατος ἡμῶν ἡ ψυχὴ καὶ οὐδέποτε ἀπόλλυται;—Καὶ ὅς ἐμβλέψας μοι ('staring at me') καὶ θανύσας εἶπε: Μὰ Δῆ, οὐκ ἔγωγε; σὺ δὲ τοῦτ' ἔχεις λέγειν; It is particularly to be noted that, in the *Phædo* (69 E, 70 A, 80 D), even the Pythagorean associates of Socrates are represented as quite incredulous. That is because they had adopted the view that the soul is the *ἁρμονία* of the body.

mind comes 'from outside' (*θύραθεν*), which is a thoroughly Ionian way of speaking and is apparently derived from Anaxagoras. On the other hand, this doctrine lands Aristotle in a dualism which neither Anaxagoras nor Plato would have admitted. It is quite wrong to say, as Rohde does, that it is 'a mythological element derived from Plato's dogmatic system.' Even in his most mythological moods Plato never lost sight of the unity of the individual soul.

This point is frequently obscured by the stress laid on the doctrine of the 'tripartite soul,' which is used for dialectical purposes in the *Republic* and for mythological purposes elsewhere. It is almost certainly Pythagorean, and connected with the doctrine of the *ἀρμονία*. The three 'parts' of the soul were identified with the three intervals of the scale, the fourth, the fifth, and the octave. Even in the *Republic*, however, we are left in no doubt that the soul is really one. It is only when it is diseased that the three 'parts' seem to be independent of each other.

8. Stoic and Epicurean doctrines.—The Stoic and Epicurean doctrines are still more obviously reversions to the standpoint of early Ionian science, though they too admit inconsistent elements from other sources, such, *e.g.*, as the Stoic belief that individual souls (which were regarded as corporeal) survived till the next world-conflagration (*ἐκπύρωσις*). That was denied by Panætius, but reasserted by Posidonius, who adopted Platonic views wholesale. He is the source of the popular orthodoxy on the subject, as we find it represented in Cicero. For the Epicureans the atoms which composed the soul were blown away 'like smoke' at death, though Epicurus left careful directions for the observation of his mortuary cult. Such is the strength of inherited tradition.

As a matter of fact this cult was kept up more assiduously than ever, and the number of 'heroes' increased daily. The teaching of the Orphics and others had left its mark, and there were parts of Greece where almost every one seems to have been promoted to heroic honours after death. That, however, need not mean a real belief in the soul's immortality. Nor did the religious revival of the 3rd and 4th centuries A.D. really bring anything new, except the worship of strange gods. The ideas about the soul which these brought with them had long been familiar in Greece. On the other hand, there arose a strong feeling of dissatisfaction with traditional views, which the revival of Pythagorism did little to meet.

9. Neo-Platonism and its influence on Christianity.—It was only when the doctrine of Plato was again preached in its integrity by Plotinus that it once more became possible to hold a coherent doctrine of the soul. Neo-Platonism at its best owed nothing to exotic religions or popular superstition, and there is no reason to believe that Plato would have disavowed his later followers. At the end it was only the Academy among the schools of Greece that retained any vitality, and it was through the Platonists that the true Greek doctrine of the soul was passed on to Christian theology. Clement of Alexandria, Origen, and Augustine all learned in the school of Plato, and the direct influence of Aristotle was not to be felt for centuries yet. That was not what the Platonists designed. Plotinus ignored Christianity, and most of his followers were bitterly hostile to it. Nevertheless, it was on their teaching that the Catholic doctrine was based, and their teaching goes back, through Plato, to Socrates, Pythagoras, and the Orphics, who represent the genuine Greek doctrine of the soul far more than Homer or the Attic tragedians do. There are two sides of this which are essential to it. In the first place, the soul is immortal, and that is the Italiote contribution to the doctrine. In the second place, this immortal soul is just our ordinary consciousness; it is the seat of knowledge and error, of goodness and

badness. That is the Ionian contribution. The two views were fused into one at Athens, the place where western and eastern influences met and reacted on one another, and this must have happened in the 5th cent. B.C.; for it was only then that the necessary conditions for such a fusion existed. The practical inference was that the soul which we know in our everyday waking life requires as much care (*ἐπιμέλεια*) as any Orphic votary had ever bestowed on the fallen divinity within him. Plato represents this as the burden of the mission of Socrates, and there does not seem to be any good ground for disbelieving him.

LITERATURE.—E. Rohde, *Psyche*,⁵ 2 vols., Tübingen, 1910 (this work supersedes all the earlier literature of the subject; its only defect is that it overlooks the importance of Socrates altogether, with the result that it fails to distinguish the Pythagorean and Socratic element in Plato's writings from his own scientific teaching on the subject); A. Dieterich, *Nekyia*, Leipzig, 1893; J. Adam, in *Cambridge University Prelections delivered before the Senate*, Cambridge, 1906, p. 29 ff.; *The Religious Teachers of Greece*, Edinburgh, 1908; J. Burnet, *Plato's Phædo*, Oxford, 1911, *The Socratic Doctrine of the Soul*, London, 1916, reprinted from the *Proceedings of the British Academy*, vii. [1915-16] 235 ff.

JOHN BURNET.

SOUL (Hindu).—From the very earliest moment at which we can trace the Aryan race which invaded India (perhaps in the second millennium B.C.), and became there the nucleus of the Hindu people, they already distinguished the soul from the body and believed that it survived death. The evidence is their ancestor-worship,¹ in which they laid out food for the souls of their dead ancestors to eat. The character of the food is sufficient proof that, at the time when the rite was formed, they still thought of the soul as being of the same nature as the body.

As in the case of other primitive races, their idea of survival was for long undefined; they had no conviction that the soul lasted for ever. But a change came after the rise of the heavenly gods (*devas*) among them:² they began to believe that the souls of their ancestors lived with or near these gods, and that was followed by the idea that some god conferred immortality on them, at least on those who had lived good lives on earth.³ From that faith there would naturally spring the conviction that the soul was of such a nature as to be fit to live for ever.

At an unknown date, perhaps in the 7th or 8th cent. B.C., the belief in transmigration and *karma* (*qq.v.*) was formed among a small group of thinking men in N. India and gradually spread from them to the whole Hindu people.⁴ The central idea of this doctrine is that of moral requit: man's soul lives many lives on earth, and reaps in a later the moral harvest which he has sown in an earlier life. As the happiness and misery of each existence are proof that the soul lived before and did good and evil actions, the theory compels the belief that the process of life and death can have had no beginning; and, as the actions of every life that is lived demand another life for their expiation, there is no escape from the conclusion that the process of repeated birth can have no end. The souls of men are thus eternal, have had no beginning, and can have no end. Each is *an indestructible eternal entity*. This is the first important idea in the Hindu concept of soul.

One element in the theory of requital is that a man who has lived a very good life may be born in his next life as a royal personage, a petty godling, or even one of the greatest gods, while, if he has lived a very evil life, he may be born in the very lowest grade of society, as a devil, an

animal, or even a plant. Clearly this implies that *all souls*, whether now living as gods, devils, men, or plants, *are essentially the same*, the differences between them being only elements of their temporary status, which have come on them as a result of their actions. This is the second characteristic element in the Hindu concept of soul.

The contemporaneous Hindu polytheism is clearly reflected in this notable idea. There can be no doubt that the men who formed the theory of transmigration and *karma* were polytheists. If they had been theists, the concept of the Supreme, high above all men and ordinary gods, would have exercised an influence in several directions. The process of requital would have been conceived as under his control, and the idea of the human spirit would inevitably have been formed in relation to him, while the fact is that, from the beginning, the process of *karma* was regarded as automatic, and there was no thought of a soul of a higher order, all being conceived as on a single plane.

Yet it seems to be true that at the very time when the theory of transmigration and *karma* was formed, or even earlier, another concept, which was destined to produce immeasurable results in India, was gradually taking shape¹ in a small intellectual circle in N. India—the philosophic concept of the *Brahman-Ātman*, the earliest germ of the Vedānta philosophy. At first the idea seems to have been that within, behind, and beyond the whole visible and invisible universe of man's experience and beliefs there is a spiritual existence of the most exalted order, free, intelligent, joyful. It was called the *Brahman*, the *Ātman*, or the *Brahman-Ātman*. It was sometimes said to be the source of all gods and men and the universe; at another time it was identified with the all. One of the commonest statements about it is that it alone exists: 'One there is and there is no second.'

But it was not long before the theory of rebirth and *karma* provoked a reaction.² While the idea of just requital was felt to be a great gain, the finer spirits soon began to regard the prospect of an endless series of births and deaths as intolerable. The question was asked, Is there no means whereby one may be released from the necessity of rebirth? In response to this desire of the spirit, a whole series of philosophic theories, each one a theory of release, sprang into being. The earliest and most significant of these theories springs from the belief in the ever free and joyful *Ātman*. Some thinker reached the conviction that his own soul was the *Ātman*—not a product of it, nor a portion of it, but the whole; and he began to teach that he who knows that his own spirit is the *Ātman* is thereby released from all bonds, and therefore from the bondage of rebirth.

This theory of the identity of the divine and the human spirit is the root of the Vedānta philosophy and first finds expression in the early *Upaniṣads*. As the source of the conception lies in the original contrast between man, bound in the toils of rebirth and *karma*, on the one hand, and God, ever free and joyful, on the other, the contrast is very clearly developed in these writings. The idea that the *Ātman* has nothing to do with *karma* and rebirth is especially prominent. Since the *Ātman* is not burdened with *karma*, it must be completely inactive—completely apart from all the temptations and toils of the sense-world. Hence, although no definite system is taught in the *Upaniṣads*, there is a broad and very general tendency to describe the *Ātman* as being not only inactive but also (1) abstract intelligence rather than an

intelligent personality, (2) thought rather than will, (3) above the petty distinctions of morality. Therefore, since this was the teaching of the earliest system of release (a system which has had an immeasurable influence in India), and since it taught the identity of man's soul with this abstract impersonal intelligence, the great stream of Hindu thought has always tended to conceive the human spirit as being essentially intelligence, to regard personality, will, and emotion as belonging to the lower reaches of human nature, because they are involved in action, which leads to *karma*, and to think of morality as a set of rules belonging merely to the social life of man and therefore having little or no relation to the nature of the soul.

This tendency has produced momentous results in Indian thought and religion. The almost total neglect of the will and the extreme weakness of ethics in Hindu philosophy, and the great emphasis laid on ritualism, or on knowledge, rather than on ethical change as the way of salvation in Hinduism, are all attributable to this cause.

In spite of this broad general tendency, the teaching of the *Upaniṣads* is by no means uniform. Lines of thought running in many directions may be found, from which divergent systems sprang at later dates. One of these is the Sāṅkhya (*q.v.*) philosophy, which is a realistic dualism. There are two eternal existences, original nature (*prakṛti*) and an infinite number of individual spirits (*puruṣa*); there is no God. Each spirit is intelligence, but no more, merely a solitary, passive spectator of the operations of nature. This concept has clearly been formed from the common idea of the human soul already spoken of. But for our purpose the most interesting point is this—that in this philosophy there took shape a psychological theory which, with modifications, has been held in all forms of Indian religion. From *prakṛti*, besides the visible things of the world, there issues a series of subtle substances—*buddhi*, *ahaṁkāra*, *manas*, 'intellect,' 'egoism,' 'mind,'—and also the senses, by means of which the functions of perception, generalization, and decision are carried out. In this physical series we have the fact made plain that, according to the Hindu idea, the human spirit is not an active power which thinks and feels and wills, but is the pure light of consciousness.

At a later date another philosophy was formed known as the Vaiśeṣika (*q.v.*), which recognizes the existence of many souls and the reality of the world. In this philosophy the concept of the soul is richer and fuller than in any earlier system. Feeling and will as well as thought are recognized as its functions.¹

The central school of the Vedānta, with which the great name of Śaṅkarācārya (*q.v.*) is linked, is monistic, *advaita*. It interprets with strictness both the leading declarations of the *Upaniṣads*, viz. that the *Ātman* alone exists, and that the human spirit is the *Ātman*. Consequently, its doctrine of the human soul is in accordance with these standards. In Deussen's words:

'To it are applicable all those negative characteristics whose purpose is to secure the conception of Brahman from all ideas by which His Being might seem to be limited. Therefore the soul is, like Brahman, (1) omnipresent, or, as we should say, spaceless, (2) omniscient and omnipotent, (3) neither agent nor enjoyer (or sufferer, as the case may be).'²

In the theistic sects, which were formed in the early Christian centuries, the central ideas of the Vedānta philosophy—that the *Ātman* alone exists, and that the human spirit is the *Ātman*—are held, but they are not interpreted so strictly as in the monistic Vedānta. These systems vary amongst

¹ J. C. Chatterji, *The Hindu Realism*, Allahabad, 1912, p. 102.

² *The System of the Vedānta*, Eng. tr., Chicago, 1912, p. 463.

¹ Oldenberg, pp. 86-104; P. Deussen, *Allgemeine Gesch. der Philosophie*, Leipzig, 1894, i. i. 159 ff.

² Oldenberg, pp. 124-147

themselves in some degree in their statement of the relation of the soul to God, four forms of theory being held, as follows: (1) *buddhādvaita*: pure monism; this, though called pure monism, is not so strictly monistic as the *advaita*; (2) *viśiṣṭādvaita*: modified monism, identity with a difference; this is the commonest point of view; (3) *bhedābheda* or *dvaitādvaita*: the relation is both monistic and dualistic; (4) *bheda*, or *dvaita*: dualism.

Yet these differences are not of much practical import, except in so far as they modify the conception of the state of the soul after release. In the monistic Vedānta, the identity of the soul with God being held in the strictest possible way, the seeming individuality of the soul in life is interpreted as an illusion, and release means the disappearance of the illusion, the complete absorption of the man in God.¹ Of the theistic sects, on the other hand, while a few teach absorption, the mass believe in the actual reality of the soul, and teach that in release the soul either enters into a mystical union with God in which individuality is not lost or spends eternity in a fellowship with God which does not in the slightest impair personality. In their account of the nature of the soul they vary between the Sāṅkhya conviction that it is a spectator, but in no sense an agent or an enjoyer, and the Vaiśeṣika theory that it wills and feels as well as acts. Yet, even if they declare the soul an agent, all the active psychological functions are still ascribed to *buddhi*, *aṃkāra*, and *manas*—the triple physical concomitant of the soul in Hinduism. Most of them teach that after release the soul is omnipresent and omniscient, but they differ in their account of its size, some declaring that it is atomic, others that it is infinite. The Śrī-Vaiṣṇavas, e.g., the sect of Rāmānuja, teach that the soul is consciousness, but is also an agent, that it is atomic in size, and that in release it is omniscient, unrestricted in movement, and able to realize all its wishes.²

LITERATURE.—See the works cited in the footnotes.

J. N. FARQUHAR.

SOUL (Iranian).—Little need be added under this heading to what has been said in the art. **PHILOSOPHY (Iranian)**, especially under § 1 (d) and (e), and the latter part of § 2, concerning the psychological analysis of the human compound—so favourite a topic in both Avestan and later literature. Of the terms *urvan*, *ahū*, *baodah*, *daēna*, *fravaši*, and in later times *khra*, *vir*, *hōs*, which express various spiritual faculties or constituents of man's non-material nature, the first named, *urvan* (gen. *urunō*), is generally taken as expressing most closely what we mean by our word 'soul' in the widest sense. Its form and meaning seem to have come down practically unaltered from the *Gāthās* to the Pahlavi *rūbāno* and modern Persian *ravān*. It is generally admitted that it is that element of man which remains immortal after death and bears the responsibility of reward or punishment for his actions in this life. Hence it is commonly employed in contrast to *tanū*, the body. And in a broader sense the two opposed terms are used, at least in the later literature, to indicate the spiritual and the material worlds respectively. Thus in the curious diagram of the *Dinkart* reproduced in art. **DUALISM (Iranian)** the whole of being (*yechevīn*) is carefully divided into two opposed parts, *rūbāno* and *tanū*. It is not only of men that *urvan* is predicated, but also, though rarely, in both Gāthic and later Avesta, of animals.³

³ E.g., Yasna xxxix. 2 (of cattle) and 4 (of wild animals); Vendidad, xiii. 15 (of the otter), and Yasht xiii. 74 (of all

The soul of the primeval ox (*gēuš urvan*) was taken up into heaven after its slaughter and became the well-known tutelary genius of cattle.

After a man's death, according to the famous description of *Vendidad*, xix., and the *Hadokht-Nask*, the soul hovers above his head for three days, but on the fourth morning sets out on its journey towards the Chinvat Bridge, which leads to the next world, and on its way meets the strange female figure, the creation and personification of the man's deeds, words, and thoughts in this life—an exquisitely beautiful damsel in the case of the virtuous soul, a horrible hag in that of the sinful soul—who ushers it either to eternal happiness or to misery and punishment.

The relationship of the *urvan* to the *fravaši* (q.v.), in spite of all that has been written on the subject, still remains very obscure, and probably was never very clearly defined. The etymology of *urvan* is also uncertain. It is almost certainly from *√var*, 'to choose,' indicating the faculty of free will.

LITERATURE.—The art. 'Urvan' in C. Bartholomae, *Altiranisches Wörterbuch*, Strassburg, 1904 (concise and full of useful information); all the ordinary translators and commentators, C. de Harlez, J. Darmesteter, etc.

SOUL (Muslim).¹—1. In the Qur'ān and in popular belief.—According to the Qur'ān,² Allāh, when He created the first man, breathed into him the soul (*nafs*) or the spirit of life (*rūḥ*). In Adam's soul were created the souls of all his descendants, and the act of endowing with life the embryo in the womb is thus a second creation.³ The soul has its seat in the heart, and is accordingly often described in the Qur'ān by the phrase 'heart, hearing, and sight,' or 'hearing, sight, and heart.'⁴ In particular, the heart is the abode of religious knowledge and of faith or unbelief. Should Allāh see good to leave a man in unbelief, He seals up or narrows his heart, closes his ears, and puts a veil upon his eyes;⁵ on the other hand, He enlarges the heart of believers, and opens their ears to the divine revelation. As is usually the case in religious psychology, hearing is of more importance than sight, and as a rule precedes it in any mention of the two. Thus Allāh Himself hears and sees;⁶ He is the hearer, the knower.⁷ He expresses Himself by the eternal Word. By unanimous Muslim tradition, Muhammad received his revelation by the ear. It is by means of hearing that faith is imparted to the heart.

Besides heart, hearing, and sight, however, Allāh at the creation endowed the soul with two fundamental propensities, viz. wickedness and piety⁸—an impulse towards evil and an impulse towards good. Originally this may have implied simply that every soul has these two impulses, and that it was Muhammad's part to address his admonitions to the good impulse, the good side of the will. Gradually, however, the preaching of the Prophet comes to ignore the human will. Allāh alone has a will in the proper sense; man is a being who knows and acts, but has no volition of his own, and his whole duty is to be prudent, to give heed to God's word, and to obey it.

Moreover, as Allāh breathes the soul into the body from without, He can also separate the two, as in sleeping and dreaming or at death.⁹ Of the soul's continued existence after death the Qur'ān says little to which we can attach a definite quadrupeds, aquatic and winged animals, etc. (though here *zhe urunō* seem identified with the *fravaši*)).

meaning. When the pious die, Allāh brings their souls near Himself, and keeps them there until He unites them again with their risen bodies at the day of judgment.¹

These notices have been considerably amplified by the Tradition, and many elements have been added also by popular belief in the various Muslim lands. As it is impossible here to enter fully into details, we restrict ourselves to a few of the main features reflected in the popular theology.

As regards the pre-existence of souls, the Tradition supplies the following particulars. Between the first creation of souls in the soul of Adam and the second in the mother's womb they are kept by Allāh in His treasure-house or in a shrine attached to His throne. When their time has come, He transmits them from His heavenly realm into the human embryos. It is true that God creates a far larger number of non-human souls or spirits—those of animals, demons, angels, and devils—but it is naturally the human soul and its destiny that engage the supreme interest of man. Nor is the soul's pre-existence a subject of anything like so much concern as its future, its life after death. Here the dreams of eschatological fantasy are lavishly drawn upon. Just as here and now man is surrounded and attended by angels and spirits, so the souls of the dying are taken in charge by the angel of death, who conveys those of believers to blessedness and those of unbelievers to perdition. The soul departs from the body (on the most widely current view) by way of the mouth, while some hold that it leaves by the back of the head. Another very common belief is that the soul which at death has been carried to heaven is sent back again by God, and that it sojourns for a longer or shorter period beside the body in the grave. It is there subjected to an examination by the angels Munkir and Nakir. If it asserts its belief in Islām—the great test is the creed, good works being of minor importance—the angels carry it aloft to heaven and set it upon a candlestick by the throne of God. The evil soul, the soul that does not know its Lord, is, on the other hand, tormented there and then, and also afterwards in hell. The souls of believers who have done evil pass into purgatory. A fairly prevalent idea is that the departed soul survives till the day of judgment in the form of a bird—the soul of the believer living in a green bird, that of the unbeliever in a black one. The souls of those who have been murdered sit beside their graves in the form of owls and cry for vengeance.

It is popularly believed that the departed soul has severed itself from the body greatly against its will; and it accordingly remains near the corpse as long as the latter is not wholly decomposed. This again affords grounds for the belief that intercourse may continue for a time between the dead and their surviving relatives. The prayers, alms, and good works of the living benefit the souls of the dead.

The synthesis of body and soul during man's earthly life is regarded as relatively loose. There is a great variety of belief as to the seat of the soul. There is no doubt, however, that the soul can leave the body during sleep. In its real nature it is known to God alone, and, as the Qur'ān says,² man knows but little about it. Nevertheless popular thought usually conceives of the soul as a material entity, and with this idea it conjoins speculations regarding the various classes of spirits—spirits or souls of the prophets, the angels, the *jinn*, the devils, human beings, and animals, and these in all their species and varieties. On the day of resurrection the souls of men, as belonging to their bodies, return, and enter into their re-

novated material frame, and thereupon Allāh assigns them for all eternity to paradise or hell, the joys or pains of which are represented, alike in the Qur'ān and in popular belief, as being of a physical rather than a spiritual character. The wicked are to burn for ever in hell without being consumed, while the good are to eat and drink for ever in paradise, and live there with beautiful youths and maidens, without weariness or satiety. The delights of paradise are accordingly those of men. As regards the blessedness that women are to expect in the beyond, the Tradition is altogether silent.

2. In the theologians and the mystics.—The rudimentary notions of the Qur'ān and popular thought regarding the soul are found again in the conceptions of the theologians and mystics, there assuming, however, a number of forms varying from the grossest materialism of the masses to the extreme spiritualism of allegorical interpretation, and in part modified by the influence of Christian theology and philosophical speculation. In the theological systems too, as in ordinary thinking, the doctrine of the soul is concerned mainly with subjects like the hereafter, resurrection, hell, purgatory, and paradise. The theologians, however, are more interested than either the Qur'ān or the Tradition in the soul as a fact of experience, though they do not deal with it empirically. Their speculations regarding the nature of the soul, its properties and capacities, and its connexion with the material body are coloured throughout by views already current.

The earliest groups of Muslim theologians (*Mutakallimūn*)¹—those of all schools, orthodox or heterodox—take a more or less material view of the soul. All that exists, from the divine spirit to the animal soul, is body or of bodily nature. With many of them this is simply the popular view, but in some thinkers—e.g., Hishām—we probably must trace it to Stoic influence. Those who do not actually regard the soul as matter define it as an accident of material substance. We find this conception in the Muslim atomists,² according to whom the whole world consists of atoms and their accidents, and among these accidents they place souls, or the manifestations and activities of souls. Like the atoms, souls come into being and pass away again every instant. This denial of the independence and continuity of their essential nature does not impugn their immortality, but merely does away with the nexus of natural causality. It thus presents no analogy to the modern theory of actuality (Wundt, etc.). It might be more aptly compared with the Buddhist conception, though the element of causality, which is the essential characteristic of the latter, is not recognized by the Muslim atomists. According to these thinkers, Allāh creates anew every moment the soul, or its phenomena and activities, as accidents of bodily substances (i.e. atoms), whether of the body as a whole, or of a number of atoms, or even of a single atom in the heart. Among those who stood apart from popular beliefs, among free-thinkers, and especially among physicians, the accidentalistic theory assumes a form in which the soul is regarded as a combination or a combining ratio of the bodily elements. On the other hand, the conception of the soul as a substance was very frequently conjoined with the doctrine of metempsychosis.

The doctrine of the soul as a purely spiritual substance constituting the essential nature of man was held by only a few of the earlier theologians—

¹ From about the 12th cent. most theologians adhere either to a mystical dualism or spiritualism, on the one hand, or, on the other, to a psychology that had developed under the influence of Aristotle.

² Cf. art. ATOMIC THEORY (Muhammadian), vol. ii. p. 202f.

¹ lxxxi. 7.

² xvii. 87.

e.g., by Nazzām and his school. These regarded the connexion between soul and body as being effected by the spirit of life (*rūh*, πνεῦμα): it was only by the mediation of that spirit that the soul could operate upon the body. The body is a product of the soul, or is at all events dependent upon it. The soul, in its essential nature, is simply pure knowledge and pure volition. Nazzām and his school usually define the soul as inward volitional action—a view which must not be identified with voluntarism in the modern sense. What they mean is, on the one hand, that the external actions of human beings are all in the stream of natural causality, and, on the other, that the soul manifests its freedom in its inner volition, and is therefore not determined directly (as most theologians held) by the supreme will of God.

The spiritualistic tendencies of the view that the soul is a substance distinct from the body are found in many of the mystics, and, somewhat tempered in form, among the theologians who were influenced by mysticism. Al-Ghazālī¹ and al-Arabī² may be mentioned as two of the most prominent representatives of this view. The mystics, in the first place, have a peculiar terminology, which, while showing affinity to the usage of the Qurʾān, has been coloured even more decidedly by Hellenistic γῶσις and Christian theology. Thus *naḥs*, the ordinary Arabic equivalent of ψυχή, they bring down to the sphere of physical life, giving it the sense of 'sensuous desire' (ἐπιθυμία, ὁρεΐσις). Conversely, they exalt the *rūh* (πνεῦμα, spiritus) by making it the immaterial psychic principle. They give a meaning identical with that of *rūh* to the term *qalb*, 'heart.' But, when they use *rūh* in the sense given to it in the philosophical and medical tradition,³ they attach an adjective—e.g., *rūh ḥaywānī*, 'spiritus animalis.' As regards the actual facts of the mystical psychology, again, the more salient features may be summarized as follows. The soul (*rūh* or *qalb*) is an immaterial substance of divine or god-like nature; it is God's image in man, light of His light. The body is a thing of inferior worth—a view found in many varieties of form. It is the soul, however, that constitutes the essential nature of man, his distinctive character. Having been created by God, through the agency either of angels or of the world-soul, it seeks the way back to God with ardent yearning. The stages of this return, leading at last to ecstasy or the *unio mystica*, are very variously enumerated.⁴ The individual soul can prepare itself for union with the Supreme Essence by pious exercises, meditation, absorption in the inner life—asceticism and good works are of secondary importance, or belong to one of the lower stages. The real union, however, the ecstatic state, the illumination, the revelation of divine mysteries—all this comes in a moment, not as the reward of human merit, but as Allāh's beatific gift of grace to the soul. While the psychology of the mystics assigns a large place to the emotional factor in religion—the affective states of the soul—yet the supreme end of man's life is always represented as a form of knowledge (γῶσις) won by immediate experience of the divine. This crowning intuition is reached by way of self-knowledge, for 'he who knows himself knows also his Lord.'⁵

3. In the philosophers and the physicians.—The spiritual or mystical psychology described above is found also in many Muslim philosophers, though in a different context of thought and with some differ-

ence in expression. In point of fact, mysticism had felt the influence of philosophy, while, again, both philosopher and mystic were indebted to the same sources. The philosophers most closely related to the mystics are the so-called philosophers of illumination or revelation, who derive their doctrine from Hermes, etc. In their numerous devotional or hortatory works they inculcate the soul's withdrawal from the material world and its return to God. Even the more typical Peripatetics of Islām, however, import mystical elements into their doctrine of the soul, or crown the Aristotelian psychology with mysticism. In so doing, nevertheless, they differ in two respects from the theologians and the pure mystics: they speak more of the powers or faculties of the human soul than of creation, God's grace, or resurrection, and they allow greater scope to the empirical investigation of the soul. The latter is especially true of the medical savants. Taken as a whole, the philosophico-medical psychology is a syncretism of Platonic and Aristotelian views, and here a factor of the utmost importance was the influence of Galen. The earliest document typical of this school is a little work by Qusṭā ibn Lūqā, a Syrian Christian (c. A.D. 835), dealing with the difference between spirit (*rūh*, πνεῦμα, spiritus) and soul. We are here told that the spirit spreads outwards from the heart as a subtle body and controls the functions of the organic frame. It is the breath, the spirit of life, animating the whole body, and ceasing to be when the body dies. It is likewise this spirit of life which, in a more refined form, effects the conservation, combination, and recollection of sense-perceptions in the ventricles of the brain. Thus the gathering together of sense-impressions (general sensation) and the process of representation or conception (φαντασία) are localized in the fore-brain; the appraisement of what is represented—reflexion and association—in the mid-brain; the faculties of memory (including recollection) and movement in the hind-brain. This spirit is quite distinct from the soul, the difference being one not of degree, but rather like that between matter and form. The soul is an incorporeal substance—the entelechy of the body conjoined with it; and, as simple substance, it is immortal. The πνεῦμα is its instrument, by means of which it animates the body and renders it capable of motion and perception.

These views were adopted, and even elaborated, by the Muslim philosophers of the 11th or 12th and later centuries, as well as by many theologians. Here we find in particular two characteristic developments, viz. the doctrine of the inner senses, and the doctrine of the *voûs* ('*agl*'). As regards the former, while Galen had distinguished three inner powers of the soul as localized in the three cerebral chambers, Muslim philosophers enumerate these powers as three, four, or even five, and in the last case they find five inner senses corresponding to our five external senses. According to the dualism of the mystics and the philosophers of revelation,¹ the inner senses are to be regarded as higher spiritual faculties of the immaterial soul, while, according to the so-called Aristotelians of Islām (al-Fārābī [q.v.], Avicenna [q.v.], etc.), they stand midway between the external senses and the purely spiritual intellect (*voûs*, '*agl*'). Schematically, the doctrine might be set forth as follows. The fore-brain is the seat of (1) general perception (*κοινή αἰσθησις*) and (2) the faculty of sense-presentation (Aristotle's *φαντασία*); the mid-brain that of (3) reflexion, which is not only reproductive, but capable of moulding the elements of perception and presentation into new forms by discrimination and combination (and therefore corresponding

⁴ Cf. art. SCĪM.

⁵ This saying is the inversion of an idea found in pseudo-Plato, *Alciades*, 129 ff.; it reached the Arabs through the medium of Neo-Platonism, and so passed into the general tradition.

¹ Cf. § 2.

partly to Aristotle's *φαντασία* and partly to Galen's *διανοητικόν*); in the hind-brain are localized (4) the faculty of sensuous judgment (*δῆξα*), which deals with the particulars of perception and conception; and (5) memory, together with the faculty of recollection (*i.e.* Galen's *μνημονευτικόν*). Some philosophers regard (2) as recollection of the sensuous forms, and (5) as recollection of the meanings associated with these forms.

The intelligence or rational soul (*νοῦς*) is an immaterial principle, towering above the vegetative and animal soul, as above external and internal sense. The speculations of Muslim philosophers regarding it are almost entirely metaphysical or epistemological, and provide no fresh material for psychology. In the hands of Muslim thinkers the Peripatetic system becomes purely intellectualistic, and their doctrine of the soul virtually ignores the emotional and volitional aspects of human life. Their psychology as a whole shows little originality. Certain fresh developments, however, are found in the works of al-Haitham († 1038), who had an inkling of certain important results of modern experimental psychology (*e.g.*, laws of colour-mixture, Weber's law), and also knew something of the duration of perception and mental assimilation. His principal work deals with optics, and contains scattered observations on psychological points. He had unfortunately no successor in Muslim thought.

T. J. DE BOER.

SOUL (Roman).—It is difficult to form any definite or consistent idea of the way in which the early Romans thought of the soul of man either during life or after it; this is owing to the want of an early Roman literature and to the uncertainty of archaeological evidence up to the present time. There are, however, certain ascertained facts of the later period of kingly government (which is also the period of the earliest religious calendar) which help us in determining the Roman idea of the condition of the soul after death, and these may possibly be taken as some evidence for the idea of the soul in the living man. The words which in the literary or Græco-Roman age were used for the soul, such as *anima*, 'breath,' cannot with certainty be considered primitive. It is quite probable that, being under the influence of an organizing priesthood and ceremonial religion, the early Romans did not trouble themselves much about their own souls or realize as vividly as many peoples have done that they possessed such a thing; the soul was of slight importance during life. There is no trace of any speculation about the soul of the living man until we come to the

last century of the Republic and the introduction of Greek philosophy.

The oldest evidence for the souls of the dead is a so-called *lex regia* attributed to Servius Tullius,¹ which enacts that the son who strikes his parent must be made *sacer* to the *di parentum*, where the word *di*, as in other similar expressions, evidently means spirits, while the word *parentum* is explained in another passage of Festus² as meaning, according to the lawyers, three generations of ancestors, beyond which apparently the memory was not expected to go.³ The fact that the son who strikes a parent is made over as an offering to the spirits of his immediate ancestors shows that these are conceived as (1) active, (2) conscious of morality, (3) in some degree capable of receiving sacrifice, like fully developed *dei*. But how far they reflected the nature of the soul in the living man is by no means clear. We only know that these *di parentes* were the subject of an organized festival in the month of February, which has been described in the art. ROMAN RELIGION.⁴ This worship, if we may call it so, of the dead (whether burnt or buried, for both practices undoubtedly existed)⁵ outside the walls in the resting-place of the family suggests a pleasant idea of the survival of the soul, which, if properly cared for, could no longer take human shape or return to trouble its human relatives. As in the case of *dei* reclaimed from wild life by settlement in farm or city, the spirits of the departed might be effectually 'laid' by yearly renewed ceremonies, and need do no harm to the survivors; and, so far as we can discover, this belief remained unaltered throughout the republican period.

But in the oldest calendar⁶ we find a festival of three days (May 9, 11, 13) called *Lemuria*, of which the object seems to have been to get rid of ghosts from the house; the only information which we have about it includes no public ceremony outside the private dwelling of a family.⁷ How we are to interpret this festival of the dead, or even the word *Lemur* which gave it its name, is extremely doubtful. It is safer not to attribute it to a pre-Roman race. The present writer has always inclined to the belief that, if we consider the kind of life led by the various tribes of early Italy, in which death on the battle-field or far from home must have been at least as common as death in the peace of family life, the most likely interpretation is that by *Lemures* is meant the host of the *unburied* dead whose souls were always liable to endeavour to return to the house familiar to them.⁸ It was not impossible to forget and ignore entirely relatives lost in this way, who had never been subjected to the processes which ensured their peace and goodwill towards the living; and those three days gave the survivors an opportunity of getting rid of them and forgetting them for the rest of the year. Thus they were thought of as hostile. True, Ovid, in the passage where he describes the father of the family expelling them from the house,⁹ calls them *manes paterni*, and *manes* no doubt meant euphemistically 'the good

¹ Festus, ed. W. M. Lindsay, Leipzig, 1913, p. 200.

² *Ib.* p. 247.

³ This probably reflects the practice of three generations living together in one house; and we may remember that this is a well-known feature of social life among certain peoples (see art. ARYAN RELIGION, vol. II, p. 235).

⁴ Vol. x, p. 826b.

⁸ Cf. *Aeneid*, ix, 214,

'Sit, qui me raptum pugna pretiove redemptum
Mandet humo, solita aut ai qua id Fortuna vetabit,
Absenti ferat inferias, decoratque sepulcro.'

where the word *solita* shows how common was the fate of the unburied even in Virgil's time.

⁹ *Fasti*, v, 429 ff.

ones'; but the house-father may be supposed to be anxious not to irritate them. Here we may note a belief that the great host of souls (*manes*) dwelt in some doubtful sense within the earth, under the guardianship of a deity Orcus,¹ and were permitted to return to the upper world only on three days in the year, August 24, October 5, November 8. But it may be doubted whether this is really a primitive Roman belief;² and in any case it seems hardly possible to co-ordinate it in this form with the other beliefs which we have been considering.

From what has been said it will have been noticed that the Roman always spoke of his dead in the plural; and this is significant as showing how hard it was for him to think of the concept soul otherwise than collectively or to realize a soul in himself as an individual entity. There was, however, one exception to this, in the *genius* of the *paterfamilias*, which must be as old as the family itself. That the *genius* was in some sort a soul is not to be doubted;³ and its peculiarity among the Latins is that it represents the mysterious power of the *paterfamilias* to continue the life of the family.

'The soul of a man is often conceived as the cause of life, but not often as the procreative power itself; and that this latter was the Latin idea is certain, both from the etymology of the word and from the fact that the marriage-bed was called *lectus genialis*.'⁴

This singularity is probably to be explained by the very early development of the idea of fatherhood, both physical and social, in close connexion with that of the continuity which the father alone could contribute to the family. Creative power was the function of the soul of the living man, if he were the head of the household; and it is possible that his wife too had a soul of the same kind, if her *Juno* is a primitive idea.⁵ The connexion of snakes, both in the house and in the tomb, with the idea of *genius* need not be explained here.⁶

In what little survives of the earliest Roman literature we find no trace of thought about the soul till we come to Ennius († 169 B.C.). Ennius was a Greek of Calabria and well acquainted with Greek literature in general and with Pythagoreanism in particular; and, as in literature, so in thought, he revolutionized Rome, suggesting subjects of inquiry about which the Romans had never yet troubled themselves. One of these subjects was the nature of the soul, as Lucretius tells us:

'Ignoratur enim quae sit natura Animai;
Nata sit, an contra nascentibus insinuetur;
Et simul intreat nobiscum morte dirempta
An tenebras Orci visat, vastasque lacunas
An pecudes alias divinitus insinuet se,
Ennius ut noster cecinit, qui primus amoeno
Detulit ex Helicone perenni fronde coronam,
Per gentes Italas hominum quae clara clueret;
Etsi praeterea tamen esse Acherusia templa
Ennius aeternis exponit versibus edens,
Quo neque permanent animae, neque corpora nostra,
Sed quaedam simulacra modis pallentia miris.'⁷

Here the first reference to Ennius seems to allude to his Pythagorean idea of re-incarnation, the second to some exposition of the Homeric idea of the shades in the nether world, which are neither souls nor bodies, but are best described in the memorable words⁸ which Lucretius took from

¹ Cf. *Orci thesaurus* in the epitaph of Nævius (E. Baehrens, *Fragmenta Poetarum Romanorum*, Leipzig, 1886, p. 296).

² See *JRS* ii. [1912] 25 f.

³ In art. ROMAN RELIGION, vol. x. p. 845b, it is called the *numen* in the man rather than his soul; but this is simply because the Romans had no word of their own for soul in primitive times, so far as we can discover.

⁴ Fowler, *Religious Experience*, p. 74; some parallel conceptions may be found in art. ARYAN RELIGION, vol. ii. p. 24; A. E. Crawley, *The Mystic Rose*, London, 1902, p. 306; L. Lévy-Bruhl, *Les Fonctions mentales dans les sociétés inférieures*, Paris, 1910, p. 90.

⁵ See art. ROMAN RELIGION, vol. x. p. 825.

⁶ Cf. art. SERPENT-WORSHIP (Introductory and Primitive).
7 i. 114 ff. 8 Line 123.

Ennius and passed on to Virgil. The inference perhaps is that Ennius had no very definite belief himself, and infected the so far unthinking Roman mind with his own agnosticism. What did he mean when he wrote the famous couplet:

'Nemo me lacrimis decoret, nec Funera fletu
Faxit. Cur? volito vivu' per ora virum.'¹

Does he mean simply that his literary reputation will survive in the mouths of men who will repeat his verses, or, as James Henry insists,² that he will actually flit before men's faces like one of the Homeric shades? Without a better knowledge of Ennius than we possess, it is impossible to say. However this may be, it is certain that from this time onwards the educated class at Rome, if they troubled themselves at all on the subject, held Greek ideas of the soul, the masses retaining the primitive notions as explained above. During a century and a half of war and money-getting the Roman educated man lapsed into a condition of mind mainly indifferent but partly sceptical about the soul, as also about the gods. If he took an interest at all in such questions, it was in the Stoic idea of the soul as a part of the universal Reason, which appealed to his legal and practical instincts³ and did not trouble him with speculations about his soul and its fortunes after death.

From this indifferentism and scepticism there came a reaction in the age of Cicero, which took the form of a revival of Pythagoreanism, i.e. a fresh interest in the soul and its fate. This is first seen in the *Somnium Scipionis* of Cicero, in which we find the beginning of the belief that the good and great man's soul flies upwards at death—a belief afterwards more fully expounded in the *Tusculan Disputations*, bk. i. So far there had been no sign of a view of the soul as individual: the tombs of the Scipios are monumental only, preserving the memory of the man and his deeds. But just at this time we have the first occurrence of a sepulchral inscription 'Dis Manibus'—still in the plural, but commemorating an individual person; and Cicero's apotheosis (so it must be called) of his daughter Tullia points plainly in the same direction.⁴

Yet, in spite of this reaction, the spirit of agnosticism continued, and is a marked feature of the next two or three centuries. Cicero himself was normally a doubter;⁵ Caesar was believed to be so, though he was *pontifex maximus*;⁶ Catullus wrote of death as 'nox . . . perpetua . . . dormienda';⁷ Lucretius in his third book glorifies in the Epicurean doctrine that the soul is a material thing which is put an end to at death. So too under the Empire Tacitus expresses the general feeling in *Agricola*, 46:

'Si quis piorum manibus locus: si, ut sapientibus placet, non cum corpore exstinguuntur magnae animae, placide quiescas.'

If we read through the chapter, it becomes fairly clear that what Tacitus really cared for was an immortality of good or great deeds. And a little earlier the elder Pliny had written of death⁸ as the relapsing into the same nothingness in which we were before birth. In the sepulchral inscriptions of the Empire the note of doubt and melancholy is sounded again and again.⁹

'The funerary inscriptions leave the impression that, down to the final triumph of the Church, the feeling of the Romans about death was still in the main the feeling of their remote ancestors of the Samnite and Punic wars. It was a social feeling, in the prospect of a dim life dependent on the memory

of the living, a horror of loneliness and desertion, the longing for a passing prayer even from a stranger.¹

This horror of being forgotten by the living, though it does not give us any direct evidence of what was popularly thought about the soul, is worth consideration here, and may be illustrated in two ways. (1) It appears in the Augustan literature and especially in Horace—e.g., in the last ode of bk. iii., where in 'Non omnis moriar, multaque pars mei vitabit Libitinam,' etc., he is plainly thinking of a literary immortality;² (2) the primary object of a multitude of *collegia* in the first three centuries of the Empire was undoubtedly to preserve the memory of their members after death.

'It is pathetic to see how universal is the craving to be remembered felt even by slaves, by men plying the most despised or unsavoury crafts.'³

Here the one thing we should like to know constantly eludes us—whether the soul was thought of as in any real sense surviving, whether the survivors could hope to meet their loved ones after death. The truth is that the inscriptions betray a great variety of ideas, and most of these are dim and vague, or conventionally expressed. It remained for Christianity to shape these ideas into a definite belief.

The deification of the soul of an emperor after death implies a belief in the survival of the souls of great men; but this, though we meet with it here and there in the poets, especially in Virgil, is not rooted in Roman ideas.⁴ What an emperor could himself think about his soul one may see in Hadrian's well-known lines, 'Animula vagula blandula,' etc., which express rather 'regret for the sunlight left behind than any hope in entering on a dim journey into the unknown.'⁵

LITERATURE.—W. Warde Fowler, *The Religious Experience of the Roman People* (Gifford Lectures), London, 1911, lectures 4 and 17, *Roman Ideas of Deity*, do. 1914, ch. i.; S. Dill, *Roman Society from Nero to Marcus Aurelius*, do. 1904, bk. ii. ch. iii., bk. iv. ch. ii.; Cyril Bailey, *Some Greek and Roman Ideas of a Future Life* (Occasional Publications of the Classical Association, no. 3), Cambridge, 1915. Much information about Græco-Roman and Pythagorean ideas may be found in the introduction to Eduard Norden, *Aeneis: Buch VI.*, Leipzig, 1903, and here and there in the notes.

W. WARDE FOWLER.

SOUL (Semitic and Egyptian).—The ancient Semites recognized that man consists of two parts, an outer frame of flesh and bones and an inner impalpable part. This inner part they connected with the breath. Only gradually did they come to think of it as an entity that could exist apart from the body. In all the Semitic dialects the soul was designated by a noun derived from a root meaning 'breathe.'

Thus, in Akkadian-Assyrian, *napašu*='be wide,' 'breathe'; *napištu*='breath,' 'life,' 'soul.' In Hebrew *naphash*='take breath,' 'refresh oneself'; *nephesh*='breath,' 'soul,' 'life,' 'person.' In Arabic *nafas*='to injure by breathing upon'; *tanaffus*='to fetch a deep breath'; *nafs*='breath of life,' 'soul,' 'self.' In Aramaic *naphshā*='soul'; *ellapash*='breathe.' In Ethiopic *nephsa*='breathe'; *nephes*='soul.'

To what extent the soul was, in course of time, differentiated from the breath may be discerned by reviewing the conceptions entertained by the different Semitic peoples concerning the soul and its survival after death.

1. Babylonian and Assyrian.—In ancient Babylonian Semitic conceptions are inextricably interwoven with Sumerian. While it is probable that the Semites were first in the Tigris-Euphrates valley, the earliest literature is in Sumerian.

¹ Dill, *Roman Society from Nero to Marcus Aurelius*, p. 403; the whole of the chapter (bk. iv. ch. ii.) will be found instructive.

² Cf. iv. ix. 26 ff.: 'omnes illacrimabiles urgentur, ignotique longa nocte, carent quia vate sacro'; cf. Virg. *Æn.* ix. 440 ff., *Georg.* iii. 9, where there is a reminiscence of Ennius's epitaph.

³ Dill, p. 263 ff.

⁴ It is fully discussed in art. DEIFICATION (Greek and Roman).

⁵ Dill, p. 503.

In Sumerian there are two equivalents of *napištu*—*ZI* and *ŠI*. *ZI*, the one most commonly employed, is written by an ideogram which originally pictured a reed growing by running water. This expressed life—vigorous, abundant life. The ideogram for *ŠI* was the picture of an eye. The brilliance and flash of the eye suitably expressed the vigour of one's life.

While it may be that the reasons which led to the employment of these ideograms were phonetic, it seems probable that the appropriateness of the symbols to suggest life had something to do with it. The words *ZI*, *ŠI*, and *napištu* are, in the literature, employed as the equivalents of 'life'; it is not necessary to render them 'soul.' 'Life' was distinguished from the 'body' or 'carcass' (*šalamtu*), and was apparently conceived as having after death an independent existence apart from the *šalamtu*.

In none of the Semitic languages is the root for 'life,' 'soul,' employed as the verb 'to live.' This is expressed in Hebrew by the verb *hayā*; in Arabic, *hayt*; in Syriac, *ḥayā*; in Ethiopic, *ḥaywa*. It is the root from which in Hebrew the word for 'animal' is derived. The Akkadian and Assyrian dialects of Mesopotamia, on the other hand, employ as the verb 'to live' the root *balātu*—a root which in Jewish Aramaic signifies 'stand forth,' 'project'; in Syriac, 'shut the eyes,' 'bolt the gate,' or 'breed worms'; in Arabic, 'spread or pave a house with flag-stones' (the noun *balāṭ* meaning 'ground,' 'smooth ground,' 'surface of the ground'); in Ethiopic the only occurrence of the root known to the present writer, *balūṭ*, means 'oak.' The Mesopotamian *balātu*, 'to live,' seems to have closer affinities with the Arabic root *balada*, 'remain,' 'abide,' 'dwell,' than with the Arabic *balāṭa*.

The idea involved in the Babylonian conception of living would, accordingly, seem to have been, not the possession of a soul, but the ability to stand forth as a distinct being and to occupy a habitation.

We can best ascertain the Babylonian conceptions of the soul by studying their conceptions of the life after death.¹ In common with many other peoples who buried their dead, the Babylonians believed that those who had departed this life dragged out a miserable existence in a subterranean cavern. In this cheerless abode the departed were thought to assume the forms of partially decomposed bodies; this we learn from representations of certain demons from whom Babylonians thought it necessary to guard themselves and who were, as the texts which describe them clearly show, human beings who had died. It is easy to see how early men should think of the departed as assuming the forms of skeletons or partially decomposed bodies. The fact that they did so conceive them is proof that they did not think of the soul as an entity which was altogether independent of the body. The dead, living in the earth, were thought to long for the food and drink of living beings; the dust and clay of the lower world did not satisfy them. In order to so satisfy them that they should not haunt the living and afflict them with disease, the Babylonians from the earliest times presented offerings of food and drink to the dead. The technical term for this was *ŠI-A-NAK*, 'pouring water on the ground.' In addition to this, an initial supply of food and drink was placed at the time of burial in the tomb with the body. Records of such offerings to the dead are found in practically all periods of Babylonian history. Their object was to keep the dead contented with their lot, so that they would not return to torment the living. When dissatisfied departed spirits did so return, they were believed to form demons and to harm the living. The spirits that came forth from the under world to trouble men were (1) those whose bodies lay unburied, (2) those who had none to present offerings for them, and (3) spirits who had, while living, never been able to satisfy their normal human desires.

The first of these classes is in the Gilgamesh epic described by Engidu, after Gilgamesh had had him called forth from the under world, thus:

¹ See art. STATE OF THE DEAD (Babylonian).

'He whose body is thrown on the plain,
Thou hast seen, I see;
His spirit rests not in the earth;
Whose spirit has no care,
Thou hast seen, I see;
The leavings of the dish, the remains of the food,
What is thrown into the street, he eats.'¹

The second class is alluded to in an incantation which apostrophizes many kinds of spirits, thus:

'Or a spirit that has no care,
Or a spirit with none to make food-offerings,
Or a spirit with none to make libations.'²

The third class is described in the following:

'Or a demon that has no resting-place,
Or a maid that died a virgin,
Or a man that died unmarried.'³

'A hierodoulos who has died of pestilence,
A woman who has died in travail,
A wailing woman who has died in travail.'⁴

'He who from hunger in prison died,
He who from thirst in prison died,
The hungry man who in his hunger
Its odour smelled not,
He who the dyke of a canal
Opened and was drowned,
He who on plain or marsh-land died,
He who on the plain a storm o'erwhelmed,
The spirit-maid that has no husband,
The spirit-man who embraced no wife.'⁵

All these, whose deaths were accidental or so untimely that the natural functions of life were not fulfilled or its legitimate desires satisfied, roamed the world and were dangerous to the living.

In general, then, we may say of the Babylonian conceptions of the soul that they were vague and for the most part ill-defined. It was recognized that each man possessed an impalpable something that made him a living being, but, so long as he lived, little attention was paid to this. After death this indefinable part of man demanded food and drink. If this were not given, it might return to annoy the living. This fear of the dead led to the conception of the soul as a form of wind—whirlwind or storm-wind. Such satisfactions as the soul received were to be obtained in this life only. If they were not attained before death, the spirit would come back seeking them. It was this in part that constituted the spirits of the departed a menace to the living.

2. Hebrew.—Among the Hebrews the word for 'soul,' *nephesh*, passed through a considerable development which gave it different shades of meaning at different times.

It is employed (1) to denote the principle of life—the thing that constitutes a living being. Thus it is said (Gn 27) that Jahveh breathed into man's nostrils the breath of life and man became a 'living soul' (*nephesh hayā*), a 'living being.' As denoting a living being, *nephesh* was applied to animals as well as men, and was believed to have its residence in the blood. Thus the Hebrews were prohibited from eating the meat of sacrifices until the blood of the animal had been poured out on the ground to God, for 'the blood is the life (*nephesh*)' (Dt 12²² 24; cf. also Lv 17¹⁰⁻¹⁴, Gn 9^{4f.}). In 1 K 17²² 'soul' is employed to denote this principle of life, when it is said that the 'soul' of the child came into him again after Elijah had stretched himself upon him three times.

(2) 'Soul' (*nephesh*) is employed to designate the seat of the physical appetites. Thus in Dt 12¹⁵, 20, 21 it is the seat of the appetite for meat; in Dt 23²⁴ for grapes; in Nu 21⁵, Job 33²⁰, for bread; in Ps 78¹⁸ 107¹⁸, Ec 2²⁴, for food in general; and in Mic 7¹ for figs.

(3) The 'soul' was also regarded as the seat of all kinds of emotion—pity for the poor (Job 30²⁵), joy (Ps 86⁴), love (Ca 1⁷), hate (Is 1¹⁴), courage (Ps 138³), purpose (Gn 23⁸).

(4) It was also the seat of moral action and of the will. Thus in Gn 49⁶ a poet sings:

'O my soul, come not thou into their council;
For in their anger they slew a man,
And in their selfwill they houghed an ox.'

¹ E. Schrader, *Keilinschriftliche Bibliothek*, vi., Berlin, 1900, p. 264 f.

² *Cuneiform Texts from Babylonian Tablets, etc.*, in the *British Museum*, xvi. 10; cf. R. C. Thompson, *The Devils and Evil Spirits of Babylonia*, i. 40 f.

³ *Cuneiform Texts*, loc. cit.; Thompson, p. 88 f.

⁴ P. Haupt, *Akkadische und sumerische Keilschrifttexte*, Leipzig, 1883, p. 89 f.

⁵ *Cuneiform Texts*, xvi. 12; Thompson, p. 54 f.

In Dt 4²⁹ the 'soul' is the seat of the will to seek God; in Job 7¹⁵, of the purpose to die; in Ps 24⁴, of deceit and fraud; in Ps 25¹, of trust in God; in Ps 119¹²⁹, 167, of obedience to law; in Jer 32⁴¹, of the will to perform a beneficent act; in Mic 6⁷, of sin; and in Hab 2⁴, of pride. In some cases the 'soul' seems to be regarded as the seat of mental activity also; see Jos 23¹⁴, Est 4¹³, Ps 13².

(5) 'Soul' was also employed by the Hebrews to designate an individual man or person. Thus in Gn 14²¹ the king of Sodom said to Abraham: 'Give me the souls (persons), and take the goods thyself'; also in Lv 17¹²: 'No soul of you shall eat blood'; Ezk 18⁴: 'The soul that sinneth, he shall die.' From this usage it came to be employed in enumerations, as in Gn 46¹⁵, where it is said that all the 'souls' of Jacob's descendants at a certain time were 33. Another result of the employment of 'soul' in the sense of 'person' was that with a pronominal suffix it came to denote 'self'; thus 'my soul,' 'thy soul,' 'his soul,' meant 'myself,' 'thyself,' 'himself.' By a curious extension of the use of 'soul' for 'person,' it came in time to denote also a person once living but now dead. This usage is found in the OT only in Leviticus, Numbers, and Hagga (see, e.g., Lv 19²⁸, Nu 6⁶, and Hag 2¹³). Although the *nephesh* had clearly gone from the body, its long use in the sense of 'person' led to this curious application of it to a dead body.

Closely connected in usage with the term *nephesh* were the terms 'spirit' (*rūah*) and 'heart' (*leb*). Indeed some writers have held that the Hebrew conception of human nature was a trichotomy, consisting of body, soul, and spirit. This position, as the best scholars have pointed out, cannot be maintained; for, however different from 'soul' the terms 'spirit' and 'heart' may have been originally, they came in time, like the term 'soul,' to designate the whole inner, impalpable nature of man. Thus *rūah* originally meant 'wind,' as in Ps 1⁴; then it was employed to denote the 'Spirit of God,' as in Gn 1², and is extensively used in this sense throughout the OT; it was then applied to the inner life of man, and is often employed as a synonym for 'soul.' Thus the 'spirit' is the seat of various emotions—in Gn 26³⁵, of grief; in Gn 41⁸, Ex 6⁹, of anxiety; in Dt 2³⁰, of obduracy; in Jg 8³, of hate; in Ps 32⁷, of deceit; in Pr 18¹⁴, of a lack of courage; in Jer 51¹¹, of courage; in Ezk 3¹⁴, of anger; in Zec 6⁸, of peace. Like 'soul,' 'spirit' is also regarded as the seat of moral and religious attributes or qualities: thus in Ps 34¹⁸ it is the seat of contrition; in Ps 51¹², of willingness; in Ps 51¹⁷, of humility; in Is 26⁹, of the will to find God; in Ezk 11¹⁹, of teachableness; in Hag 1⁴, of the will to work.

In late writers only *rūah* ('spirit') is also employed of the seat of mentality; cf. Job 20³, 1 Ch 28¹², Is 29²⁴, Ezk 11⁵ 20³². It thus becomes clear that the uses of 'soul' and 'spirit' overlap one another. The Hebrews did not have a clear-cut psychology of the inner life of man with a well-defined terminology, but held a very simple view of the constitution of human nature and employed terms with a vagueness and an overlapping characteristic of popular unscientific thought.

The inner life of man was also by the Hebrews often designated the 'heart' (*leb*). 'Heart' was more often employed to denote the seat of the mind or intelligence than either 'soul' or 'spirit' was; cf. Nu 16²⁸ 24¹³, Pr 6³² 7⁷, etc. The heart is sometimes described as wise (1 K 3¹², Pr 16²³, Ec 8³), sometimes as intelligent (Pr 14³³ 15¹⁴ 18¹⁵). It is also employed to designate the seat of emotions and of moral purpose: thus in Jg 16³⁵ the heart is the seat of joy; in Neh 2², of sorrow; in Am 2¹⁶, Ps 27¹⁴, of courage; in Job 36¹³, of godlessness; in Pr 11²⁰, of perversity; in Jer 14⁴, of deceit; and in Pr 21⁴, of pride. It is, therefore, like spirit, often but another name for soul.

As to the fate of the soul after death, the views of the Hebrews were akin to those of the Babylonians. The soul went with the body into the underworld or Sheol, where the Hebrews before the Greek period believed that it dragged out a wretched existence (Is 14⁹⁻¹¹). It is implied that in Sheol the dead perform much the same functions as when alive. At least kings are represented as still sitting on their thrones, though worms cover them and are spread under them. The last idea is derived from the putrefaction of the body.

Similarly in Ezk 32⁷⁻²² Sheol is portrayed as a great subterranean region where the dead of all the nations are collected. They lie in helplessness and gloom, though their kings are still kings and their princes still princes. The inhabitants of Sheol were called *rephaim*, i.e. 'helpless (or 'powerless') ones.' After a century or more of contact with the Greeks the conception of a longer and happier life, bordering on the idea of the immortality of the soul, was entertained in some sections of the nation. The earliest approximation to this idea appears in Enoch 10¹⁰ (before 170 B.C.), where it is said of certain wicked ones: 'They hope that they will live an eternal life, and that each one of them will live five hundred years.' The author of Enoch evidently regarded such a hope as presumptuous, for he declares in substance that this hope was vain. The author of Daniel, however, a few years later accepted the view which the author of Enoch repudiated, and definitely predicted a resurrection (Dn 12²). Later writers who came under Greek influence accepted it also (cf. Wis 2³), and it became the faith of the Pharisees, but nevertheless some of the later Psalmists adhered to the old view. One of them declares:

'The dead praise not Jahweh,
Neither any that go down into silence' (Ps 115¹⁷).

A similar idea is expressed in Ps 88¹⁰:

'Will thou shew wonders to the dead?
Shall the shades arise and praise thee?'

This view the Sadducees still held at the beginning of the Christian era. Jews who accepted the idea of a resurrection were not, however, able as a rule to dissociate the soul from the body; they held to the resurrection of the body.

Like the Babylonians, the early Hebrews believed that certain persons had the power of bringing the dead up from the grave. Such persons were said to be master or mistress of an *'obh*, though just what this was is unknown. It was probably a name for a departed spirit.

The classical instance of this sort of necromancy is the witch of Endor who was consulted by King Saul the night before he fell on Mount Gilboah. She brought Samuel from the earth, and when she saw him she said: 'I see a god (*elohim*) coming up out of the earth.' Saul asked her: 'What form is he of?' She answered: 'An old man cometh up; and he is covered with a robe.' Saul then perceived that it was Samuel (1 S 28³⁵).

From this it appears that the Hebrews did not dissociate the soul from the body as much as the Babylonians did. Samuel is still in the form of an old man wearing his mantle. He is not, like Engidu, a whirlwind.

Such necromancy was practised in Israel down to the time of the Exile or later. Masters of *'oboth* or *yidde'oni* (another term for departed spirits) practised it. They are mentioned in Is 8¹⁹, 2 K 21⁶ 23²⁴, Lv 19³¹ 20^{6, 27}, Dt 18¹¹, and 2 Ch 33⁶. King Saul had during his reign prohibited the practice of such necromancy, and Isaiah and the author of Deuteronomy protested against it, substituting prophecy for it as a means of ascertaining the future. While the Hebrew conceptions of the soul are somewhat more clearly defined than the Babylonian, especially on the moral and religious side, they are nevertheless vague and are not for the most part clearly distinguished from the mind and other aspects of the inner life.

3. Jewish.—In post-Biblical Judaism conceptions of the soul have varied according to the environment and intellectual outlook of Jewish thinkers. They may, however, be grouped in three classes: the Hellenistic, the Rabbinic, and the philosophical.

(a) *Hellenistic*.—In Jewish Hellenism the conceptions of the soul were shaped by Platonic ideas. Plato's doctrine of the pre-existence of souls was accepted by the author of the *Secrets of Enoch* (23⁵) and by his contemporary, Philo Judæus.

Philo accepted also Plato's tripartite division of the soul, holding that one part is rational, the second spiritual, the third the seat of desire. This tripartite division relates in Philo's usage solely to the functions of the soul. When he speaks of its composition, he regards it as dual, composed of a rational and an irrational part. The rational soul (*voûs*) was divine; the irrational, corruptible. Not all souls created by God became incarnate; the purest of them inhabited the air and were never entangled in the corruptions of the flesh. The mind or rational soul, which dwelt in the head, was, Philo believed, akin to the incorruptible 'citizens of the air.' Like them, it was incorruptible and immortal. It is the instrument by which man comes into contact with the various objects of creation and makes its way to God Himself. It sends out its streams like a fountain, and pervades the whole body. The spiritual, he believed, inhabited the chest; the soul of the desires, the abdomen. When Philo treats of immortality, it is the rational soul only that occupies his thought. The mind of man came from God and, of course, would return to God. By implication this would be true of the spiritual soul also, but apparently not of the seat of desire. We must not, however, look for logical consistency in Philo; his twofold system of classifying souls and their powers, the dualistic and the tripartite, led him to inextricable confusion.

(b) *Rabbinic*.—Rabbinic Judaism, as represented by the Talmud and the related literature, retained the Biblical view of the dualism of human nature, consisting of body and soul.¹ Probably on account of the influence of Platonism, the Rabbis, although they rejected Philonism, believed in the pre-existence of souls.² They held, however, that it was taught in Gn 2⁷, and consequently believed that their view was due to Biblical teaching rather than to philosophy. At the time of conception God, so the Rabbis taught, commanded an angel to bring Him such-and-such a spirit, and the spirit or soul entered the embryo by the head.³ The spirits which were to descend to earth to inhabit bodies were said to be kept in Araboth, the lowest of the seven heavens.⁴ The spirits of the righteous dead, on the other hand, were beneath the throne of God. There was a difference of opinion as to whether the soul descended from heaven at the moment of conception or after the embryo was formed.⁵ Some held that God gave the Jew a new soul every Friday and took it back again at the end of the Sabbath.⁶ The Talmud seems to consider the inner nature of man as consisting of soul and spirit, but there was in the thought of the Rabbis no clear division between the two. In their opinion the power by which man distinguishes between right and wrong and his inclination to one or the other are two distinct essences which God places in the soul. They are the *yeseh tôb*, or 'inclination to good,' and *yeseh hārā*, or 'evil propensities.'⁷ Over these the soul has control, and it is thus responsible for moral action. The connexion between body and soul was held to be of the slightest. In sleep the soul was believed to ascend to its heavenly abode, where it often learned important truths. It was this belief that gave dreams their oracular significance. Nevertheless some Rabbis believed that dreams were due to psychological suggestion.⁸

(c) *Philosophical*.—The Jewish philosophers, who were the pupils of Arabian masters, who had in

turn learned their philosophy from the Greeks, thought of the soul in more scientific fashion. Se'adiah (*q.v.*), who died in Babylonia in A.D. 942, denied the Platonic doctrine of the pre-existence of the soul, claiming that each soul was created at the time of the creation of its body. The substance of souls resembled that of the 'spheres,' but was of finer quality, since it has the power to think and discern, which the 'spheres' lacked. The soul needs the body as its instrument or medium of activity. By its union with the body three powers latent in the soul are set free—intelligence, passion, and desire. These are not three separate parts of the soul, each having a seat in a different part of the body, but are powers of the indivisible spirit which has its seat in the heart. Without its union with the body the soul could not attain to eternal bliss, because this reward is granted it only as a recompense for obedience to the will of God, an obedience impossible without a body.

Notwithstanding the work of Se'adiah, *Sefer Emunoth ve De'oth*, 'Book of the Articles of Faith and the Doctrines of Dogma,' in the sixth chapter of which his views on the soul are set forth, the Platonic views prevailed in a debased form in most of the Jewish schools during the 10th and 11th centuries. According to a work of this period attributed to Ibn Pakuda, man has three souls—the vegetative, the animal, and the rational. The first two are derived from matter. The vegetative soul creates the body. The attribute of the vegetative soul is chastity; of the animal soul, energy; of the rational soul, wisdom. These views were accepted with variations by Ibn Gabirol and Ibn Ziddik.

Maimonides (*q.v.*), who had come under the influence of Aristotle, fashioned his conception of the soul after that Greek master. According to him, the soul is a unit possessing five faculties—the nutritive; the sensitive, by which one perceives; the imaginative, by which it has the power to form images of the things impressed on it by the senses; the appetitive, or the ability to feel either desire or aversion; and the rational, by which it acquires knowledge and discerns right and wrong. Maimonides held that the soul is indissolubly bound up with the body and at death ceases to exist. Maimonides and Levi ben Gershon (*q.v.*) held that, in addition to the soul possessed by every one, it was possible to develop, as was done by some, an acquired intellect. These views were strenuously opposed by others.

In *Zôhâr*, the most psychological of the treatises of the Kabbala, the Neo-Platonic theories of the soul asserted themselves.

4. Arabian.—See art. ARABS (Ancient), vol. i. p. 671f.

5. Muhammadan.—See art. SOUL (Muslim).

6. Other Semitic races.—Our information concerning the conceptions of the soul entertained by the other Semitic nations is very fragmentary, but what there is of it goes to show that their ideas were practically identical with those of the early Hebrews and Arabs. A Phœnician inscription employs *nephesh* in the sense of 'person.'¹ The Nabateans used the word in the same way, for there is a survival in one of their inscriptions of its employment to express the idea of self.² Another extension of this meaning, already traced in Arabia, was the employment of *naphsha* in the sense of 'memorial monument' or 'gravestone.' This is quite frequent.³ It is also found among the Palmyrenes.⁴ *Naphsha* had also, in the Nabatean

dialect, the meaning 'life.'¹ Of a deeper or more psychological meaning to the word among these peoples the sources reveal no trace.

The Syriac literature from the region of Edessa and the Ethiopic literature from Abyssinia are both Christian. The conceptions of the soul formally presented in these literatures are accordingly Christian. Nevertheless the usages of the languages in which the literatures are written testify that the heathen ancestors of these two sections of the Semitic race shared the views of the soul already traced in Israel and among the Arabs. In Syriac a verb formed from the root *n'phash* meant 'to breathe,' also 'to desire.' Forms of the root were also employed in the meaning of 'natural life,' 'soul,' and 'self.'

In general the same is true of Ethiopic. *Nafsa* means 'breath,' 'blow'; *nefs*, 'soul,' 'living thing,' 'wind,' 'air'; *nafst*, 'body,' 'pudenda'; and *manfus*, 'spirit,' 'soul.' The methods of reasoning employed above enable us to deduce from these facts that the word stood for 'breath,' 'life,' 'soul,' 'person,' and 'self,' as among the other Semitic peoples.

7. Egyptian.—The Egyptian beliefs concerning the soul differed considerably from those of the Semitic peoples. It is generally held that they thought a concrete entity, invisible during life, had its residence in the human body. They called this *ba*, a word which never means 'life.' Life was denoted by quite a different word, *ankh*. There is a verb *ba*, which means 'to cut in pieces,' and, if it had any connexion with the word for soul, the connexion is not apparent. There is also a denominative verb *ba*, 'to become a *ba*.' The *ba*, according to the usual Egyptian belief, dwelt in the body during life, but departed from it at death.² Some texts indicate that in parts the belief prevailed that only at death one became a *ba*. The Egyptians never developed philosophical ability; they did not form theories as to the inner composition or structure of the soul, such as were given to the world by Plato and Aristotle and were entertained by the peoples who came under the influence of these philosophers. In Egypt interest centred in the future fortunes of the soul. The conceptions on this subject at the beginning were bound up with myths which differed in different nomes. As time advanced and the establishment of the monarchy created syncretism, those myths and theories blended. They also in the lapse of time underwent development. Many of those views found expression in that medley of myths of the hereafter known as *The Book of the Dead*. Gods as well as men were thought to possess souls. The soul was the seat of strength, courage, and power in both gods and men. The favourite method of picturing the soul was in the form of a heron; in later times it was represented as a bird with a human face. Such representations on tombs enabled the survivors to place a portrait of the deceased over his grave.

In early times it was thought that, though the soul wandered abroad during the day through the under world or through the desert, on the borders of which cemeteries lay, it needed to return to the body at night or in moments of danger, as when attacked by hostile spirits. It was probably for this reason that such pains were taken to mummify and preserve the body. Departed souls were supposed to need the same kind of sustenance as in life; hence quantities of food were placed in the tomb. If a man had possessed wealth and servants in this world, he would need them in the after life. Hence, from the Vth dynasty onward, numerous servants preparing food and making all

that was useful during life are pictured on the walls of the tombs. *Ushabti* figures were later introduced for the same purpose.

The Pyramid Texts, our oldest source of information, deal with the posthumous destiny of the king. The souls of other men were thought to remain in the under world or to wander in the desert; the king was, like Osiris, transferred to the skies and placed among the gods. The reception given him there is vividly portrayed. Feasts of geese, bread, and all delicious viands are provided for him; quantities of beer are furnished for him to drink; concubines for the gratification of his desires are not lacking. Sometimes, as he was, on his arrival in the sky, but a babe to the new life, he is represented as suckled at the breast of a goddess. Later the heaven of the sky was democratized, and it was believed that all good men went thither. Old beliefs that the dead returned to the tomb or revisited his former abode survived side by side with the beliefs in the soul's celestial destiny. Sometimes a little ladder or a boat was pictured, by which the soul could climb or sail away to the stars.

In course of time it came to be believed that on its arrival in the under world the soul must undergo an examination to see whether it was fit to go to heaven. While Osiris was believed to be the great judge, he was attended by 42 assessors—one for each of Egypt's nomes. These bore such terrifying names as 'Blood-drinker,' 'Bone-breaker,' 'Shadow-swallower.' Those who successfully passed the examination and could say at the end, 'I am pure,' were transferred to the sky, where they enjoyed a material paradise such as was, in the Pyramid Texts, the lot of kings. These promises were only for the worthy. The wicked were doomed to destruction by the myriads of demons who inhabited the under world. They might be torn in pieces by the 42 terrible judges, burned in furnaces, or drowned in the abyss. These souls might themselves become demons and return to torment the living with disease and death. Against them, as against other demons, magic spells were necessary.

It has often been stated that in addition to the soul (*ba*) the Egyptians believed that a man possessed another invisible entity or double, called a *ka*. The existence of the *ka* is beyond question, but its function has until recently been misunderstood. The *ka* was a man's double. On the walls of the temple of Luxor a sculpture of the 15th cent. B.C. depicts the birth of Amenophis III. By his side is another child of the same size and appearance.¹ This was the *ka*, which accompanied him through life. The *ka* was a corporeal comrade, though an invisible one. He accompanied a man through life, as a sort of guardian genius. The *ka* preceded a man to the realm of Osiris and prepared for his reception there. When a man died, therefore, it was said, 'He goes to his *ka*.' Lest the *ka* should mistake his *protégé*, the dead was given a peculiar garment by which the *ka* might identify him. The *ka*, united with the individual whom it had protected, lived a common life with him in the hereafter. Often it was said of the dead: 'How beautiful it is in the company of the *ka*!'

GEORGE A. BARTON.

SOUL (Teutonic).—I. The personal soul.—(a) In life.—The conception of a personal soul inherent in man during life and distinct from his body can be traced in popular beliefs of to-day in Germany, but the only evidence for it among the early Teutonic peoples comes from Scandinavia, and is singularly uniform in character. The mind (*hugr*) of a man is seen, on occasion, in the form of some animal usually thought to share the characteristics of the individual; thus a gallant chieftain will be represented by a bear, an eagle, or a bull, a blood-thirsty man by a wolf, a cunning man by a fox, a fair woman by a swan, and so on. This 'animal familiar' is called *fylgja* (fem. sing.; pl. *fylgjur*), 'something accompanying,' which we may render 'companion' or 'associate.' It can be seen (except in dreams) only by persons with second-sight, but it appears to have an objective existence.

Thus in an Icelandic story a boy stumbles over some obstacle unnoticed by him which an old man present sees to be the lad's own *fylgja*, a bear-cub (*þorsteins þáttur úzaðs*). After killing an enemy Eyjólf fell off his horse and was lamed for life; a wise man tells him that the reason of his fall was that he could not withstand the *fylgjur* of the slain man's kinsmen, whereupon Eyjólf asks: 'Do you think that their *fylgjur* are more powerful than mine and those of my friends?' In another saga certain brothers are said to be awkward to contend against, as they have 'strong *fylgjur*.'

The *fylgja* has thus a protective character, and it precedes its owner on all critical occasions. Hence dreams of encounters with wild animals are taken as portending a fight with the individuals whose *fylgjur* the animals are supposed to be, and an alternative name for the *fylgjur* is 'men's minds' (*manni hugir*).

Thus a hero dreams that he is attacked by wolves, of which he kills two; the dream is interpreted next day: 'It is easy to see that these are men's minds hostile to thee,' and in the ensuing encounter he actually kills two of his opponents.² In *Njáls Saga* a man dreams of a great white bear entering his brother's house; he says on waking that the animal had no peer and must therefore be the *fylgja* of the peerless Gunnarr.³

The close connexion of this belief with that of shape-changing is obvious. When we are told that Böðvarr Bjarki fought as a bear while he sat inert in the king's hall,⁴ it would seem that his *fylgja*, or animal-soul, was fighting for him; but, when the Icelandic chief Kveldúlf, of the 9th cent., is said to become a wolf at night, this appears to be rather a case of shape-changing.

So also in the case of Lára, who flew in the form of a swan above her lover in battle, chanting magic incantations so that none could wound him, until in swinging his sword he cut off the leg of the swan, and Lára dropped dead to the ground.⁵

In one essential point the conception of the external soul, or *fylgja*, follows closely that of the belief in shape-changing. The life of the *fylgja* depends on that of the individual, and dies when he dies. Though it is called his *hugr*, 'mind,' it is not the part of a man which continues a life after death. Its death is the portent of the death of its owner, and this not only when its death is seen in dreams. The freedman Thórð in *Njáls Saga*⁶ sees a dead

goat, which is realized to be his *fylgja*, and he is killed the same day.

The animal-soul, or *fylgja*, which dies or disappears on the death of the body, must certainly be distinct from the *hamingja*, occasionally called *fylgjukona*, which is a kind of female tutelary genius, who on the death of one member of the family passes on to another. In an Eddic poem these are described as 'wise maidens.'¹ The practice of naming a child after a recently deceased grandparent appears to have originated in a desire to attach the family *hamingja* to his fortunes.² In one or two passages there is a confusion of terms, and this tutelary genius is called *fylgja*, but, as the word only means 'companion,' it is really as applicable to the *hamingja* as to the animal-soul. The *fylgja* proper, the animal-soul, is never called *hamingja*. A similar distinction between the ancestral soul and the personal soul is found in various races.

The Kafirs believe in the *idhlozi*, an individual soul unable to leave the corpse after death, and the *itongo*, a corporate soul, shared by various members of a family and making its home permanently with their descendants.³ So among the Eskimo the individual soul of a child is distinct from the family guardian-spirit (*atka*), which is immanent in it in childhood.⁴

Ancient Teutonic literature has thus preserved to us no conception of the soul as a shade, or as a miniature, or as present in the breath or heart or blood. In modern popular superstition it is generally thought of as a butterfly, mouse, or other small creature, which issues from the mouth of a sleeper. This does not, however, resemble the Northern *fylgja*, for it survives the death of its human associate. In folk-tales it is often seen leaving its human habitation on the death of its owner.

(b) *After death.*—As we have seen, these *fylgjur*, or 'men's minds,' are not 'souls' in the sense of being that part of the individual which continues an existence beyond the grave. There is absolutely no mention of them in the realms of the dead, nor is there any hint that any particular part of man, such as the breath, is the seat of life both before and after death. Yet the popular belief in the Wild Huntsman and his companions, who are undoubtedly spirits of the dead, and the association of Odin (originally a god of the dead) with the wind,⁵ must be connected with the idea that the spirit of man was breath or wind. Other conceptions of the realm of the dead show less consciousness of any difference between spirit and matter. It is true that the realm of Hel, the goddess of death, seems to have been somewhat shadow-like, since its guardian chides the living Hermóð for making more noise than five battalions of the dead, but, when the dead Balder gives Hermóð the ring which was burnt on his pyre, as a gift to Odin, and his dead wife sends a shift to Frigg, these articles are apparently still material enough to give satisfaction in the world of the living.⁶ The practice of cremation must have originated in some definite belief about the soul's departure to another world, but Teutonic thought, like Chinese, seems to have been averse from admitting the dualism of spirit and matter, and literature gives us no hint that they can be separated. Moreover, the beliefs connected with cremation may have early crystallized into meaningless custom. When the German peasants in Voigtland put an umbrella and galoshes into the coffin of a departed friend, it is not to be supposed that they really believe these articles to be required in heaven, but merely that they have become part of the Sunday outfit in which it has always been customary to inter the body.

Constant references in ecclesiastical prohibitions

show that the dead were still thought to require food and drink, and in some parts of Sweden the peasants still continue to lay such offerings in the saucer-shaped depressions on the rock slabs of ancient tombs. Neither the idea of Hel nor that of Valhöll could oust from the popular mind the older and more widely spread belief that the dead man lived on in his grave-mound. Icelandic sources show that certain families believed that they 'died into' hills, which they regarded as sacred, and a reference in *Landnám* suggests that the young men of the family were conducted to this hill for the ceremonies associated with the attainment of manhood.¹ When continuing an existence in the neighbourhood of their burial-place, the dead seem to have been thought of as *álfar*, 'elves,' in Scandinavia, N. Germany, and the Netherlands. Sacrifice to these beings seems to have been practised in Sweden,² and it is once mentioned in Iceland.³ That the continuance of the prosperity due to some fortunate king depended on the actual presence of his corpse is clear from the eagerness which different portions of his kingdom evinced for some part of the body of King Hålfðán the Black,⁴ and also from the story of Frode, who was embalmed after death and taken round his kingdom in a carriage.⁵ In Norway the *haugbu*, or dweller in the grave-mound, is still regarded with veneration. In these cases, if the soul is thought of as separate from the body at all, it is evidently in close dependence on it. The importance of the corpse rather than the spirit is seen in the belief that dead bodies could be made by spells to utter prophecies, whereas there is no reference to calling up *spirits* to foretell the future. The refusal to distinguish between the corpse and its spirit is seen even more clearly in the beliefs about persistent ghosts—dead men who were evil in life. The ghost, if we may call it so, still possesses great physical power and can kill men; and its activities can equally well be put an end to by burning the corpse and scattering the ashes in the sea⁶ or by overcoming the ghost and cutting off its head.⁷

If, as has been suggested, Jötunheim, the world of the giants, is originally a realm of the dead, and the word *jötunn* really means 'devourer,' it seems as if Teutonic thought had contemplated a world in which the dead are nothing but corpses, devoured by ogres.⁸ This is a more crudely materialistic conception than most savages could boast of.

In Valhöll, which is probably a creation of the North, the *einherjar*, or warriors slain in battle and now living a new life under almost the same conditions as the old, must evidently be thought of as re-incarnated, since their dead bodies are not in Valhöll. But there is nothing spiritual about their fare of pork and ale, and their life after death is not an immortality, since they are doomed to fall again, with no further hope of renewed life, in the battle between gods and giants. We find the perpetual fighting dissociated from the belief in Valhöll in the story of Hild, who by her spells raised up the slain combatants in a great battle. At night they and their weapons turn into boulders, but every day they revive and fight, and so it shall continue till the end of the world.⁹ This excessive activity on the part of the dead probably reflects the superabundant energy of the Viking age, and

⁹ Snorri's Edda, *Skáldskaparmál*, ch. 67.

is perhaps also the foundation of the belief that persons pre-eminent in their life are reborn.

It will be seen from the above that the early Teutonic peoples were less speculative about the relations of matter and spirit than many savages. No doubt, if they had been questioned as savages are to-day, they would have produced a philosophy, but in their literature as it stands there is no recognition of any distinction between body and soul. It is, however, possible that their perception of this dualism had been clearer in the pre-literary time, and had become blurred in the Viking age owing to its intense interest in this life, to its materialism, and, above all, to its acquaintance with different forms of burial and with conflicting beliefs as to the destiny of the dead. Whereas the conception 'spirit' is not expressed in heathen Teutonic literature, the traces of animistic belief still left from a more primitive age may perhaps justify us in believing that the idea had once been more clearly formulated. Only the more enlightened classes seem wholly to have abandoned animistic beliefs, in which 'souls' are attributed not only to living beings, but also to inanimate objects.

2. Animism.—The worship of waterfalls, springs, and rocks, common all over Scandinavia, England, and N. Germany, had probably an animistic basis, as also probably had the cult of the *landvattir*, spirits of the soil. Where literature fails, archaeology may serve to show that in the period immediately preceding the Viking age the distinction between matter and spirit was more clearly realized. The intentional damaging of weapons and other objects before interment with their owners, practised in the 5th and 6th centuries, suggests that souls were ascribed to the objects as well as to their owners, and that it was believed that these souls could be set free to follow their dead owner only if they too were 'killed' in some way. So the sword of the Frankish king Childeric († 481) lay broken in the grave. Perhaps the most interesting illustration of this belief is given by such S. Scandinavian bog-finds as that at Vimose in Denmark, where some 4000 objects, mostly weapons and gear, are found to have been carefully damaged before being abandoned. The same idea of setting free the spiritual counterparts of objects can be traced in certain finds in Bornholm. These contain no corpses, but consist merely of a heap of intentionally damaged objects, the personal effects of some man whose body, probably because he fell at a distance, was not available for interment.¹

LITERATURE.—Besides the literature mentioned in the footnotes, reference should be made to the section on souls in E. Mogk's art. 'Teutonic Religion,' in H. Paul, *Grundriss der german. Philologie*², Strassburg, 1898-1918, iii. 249 ff., and to other works on Teutonic religion and folk-lore mentioned in that art.; also to Rieger, 'Über den nordischen Fylgjen glauben,' *ZDA* xlii. [1898] 277 ff.; G. Storm, 'Vore Forfædres Tro på Sjælevandring og deres Opkaldelsessystem,' *Arkiv for nordisk Filologi*, ix. [1893] 119 ff.; R. Cleasby and G. Vigfusson, *Icelandic-Eng. Dict.*, London, 1874; J. Fritzner, *Ordbog over det gamle norske Sprog*, Christiania, 1867, s.v. 'Fylgia,' 'Hamingja'; J. Ihre, *Glossarium Scythothicum*, Upsala, 1769, s.v. 'Fylgia.' B. S. PHILLPOTTS.

SOUL-HOUSE.—This name is only a recent one for reference, as no original name is known. The Egyptians, like many other peoples, habitually placed food-offerings with the dead, from the time of the earliest pre-historic graves down to the present. Before the 1st dynasty it became usual to place additional food-offerings—probably at festivals—on one side of the surface mound, or *mastaba*, opposite to the slit where the soul was supposed to go in and out. The heaps of offering pottery still remain in place.² In other cases a

mat was laid down to keep back the dust, and a pan of flour was placed on it; this was the origin of the sign *hetep* for any offering, satisfaction, or peace, a sign which appears among the earliest hieroglyphs, at the beginning of the 1st dynasty.¹ Next, a stone altar appears with a tank to hold a drink-offering (IVth dynasty), and, as sculptured offerings would never decay, the forms of cakes and other food were carved beside the tank. By the Vth dynasty the tank was looked on as a model of the living-house tank; one in the Cairo Museum has the months of high and low Nile marked on different steps. Various foreign influences came in at the collapse of IVth-Vth dynasty civilization, and it is not unlikely that African custom (see below) modified the altar of offering by providing a shelter for the soul, when it came out to feed at the tank-altar. Some time between the VIth and IXth dynasties various stages of shelters are found, modelled in pottery, about a foot across. At first it was like a Bedawi tent, a cover propped up with two sticks in front, and closed at the back and sides; in front of it is a courtyard, with a tank in the middle, and lying round this are the offerings of an ox head and haunch, round loaves, and bundles of vegetables. The tanks sometimes have holes at each corner, in which to set up poles for supporting a mat-shelter, to keep the water cool. The tent type soon passed into a colonnade with four columns, forming a verandah. Then a little box-shelter was added in the verandah, which soon developed into a back chamber. Steps were placed at the side to give access to the roof, and wind-openings to keep the interior cool. This point was reached at about the Xth dynasty.

The development continued by adding more back chambers; then small chambers on the roof, which grew into a complete second storey. The steps were continued up to reach the roof of the upper storey. Furniture was added—a chair, a couch with head-rest, an easing-stool. A servant grinding corn, and a recess for worship, are also represented. In short, we learn the exact arrangement of the peasants' houses of the XIth and XIIth dynasties. The details of construction were shown—elliptic brick-arch roofing, floors of poles and matting, mud-plastered, as at present, a flying staircase winding round curves, drip-hoodings over the windows, and crenellated walls exactly like those of the modern tombs in the same region.² A series of 150 examples giving every variety of development was found at Rifeh, south of Asyut. A few rather more elaborate are known elsewhere, but, as they have been imitated very skilfully by forgers, the further detail cannot be trusted.

The regular position of these soul-houses was on the surface of the ground, at the side of the grave, facing towards it, and most often at the north end. The period is from soon after the VIth dynasty, mainly about the Xth and XIth, and dying out in the XIIth dynasty. The region is at Gebelein, Erment, Thebes, Denderah, and Rifeh, all south of Asyut, in the Thebaid. The most complete series of soul-houses is in the Manchester Museum.

Modern African parallels suggest that this idea came into Egypt from the south.

¹ Chipoka had been a person of importance . . . a ceremony was to take place for the purpose of propitiating the old chief's spirit . . . people were busied about a group of neat miniature huts, made of grass, about two feet high. The roofs of these huts, which had been finished separately, were not yet put on, and I could see that a couple of earthen jars were sunk in the

ground inside each. These jars were now filled with beer, and then the roof was lifted on.¹ 'Of things which the stranger can see for himself in passing through the villages, the most noticeable are the little spirit-houses . . . where sacrifices are presented from time to time.'²

'Homeless *idimu* [souls] remain in the air and haunt the neighbourhood of the village. . . . It is to provide accommodation for the *idimu* that small huts are built over graves, and a clever device to keep them from wandering at night is to kindle small fires in the huts, for, if this is done, the *idimu* will remain there and warm themselves.'³

Lastly, what is the motive for such offerings? Three attitudes toward the dead are found in different countries:⁴ (1) fear, as with the Troglodytæ, who bound the body as tightly as possible, or in the various means of breaking connexion between the house and the grave; (2) comfort of the dead, as by giving food and drink; (3) honour of the dead, as in placing on the grave a light (as in Egypt) or flowers (Europe) in the present time. There seems no trace of fear of the dead in Egypt; in all ages weapons were placed with them, or models of weapons, and also sandals (or models in a pre-historic grave) to enable the dead to travel; and in Græco-Roman times the mummy was kept in the house for twenty or thirty years and there honoured, like the present African's offering to his father's head kept in the family circle. It seems therefore only consistent to regard the soul-house as being placed by the grave to comfort the soul when it came out, and provide shelter, food, and rest for it. W. M. FLINDERS PETRIE.

SOUTHCOTTIANS.—The Southcottians are the followers of Joanna Southcott (1750–1814), a Devonian. One of her followers, herself claiming to be divinely directed to write, describes her in 1907 in these words:

'(i) She was a woman chosen by God to stand at the end of the ages in perfect obedience to Him. (ii) She was to claim the Promise made in the Fall to the Woman, that her seed (Christ) should bruise the Serpent's head and thus put an end to evil. (iii) She was in a special sense to be the bride of Christ, not the only one, but set as a type until all become brides—both men and women—and give their supreme love to Him, standing in perfect obedience as His Church.'⁵

The same authority continues that the Holy Spirit revealed to Joanna things to come, and showed her plainly of the Father; that, as the woman's hand brought the evil fruit to man, so her hand is to bring to man the good; that woman is to be saved through child-bearing; that Joanna perfectly fulfilled Rev 12 in the spiritual birth of the man child; that the Church is finally to be the man child when filled with His Spirit.

Joanna, who was of Wesleyan extraction, began prophesying in 1792, and many of her predictions were fulfilled within a few months, as was verified by a local inquiry. Publications from 1800 onwards introduced her to a wider circle, and in 1801 Thomas P. Foley, rector of Old Swinford, brought friends who conducted a systematic trial of her gifts at Exeter, and, being convinced, were hailed as the 'Seven Stars.' In Aug. 1802 she retired for a seven-day dispute with Satan, which she published. Further trials ensued in 1803 and 1804, each widening her fame. She organized her adherents, enjoining on them the observance of certain Jewish laws, notably as to the Sabbath and as to clean meats. They were presented with a signed paper, 'The Sealed of the Lord—the Elect Precious Man's Redemption—To Inherit the Tree of Life—To be made Heirs of God and Joint-Heirs with Jesus Christ. Joanna Southcott.' This was bestowed only on those who had read and accepted

⁴ See art. DEATH AND DISPOSAL OF THE DEAD.

⁵ Alice Seymour, *The Express*, No. 1, page 27.

at least two of her major works; within five years about 14,000 persons were 'sealed.' She then challenged attention by a personal letter to every bishop, peer, and member of the House of Commons, and by letters to the *Times* and the *Morning Herald* in 1813. Next spring she announced that she was pregnant with Shiloh, and much excitement was evinced, even in medical circles, fourteen doctors being invited to examine her. But she passed away two days after Christmas.

Samuel Sibley and John Ward sought to rally her followers, the latter being believed in as late as 1892. But George Turner, himself owned by Joanna as inspired, joined with Jane Townley, her most intimate friend, in holding together the main body. Between 1840 and 1850 a controversy broke out, leading to much publication, on the question whether a spiritual child was born at the end of 1814, or whether Joanna will return, complete the year foretold, and bear a literal child. Forty years ago the London adherents were but a handful in Walworth; but a revival has taken place. With 1902 Alice Seymour, deeply impressed by the annual service on New Year's Day 1901 (Old Style), the 'lifting up of hands,' near Manchester, felt drawn to renewed study, and came to the conclusion that the prophecies 'for ten years from the fourth of the century' applied to the 20th cent., not the 19th. She therefore published two volumes in 1909 which are the foundation for sane study, and thus prompted renewed interest. The coincidences in the five years since are certainly remarkable.

Two other movements have sprung out of the original. John Wroe of Bowling, near Bradford, was accepted as successor to George Turner of Leeds in 1822, and his new revelations broke fresh ground, so that the Christian Israelites, as his followers are called, are not to be classed as Southcottians. They hold that the Ten Tribes are dispersed throughout the nations, and are to gather on the basis of the four books of Moses and the four Gospels. Perfect obedience to the Mosaic Law will procure immortality, the body not seeing death. There is no ordained ministry; propaganda is carried on especially in the open air, with a large brass band rendering plaintive music; adherents may be recognized by their long unshorn hair. They reached New York in 1844, and thus excited some curiosity in Australia.

In 1875 the Chatham group of Southcottians was joined by a soldier, James White, who, after his period of service in India, returned and took the lead locally, developing further the doctrines of Joanna and of Wroe, with a communistic tinge. The name 'New and Latter House of Israel' was assumed. Though he died in 1885, his widow continued the work, and an enormous mass of brickwork at Gillingham, strong as a fort, marks the house of Jezreel. Her death three years later caused financial chaos and a cessation of work. But adherents still exist in the United States, Canada, and Australia.

LITERATURE.—The sources are pamphlets by Joanna Southcott, complete sets of which are in the British Museum, the Bodleian, and the John Rylands Library, Manchester, totalling 4500 pages. Twice as much remains of her MSS, some in a peculiar shorthand, most sealed in a large case corded up till the next crisis of world-history. Her correspondence books are also preserved. The only long studies of her which are not caricatures are: Alice Seymour, *The Express*, containing the *Life and Divine Writings of Joanna Southcott*, 2 vols., London, 1909; Charles Lane, *Life and Bibliography of Joanna Southcott*, Exeter, 1912. W. T. WHITLEY.

SOVEREIGNTY (Divine).—1. Definition.—There are three senses in which the term 'divine sovereignty' may be used, two of which need little more than mention, as they are dealt with else-

where; the third alone claims further treatment. (1) In polytheism (*q.v.*) we may speak of the divine sovereignty of the one god who is more or less exalted above the other gods. In Chinese religion T'ien or Shang Ti possesses an absolute pre-eminence over all gods and spirits. In Vedic religion the gods in succession are exalted by the worshippers in the type of piety which Max Müller¹ has called henotheism or kathenotheism.² Some of the hymns almost rise to the height of monotheism (*q.v.*). Of Varuṇa it is said:

'The mighty Varuṇa, who rules above, looks down
Upon these worlds, his kingdom, as if close at hand.'³

Even in Zoroastrian dualism Ahura Mazda, despite his conflict with Angra Mainyu, is assured of final triumph. It is questioned now whether Dyaush pitā, 'Heaven-Father,' in spite of the linguistic equivalence, ever held the same place in the Vedic pantheon as *Zeus πατήρ* in the Greek, or Jupiter in the Latin,⁴ although the monarchy of these deities was very much limited by the wayward wills of the other gods. A similar position was attained among the Babylonian gods by Marduk, and the Assyrian by Ashur. The composite deity Amōn-Rē was in like manner exalted in Egyptian theology, and the attempt of Amenhotep IV. to dethrone him in favour of Aten failed. This tendency to raise one god over others may be regarded as the movement from polytheism towards monotheism.

(2) In the monotheistic religions the divine sovereignty means not exaltation above other gods, but complete power over nature and man, though in the OT we can trace the process by which monolatry—the exclusive worship of Jahweh along with a recognition of other gods—passed into monotheism. In Am 1 and 2 Jahweh is Judge and Ruler of all nations even as of His people Israel. Assyria is the rod of His anger (Is 10⁵). Cyrus is His anointed to fulfil His purpose (45¹). Monotheism was never as confident or challenging as in Is 40¹²⁻²⁶. The omnipotence of God is the prevailing doctrine of the OT.⁵ The same doctrine is assumed in the NT, as indeed it must be in any monotheistic religion. Into any details it is not necessary here to enter.

(3) It is the third sense of the term—the exercise of the will of God absolutely, unconditioned by the will of man—that claims special attention, since this view has been challenged and defended in the history of Christian theology, as the omnipotence of God has not been, unless in dualistic systems of thought.⁶ Before dealing with the doctrine of divine sovereignty in this narrower sense in Christian theology, we must note the unqualified and unreserved assertion of God's sole sovereignty in Islām.

'There is no god but God—are words simply tantamount in English to the negation of any deity save one alone; and this much they certainly mean in Arabic, but they imply much more also. Their full sense is, not only to deny absolutely and unreservedly all plurality, whether of nature or of person, in the Supreme Being, not only to establish the Unity of the Unbegetting and Unbegot, in all its simple and uncommunicable Oneness, but besides this the words, in Arabic and among Arabs, imply that this one Supreme Being is also the only Agent, the only Force, the only Act existing throughout the universe, and leave to all beings else, matter or spirit, instinct or intelligence, physical or moral, nothing but pure unconditional passiveness, alike in movement or in quiescence, in action or in incapacity. The sole power, the sole motor, movement, energy, and deed is God; the rest is downright inertia and mere instrumentality, from the highest archangel down to the simplest atom of creation. Hence in this one sentence,

"La ilāh illa Allāh," is summed up a system which, for want of a better name, I may be permitted to call the Pantheism of Force, or of Act, thus exclusively assigned to God, who absorbs it all, exercises it all, and to whom alone it can be ascribed, whether for preserving or for destroying, for relative evil or for equally relative good.'¹

This doctrine is obtruded very frequently in its most offensive form in the Qur'ān:

'God misleadeth whom He pleaseth, and guideth whom He pleaseth aright.' 'We created man upright, and then caused him to be the vilest of the vile.' 'The fate of every man have we bound about his neck.'²

Such statements of the doctrine without reserve or restraint might have served as warnings to Christian theologians.

2. The Pauline doctrine.—While it is in the NT that the divine sovereignty is first dealt with controversially, the unconditionality of God's action is already asserted in the OT. God's work shall not return to Him void, but it shall accomplish that which He pleases, and it shall prosper in the thing whereto He sends it (Is 55¹¹). In contrast to other gods, He is in the heavens, and 'hath done whatsoever he pleased' (Ps 115³). He does good and evil, and creates darkness and light (Is 41²³ 45⁷ 54¹⁶, Am 3⁷). For Him 'the nations are as a drop of a bucket, and are counted as the small dust of the balance' (Is 40¹⁶). None can hinder His work, and from Him none can deliver (43¹³). The impossible to man is possible to God (Zec 8⁶). The relation of God's action to man's activity was a subject of controversy in the Jewish schools, although it is probable that Josephus was accommodating himself to Gentile readers in the account that he gives of the difference on this question:

'The Essenes taught an absolute fate, the Sadducees utterly denied fate, and the Pharisees struck out a middle path between the two.' For 'the very expression *ἐμπασις*, which is utterly impossible to any Jewish consciousness, proves that we have at least to deal with a strongly Hellenized colouring of Jewish views.'³

For fate the Jew would put the will of God. Paul, in his argument in Ro 9-11, takes the middle path in asserting both divine sovereignty and human freedom; as an *argumentum ad hominem* he assumes that his opponents grant the divine sovereignty while maintaining human freedom. Had Christian theologians recognized that Paul was fighting Jewish arrogance and exclusiveness with its own weapons, that the argument is to be treated as a whole, and a dogma must not be built upon its separate statements, and that the distinctively Christian contribution is the hope of a universal mercy, they would not have given to the doctrine of divine sovereignty the place that in their systems they have assigned to it, disproportionate to the teaching of the NT as a whole, and even inconsistent with the general trend of Paul's theology.

'The argument consists of three main propositions: (1) God is absolutely free to elect or reject individuals or nations according to His own will (ix. 1-29); (2) the Jewish people, by its unbelief, has deserved its present exclusion from the blessings of the gospel (ix. 30-x. 21); (3) this exclusion is partial and temporary, as it is God's purpose ultimately to include both Jew and Gentile in His grace (xi. 1-4).'

In dealing with the first proposition 'he shows how in the history of the chosen people the principle of God's unconditional election has been again and again asserted, and repels the charge of injustice by appealing to God's own words, in which He claims freedom in all His acts. While rebuking the arrogance of the creature in questioning the acts of the Creator, he blunts the edge of his argument somewhat by showing that God has used His freedom to show mercy rather than judgment. The form of the argument is not beyond criticism; Paul's exegesis cannot be accepted as strictly historical.' But, as regards the substance, we cannot escape the difficulty by say-

ing that Paul has in view only the historical fate of a nation, for he asserts unequivocally God's freedom in electing or rejecting individuals. We must insist that 'it is not the Christian conception of God which dominates the discussion'; that Paul does not carry out his principle with rigorous logic, since 'he shrinks from affirming that God fitted the vessels of wrath unto destruction, and admits that God endured them with much long-suffering,' and that 'the metaphor of the potter itself cancels the argument,' for 'the potter does not use the clay willfully, but makes of each lump what it is fitted to become.'¹ Apart from this argument in Ro 9-11, there are passages in which Paul asserts 'a doctrine of election as regards Christian believers (Ro 8^{28f}, Eph 1⁴). . . . The aim of this teaching is, however, to give the believer assurance that his relation to God does not begin in time with his faith in God's grace, but is deeply rooted, firmly fixed, in the eternal will of God. . . . Paul does not teach that God foreknows, foreordains, or elects any man unto eternal death. The responsibility for that he throws on the man himself.'²

We must not ascribe to Paul the deductions of a too ruthless logic, which infers that whom God does not elect He rejects, as he was concerned not with the speculative problem of the relation of divine sovereignty and human freedom, but solely with the practical assurance of God's unchanging grace.

3. Augustinianism.—Neither Paul's theology nor even his personal experience accounts wholly for Augustine's position; his previous philosophical training must be taken into our reckoning. While, as with Paul, it is man's entire dependence on God's grace that He seeks to magnify, yet he, in his controversy with Pelagianism, develops this practical assurance into a speculative doctrine which virtually denies man all freedom, and even transforms constraining grace into compelling force, fixing man's destiny solely by the eternal will of God.

'Sinful man depends,' says B. B. Warfield, 'for his recovery to good and to God, entirely on the free grace of God; this grace is therefore indispensable, preventent, irresistible, indefectible; and, being thus the free grace of God, must have lain, in all the details of its conference and working, in the intention of God from all eternity.'³

'From the sinfulness and impotency of all men,' says G. P. Fisher, 'Augustine deduced the doctrine of unconditional predestination. They who believe in the Gospel with a saving faith are not merely elected to be the recipients of the heavenly reward; they are elected to be the recipients of faith (*de Prædest. Sanctorum*, 37, c. 18). Faith itself is the gift of God. All others are left in their sins—left to perish. They are not predestinated to sin, but rather to the punishment which sin deserves, from which they are not saved by electing grace. The number of the elect is fixed (*de Corrupt. et Grat.* 39, c. 13). It is predetermined in the plan of God. But not all believers are of the elect. Perseverance in the new, holy life is the gift of God, and is bestowed on that portion of believers to whom God in His inscrutable wisdom chooses to grant it.'⁴

While Augustinianism triumphed over Pelagianism, yet the Church did not accept it in its entirety, for this emphasis on free grace is in inherent antagonism to the Church's doctrine and practice of 'works.'

'As over against the Pelagians,' says Warfield, 'the indispensableness of grace was quickly established; as over against the Semi-Pelagians, its preventent was with almost equal rapidity made good. But there advance paused. If the necessity of preventent grace was thereafter (after the second Council of Orange, 529) the established doctrine of the Church, the irresistibility of this preventent grace was put under the ban, and there remained no place for a complete "Augustinianism" within the Church, as Gottschalk and Jansen were fully to discover.'⁵

4. The Reformers.—Augustinianism was revived at the Reformation. Luther in his controversy with Erasmus 'affirmed in almost reckless language the impotence of the human will. God's agency was asserted to be the universal cause. His will was declared to be subject to no law, but to be the foundation of right. Predestination was declared to be unconditional and to include as its objects the lost as well as the saved.' He did not attack Melancthon, however, when he propounded

the doctrine of synergism (*q.v.*)—a co-operation, however subordinate, of the human will with divine grace in conversion. In truth he himself had not a consistent doctrine. On the one hand, he affirmed 'that God from eternity desires the salvation of all men,' and, on the other, the truth nearest his heart was 'that salvation is by divine grace, without merit,' which he used as a weapon against the Roman Catholic insistence on human merit.¹ The doctrine of predestination was not with Luther, as it was with Zwingli, the starting-point of his theology. It was in Calvin, however, that the doctrine of the divine sovereignty found its full expression in a logical system of theology.

'Calvin and Calvinism,' says Fisher, 'emphasize not only the freedom, the unmerited character, of grace, but equally the sovereignty of God in the bestowal of it. The idea is that apart from this sovereignty in the selection of the subjects of it, grace would not be grace. . . . The peculiarity of Calvin's doctrine of predestination is that it includes in it the decree of reprobation. This the Lutheran confessions exclude. . . . God has once for all determined "whom He would admit to salvation and whom He would condemn to destruction" (Calvin, *Institutes*, iii. xxi. 7).'²

God does not merely foresee the hardening of the heart of the sinners; but Himself brings it about by the withdrawal of His Spirit and by using Satan to influence their minds and deeds. Why God does this we must not ask, as God's will is above all. Yet there is a good and sufficient reason for every divine decree.³

It has been disputed whether Calvin is to be regarded as a supralapsarian or a sub- or infralapsarian. The question at issue was this: Did the divine decree of election and reprobation precede (in divine thought, not in time) or follow 'the consideration of man as fallen'? While in the heat of controversy Calvin seems to commit himself to the former view, his more considered judgment inclines to the latter.

'Calvin,' says J. Orr, 'always viewed election as from a "mass" already in condemnation, while, of course, recognizing that the fall of man also was embraced in the providence of God.'⁴

5. Later doctrinal developments.—A modification of Calvinism which gave the doctrine of divine sovereignty less the appearance of arbitrariness was the doctrine of the Covenants, or the Federal Theology,⁵ of which Cocceius in Holland was the leading exponent. A deduction from the doctrine of election, which Calvin himself did not make, was that the Atonement in Christ's death must be provided only for the elect. Arminianism asserted the universality of the Atonement, in God's intention, although it is not actually efficient in all. A compromise was attempted in Amyraut's 'hypothetical universalism': the Atonement is for all, and yet it is applied only to the elect; and this view found wide acceptance.⁶ It is unjust to regard Arminianism as simply a revived Pelagianism, for it taught an election conditional on God's foreknowledge of faith in the individual, man's dependence on God's grace for the ability to exercise saving faith, the necessity of regeneration by the Holy Spirit for good works, the indispensableness, but not irresistibility, of grace. It is not necessary to follow in detail the subsequent controversies. The 'hypothetical universalism' of Amyraut, however, was capable of further development. If the Atonement avails for all, can it be God's purpose that its efficacy shall be limited to the elect because the operations of the Holy Spirit in producing saving faith are limited to them? The universality of the Atonement led James Morison backward to the universality of the love of God and forward to the universality of the work of the Holy Spirit: the three universalities was the battle-cry of the movement in Scotland of which he was leader. He still affirmed, however, that man was free to choose or

to refuse this universal salvation. Starting from the conception of God as Father, as given in the revelation of Christ, and applying the conception of divine sovereignty thereto with the same logical rigour as did Calvinism, we should at last reach universalism.

6. Fatherhood and sovereignty.—Every monotheistic religion must affirm the divine sovereignty. Apart from impossibilities, metaphysical, logical, and moral, God can do whatsoever He wills. But whatsoever He wills depends and must depend on what God is. As we conceive God, so must we think of the divine sovereignty. If we think of God as Father, we must think of His sovereignty as fatherly. A doctrine of divine sovereignty that ends, as do Augustinianism and Calvinism, in the election of the few and the reprobation of the many has evidently started wrong—not from the Christian conception of God as revealed in Christ, but from a conception of sovereignty that in every country to-day which enjoys any measure of constitutional liberty would be repudiated as false. Even a sovereign to-day does not wield absolute and arbitrary power. The doctrine of election, it is argued in its favour, has its roots in the sense of man's impotence, and his dependence on God for every good; but is it in a child's trust in the father or a subject's submission to a sovereign? Must we not admit that, while the former attitude was not absent, yet it was the latter that was dominant, when the religious assurance was developed into the speculative doctrine? But does not the religious consciousness need to be allied with the moral conscience, which no less clearly and firmly affirms man's responsibility and liberty? The conception of God's Fatherhood, which implies man's moral affinity as well as his religious community with God, involves that God will so exercise His sovereignty, on which man depends, as not to deprive him of his liberty. It is no abrogation of the divine sovereignty, but only an exercise of it accordant with His Fatherhood, if He allows the activity of His will in dealing with men to be conditioned by the acts of their wills. Such a view of the divine sovereignty forbids the deduction from God's Fatherhood made by universalism; but it does leave us the hope that the Father who created man in His likeness and for fellowship, despite man's sin, has such resources in Himself, rational, righteous, and gracious, as will at last, not by the compulsion of force, but by the constraint of love, make His Fatherhood sovereign in mankind.

ALFRED E. GARVIE.

SPACE.—The various ideas which have historically prevailed regarding the nature of space are commonly regarded as so many detached views, independent of, and mostly in conflict with, each other. In this article we propose to consider them from a different standpoint, and to regard each of those opinions or doctrines as contributing an important factor or element in the one true conception of space. In point of fact, there is scarcely a view or theory which has been put forward regarding space that does not express some important aspect of the truth.

1. History.—(a) *Greek philosophy.*—In early Greek philosophy the concept of space is confounded with that of matter, at any rate by the Pythagoreans. J. Burnet says:

'The Pythagoreans, or some of them, certainly identified "air" with the void. This is the beginning, but no more than the beginning, of the conception of abstract space or extension.'¹

It still remains true that the most recent discussions as to the nature of space turn upon the relations between the two concepts, space and

matter, and the objects which they denote. In modern speculations it is no longer the air, it is the ether, that is confounded with the void.

The first important conception of space which we have to notice is that of Plato. It is not necessary, for this purpose, to enter upon a discussion of the different interpretations which have been given to the Platonic philosophy in recent times. Whether we adopt the objective view of the Ideas, as the hypostatization of the universal, attributed to Plato by Aristotle, or the more subjective interpretation of Henry Jackson and R. D. Archer-Hind, based on the later dialogues, or that older view of St. Augustine, and in modern times of Cousin,² which combines both these interpretations, in none of these cases is the interpretation of the Platonic space essentially affected. Plato in his speculations seems to have travelled a road the reverse of that travelled by Fichte. As the latter began with an Ego which was suspiciously finite, and ended with an Absolute which had very few of the characters of Ego-hood (*Ichheit*) about it, so Plato began with an Absolute which continued itself into a world of ideas, and ended in a world-soul and a demiurge.

Space Plato speaks of in the *Timæus* as 'the receptacle, and as it were the nurse, of all becoming.'³ 'It behoves that which is fitly to receive many times over its whole extent likenesses of all things, that is, of all eternal existences, to be itself naturally without part or lot in any of the forms. Therefore the mother and recipient of creation, which is visible and by any sense perceptible, we must call neither earth nor air nor fire nor water, nor the combinations of these nor the elements of which they are formed; but we shall not err in affirming it to be a viewless nature and formless, all receiving, in some manner most bewildering and hard to comprehend, partaking of the intelligible.'⁴ 'This being so, we must agree that there is first the unchanging idea, unbegotten and imperishable, neither receiving aught into itself from without nor itself entering into aught else, invisible, nor in anywise perceptible—even that whereof the contemplation belongs to thought. Second is that which is named after it and is like to it, sensible, created, ever in motion, coming to be in a certain place and again from thence perishing, apprehensible by opinion with sensation. And the third kind is space everlasting, admitting not destruction, but affording place for all things that come into being, itself apprehensible without sensation by a sort of bastard reasoning, hardly matter of belief. It is with this in view that dreaming we say that all that exists must be in some place and filling some space, and that what is neither on earth nor in heaven anywhere is nought.'⁵

To some extent there can be no question with regard to the interpretation of this. Space is to Plato 'the other,' what in the Platonic philosophy takes the place of the *prima materia* in the Aristotelian philosophy. This interpretation has been completely established by Zeller,⁶ though the opposite view, which makes primordial matter different from space, was still maintained by Gomperz.⁷ But here a subtle difference of interpretation arises, which has a close connexion with recent philosophy. We may adopt a subjective view with Ritter,⁸ and hold that the relation subsisting between the ideal and the sensible is 'a mere relation to the sentient,' and still, as Zeller points out,⁹ the resulting view of matter can be adopted, with slight modifications apart from that theory. The Platonic theory of matter is then, in effect, as Zeller says, identical with that of Leibniz. This is the interpretation of Plato adopted by Archer-Hind, according to whom space, though the substrate and recipient of the images of the ideas, is only 'the law of our finite nature which ordains that we shall perceive all objects as extended in space,' and depends on a subjective view of the Ideas, which, following Jackson, Archer-Hind

⁹ *Early Greek Philosophy*, pt. I., London, 1914, p. 61.

It is in relation to the well-known paradoxes of Zeno that Aristotle's doctrine attains its full significance. These paradoxes are based on the contradictions between the actuality of the infinitely small and the potentiality of actual existence. It is only through matter passing into actual existence that space exists as a reality. Matter, as infinitely great or infinitesimally small, is nothing actual. It is identical with pure potency. The infinitely little, the infinitely great, do not actually exist. This contradicts recent mathematical doctrines which treat the infinite as actual. The views of Cantor and his school have been subjected to criticism on this very point by Poincaré.⁶ There is, however, an older line of argument which seems to be decisive in favour

(b) *Middle Ages*.—The Alexandrian school did not attribute to space an existence independent of matter, outside the world. The same position was maintained by St. Augustine.⁶ This remains the fundamental point of view of the Aristotelianism

⁸ *De Civ. Dei*, xi. 5.

of the Middle Ages. De Wulf¹ attributes to Henry of Ghent belief in the possibility of the existence of vacuum, but only as a deduction from his theory of matter. But, within the general view of the dependence of space or extension on matter, what is most significant for the Scholastic theory of space is the controversy as to the principle of individuation. It is unnecessary here to enter into the numerous theories put forward on this subject in mediæval philosophy. It is sufficient to consider the theory of Aquinas, the different interpretations of it, and one or two of the theories opposed to it.

According to St. Thomas Aquinas, the principle of individuation is not matter in general, but *materia signata certis dimensionibus*, i.e. matter limited by dimensive quantity. There are, however, two interpretations of the phrase. According to Ægidio Colonna and others, it means matter quantitatively determined—not the mere potentiality or capacity, but the actual determination. According to Cardinal Cajetan, it means matter endowed with the proximate power of receiving such determinate quantity. The former interpretation is exposed to the objection, actually made by the realists, that such quantitative determination already implies the possession of form. The latter interpretation endows the *materia prima* with a determinate capacity or potentiality. Now the rival theory of Duns Scotus regards *hæccitas* as the individualizing principle. This difficult conception has been explained by Rousselot² as a force or active type in matter. It is the reverse of St. Thomas's theory on the first interpretation; but it approximates to it on the second. To attribute to first matter a capacity or force prior to its union with form seems to require a degree of reality in matter apart from form. Notwithstanding this difficulty, Cajetan's interpretation of St. Thomas finds favour with Neo-Scholastics.³

The logical solution of these difficulties is to be found in the theory of aptitudinal extension put forward by Suarez,⁴ that there is in first matter a natural tendency towards extension. But no more than any other Scholastic does he explain why it should be there. It does not escape the witty criticism of Geulincx on all these theories, that quantity is like the size used to stiffen the brims of hats, without which matter would become flaccid or collapse to a point.⁵ Plotinus had already foreseen this criticism when he said that matter separately was 'both small and great.'

(c) *Cartesian and English philosophy.*—The speculations of the later Scholastics prepared the way for the doctrine of Descartes. Aquinas had held that *materia prima* was numerically one. Suarez⁶ held that numerical distinction was not repugnant to it; moreover, he also admitted that the Scotist rejection of absolute accidents that are more than modal could not be philosophically disproved. Add to this that the conception of *materia prima*, except in so far as it is synonymous with the occupation of space, is negative,⁷ and we are led to the doctrine of Descartes that 'extension

in length, breadth and depth constitutes the nature of corporeal substance.'¹ It is not an identification of matter with space, but of space with matter. Extension is the sole attribute of corporeal substance; and yet it is distinguished from it, not by a real distinction, such as exists between substances, nor by a merely modal one, but by a 'distinction of reason.' This does not mean that extension is anything distinct from bodies.

'I do not suppose,' says Descartes, 'any real qualities in nature which may be added to the substance as little souls to their bodies, and which could be separated from it by Divine power.'²

It follows from this necessary inherence of extension in matter that the universe is infinite. 'It involves a contradiction that the world should be finite or bounded.'³ The crux of the Cartesian philosophy is the synthesis of thought and extension. This may be attempted either from the side of thought or from that of extension. The first way is that of Malebranche; the second that of Spinoza. According to Malebranche, there exists in the Divine Intelligence 'intelligible extension'—the archetype of matter.

'God includes within himself an ideal or infinite intelligible extension. For God knows extension, inasmuch as he has made it, and he can know it only in himself. . . . Intelligible extension is immovable even intelligibly. . . . But only by it are we able to see or imagine actually bodies in movement.'⁴

The difficulty in this conception is thus put by Kuno Fischer:

'The intelligible extension can belong neither to extension, for it is intelligible, nor to thought, for it is extension.'⁵

To have escaped this contradiction Malebranche should have placed in the Divine Reason, not extension, but its intelligibility.

The relation of the attributes, thought and extension, in the philosophy of Spinoza has received at least four different interpretations.⁶ The Hegelian interpretation regards the attributes as something read into the substance by our minds—a view also maintained by Schwegler and Erdmann.⁷ Only two interpretations concern us here—the mathematical and the dynamical. The former⁸ emphasizes the unity of the attributes, and consequently brings the substance within each attribute according to Spinoza's own definition: 'An attribute I understand to be that which the intellect perceives as constituting the essence of a substance.' The latter, brilliantly advocated by Fischer, really separates the attributes. It places the substance outside them, as it were. They are forces proceeding from it. This agrees with Spinoza's definition of substance: 'I understand substance to be that which is in itself and is conceived through itself.' The definitions are inconsistent. Both interpretations are correct, and are the consequences of the inevitable dialectic which underlies our conception of space.

According to Leibniz, space is 'an order of co-existences.' It is 'a relation, an order, not only between things existing, but between possible things as if they existed.' According to Descartes, the sides of a hollow empty body would touch each other. Leibniz, on the other hand, says:

'I distinguish matter from extension, and I admit that, if there were a vacuum in a sphere, the opposite poles in the hollow space would not on that account touch. But I believe that this is a case which the divine perfection does not allow.'⁹

Space without body does not exist, and body has

extension and is in space by reason of its passive resistance or impenetrability.

'This primitive passive power or principle of resistance does not consist in extension but in an exigency of extension.'¹ Leibniz in this language approaches very close to the aptitudinal extension of the Scholastics—an approach which becomes closer still in the *Systema Theologicum*.² Yet the difference is marked. To the Scholastic not the *materia prima*, but aptitudinal extension, is *extensionis exigentia*. To Leibniz the *materia prima* itself is this. The whole difference between Scholastic and modern philosophy lies in the change. The Leibnizian view is finally formulated by Wolf in the definition, 'Spatium est ordo simultaneorum, quatenus scilicet coexistent.'³

A series of writers, mostly English, have put forward views affirming a direct relation between the Deity and space. Some, as Henry More,⁴ have made it one of identity—a doctrine alluded to by Berkeley⁵ and Leibniz⁶ and also attributed to Jonathan Edwards. Newton⁷ suggests that infinite space is the sensorium of the Deity. More definitely, in the general scholium at the end of the *Principia*, he says:

'The Deity is not eternity nor infinity, but He is eternal and infinite; He is not duration nor space, but He endures or is expanded. He endures always and is present everywhere; and by existing at all times and in all places, He makes duration and space, eternity and infinity to be.'

Clarke makes immensity, i.e. infinite space, 'a mode of an essence of substance incomprehensible to us.'⁸ These speculations, if they mean anything, are important as asserting a direct relation between infinite intelligence and infinite space.

The main course of English philosophy is, however, concerned with the psychological question as to how we get our knowledge of space—a question still unsettled. To Hobbes space was the phantasm of an existing thing, as existing.⁹ To Cudworth there is no actual infinity of space, only a potential infinity or indefinite increasableness of corporeal magnitude.¹⁰ According to Locke, we get the idea of space through sight and touch. Pure space, which is capable neither of resistance nor of motion, he distinguishes from solidity.¹¹

'The ideas of primary qualities of bodies are resemblances of them, and their patterns do really exist in the bodies themselves.'¹²

He distinguishes between the idea of the infinity of space and the idea of space infinite. The former is nothing but a supposed endless progression of the mind over what repeated ideas of space it pleases. The latter supposes the mind already passed over and actually to have a view of all those repeated ideas of space, which an endless repetition can never totally present to it, and carries in it a plain contradiction.¹³ According to Berkeley, 'the ideas of space, outness, and things placed at a distance are not, strictly speaking, the object of sight.'¹⁴

'All place or extension exists only in the mind.'¹⁵ 'Those qualities [extension and figure] are in the mind only as they

are perceived by it;—that is not by way of *mode* or *attribute*, but only by way of *idea*.'¹

According to Hume, 'the idea of extension is but a copy' of the 'impressions of colour'd points, dispos'd in a certain manner.' When the colours change, 'finding a resemblance in the disposition of colour'd points, of which they are compos'd, we omit the peculiarities of colour, as far as possible, and found an abstract idea merely on that disposition of points, or manner of appearance, in which they agree. Nay even when the resemblance is carry'd beyond the objects of one sense, and the impressions of touch are found to be similar to those of sight in the disposition of their parts; this does not hinder the abstract idea from representing both, upon account of their resemblance.'²

The remarkable point in this theory is that somehow out of mere qualitative differences of two senses, sight and touch, an idea of an order of disposition of points or, as Hume afterwards says, of co-existent parts is formed, which is the idea of extension or space.

The culmination of this whole subjective view of space is found in the theory of Brown, Bain, and J. S. Mill, by which, out of a series of muscular sensations, confessedly only occupying time, length of space, and with it longitudinal extension in every direction, is constructed, in such a way, however, that length in space is at bottom length in time. The difficulty in this theory has already been perceived by Hamilton.³ It is briefly: How get length in space out of length in time? Mill in his reply very properly dwells on the fact that the notion of simultaneity must be supposed to have been already acquired; but his theory of the synthesis is not satisfactory.⁴

The chief contribution of Reid to the theory of our knowledge of space is his theory of natural signs, especially those of the third class.⁵ This theory is highly suggestive, and resembles Lotze's theory of local signs, without the *petitio principii* involved in the very name of the latter. What is wanted is an analysis of these signs and an explanation of how it is that certain sensations of sight and touch should be able to act as such—what it is in them that constitutes the sign.

(d) *Kant*.—The most prominent theory of space in modern philosophy is that of Kant. According to Kant, space is not an empirical concept which has been derived from external experience. The reference outward of sensations and their representation as out of and near each other presuppose the representation of space: space is a necessary representation *a priori* lying at the basis of all external intuitions. It is not a discursive or general concept of the relations of things, but a pure intuition. Space is represented as an infinite given quantity; space does not represent any property of things in themselves, nor themselves in their relation to one another, i.e. no determinations of objects in themselves. Space is nothing else than the form of all phenomena of external sense.⁶ Space is empirically real with regard to all possible external experience. It is transcendently ideal as regards things in themselves. By means of this theory Kant undertakes to explain the *a priori* synthetical principles of geometry, and it is this claim that is contested at the present day. In a paper in *Mind*,⁷ entitled 'Going Back to Kant,' the present writer pointed out that the synthesis involved in *a priori* knowledge is not explained by Kant; it is only assumed as already existing in the mind. In this respect the recent reaction against Kant's doctrine is

relatively justified; though the attempt to reduce mathematics to analytical truths cannot succeed, this synthetic reference must itself be explained.

In England Kant's doctrine of space was maintained by Hamilton and Mansel; but Hamilton also asserted an *a posteriori* perception of extension as distinct from the *a priori* form space.¹ This is the perception of a great truth. But, to make it such, it must be shown how the texture of a *a priori* thought is interwoven with spatial reality.

In a one-sided form something like this is to be found in the deductions of space in post-Kantian idealism. The most remarkable is that of Fichte.² He here expresses verbally the principle which we have had in view throughout this article: 'No space, without construction of it, notwithstanding, not space, but only its consciousness is thereby to be produced [ideal relation]; no construction without presupposing it [real relation].' Further on he says we should never get space out of us if we had it not in us.

To Schelling, too, space is nothing but 'an action of the intelligence.' 'We can define space as arrested time, time as flowing space.'³

Precisely the same determinations are found in Hegel: 'This immediate unity of space and time is already the ground, through which they are; for the negation of space is time.' 'The past and future of time, as being in nature, is space.'

In other words, space, if it is the abstract out-of-itselfness of nature, is in constant process, a sort of ideal movement, like a vector in quaternions; but this movement is time. Conversely, this movement constantly deposits itself, as it were, in space. For the rest, Hegel, like Aristotle, Descartes, and Leibniz, regards space as always filled; nor can a space be shown that is distinguished from its filling.⁴

2. Laws of thought and the concept of space.—We have now surveyed the views of the great thinkers. Herbart and Lotze, Schopenhauer and Hartmann, really only repeat or modify previous philosophical standpoints. It remains that we sum the results of this history. It is not any intelligible or subjective space that stands over against or generates objective space, but intelligence or thought itself acting according to its own laws. What are those laws? They may be described as the well-known laws of Identity, Contradiction, and Excluded Middle. The elements in sensation out of which thought constructs space are its most abstract features—identity, difference, relation. But here a difficulty presents itself. Grassmann truly says:

'The concept of space can in no way be produced by thought, but always stands over against it as a given thing.' He adds: 'He who will maintain the opposite, must undertake the task of deducing the necessity of the three dimensions of space from the pure laws of thought—a task the solution of which presents itself as impossible.'⁵

We accept both these positions of Grassmann—that space must be given over against thought; that it cannot be got from the pure laws of thought alone. We go farther; we say that the pure laws of thought themselves cannot be got from thought alone; in other words, that the self-diremption of thought cannot take place apart from space and time. This means that abstract thought, space, and time are all correlative. This involves the apparent circle that, while space receives its determinate character from thought, the latter is again determined by the former. It has therefore to presuppose as prior to itself what itself has produced. But this is what this whole history has taught. This is Plato's 'bastard reasoning.' This is that aptitudinal extension which has to be presupposed as the basis of that actual extension which it is not, but which it produces. This is the source of that double interpretation, mathematical and dynamical, to which the attributes of Spinoza equally lend themselves. The psychological analysis of the English school—Locke, Berkeley, Hume, Brown, and Mill—acquires a new meaning when considered as the analysis not only of processes

taking place in the individual mind, but also of universal relations of thought and being.

3. The three dimensions.—It remains to touch upon the problem of the three dimensions. Seeing that spaces of more than four dimensions, as well as non-Euclidean spaces generally, involve, as spaces, no internal contradictions—i.e., the geometries based upon them are internally consistent—it is evident that we cannot derive the three dimensions from the mere principle of contradiction.

Leibniz¹ seeks to derive the three dimensions of space from the impossibility of more than three straight lines which cut in a point being perpendicular to each other. This has been objected to by Kant on the ground that it involves a circle. Kant himself conceived the possibility of two other proofs—one from the simplicity of the three first powers of numbers, which he rejects; another, and a highly interesting one, from the fact of substances in the existing world acting on each other in the inverse ratio of the square of the distance.² A proof with which he seems scarcely satisfied himself, and which seems at bottom not different from that of Leibniz, has been put forward by Lotze.³ Hegel confines himself to saying that the necessity of three dimensions rests on the nature of the notion or concept.⁴ Whewell⁵ gives a proof from the fact that each portion of space has a boundary, and is extended both in the direction in which its boundary extends and also in a direction from its boundary. A derivation from the concept of motion similar to some of the foregoing has been put forward by Schmitz-Dumont.⁶

The fact that none of these attempts is satisfactory—all seem to involve *petitio principii*—should not preclude us from recognizing that they may be on the right track. The present writer believes that a proof may be derived from the imaginary symbol $\sqrt{-1}$ combined with the concept of order. A more satisfactory proof is the following. By far the most important and original contribution to our subject is the memoir by A. B. Kempe, 'On the Theory of Mathematical Form,' in the *Philosophical Transactions* of the Royal Society, for 1886,⁷ with supplementary paper, 'The Subject-Matter of Exact Thought,' in *Nature*, December 18th, 1890. In the art. 'The Theory of Mathematical Inference' in the *American Mathematical Monthly* for Jan. 1900 the present writer said:

'Mr. Kempe has shown that between the mathematical theory of points and the logical theory of statements, a striking correspondence exists. Between the laws defining the form of a system of points, and those defining the form of a system of statements, perfect sameness exists with one exception. The former is subject to a law to which the latter is not subject. It is sufficient here to say that it is the law "which expresses the fact that two straight lines can only cut once."

From these conclusions we may draw the converse inference that the laws which govern geometrical theory can be deduced from logical or purely analytical principles, taken in conjunction with that law in which the form of a system of points differs from the form of a system of statements. We have now to ask, Is there anything omitted from the form of a system of statements as contemplated by Mr. Kempe, or by the ordinary logic (and there is complete agreement between them), which would account for the absence of the particular law which distinguishes geometrical theory? I think there is. Mr. Kempe in order to effect his assimilation of the logical to the geometrical theory, and in particular in explaining the processes of immediate inference, has introduced two constants which play the same part in the logical theory that the "absolute" does in geometry. He entitles them "truism" and "falsism" respectively. It is by relation to these that such logical relations as contrariety, sub-contrariety, sub-alternation, analogous to the metrical relations of points in geometry, are determined. He considers

"truisms" and "falsisms" as propositions or statements standing in the system of statements on the same footing with all other statements. In reality this is not so. The truism and falsism of Mr. Kempe are really the laws of Identity and Contradiction in disguise, and every synthetic statement or proposition expresses more than what these laws require. The principle that a real proposition refers to, or is a synthesis with, something more than itself, is as old as Aquinas, and is indeed the fundamental principle which makes our thinking dependent on experience. It is the non-recognition of this which prevents Mr. Kempe from evolving the relation of noncollinearity from the relation of a truism and falsism to each other, which ought to be capable of being done, if it were true that these propositions could rank *pari passu* with all other propositions. A truism is not as such a true proposition. Apart from the postulate of synthesis, no logical relation exists between the truism and falsism. Contradictories are in this case compatible, as Venn and Kant before him have pointed out.

If these views be true, I believe it ought to be possible to deduce the properties of Euclidean space, not from the analytical laws of thought, but from the pure postulate of synthesis, when subjected to conditions arising from these laws. The postulate can be shown to involve two things—(1) Infinity, (2) the necessary relation or connection of what Mr. Kempe styles truism and falsism equivalent to Boole's $x(1-x)=0$.

This pure postulate of synthesis is identical with that presupposition of the real existence of space which intelligence has to make as being prior to the very act by which it ideally determines space.

GEORGE J. STOKES.

SPENCER, HERBERT.—The philosophy of Herbert Spencer is eminently characteristic of the Victorian era. It is dominated by two fundamental principles: (1) the doctrine of evolution, which was defended by Spencer several years before Darwin's researches were published; (2) his conception of political and social freedom, which was so powerful a factor in political thought during the middle of the 19th century. It so happened, therefore, that the predominant interests of his mind were just those which most markedly captured public attention during his life. His intense conviction and high intellectual qualities naturally brought him to the front as the leading exponent of the progressive ideas of his time; and the change which subsequently overtook those ideas similarly involved a great decline in his influence. The natural growth of Spencer's mind was in close harmony with the spirit of the times in which he flourished. His philosophic principles luxuriated in a congenial soil and atmosphere; they drew to themselves the whole of the intellectual and emotional vigour of his mind; at an early age he began to *live* in his ideas; philosophy more and more absorbed his life; and the external movements and incidents of his career are of little interest. The real life which he lived was the subjective life, which is best recorded by a description of his philosophy.

1. Life.—Spencer was born at Derby on 27th April 1820, son of a school teacher of strong radical views in politics and Quaker tendencies in religion. The father, like the son, was characterized by extreme independence of thought and action, and Spencer's education was of an unusual character. He was taught little of the ordinary subjects of a school curriculum; but his natural powers of thought and observation were developed by his father's method of directing him in the way of self-education and of learning to find for himself the answers to the questions and problems set him. Thus at the age of thirteen he had received no instruction in English history or biography, or in the English language, and next to nothing in Latin or Greek. He had, however, some acquaintance with the

rudiments of physics and chemistry, in which his father was specially interested; he had picked up some natural history, he was backward for his age in most subjects, except perhaps geometry, on which his father placed much reliance as an educational discipline. In short, his education was largely neglected; but such as he received was carried out on principles which in recent times have come into favour among the leading authorities on education. For a year or two he was subjected to a somewhat more intensive training at the hands of his uncle, Rev. Thomas Spencer, a well-known social reformer and temperance agitator of the time. But when his official education was concluded at the age of seventeen, the only subject in which he had attained an average standard was mathematics.

Spencer began life as an assistant schoolmaster at Derby; but after three months an opening occurred on the London and Birmingham Railway, and he determined to enter upon the career of a civil engineer. For three or four years he was employed upon the railways which were then being rapidly constructed. He developed a strong interest in mechanics, and, when in 1841 his engineering work temporarily came to an end, he turned joyfully to the prospect of living by mechanical inventions. But these for the most part met with no commercial success, and after a while he determined to seek his fortune in literature. In 1842 he wrote a series of letters to an advanced dissenting organ called *The Nonconformist*, maintaining the view that police administration and the preservation of order were the sole duties of the State, to the exclusion even of preparedness for war, which he then regarded as wrong both for offensive and for defensive purposes. After several years spent in casual political writing and in engineering, Spencer at length in 1848 became sub-editor of *The Economist* at a salary of 100 guineas a year, with free bedroom and attendance at its offices in the Strand. He became friendly with John Chapman, the publisher, at whose soirées he met George Henry Lewes and many more of his later friends, including George Eliot, with whom he was soon on terms of intimacy. About this time he also made the acquaintance of Huxley and Tyndall.

In 1850 Spencer began to win a literary reputation by the publication of his first book, *Social Statics*, the main doctrine of which was the same as he consistently maintained throughout his life—the limitation of the functions of government to the bare minimum of maintaining order at home and resisting aggression from abroad. Thereafter he found admittance to many of the leading reviews; one of his most interesting articles, which appeared in the *Leader* of

'The Development Hypothesis,' in 1853, was published seven years before the publication of Darwin's *Origin of Species*. In 1853 Spencer resigned his position on *The Economist*, hoping to earn a sufficient livelihood through writing for reviews. In 1855 he published his first philosophical work, *The Principles of Psychology*, which was attacked in *The National Review* for its atheistic tendencies, but otherwise received little attention. During the writing of this work Spencer's health permanently broke down, and for the remainder of his life he was a victim of neurasthenia, which severely curtailed his hours of work; its chief symptom was an inveterate insomnia.

In 1858 Spencer drew up his scheme for 'A System of Philosophy'; and, to secure an income while writing it, he decided to issue it in quarterly instalments to subscribers at 2s. 6d. for each instalment of 80–96 pages. In England and America about 600 subscribers were obtained; but the work was carried on amid great financial difficulties, and was more than once threatened with stoppage. For many years Spencer's life is a mere record of ill-health, notwithstanding which volume after volume continued to appear. He lived mainly in boarding-houses in London till 1889, when he took a house with three maiden ladies in St. John's Wood. His most intimate friends were his fellow-members of the famous X Club, and he became a regular habitué of the Athenæum Club. The publication of the 'System of Philosophy' was concluded, after occupying 36 years, in 1890. Already for many years he had been secured, and a chorus of 1 In 1893 he removed to Brighton, He was cremated at Golders Green, and his ashes were interred in Highgate Cemetery.

2. Works.—Spencer's writings as finally published are contained in 20 volumes, including the two volumes of *Autobiography*. In addition he published two small volumes of his father's—one a *System of Lucid Shorthand* (1893), the other an *Inventional Geometry* (1892) for the teaching of children. He published, moreover, during his lifetime eight folio volumes of *Descriptive Sociology* (1873–81), consisting of cuttings selected from numerous books of travel, describing the manners of primitive peoples. These served as a basis for the generalizations of his *Principles of Sociology*. Two further volumes have been published (1910) since his death, and also a posthumous pamphlet *Against the Metric System* (1904), an earlier edition of which he included in *Various Fragments* (1897, 2 1900). Some unimportant writings of Spencer are included in the authorized *Life and Letters* by David Duncan. Of Spencer's twenty

¹ George Boole, *An Investigation of the Laws of Thought*, London, 1854, p. 49.

volumes ten are devoted to his 'System of Synthetic Philosophy.' They are as follows:

(1) *First Principles*.¹—This, the opening volume of the philosophy, is divided into two parts, of which pt. i., 'The Unknowable,' sets forth Spencer's religious and metaphysical views. He attempts to establish a reconciliation between science and religion, by accepting as the fundamental truth that factor which they both possess in common, viz. the belief in the existence of some ultimate cause of phenomena—some profound mystery which lies at the back of the universe and 'from which all things proceed.' This ultimate mystery he terms 'the Unknowable,' and he separates himself from religion in denying to it any attributes of personality, or immortality, or any moral bearing. Since it is unknowable, these qualities, he says, cannot be predicated of it. And yet, with strange inconsistency, he goes on to affirm that it is infinite and absolute, omitting to explain how that which is absolute can be the cause of (thus entering into relation with) the phenomena of the knowable. However that may be, Spencer presents this 'Inscrutable Existence' as his substitute for religion. He himself regarded it with reverence, and considered that the religion of the future would take the form of a passive contemplation of 'the Unknowable.' Needless to say, this reconciliation between science and religion has been accepted by neither party. Science moves in the sphere of matter and energy, and has no interest in ultimate metaphysical existences. Religion does not accept a logical formula as a substitute for a God—a formula barren of emotional content and with no moral colouring.

The second part of *First Principles* deals with 'the Knowable.' Spencer takes the two physical laws, Indestructibility of Matter and Conservation of Energy, combines them into one under the title 'Persistence of Force,' and formulates it as the widest generalization of Philosophy, from which all the minor laws of science may theoretically be deduced. He then proceeds to his doctrine of evolution—not organic evolution only, but universal evolution. He observes that all matter and energy is in a permanent state of change or flux; and he sets forth the laws according to which this flux everywhere proceeds—in the development of nebulae to solar systems, the formation of the earth and geologic change generally, the evolution of animals and plants, the mind of man, the development of nations or societies, and all social institutions. This all-embracing law of universal evolution is stated in the last edition of *First Principles* as follows:

'Evolution is an integration of matter and concomitant dissipation of motion; during which the matter passes from a relatively indefinite, incoherent homogeneity to a relatively definite, coherent heterogeneity; and during which the retained motion undergoes a parallel transformation.'²

It is easy enough to perceive that such a formula does describe the main outlines of the course of change during the transformation of a nebula into a system of stars and planets; so also does it cover the naked-eye appearance of evolution from Amœba to man, and the development of the embryo in animals and plants. Even if, as Spencer endeavoured to prove, it is a correct statement of the course of all change in all spheres of human art and knowledge, the question still remains, How far is it significant? Has it the profound philosophical importance that he attributed to it? All that can be said at present is that, after more than half a century, it has proved to be heuristically barren. Spencer's case would perhaps have been stronger if he had left his formula as an

inductive generalization. But, not content with this, he endeavoured to give it greater finality and deeper significance by deduction from the 'Persistence of Force.' In this attempt he certainly exceeded the range within which deduction is legitimate. The remaining sections of the philosophy are mainly and overtly the applications of the law of evolution to the various departments of human knowledge. He passed over astronomy and geology as being relatively simple, and proceeded at once to the organic realm.

(2) *The Principles of Biology*.³—The application of the law of evolution to living organisms brought Spencer into close connexion with the whole Darwinian movement. He was one of the very small minority who warmly believed in organic evolution and defended it in public, years before Darwin and Wallace announced their discovery of natural selection, to which Spencer in his *Principles of Biology* first gave the alternative name of 'survival of the fittest.' In the absence of this factor, Spencer imagined that inheritance of acquired characters was sufficient by itself to account for the whole phenomenon of organic evolution. He believed that the environment exerts direct and immediate action on individuals (which of course it does); he believed also that the use or disuse of its organs by any individual leads to the growth or reduction of those organs (which is equally undeniable); but he also held that these modifications of individual structure are passed on by heredity, and that their summation through many generations can thus account for the evolution of species. Of the latter doctrine there remains to the present day no evidence whatsoever. It must therefore be affirmed that Spencer, though right in his belief in organic evolution, was totally wrong in his conception of its method. On the discovery of natural selection, he immediately embraced the new theory, holding, however, that it was applicable chiefly to primitive forms of life. He consistently defended to the end of his life the doctrine that acquired characters are inherited, and that this is an adjuvant factor in evolution. In the nineties he carried on a long and vigorous controversy with Weismann on the subject.

Other features of *The Principles of Biology* were his definition of life as 'the continuous adjustment of internal relations to external relations'; a theory of heredity as being due to 'constitutional units,' larger than molecules, but smaller than cells, which, like the molecules of a crystal, were possessed of a fixed 'polarity' and tended to fall into an arrangement characteristic of the structure of the species; finally, a doctrine of the antagonism between individuation and reproduction. These theories still possess considerable interest and value.

(3) *The Principles of Psychology*.⁴—This is perhaps the most original and important of the philosophic series. It introduced into psychology for the first time the idea of evolution, which runs through the whole work, although first published four years before the *Origin of Species*. But it suffers again from the emphasis laid on inheritance of acquired characters as the main factor of mental evolution. Thus one of the most important theories of the work is that in which Spencer by the aid of this factor endeavoured to establish a compromise between the empirical and the transcendental schools. Locke affirmed that all intelligence was the product of experience by the individual. Kant, on the other hand, insisted that intelligence was an innate endowment. Spencer put forward the attractive theory that

¹ London, 2 vols., 1864-67, rev. ed., 1893-99.

² The 1st ed., London, 1855, was in 1 vol.; 2nd ed. in 2 vols. 1870-72; ³ 1892.

¹ London, 1862, 61900; popular ed., 2 vols., 1910.

² Il. 321 (pop. ed.).

intelligence is in all cases originally based on experience, but that the experience may be inherited, so that individuals are in fact born with innate powers of intelligence. In other words, intelligence is *a priori* for the individual, but a *posteriori* for the race. Plausible as this theory first appeared, it has not stood the test of later knowledge. The theory now most widely held is, not that intelligence gradually becomes instinctive and automatic in the course of generations, but that it is formed out of automatic, reflex, and instinctive actions by increasing composition and complexity.

Spencer analyzed mind into 'feelings' and 'relations between feelings.' The fundamental process of thought is the recognition of similarity or dissimilarity between two successive states of consciousness. In this doctrine he closely approached the associationist school.

Coming to the question of realism *versus* idealism, Spencer began by inquiring what is the test of truth. He concluded that the ultimate test of the truth of any proposition lies in our inability to conceive its negation. This test he called 'the universal postulate,' which is involved in every link of a chain of argument or reasoning. Now the theory of idealism, he says, is based upon a chain of reasoning with many links, and therefore as many applications of the universal postulate. The theory of realism, on the other hand, being a direct deliverance of consciousness, involves but one application of the universal postulate; and realism is by so much the more probable theory than idealism. Spencer thus confessed himself a realist, though with the proviso that the only fundamental reality is 'the Unknowable,' of which all phenomena are but manifestations. In this amended form he called his doctrine 'transfigured realism.' Few persons in these days would accept it, and a doubt must be expressed whether Spencer, intent as he was on his own line of thought, ever really appreciated the arguments of Berkeley and Hume.

(4) *The Principles of Sociology*.¹—This is the longest single division of the philosophy, the multitudinous facts contained in it being drawn from the tables of the *Descriptive Sociology*. The chief conclusions reached are that societies fall into two main categories, the militant and the industrial, which are in strong contrast to one another. The former type is characterized by compulsory co-operation, the latter by voluntary co-operation. In the militant type of society government rami-fies through every branch of a citizen's activities, individual liberty is narrowly restricted, the lives and actions of men are severely controlled by the State. In the industrial type of society, on the other hand, individual liberty is highly developed, the functions of the State are limited within narrow boundaries, the régime of contract has superseded the régime of status. The militant type is adapted for war, and is found where wars are frequent; the industrial type is a product of peace. With the militant type Spencer finds associated many of the personal vices of mankind, whereas the virtues are associated with the industrial type. He further subdivides the militant type into that which is purely military and that which is socialistic. The fundamental resemblance between these two arises from the wide extension of governmental organization in each, by contrast with the individual liberty of the industrial type. He holds that the difference of purpose for which that organization exists in the two cases cannot obscure their fundamental similarity.

Of the other doctrines of *The Principles of Sociology* the most important perhaps are those con-

tained in the 'Data' and in the 'Inductions,' which form pts. i. and ii. respectively of the work. In the former the origin of all forms of religious worship is traced to ancestor-worship. In the latter an analogy is drawn in extreme detail between the individual organism and the social organism.

(5) *The Principles of Ethics*.¹—This work was regarded by Spencer as the flower of his whole philosophy. His ethical principles are based both on evolution and on hedonism. Moral conduct, he says, is that which conduces to the maintenance of life, whether of the individual or of the species, or of social life. A system of morals should therefore be founded on a true doctrine of the evolution of life. But the ends of life are in general furthered by happiness. The pursuit of happiness, with certain notable exceptions, is advantageous to survival; had it been otherwise, the species would long ago have become extinct. Hence an ethics of evolution is also an ethics of hedonism. The happiness to which Spencer refers is of course mainly that derived from the higher, and not the lower, emotions.

In 'The Ethics of Individual Life,' dealt with in pt. iii., Spencer emphasizes man's duty to himself as distinct from his duty to his neighbours. He should take sufficient rest, and attend to his health and amusements; dereliction from these duties is a breach of moral principle. Spencer opposed a life of undue self-denial, arguing that wholesome forms of enjoyment are demanded by ethical principles.

The culminating portion of the work, however, is in pt. iv., entitled 'Justice,' in which Spencer defined the duties of the State with respect to its component individuals. He starts from the theory of the survival of the fittest. In every society the most vigorous and strongest members will, if unimpeded, achieve most success, and will thus multiply and hand on their qualities to future generations. The weaker strains will fail and gradually die out. Society will thus be gradually purged of its weaklings, and the race will be carried on by the most efficient. The maintenance of this law was regarded by Spencer as of cardinal importance to the welfare of the species. In order that its effects might be most fully realized, therefore, he urged that individuals must be as far as possible emancipated from all interference by the State. They must be left to reap the natural rewards of their modes of life. Clearly, however, the doctrine of liberty cannot be rendered absolute; for then crime would be unrestrained, and the highest success might be attained by a career of robbery and fraud. The freedom of the individual must, therefore, be limited by the State just in so far as is necessary (and no more) to preserve the like freedom for every other individual. Spencer's formula is:

'Every man is free to do that which he wills, provided he infringes not the equal freedom of any other man.'

The practical results deduced by Spencer from this formula are that the proper functions of the State are limited to two things only: (1) prevention of foreign aggression, for which purpose an army and navy must be maintained, and (2) prevention of crime at home, *i.e.* prevention of aggression by individuals on one another. He interprets the phrase 'individual aggression' with considerable latitude; thus loud street noises are to be regarded as an aggression which should be suppressed; so also keeping a house in an insanitary condition, to the danger or annoyance of neighbours. But, outside his formula, all other under-

¹ Two vols., London, 1892-93. 'The Data of Ethics,' forming pt. i. of vol. i., was originally published separately in 1879.

² *Principles of Ethics*, ii. 40.

¹ Vol. i., London, 1870, 1895; vol. ii., 1882; vol. iii., 1896

takings—such as education, the post office, road-making—are regarded as outside the province of government. Spencer urges that, if the State had never embarked on these activities, they would have been carried on by corporations of private individuals, and for the most part far more efficiently than they are at present. Leaving aside Spencer's formula of justice, and the corollaries which he drew from it, the essence of his ethics is that individual freedom should be brought to the highest point consistent with social order. He recognized that all these conclusions may be abrogated in time of war, and he was an inveterate hater of all war. He held that peace was an inviolable condition of social prosperity and progress; that war, other than defensive war, was the most abominable of all crimes.

While thus reducing the functions of government to those of merely maintaining a social condition in which natural selection could work unhampered, Spencer was far from asserting that the severity of the process should not be tempered by philanthropic sentiment. Accordingly he concludes his *Principles of Ethics* with two sections devoted to 'Negative Beneficence' and 'Positive Beneficence,' in which he describes the various ways in which the business and social relations of men should be redeemed from the hardships of a crude struggle for existence. Poor relief, *e.g.*, though no business of the State, should be undertaken by private persons. The relations of employer and employed should be governed not only by economic pressure, but also by a proper infusion of humane and philanthropic sentiment. This, however, Spencer considers outside the province of law; and the injunctions of 'beneficence' are to be enforced only by public opinion.

This is the end of the 'Synthetic Philosophy.' It is sufficiently obvious without further comment why Spencer has now passed so much out of fashion. In the sphere of politics the dominating note has now become equality rather than liberty. It is very possible that liberty may once again become a political ideal, but hardly in the form in which Spencer preached it. The great and luminous conceptions which lie at the back of his ethics were worked out by him into formulæ too narrow and precise to contain them. Moreover, not unnaturally, the work itself is apt to be judged by its practical conclusions; these being rejected, the fundamental conceptions tend likewise to be consigned to oblivion. It is unfortunate that Spencer's fine conception of human freedom should be condemned wholesale, merely because he too often applied it in a dogmatic and unsatisfactory manner.

Besides the ten volumes of philosophy, Spencer published ten other volumes. Three of these contain his *Essays: Scientific, Political, and Speculative* (1857-74). Many of them were written while he was a young man; and their subject-matter is for the most part embodied in a more systematic form in the 'Philosophy.' They are written in a more vivacious and attractive style than occurs in Spencer's more formal works. *Social Statics* has been already alluded to. *Various Fragments* (1897, 21900) and *Facts and Comments* (1902) are two volumes of short essays on a great variety of subjects, written when Spencer was an old man. The *Autobiography* (1904) in two large volumes is the dulllest of all Spencer's writings, and betrays the barrenness of his life, the current of which had been drawn away into his philosophical works. The two other volumes remaining to be mentioned achieved a far higher commercial success than any other of his publications. The *Study of Sociology* (1873) was written for the 'International Scientific Series' at the request of E. L. Youmans. It is concerned mainly with social science in general and the difficulties attending its study owing to the numerous different kinds of bias which intrude themselves at every point. Being comparatively short and intended for the popular market, it is the first book that should be read by a student of Spencer, and the only one of which perhaps it may be said that every well-read person ought to have read it. Finally, there is the *Education: Intellectual, Moral, and Physical* (1861), which has had the most profound influence on all modern educational theories. It extols science as by far the most important ingredient in a

good education. It strongly insists, moreover, on non-coercive methods; it is in this sphere that Spencer's sentiments of liberty have found the widest acceptance.

LITERATURE.—The two main authorities on Spencer's life are *An Autobiography*, 2 vols., London, 1904; and David Duncan, *The Life and Letters of Herbert Spencer*, do. 1908. Apart from these, the only complete treatment of Spencer's life and works from the modern standpoint is the present writer's *Herbert Spencer*, in the series 'Makers of the Nineteenth Century,' London, 1917. In that volume will be found a complete bibliography, both of Spencer's own works and of the works by others who have dealt with him.

HUGH ELLIOT.

SPERONISTÆ.—This is the name by which the Cathari (see art. ALBIGENSES) were known in Italy in the 13th cent., and they are thus designated in a law of the emperor Frederick II., A.D. 1224 (Mansi, *Concilia*, Venice, 1759-98, xxiii. 590). Charles Schmidt is of opinion that it is probably derived from Sperone, an Italian town in Piedmont, whose bishop, Robert of Sperone, along with his followers, had embraced the dualistic theory of the Manichæans (*Hist. et doctrine de la secte des Cathares ou Albigeois*, Paris, 1849, ii. 281-282; see also J. C. L. Gieseler, *A Compendium of Ecclesiastical History*, Eng. tr., Edinburgh, 1853-65, iii. 446).

J. BASS MULLINGER.

SPHINX.—In the well-known Greek myth the composite monster, with the head and bosom of a woman, the body of a dog or a lion, the tail of a serpent, the wings of a bird, the paws of a lion, and a human voice, who propounded enigmas, destroying those who failed to solve them, and who perished, self-destroyed, when her riddle was solved by Œdipus, bore the name of Sphinx ('Strangler'). Greek travellers, coming into the Nile Valley, found there also a composite monster, or many varieties of such a creature, who recalled to them their own native tradition, and upon these they bestowed the name of the creature of the Greek myth. Apart from the name, however, and a superficial similarity in the fact that the Greek monster and the Egyptian (in some cases) were both human-headed and brute-bodied, there was really nothing in common between the two types or the conceptions which they represent.

The original idea of the Egyptian sphinx was that of an imaginary quadruped, human-headed, living in the desert, and assumed by the sun-god Ra as his incarnation, for the purpose of protecting his friends. Out of this conception grew the idea of the sphinx as the guardian of a temple, a deity, or a tomb; and Ra himself, the original guardian sphinx, is represented as being guarded by a sphinx in which is incarnate the god Aker, the watchman of the *duat*, 'under world,' and the special protector of Ra during the hours of darkness.

The former conception—that of Ra as guardian—is embodied in the greatest of all Egyptian sphinxes, that which crouches in front of the second pyramid at Gizeh. The date of this remarkable monument is uncertain. Its position in front of the Gizeh necropolis suggests that it was intended to guard the illustrious dead buried there against evil genii, and that, therefore, it may be roughly contemporary with the pyramids and tombs in its neighbourhood, *i.e.* of the period of the IVth dynasty. This date is so far countenanced by an inscription on the stele of Tahutmes IV., between the paws of the monster, which, though unfortunately mutilated at the point where its testimony would have been of most value, appears to mention Khafra, the builder of the second pyramid, as connected with the making of the statue of Tem-Heru-em-Khut, *i.e.* the sphinx Maspero, however, prefers an even earlier date.

He regards this mention as 'the indication of an excavation of the Sphinx, executed under this prince [Khafra], conse-

quently the almost certain proof that the Sphinx was already enveloped in sand in the time of Khéops and his predecessors.¹ On the other hand, Petrie regards Tahutmes' mention of Khafra as entirely negligible.

'How much Tahutmes knew of Khafra, or cared to honour him, is shown by the material he selected for his tablet. It is carved on a grand door lintel of red granite, which almost certainly was robbed from the adjacent granite temple of Khafra.'²

Petrie suggests a date at all events later than the Old Kingdom, on the grounds that a tomb-shaft is found in the body of the image, that no tombs of earlier date than the IVth dynasty exist in this part of the necropolis, and that a tomb would hardly have been sunk in the rock of the statue after it had been carved to a divine form, and was generally venerated. The question of date, therefore, is in suspense.

The Great Sphinx is hewn out of the living rock, but has been patched and made up at various times with masonry. Human-headed and lion-bodied, it measures 150 ft. in length, and 70 in height, from the crown of the head to the base; the paws are 50 ft. long, the head is 30, and the face is 14 ft. wide. The Egyptian name for the Great Sphinx was *Hu*, and it represented Horus-on-the-Horizon, Heru-em-Khut, or Harmakhis. It is curious, if the early date for its existence be correct, that it is not mentioned in any early inscriptions, that no representations exist of so important a monument, and that no priests of the sphinx are recorded.

The stele of Tahutmes IV. already referred to was discovered by Caviglia in 1817. It stands between the outstretched paws of the figure, a granite tablet, 14 ft. in height. The inscription narrates how Tahutmes (1423-1414 B.C.), when hunting in the desert near Memphis, fell asleep under the shadow of the sphinx. Ra-Harmakhis appeared to him in a dream, and charged him to clear his image of the sand which had enveloped it on all sides, promising the king his favour if the task were executed. The inscription obviously fixes the lowest possible date for the existence of the sphinx, which must plainly have been of considerable antiquity in the time of Tahutmes IV.; beyond that it does not carry us with any certainty.

Apart from the Great Sphinx, there are few indications of the existence of sphinxes in the period of the Old Kingdom. It is only with the XIIth dynasty that the figure becomes popular, maintaining its popularity down to the time of the Ptolemys. The creature's function, as already indicated, is invariably to ward off evil genii from a tomb or a temple. Thus, in an inscription quoted by Bergmann,³ we have the following:

'I protect the chapel of thy tomb. I guard thy sepulchral chamber. I ward off the intruding stranger. I cast down the foes to the ground, and their arms with them. I drive away the wicked one from the chapel of thy tomb. I destroy thine adversaries in their lurking place, blocking it that they come forth no more.'

To the period of the XIIth dynasty are now very generally assigned those sphinxes discovered at Tanis by Mariette in 1861, bearing heads of peculiar and strongly marked features, which were formerly held to be representations of a king of the usurping Hyksos dynasty. Golénischeff⁴ has shown, by comparison of these with extant portraits of Amenemhat III. of the XIIth dynasty, that the Tanis sphinxes in all probability are portraits of that monarch.

The head of the sphinx, if human, was generally modelled on that of the Pharaoh in whose reign it was sculptured. It would therefore generally be the head of a king; but in the case of a temple

founded by a queen the guardian sphinxes might be female, more particularly if they were all intended to represent a goddess. The sphinx, in fact, was not necessarily always a representation of an incarnation of Ra, but might represent other gods or goddesses. Thus Isis occasionally assumed the sphinx form, when she appears as the guardian of Osiris. From this fact arises the frequent representation of the sphinx with a head other than human. There are many instances of such images bearing the head of a jackal, a hawk, or, perhaps, most common of all, a ram—the animal head being that of the particular god who was supposed to be incarnate in the sphinx in question.

From the time of the XVIIIth dynasty onwards the sphinx becomes exceedingly popular—more, one may suspect, as a decorative adjunct to a temple than as bearing any special religious significance. Great numbers of these images are found in rows lining the approaches to the great temples—e.g., the avenue of 122 sandstone sphinxes erected by Amenhotep III. before the temple of Khonsu, at Karnak, and similar avenues at Thebes. These were largely ram- and jackal-headed figures, often bearing between their fore-paws a small statue of the king who erected them. It may be questioned, however, whether these innumerable figures were actually meant to act as guardians of the temple or were not rather merely an architectural feature. Wiedemann's opinion is as follows:

'The stone rams, lions, etc., which we find as amulets, or which in many cases occupy the same position before Egyptian temples as the sphinxes, must by no means be confounded with the sphinxes; each was simply an image of the sacred animal of the god of the place, of the creature in which he took incarnate form, and each was therefore the equivalent of the statue of the god. There is no authority whatever for calling these objects by the name of sphinxes, and the mistaken nomenclature has arisen only from the fact that their office was the same, architecturally speaking.'¹

The origin of the conception of the sphinx is obscure. Sayce is of opinion that it arose from a transference to Egypt of the Babylonian idea of guardian genii exemplified in the winged bulls and cherubim of Chaldæa.

'The curious similarity in the functions assigned to the images of composite animals both in Egypt and Babylonia raises the presumption that the composite forms themselves were ultimately derived from a Babylonian source. . . . It is only in Chaldæa that they find their explanation. . . . The sphinx of Giza still guards the desert of Giza because ages ago the flooding waves of the Persian Gulf made the Babylonians believe that the world had arisen out of a watery chaos peopled by unformed creatures of monstrous shape.'²

The inference, however, seems rather a wide one. The idea of the necessity of protecting the tomb against evil genii is of very early date in ancient Egypt, and is itself connected, in the Pyramid Texts, with the actual local flood—the inundation of the Nile; and it is difficult to see why it may not have arisen independently in Egypt under similar conditions to those which produced it in Babylonia. Moreover, the type of the sphinx which most closely resembles that of the Babylonian guardian genii, the winged type, is of later date than the normal Egyptian sphinx.

JAMES BAIKIE.

SPINOZA.—I. LIFE.—Baruch de Spinoza was born at Amsterdam on 24th Nov. 1632. He came of a tribe of Spanish Jews, who had found in Portugal a precarious refuge from the attentions

of the Inquisition. His father, Michael de Spinoza, hearing that a securer home was to be found in the United Provinces, removed thither. Already, in 1593, a company of 'Marranos' had been received in Amsterdam, and had in 1598 formed the first synagogue in that city. Michael was chosen to fill several offices of trust in the fraternity. He was thrice married: by his first wife he had a daughter Rebekah; by his second a son Baruch and a daughter Miriam.

Spinoza was instructed in all the puerile wisdom of the Synagogue. Of Isaac de Fonseca it is enough to say that he was afterwards a victim of the impostures of the sham Messiah, Shabbathai Sebi. Rabbi Saul Morteira, though kindly, was intellectually hardly superior to Fonseca. In Manasseh ben Israel Spinoza might have found a more sympathetic adviser; but during the years of gradual alienation Manasseh was absent on that mission to the Republican Government of England which led to the return of the Jews to our island. For very few of the standard authors did Spinoza indulge any feeling but profound contempt. 'I have read,' he says, 'some of the Kabbalistic triflers, at whose follies I was astonished beyond description.'¹

The Synagogue, moreover, was compelled to maintain a rigorous orthodoxy. Such toleration as was allowed to the Jews was watched with jealous eyes. In 1617 the Remonstrants, fretted by the limitations that hedged in their own worship, complained of the freedom accorded to the Synagogue; and the complaint, though it did the petitioners no good, did the Jews some harm. In 1640 the vagaries of Uriel da Costa had created an uneasiness totally out of proportion to their intrinsic importance; and it is small wonder, then, that the authorities watched anxiously the growth of heresy in Spinoza's mind.

Discontented with the Kabbālā, the young man turned to secular studies. He felt above all the need of Latin, then the language indispensable alike in diplomacy and in science. Its elements he studied under a master conjectured by Meinsma² to have been a German named Felbinger. From Felbinger he perhaps learned a tinge of Socinianism. His next teacher was Francis Van den Ende, a physician and schoolmaster, who was suspected, not without reason, of imparting much more than Latin to his pupils. He made Spinoza not only a classical scholar, but a master of all the physics and physiology then known. It is probable that through Van den Ende Spinoza became acquainted with Bacon, Descartes, Hobbes, Lord Herbert of Cherbury, and possibly Giordano Bruno. The subsequent history of Van den Ende is well known. In 1674 he engaged in the stupid conspiracy of Rohan and the Marquise de Villiers against Louis XIV., and suffered death along with his principals.

There were others with whom about this time Spinoza came into contact. We are told by Colerus that he became intimate with 'some learn'd Mennonites.' One of the members of this sect, Jarrig Jellis, appears among his correspondents; another, John Bredenberg, was the author of a so-called answer to the *Tractatus Theologico-Politicus*, which reveals more of the disciple than of the antagonist. Peter Serarius often visited Spinoza, and assisted him in his correspondence with Oldenburg. Peter Balling, Jan Rieuwertz, and others were also in his circle. The rumour indeed spread abroad that Spinoza was actually baptized.

All this could scarcely escape the eyes of Morteira and his colleagues. For some time they had been dissatisfied with the tone of their pupil; and matters came to a head when two of his companions stepped forward to accuse him of actual heresy. After a trial he was subjected to the 'lesser excommunication'; and Morteira is said to have made strong personal appeals to the young free-thinker. But all was in vain; and on 27th July 1656 the final sentence was pronounced. The text may be seen

in Van Vloten or in Freudenthal;³ it shows that the condemnation was less for speculative error than for some overt act. Much has been written in censure of the rabbis; their conduct will compare favourably with that of most other bodies on similar occasions. It is certain that Spinoza can have expected no milder treatment.

The heretic did not hear his sentence. Shortly before, according to a somewhat doubtful story, his life had been attempted by a fanatical Jew, and he removed to the house of a Remonstrant friend near Amsterdam. Thence he wrote his reply to the excommunication. This reply, which was in Spanish, is no longer extant; its substance is doubtless to be found in the *Tractatus Theologico-Politicus*. Thenceforward he was lost to his old associations, and perhaps, as some think, marked the severance by substituting for his Jewish name Baruch its Latin equivalent Benedict.

Following the Jewish custom, he had most probably already learnt the art of lens-polishing—an art which the rapid advance of science was then rendering daily more important. Through this he earned a modest livelihood; and through this he became acquainted with Huygens and, later, with Leibniz. Friends, indeed, he never lacked. His fellow-students under Van den Ende and his Mennonite acquaintances held by him. When, in 1660, he removed to Rynsburg, near Leyden, it was probably to be near the Remonstrants, Rynsburg being then their headquarters. In April 1663² he again removed, to Voorburg, a suburb of the Hague, remaining there six years.

From 1656 to 1660, or perhaps still earlier, he completed his study of the Cartesian philosophy, and developed at least the outlines of his own. It was his duty to teach Cartesianism to a certain private pupil; but he early became dissatisfied with many of the principles which he had to teach. His objections he submitted to a coterie of students in Amsterdam. These enthusiasts speedily formed a kind of Spinozistic school, discussed his papers, and communicated their difficulties to him. 'Spinoza's gifts as a teacher,' says Lucas,³ 'were such that he insensibly converted all men to his views.' His influence over his little school, at any rate, was immense. Among the number were Simon de Vries, a wealthy medical student, John Bresser, apparently an older man, and Lodewijk Meyer, who afterwards edited more than one of his master's works. Other acquaintances, more or less intimate, rapidly gathered round him. Pontiaan van Hattem became the founder of a curious Spinozistic church. Niels Stensen turned Roman Catholic, and engaged in controversy with his former friend. The Huguenot St. Glain translated the *Tractatus* into French. Tydeman, Spinoza's Voorburg landlord, was accused of being the creature of the 'atheist and mocker.' John Casarius, a name unearthed by Meinsma,⁴ became a botanist of eminence. To John Bouwmeester, an Amsterdam physician, Spinoza wrote the affectionate *Epistle* 87. Towards Adrian and John Koerbagh he cherished equally friendly feelings. The former was a physician of some skill, and, if we may trust Meinsma's conjecture⁵ that to him *Epistle* 28 was addressed, prescribed for his friend more than once. Both Adrian and John came under ecclesiastical censure, and died in prison. Henry Oldenburg of Bremen, the famous first secretary of the Royal Society, met Spinoza in 1661. He was a man of insatiable curiosity, but of no philosophical depth, and constitutionally timid. At first his letters urge Spinoza to publish his speculations; but after the appearance of the *Tractatus* he never ceases to ingeminate caution.

Spinoza's adherence to Descartes, if ever complete, was short-lived. True, in 1663 he threw into geometrical form, for the benefit of Casarius, the first two parts of the *Principia*; but his own appendix, *Cogitata Metaphysica*, contains clear evidence of independent thinking. Still earlier, if we may trust internal evidence, had been written a treatise which shows yet more unmistakably how widely Spinoza had already diverged from Descartes. Before 1661 he had completed the *Korte Verhandeling van God, de Mensch, en deszelfs Welstand* ('Short Treatise on God, on Man, and his Well-being'), a work discovered only in 1852. Of this book two Dutch MSS exist. Both contain notes, some obviously written by disciples, a few perhaps by Spinoza himself. The original Latin has not been unearthed. Various strata of thought are to be detected in the work, from the early stage as represented in the curious dialogues to the mature appendix.

There is every reason also to believe that the *Ethics* was far advanced before Spinoza left Voorburg. We may fix its composition between 1661 and 1665, and the beginning of the *Tractatus Theologico-Politicus* in the latter year. The date of the unfinished treatise *de Intellectus Emendatione* is uncertain; but critics are practically unanimous in placing it before that of the *Ethics*. In addition to all this his correspondence also must have been voluminous; for the large amount preserved includes only those letters which have a philosophical or scientific interest. The letters to Oldenburg are valuable as illustrating the indirect intercourse between Spinoza and Boyle. The correspondence with Huygens is polite, but not very illuminating. That with Simon de Vries, on the other hand, is of great importance. That with Blyenbergh, a burgess of Dort, is interesting as showing how Spinoza could deal with tedious pretenders to learning. To Peter Balling (probably the 'P. B.' who translated the *Principia* into Dutch) and to Hugo Boxel of Gor-

cum Spinoza writes with great sympathy and even with occasional flashes of humour, on the subject of ghostly manifestations.

In 1671 (or, as Pollock thinks, 1673) he received an epistle¹ now ascribed to Jacob Ostens, a Rotterdam surgeon. Ostens enclosed a document from Lambert Velthuyzen of Utrecht, which contained a violent attack on the 'atheistic' and 'immoral' principles of the *Tractatus*. Spinoza's reply shows that he was unconscious of any irreligious tendency in his work. It is written in an unusually passionate tone. Strangely enough, at a later time he became friendly with Velthuyzen, and even² urged him to publish his strictures.

With Albert Burgh, a scion of a rich Amsterdam family, once his disciple (indeed he was supposed till Meinsma's time to be the 'fellow-lodger' now known to have been Cascaius), Spinoza had an interesting correspondence. In 1675 Burgh entered the Roman Church, and wrote to his old master a curious letter advising him for his good. Spinoza's answer is the most contemptuous of all his writings. Burgh's one argument, indeed—the continuity of the Church—was not likely to have weight with one who could trace his spiritual ancestry to Abraham.

Meanwhile, Spinoza entertained hopes of support from the de Witts; and they in return appear to have claimed such assistance as he could give. At what time he received the small pension which John de Witt settled on him we do not know; but as early as 1663³ he was planning the open publication of his works, with the countenance of 'some holding the highest places in the State.' The Grand Pensionary must have known him even in the Bynsburg days. With de Witt's supporter, John Hudde, burgomaster of Amsterdam, we know⁴ Spinoza to have been intimate; and contemporary squibs speak of the *Tractatus* as 'written in collaboration with the devil and published with the connivance of de Witt.' Spinoza did what he could for the Pensionary; and his hopes were centred in the success of the anti-ecclesiastical policy of the great statesman. De Witt, however, could not favour open heresy; and the publication of the *Ethics* was accordingly postponed. Excited perhaps by the appearance of a Dutch version of the *Leviathan* in 1687, Spinoza turned to other studies, and in 1670 the *Tractatus Theologico-Politicus*, a work of epoch-making importance, was published anonymously. Spinoza suppressed a projected Dutch translation;⁵ but precautions were vain. On the rise of William of Orange to power, orthodoxy resumed its sway; and in 1674 the work was formally prohibited. The Church of Rome soon followed suit; and the *Tractatus* shares with the *Leviathan* the honour of figuring on the Index.

In 1670 Spinoza removed to the Hague, lodging at first in the Veerkay with a widow named Van der Werve. Thirty years later the Lutheran minister Colerus occupied the same room, and was thus able to make those inquiries the results of which appear in his biography. But Spinoza's stay was short. Within a year he removed to the house of a painter named Van der Spijck, on the Paviljoensgracht; and here he remained till his death. He might, it is true, have easily improved his financial position. Simon de Vries in vain offered him a donation of 2000 florins; and, when the same devoted pupil, feeling the approach of death, endeavoured to make Spinoza his heir, he refused to accept more than 300 florins per annum. He had already yielded up to his relatives the whole of his patrimonial inheritance except a single bed. In 1673⁶ he declined the offer of the chair of philosophy at Heidelberg made by the Elector Palatine Karl Ludwig.

During his remaining years he lived a life of extraordinary seclusion, staying within doors often for days together. Two episodes alone broke the monotony. In 1672 de Witt was brutally murdered by the populace. Spinoza's philosophic calm was for once disturbed. He burst into a passion of weeping, and was with difficulty prevented from affixing a placard, with the words 'Ultimi barbarorum' upon it, to the walls of the prison where the deed was done. Shortly afterwards he incurred an even greater risk. Condé's winter quarters were at Utrecht, and Spinoza visited the French general under safe-conduct. He there received marks of favour, and the offer of a pension from Louis XIV. Refusing the pension, he returned to the Hague, where he found himself in great danger of being torn to pieces as a spy. Van der Spijck indeed expected the house to be stormed by the mob; but Spinoza reassured him, saying that many of the chief men in the city knew the nature of his errand; if the worst came to the worst, he would go out alone and meet the fate of de Witt. The purpose of this strange excursion remains a mystery; but it seems most likely that the authorities deliberately chose him, as a man of European reputation but no diplomatist, to open up with the French informal negotiations which it would be easy to disavow.

Meanwhile his reputation continued to grow, and the circle of his acquaintance to widen. Chief among his new friends was Leibniz (q.v.), whose indebtedness to Spinoza, minimized by himself, has recently been made clear.⁸ In 1670, having already read the *Tractatus*, Leibniz began to correspond on the neutral subject of optics. Spinoza received his advances with caution, refusing to show him the *Ethics*. But in 1671 Leibniz's aversion yielded to an admiration of which afterwards he endeavoured to make light. The introduction was brought about by Geyrge Schuller. At first the younger man was quite fascinated by the older; but there was a want of intellectual sincerity in Leibniz which rendered permanent confidence impossible. To Schuller was also due the acquaintance between Spinoza and Tschirn-

hausen. Correspondence began in 1675. Tschirnhausen was one of the select few to whom the *Ethics* was entrusted; and his criticisms were among the keenest that the author ever had to meet. Soon afterwards we find him in London, where he removed a misunderstanding that had clouded the relations of Boyle and Oldenburg with their friend. In later years Tschirnhausen drew largely, without acknowledgment, on Spinoza's *de Intellectus Emendatione* for his *Medicina Mentis*.

Spinoza's mental activity during his later years, probably because of failing health, was slight in comparison with what it had been. It seems that he revised the *Ethics*, possibly adding the remarkable propositions that close the fifth part. In 1676 he endeavoured to publish the work; but the divines and the Cartesianes again interfered.¹ Phthisis was congenital with Spinoza, and its advances were not retarded by the climate of the Hague. Early in Feb. 1677 Schuller wrote to Leibniz that the end was approaching. The *Tractatus Politicus* was laid aside for ever, and the design for a comprehensive scheme of natural philosophy was not even sketched out. Death came suddenly at the last, just in time, perhaps, to save him from the fate of Koerbagh. Feeling worse than usual, he had sent to Amsterdam for a medical friend, probably Schuller.² On Saturday, 20th Feb. 1677, he came downstairs and conversed with the Spijcks, smoked a pipe, and went early to bed. Next day he again came down. Schuller had now arrived, and ordered some broth, of which, on the return of the Spijcks from morning service, he partook quite heartily. There seemed no reason why they should not go to church again in the afternoon; but on their return they heard that Spinoza was dead. The physician returned at once to Amsterdam. Many apocryphal details have been added to this narrative by legend-mongers. There is no ground for the suspicion, entertained by Martineau among others,³ that the physician and the philosopher had contrived a euthanasia—conduct condemned by Spinoza himself.⁴ Spinoza's property fetched so little that his sister Rebekah did not claim the inheritance. The MSS of the *Opera Posthuma* were duly conveyed to Jan Rieuwertz. Meyer furnished the preface, and Schuller, as we now know, supervised the publication. In the next year the work was anathematized.

Spinoza was a man of middle height, with a distinctly Jewish countenance, the swarthy complexion of a Spaniard, and a forehead befitting a philosopher. He was abstemious almost to asceticism, rigidly careful to keep his expenditure within his means, but cheerful in his demeanour. He conversed on affable terms alike with the highest and the lowest. Such signs of impatience as we detect in his letters show merely that his serenity was not attained without an effort. A noble independence was perhaps the most marked feature in his character. His intellectual hardihood, almost unparalleled as it was, involved no intolerance of the views of others. Love of truth was his guiding principle. To children he showed himself tender, affectionate, and even playful. He is one of the very highest exponents of the philosophical and self-centred virtues; if we must find fault, it is to point out his lack of an active benevolence, of a passionate zeal like that of Paul for saving the world at large. He had not, in fact, a truly broad humanity. He has been charged with moral cowardice. It is asserted that there is a kind of *suppressio veri* in the *Tractatus*, and that theological terms are, in the *Ethics*, frequently used in a misleading sense. But this seems a harsh judgment. His learning has recently been shown to have been great.⁵ The publication by Van Roviens in 1889 of an inventory of his library proves the wide range of his acquirements. He was, unquestionably, weakest in the domain of the inductive sciences.

Of portraits of Spinoza the best is that at Wolfenbüttel, of which there is a copy at the Hague, and which is reproduced in Martineau. Some copies of the *Opera Posthuma* have a portrait, perhaps derived from the Wolfenbüttel painting. The miniature reproduced by Schaarschmidt⁶ may be genuine. There is also a portrait in the German translation of Colerus.⁷ Spinoza's drawing of himself as Masaniello was seen by Colerus, but has apparently perished.

The discovery of the *de Deo* in 1852, and the bicentury of his death in 1877, roused great interest. At the bicentenary Renan delivered his famous eulogium. In 1880 the bronze statue by Hexamer was unveiled at the Hague; while a tablet in the wall of the house that stands on the side of Spinoza's lodgings in the Paviljoensgracht marks the spot where he spent his last days.

II. **PHILOSOPHY.**—I. Its aim.—The speculations of Spinoza never forgot their practical end. It was his object to 'discover and attain something which would enable him to enjoy supreme, continuous, and permanent happiness.'⁸ His philosophy aims at 'tranquillizing the mind of the individual, and elevating social life.'⁹ But soon he discovered that well-being is not to be captured by a direct assault.¹⁰ Hence Spinoza's doctrine is not primarily a metaphysic but an ethic; nay, more, it is not so much a philosophy as a religion.

'There is,' he says,¹ 'for sciences but one purpose, to which they should all be directed, namely, supreme human perfection.' And this perfection can be reached. 'Those who deny that men can ever attain virtue or truth, by that very denial prevent themselves from attaining it.'² But this virtue can be reached only through intellectual certainty. We may perhaps hazard a guess as to the process by which he was led to his deductions. His spiritual ancestry was theological; hence his first independent thought moved on theological lines. His life, again, had led him to attach a supreme importance to 'fortitude.' But a mere unreasoned fortitude was worse than useless. Spinoza was the last man to court unnecessary pain. Resolved to live his own life, he desired to practise that *animositas* by which 'a man strives to preserve his own being in accordance with the dictates of reason.'³ Resolved, on the other hand, to be of use to his fellows, he desired also to practise that *generositas* whereby, solely under the dictates of reason, a man seeks to unite other men in friend 'ship to himself. Virtue of any kind appeared to him impossible without 'adequate knowledge.'⁴ Hence the necessity of a method for discovering the true.

2. Logic and doctrine of method.—Truth is its own ultimate guarantee; 'it is not necessary to know that we know.'⁵ But by truth is not meant the correspondence with any physical fact. An architect's idea of a building is 'true,' even if the building is never erected, provided that the idea conforms to the rules of architecture.⁶ On the other hand, a reckless assertion is none the less false because it may turn out accidentally 'true.' It is as well, therefore, to note how the true differs from the false.

Knowledge is of many kinds. It may arise from hearsay; from mere experience ('*ab experientia vaga*'—a phrase borrowed from Bacon); from inference ('*ubi essentia rei ex alia re concluditur*'). All these are 'inadequate' kinds of knowledge. True perception arises only when the thing is perceived solely through its essence or by the knowledge of its 'proximate cause.' Nor, when we employ this method, do we need another method to test it. Otherwise there would be a constant regress to infinity—which is as absurd as to say that, because tools are needed to make tools, therefore no tools can ever be made.⁷ Falsity consists in mistaking accidents for essence.⁸ Simple ideas then are necessarily true; inadequate ideas arise from the careless juxtaposition of two or more simple ideas. To attain truth, we have only to split ideas into their simple components.⁹

To exclude confusion, the following rules must be observed: (1) the definition of a thing should comprehend the proximate cause; and (2) all the properties of the thing must be capable of being deduced from it. Thus only shall we secure the two essentials of adequate knowledge—clearness and distinctness in our ideas. Spinoza illustrates his meaning by asserting that the ordinary definition of a circle merely defines one of its properties. It should be defined as the figure described by a line whereof one end is fixed and the other free.¹⁰ To this assertion certain acute objections were made by Tschirnhausen; and Spinoza found some difficulty in answering them.¹¹ A further objection is of importance, as it brings us to the very centre of the Spinozistic philosophy. This idea of definition involves a confusion between the 'formal' law of cause and effect and the 'objective' law of

logical deduction. 'The relation,' says Spinoza,¹ 'between the abscissæ and the ordinates of a curve results from the nature of the curve precisely as the essences of created things result from the nature of God.' But really this relation does not result at all; it only emerges later in our minds because of their incapacity to grasp many ideas at once. Nevertheless it is necessary to notice this essential feature of Spinoza's theory. An effect neither follows nor precedes its cause; the distinction between the two is merely, to him, one of logical convenience.²

So far, then, of the definitions of created things. But what of uncreated, and of the ultimate idea of all, that of God? If definition is nothing but the 'objective' (*i.e.* nearly what we now call the 'subjective') aspect of cause, what then of God the First Cause? The rules for defining an uncreated thing³ lay it down that all idea of cause must be excluded, while no abstraction is permissible. It would seem therefore hard to define God; and yet all knowledge is conditioned by the knowledge of Him. Everything is either *in se* or *in alio*; if it is *in alio*, it must, as we have seen, be defined by the *aliud*; if *in se*, where is the definition to begin? If God is defined by His attributes, they must be His causes, and therefore (logically) prior to Him. Spinoza meets the difficulty by using the vulgar phrase ('*ut vulgo dicitur*'), '*Causa sui*'. From this definition Spinoza imagined it possible to deduce properties.⁴ Among these properties he regards existence as one: 'When the definition of the [uncreated] thing has been given, there must be no room for doubt as to whether it exists or not.'⁵ Conceive a Being the very essence of which is existence. We can conceive such a Being: therefore it exists. This startling proposition is an extension of the Cartesian '*Cogito ergo sum*.' Upon the idea of this Being all knowledge is based. 'That method is the most perfect which exhibits the standard of the idea of the most perfect Being.'⁶ 'As soon as possible, we must inquire whether there is such a Being, which is the cause of all things as its "objective" essence is the cause of all our ideas.'⁷

What Spinoza meant by his 'perfect Being' is doubtful. But it is at any rate certain that it is not an *abstract* deity—so much so that Spinoza forbids us to deduce abstract essences from the idea of God. Such generalizations, formed by abstracting from a number of individuals, are nothing but negations. All things follow from the divine nature; but these 'things' are 'individuals';⁸ and hence 'we must admit into our definitions as few abstract nouns as possible.'⁹ Yet the first deducibles from God are not individual things; they are *res fixæ, æternæ*, and yet *singulares*. What then are these? They are present everywhere, the *genera* of the definitions of individual things, and the *causæ proximæ* of all things; but their real nature is obscure.

3. The geometrical method of the Ethics.—At this point the *Tractatus de Intellectus Emendatione* ('Treatise on the Improvement of the Understanding') breaks off; and we therefore turn to the *Ethics*. At the outset of this work we are struck by a change of method. The title-page speaks of '*Ethica ordine geometrico demonstrata*.' Spinoza's motive for using axioms, postulates, and propositions is not quite clear. Causation being but logical deduction, he regarded things, which are implicit in the idea of God, as capable of being drawn out explicitly, precisely as from the definition of a circle its properties can be deduced. Con-

fusing logical necessity with dynamic efficiency, he states in one place that God is the *cause* of all things;¹ in another, that God *is* all things. In i. 11 he tells us that everything must have a cause of its existence; but in the ordinary sense of the word 'cause' this is obviously false. What is necessary is a cause of its coming into existence. This confusion is the source of much difficulty in the interpretation of Spinoza. In any case the choice of the Euclidian method is the natural concomitant of this theory of causation. The example, it is true, had been set by Descartes; but Spinoza would have used it even if Descartes had not anticipated him. Not that he thought that the method excluded error. Already he had used it to exhibit the Cartesian system at a time when he did not believe in it. But he saw clearly that error is more easily brought to light by this means than by any other. Of course there are objections to its use. The cogency of Euclid is due to the fact that his primary assumptions are either self-evident or at least sufficiently near the truth for the purpose in hand; whereas it is precisely Spinoza's definitions and axioms that arouse controversy. Another objection was first brought forward by Tschirnhausen,² and has been developed by Joachim,³ Busolt,⁴ and others. From a geometrical definition we can deduce but one property. All others can be deduced only by bringing other definitions into relation with the first. Similarly, when Spinoza 'deduces' from the definition of God, he is really, though unconsciously, deducing from other definitions. His right to select one attribute as the defining property is the matter in dispute. And hence we are not surprised to find that he constantly, if tacitly, varies the definition. When 'Substance' fails him, he has recourse to 'Nature'; when 'Nature' gives way, he substitutes 'Reality'; when 'Reality' is not concrete enough, he falls back on 'God.' Thus Spinoza himself is often driven to drop the deductive method, and to allow himself the luxury of explanations, notes, and appendices. Occasionally he even calls in experience to confirm his theoretical propositions.

4. Metaphysical doctrine. — (a) *Substance*. — Spinoza's God is not the deity of any religious system. His conception may be expressed, provisionally at least, by the term 'Reality.' All things exist *in alio*. Retracing our course, we track the *aliud* to its conditioning somewhat; and finally we must arrive either at blank nonentity and scepticism or at certainty based on that ultimate Reality of which 'things' are expressions. The first alternative being impossible to Spinoza, he came to the second. He had already shown to his own satisfaction in the *de Deo* that God exists; and in the *Ethics*, though he gives certain formal definitions, he in fact takes Reality as a first postulate.

This Reality is not mere Being—not (to use Hegel's phrase) the night in which all cows are black. It is a concrete, pregnant, and living conception, positive in itself and capable of positive development. Spinoza makes desperate attempts to give it a higher position than that of the mere abstract home of attributes. The infinite is not less, but more, positive because it is indeterminate. Yet he cannot always rid himself of an abstract way of regarding Reality. As Caird well puts it,⁵ the ultimate, with him, is reached not by reconciling opposing elements, but by abstracting from their difference. Still, Spinoza's intention was always to represent the real as concrete.

This idea appears under many different aspects.

⁵ *Spinoza*, p. 146.

Tracing back the chain of causes, we reach at last the *Causa sui*. As cause, it is *Natura naturans*, that which underlies phenomena. As caused, it is *Natura naturata*; i.e., it is identical, in a sense, with the phenomenal world. From another point of view, Reality is Substance, that which is in itself and is conceived through itself—a restriction of the use of the word which Spinoza had not always made.¹ Yet another word is 'Nature,' which² is *unum æternum, per se infinitum*; but the word expresses Reality rather as the productive source of things than as their underlying principle. Hence it is less frequently employed in the *Ethics* than elsewhere. Lastly, by the term 'God' is meant a Being absolutely infinite, that is 'Substance consisting of infinite attributes, whereof each expresses eternal and infinite essentiality.'³ From this definition the idea of personality, often ascribed to God in the *de Deo* and in the *Cogitata Metaphysica*,⁴ has been rigidly excluded. God is no longer good; He no longer has a will; He is 'perfect,' but not in the moral sense;⁵ nor does He ever act for an end.

The first few propositions prove, or state, the identity of these various ideas. *Causa sui* must have necessary existence; hence it is Substance. Substance is necessarily infinite; therefore it is God. Thence we pass to the proof that there is but one Substance;⁶ but, if God is infinite in infinite ways, this seems little more than a truism. Yet Spinoza was convinced⁷ that he could deduce from his definitions less obvious conclusions than these. First, God is the most real (or perfect) entity. Secondly, He is one and whole. Thirdly, He is concrete, not abstract. He has infinite attributes, but not 'infinite' in a numerical sense; nor is He one in a numerical sense. He is in fact the unchanging Unity which underlies the fleeting manifestations of the many. Were there not this simplicity beneath the complexity of Nature, Nature could not possibly be conceived. Yet God is not the whole as including the parts;⁸ for, if so, as parts, they would be independent of Him. To separate the whole into parts is to destroy it. By this we see that Spinoza means to assert that the Reality involves a reconciliation of all difference; but whether he is always consistent is another matter.

In what sense God is 'concrete' we have seen. He is 'infinite' not through negation, but because He admits of unlimited predicates being affirmed of Him. It is only the imperfection of language that compels us to use a negative term of a quality essentially positive.⁹

That God exists of necessity is shown both *a priori* and *a posteriori*;¹⁰ but the real demonstration lies in the whole theory of which the proofs are a part, and this we may sum up as follows.

The notion of cause is reciprocal: everything that is involves God as its cause, just as much as God involves it. Now, things are perceived by us under the entangling notions of time, place, and the like. Such conceptions are mere phantoms. Nevertheless, the things are not altogether phantasmal; nay, they appear simply because they really are. 'Every idea of every existing thing necessarily involves the eternal and infinite essence.'¹¹ The tiniest entity implies infinitude. God, then, both is and is not identical with the many. He is identical with the many in so far as they are implicit in Him; He is different, inasmuch as He is not subject to the mutations of the many. He is not the sum of what appears; he is all that is. 'He is the immanent cause of all things, and not the transient.'¹² Spinoza will have no dualism. 'God and Nature'—the phrase of the earlier writings—gives place to 'God or Nature.' Nay, even space and thought must be united in one, which includes both. The idealists also allow but one; but that is done by subsuming space under thought. The materialists subsume thought under space. Spinoza's form of monism is peculiar to himself, and is exhibited in his remarkable doctrine of attributes.

(b) *Attributes*. — Substance can be, and is, known. 'I have,' says Spinoza, 'as clear an idea (if not as clear an *image*) of God as of a triangle.'¹³ Experience shows that we can form two clear ideas of Substance—as extended and as thinking. Hence extension and thought are each co-extensive with Substance; nay, they are Substance, or, as Spinoza phrases it, they are attributes of Substance. 'It

is essential to the nature of Substance that each of its attributes should be conceived *per se*. All the attributes have always been together in it, nor could one have been produced from another; but each expresses the reality of substance.¹ Each of the two attributes that we know (and each of the others, did we know them) gives us a final account of ultimate Reality.

The two attributes were accepted from Descartes; but with startling differences. Descartes² denied that God is extended. Space is a creature of God, who gave it its 'primary' qualities of motion and rest, three dimensions, and the like. The 'secondary' qualities he regarded as not created by God, but due to the percipient mind. To Spinoza the whole idea of 'creation' is repugnant.

The attributes are independent of each other. Body cannot determine the mind to think, nor mind determine the body to move.³ Ideas are due to God as *res cogitans* simply; motion and rest to Him as *res extensa* simply.⁴ How, then, is the unity of God secured? There are infinite attributes, each pointing to an independent essence: how, then, is there but one Reality? Spinoza's proof⁵ is curious. He says that, if twenty men exist, there must be a reason, over and above the cause of human existence in general, why *twenty* men should exist. But the definition of God, implying existence, yet contains no provision for several substances. Hence only one can exist. This ingenious argument occurs again; but it is hardly convincing. All that really is shown is that number is beside the question; and so Spinoza himself seems to recognize⁶ when he says 'eum qui Deum unum vel unicum nuncupat, impropere de eo loqui.' God, then, is merely indivisible Reality. But, if there is no passage from extension to thought, how are we to account for the statement that extension and thought move in parallel lines—that for every affection of space there is a corresponding affection of mind?

The point is too abstruse to be discussed here in detail. Difficulties enough remain. If it is intelligence that perceives attribute, then thought, which is an attribute, seems made a judge of itself; indeed, as Tschirnhausen pointed out,⁷ thought is conscious of extension also, and hence, in the forcible phrase of Martineau, elected as a consul, it soon poses as a dictator. In one of his most striking pages Pollock⁸ asks what difference it would make if every attribute but thought were destroyed; and the answer is simply 'None.' Then why does Spinoza postulate other attributes? Above all, why demand an infinite number? We might ask other questions. Does thought correspond with each of them, so that we have a series of pairs of which thought is always one? Or is there another series of pairs, like extension and thought, but not the same, in each of which one, but not the other, can look over its neighbour's wall, and in which neither can see any farther? Spinoza⁹ hints at answers to these questions, but gives no satisfactory solution.

Monism is neither good nor bad in itself. There is nothing, apart from good reasons, that makes monism better than dualism or than infinitism. What, then, is it beyond prejudice that compels us to posit any unifying principle of these infinite attributes, which are distinctly stated to have nothing in common? Spinoza's theory made him reduce the many to one. Experience showed him two. But you do not bridge the Channal by simply calling England a part of Europe.

As Martineau¹⁰ has shown, there is an essential difference between extension and thought in their relations to their modes. Body is a limited fragment of extension; our minds are not limited fragments of the infinite mind-stuff. For, though all individual things are animate,¹¹ they do not think; they are only thought of. Nor does God Himself think; those who ascribe thought to Him are like those who should confuse the Dog-star with the animal that barks.¹² Intellect¹³ belongs to *Natura naturata*, not to *Natura naturans*. Nay, to attribute thought to God would be to attribute to Him an imperfection.

There is difficulty enough, then, in the transition from substance to attribute. There is hardly less in that from attribute to mode.

(c) *Modes, infinite*.—Mode is an affection of Substance, that which exists not *in se* but *in alio*.¹ It will thus partake of the twofold nature of Substance. As we have seen, 'things' are both extended and 'animata'; and modes are 'things' under the phenomenalizing influence of time. In coming under that influence they lose some of their reality. All things follow from the divine perfection, but all are not equally perfect—a doctrine of ethical import.² The First Cause alone is perfect; that which is directly produced by God is the nearest approach to perfection (it is 'infinite' in its own kind, and admits of the least negation). That which is produced mediately is imperfect in accordance with its degree of mediacy. Thus an infinite number of modes follows from God 'by the necessity of the divine nature.'³ Mode, then, is a device for deducing the finite from the infinite. But the step is not made at once. We pass first to infinite modes. These are Substance in its totality considered as active. Extension is barren until touched to life by motion and rest; and these have an infinitely extended range. Similarly, Substance as thought, when its decks are cleared for action, appears as *intellectus absolute infinitus*. Yet both these, though infinite, are intelligible not *per se* but *per aliud*. They are therefore modes, not attributes—'sons of God' in the language of the *de Deo*.⁴

Each of these immediate infinite modes gives birth to 'mediate' infinite modes. Under motion and rest stands the *facies totius universi*,⁵ which, though varying internally, is in total always the same. Spinoza's account is brief; but the doctrine seems to be derived from that of Descartes, that the quantity of motion in the universe is constant. By this Descartes meant momentum. Had Spinoza lived now, he would doubtless have expressed his 'mode' in terms of the Conservation of Energy. That there were other such 'mediate infinite modes' is likely enough; but conjecture may well be spared.

How intellect, which is a mode, can yet be absolutely infinite is hard to see. 'Our mind, so far as it understands, is an eternal mode of thinking, determined by another eternal mode, and this by another, and so on *in infinitum*; so that all together constitute God's eternal and infinite intellect.'⁶ Thus 'God's intellect' is here used as equivalent to the sum-total of human intellects, including potential intellect as well as actual; and it deals not merely with extension, but with thought itself. Every thought is capable of being made the object of another thought, and so on *ad infinitum*. The absolutely infinite intellect is identical with the whole of these actual or potential series. Here for once Spinoza seems to use the term 'infinite' in the sense which he elsewhere rejects—that of indefinitely numerous.⁷

In the attribute of thought the mediate eternal mode, corresponding to the *facies* in extension, is not given by Spinoza. Did we know the other attributes, we should find each of them throwing off stems, first immediate and then mediate, in a series of similar pairs. But even so we have not bridged the chasm from the infinite to the finite. How is that to be done?

(d) *Modes, finite*.—Spinoza's answer is that finite things are themselves in a sense infinite. Their essences are eternal; their existence finite. In *Eth.* i. 17, schol., e.g., we learn that a man is the cause of another man's existence, but not of his essence, for the latter is eternal.⁸ Peopling the vast heaven of eternity are countless hosts of

eternal essences; they pass for a moment through the entangling atmosphere of existence, and flash into a transient light. Essence¹ is 'the manner in which created things are comprehended in God's attributes.' Hence the essences even of finite things are eternal. Thus the passage from the infinite to the essence of a finite thing is but a passage to the entirely finite. But whence comes the partial finitude?

Everything left to the play of its own essence would be eternal. Nothing can be destroyed,² except by a thing of the same kind, external to itself. The essence of a thing neither brings it into existence nor expels it thence. There cannot be a finite thing until there is another finite thing to determine it; and that other is itself determined by another finite thing; and so *ad infinitum*.³ So also there is no particular thing than which there is not a more powerful one by which it may be destroyed.⁴ But whence does the finite get its first impulse? This indefinite series is not true infinity.⁵ Nay, finiteness, a mere negation, seems to have been unconsciously pressed into the domain of causality. As Martineau well puts it, finding the 'most capacious essences struck with sterility' in the domain of actual things, Spinoza invents a second kind of causality, the despised inductive.⁶

He has been defended on the ground that this second causality, being bound up with temporal existence, is a mere illusion. Spinoza's particular things, say some, have no real existence; and therefore the series of causes that leads to them, being illusory also, is of course irreconcilable with the eternal causality. Much in his language lends countenance to this theory. In *Ep.* 29, *e.g.*, he says that extended substance is not really divided, as we are so prone to divide it in imagination. Yet elsewhere he speaks of particular things as 'actually existing';⁷ and this existence seems to have been objective (*formalis*). Else why does he tell us that the finite is only in part negative?⁸ Admitting, then, to the full the illusoriness of the temporal existence of particular things, we are still unable to reconcile the two lines of causality into one. How they put on this illusory actuality is precisely the difficulty which Spinoza does not meet. He provides causes for the real and causes also for the phenomenal; but he says nothing as to how the real becomes phenomenal.

Assuming, however, this double causality, let us see how it works. The existence of each thing is a mediate infinite mode. If left to its essence, the thing would simply be. But it comes into a 'struggle for existence' with other essences.⁹ Hence arise the ideas of contingency, possibility, and the like. If the circumstances of the temporal world forbid the appearance of the thing, we call its existence 'impossible'; should they not forbid it, we call it 'probable' or 'possible.' But in either case the contingency is merely a phrase for our ignorance.¹⁰

To sum up: a finite individual thing is a fusion of its eternal essence with the temporal chain of causality, which alone determines its duration. In both these senses the thing is called actual; but the actualities are of totally different kinds.¹¹ In the individuality of such a thing both attributes (and possibly even the infinite others also) must, in modal form, unite their forces. In a man, *e.g.*, must combine size, form, motion, etc., while external circumstances will, by their action upon him and upon themselves, decide the length of his terrestrial course. A man is a complex; and our knowledge both of his mind and of his body, as well as of his external conditions, must be fragmentary at best.¹²

(c) *Man as mode*.—Among all individuals man is highest. Not of course that he is the end of Nature, or that Nature in any sense aims at his welfare.¹³ Nevertheless, as there are degrees of perfection, man, expressing the infinite both in mind and in body better than other finites, is the most perfect. Even in men there are degrees of perfection. The good man expresses God more

fully than the knave.¹ Ideas differ from one another in containing more or less reality.² Hence, by the doctrine of parallelism, the human body also is superior to other finite bodies. Not, of course, that there is any causal connexion between body and mind. The body and the idea of body (*i.e.* the mind) are the same individual conceived under different attributes.³ The object of the idea constituting the human mind is the body and nothing else.⁴ True, Spinoza probably began by regarding the body as the prior;⁵ but in the *Ethics* this has been dropped, and the highly artificial doctrine which, for want of a better term, we have called 'parallelism' has been substituted. This doctrine involves the rejection of all belief in a real self in man, as is clearly seen in the series of propositions⁶ in which the subject is discussed. There is no *faculty* of desiring, loving, understanding. All these are fictions, or metaphysical universals. To call them 'mind' is like explaining a stone by talking of lapidity.⁷ 'The mind is a definite mode of thought, and not the free cause of its actions.'⁸ The perceptions of the mind vary with the sensations of the body.⁹ The idea which constitutes the actual being of mind is not simple, but compound.¹⁰ The succession of thought is the mind. The human mind does not know the body to exist save through the ideas of the modifications whereby the body is affected; and¹¹ the idea of the human mind is referred to God (*i.e.* exists in the ordered sequence of the world) precisely as the idea of the human body. But how can the mind, which is nothing but a series of thoughts, be conceived by one link in that series? Spinoza answers¹² by propounding the theory of the mind not only as the idea of the body, but as *idea ideæ*, *i.e.* as conscious of ideas. Precisely as it sums up the sensations into one whole which we call the body, so these various ideas are summed up into one generalization and contemplated as a whole.¹³ But the difference is obvious. An idea of an idea is caused by that idea, whereas the body is absolutely dissociated from the mind.

The ambiguity in the word 'idea' must already have struck the reader. When Spinoza tells us that all things are animate, or that the object of the idea constituting the mind is the body and nothing else, he does not mean by 'idea' what we now denote by 'concept,' but merely the parallel in thought to the body in extension. Thus the *idea corporis* is one kind of idea; the *idea ideæ* is another.

We may well ask how, if the mind is but a succession of ideas, it can form judgments. The answer is¹⁴ that the judgment is in the idea itself, and not in the mind regarded as having the idea. The truth of an idea is its own standard; the mind does not judge its truth, but the idea asserts its own truth. A false idea, similarly, is negative in itself.¹⁵ There is, as we have seen, no *faculty* of judgment; and the possibility of judgments is not explained, but simply referred dogmatically to the ultimate Substance. We shall find later that will, which is to Spinoza a judgment, is equally reduced to a mere point in a long line of points reaching back to infinity.

The purpose of the theory of *idea ideæ* was to reinstate after a fashion the 'self' which had been destroyed by the rejection of 'faculties.' But the self, lodged at the end of an infinite series, recedes like a will-o'-the-wisp the more it is pursued; and a mind which receives ideas passively *ab extra* has no claim to the character of a real mode of thought. Regarding man as finite, in fact,

Spinoza seems to have *ipso facto* banished the self; for the essence of self is independent reality. There is in the mind much that we do not know, which yet may be postulated from considering the body; and *vice versa*. Hence to know the one thoroughly we must discuss the other; and Spinoza¹ proceeds to give us a few propositions (or 'lemmas') on body generally, into which we cannot here enter. The probability is (though Joachim and others dispute it) that a full knowledge of man would reveal body, mind, and an infinite number of other modes in the other attributes. When Spinoza says² that 'of things as they are in themselves God is the cause so far as he consists of infinite attributes,' he must surely mean that every individual thing, man included, is a fusion of modes of all the attributes.

5. Theory of knowledge.—At this point Spinoza resumes the thread of psychological analysis that was broken off in the *Tractatus de Intellectus Emendatione*. The test of truth is in the idea itself; the mind does not, strictly, judge its ideas. Nevertheless we need some method of comparing these ideas—and most of all in a system which regards the ideas as the mind. Spinoza accordingly gives us a classification. We find three classes: (1) ideas of the imagination, (2) ideas of reasoning, (3) ideas of intuition. In earlier times Spinoza seems to have regarded ideas as passive,³ but in the *Ethics* he speaks otherwise: 'I call an idea a conception rather than a perception, because the latter word seems to imply that the mind is passive with respect to the object.'⁴ An adequate idea, then, is one in which the intrinsic (or subjective) marks of truth are present, namely, clearness and distinctness; and to attain certainty we need only reduce ideas to simplicity. This is done directly by intuition, and mediately by reasoning; hence the only source of error is imagination.

(a) *Ideas of imagination*.—The question of the relation between mind and body was differently solved by Spinoza at different times. In the appendix to *de Deo*⁵ he says, 'mens a corpore originem ducat.' In *Int. Em.*⁶ the possibility of ideas arising from fortuitous motions of the body is admitted. To account for this influence he adopted Descartes's fantastic doctrine of animal spirits. This theory he utterly rejects in the *Ethics*.⁷ Nevertheless a few traces of it seem to remain in the language which he uses to explain imagination.

We only know our body phenomenally, 'by the ideas of the affections of the body.'⁸ Hence our knowledge of it is very imperfect. We know it not in its cause, but through ideas of its successive states, and these ideas are confused with those of other bodies.⁹ This ill-blent conception is imagination. If we are affected by an external body, we regard that body as present;¹⁰ and we tend to regard even absent external bodies as present also. This is explained¹¹ by a curious physiological doctrine, which we need not here examine. Anyhow, when the external body is really there, we 'perceive' it—i.e., the mind forms an idea which is parallel to the contiguous body. This Spinoza calls the idea of the body—another instance of the ambiguity of the term 'idea.' Like Sir William Hamilton, he identifies the cause of a sensation with the object of a perception. Still more clear is this when we look at his account of representation—i.e. of the formation of pictures

of external things that are not there. The external bodies have left a 'footprint' on the brain. Whenever that footprint is reproduced by internal causes, we invent the external cause. Modern psychologists would unanimously assert that we do not (as a rule) think of these states of the brain. The thought arises from them, doubtless; but an idea caused by a thing is not a knowledge of it. In any case, a knowledge of the body thus attained is inadequate; and the mind's knowledge of itself, being attendant on the ideas of bodily affections,¹ is equally inadequate.² We can often correct one imagination by another;³ but full correction can come only from reasoning or intuition.

Should ideas be frequently given together, an association tends to be created by which the appearance of one idea arouses the others. Thus 'from the word 'apple' we proceed to form the image of the fruit.' (Spinoza does not distinguish this association from memory.) Should a large number of these images recur, the mind, retaining the *ratio patientis*,⁴ and acting as a mere 'spiritual automaton,' selects those ideas that are alike in certain respects from those that are alike in others, and forms blurred images. This is the origin of those worthless 'universals' which, as we saw above (§ 2), are mere negations. To the universal we give an equally worthless class-name, which means one thing to one man and another to another.⁵ Still more blurred are those abstract images which are represented by 'transcendental' terms like 'thing,' 'being,' 'somewhat.'⁶ Such a fiction, so persistent that it hampers even philosophers, is that of time, which is 'nihil præter modum cogitandi.'⁷ This doctrine must not be confused with the Kantian 'forms of thought.' With Kant 'time is a necessary representation, lying at the foundation of all our intuitions.'⁸ With Spinoza time is quite unessential to all rationally conceived ideas. So long as we confine ourselves to essences, we are in a region to which the notion of time is quite foreign. Time, in fact, is a form of contingency, which, as we saw above, is not in nature but in ourselves.

Equally illusory is the notion of freedom.¹⁰ Not knowing the causes that impel us to action, we imagine ourselves free to do this or that. Even so a falling stone, if it could think, would fancy it fell of its own accord. Similar is that worst of all errors, the ascription to God of a purpose in His actions.¹¹ Intellect and will do not pertain to God; they are a mere *refugium ignorantiae*.

(b) *Reasoning*.—If the imagination is prone to false generalizing, it does not follow that all generalizing is false. Without some form of generalization thought is impossible. In *Eth.* ii. 38 we learn what is the true form. 'Those things which are common to all, and which are equally in a part and in the whole, cannot be conceived except adequately.' Suppose our body to be acted on by an external thing. There must be something 'commune et proprium' to the two. Let the body be again acted on, this time by another external thing. There will again be something in common; and so on. The idea of this common element will be clear and distinct, i.e. adequate. Such a remaining common quality is weight. Our idea of weight, then, is adequate. Similarly with the yet wider idea of extension. Such *communes notiones*, unlike the false universals, are true; and the more the body has in

common with external bodies the more things can be adequately known.¹ These *communes notiones* may be made the basis of reasoning (*fundamenta rationis*), and will lead to other adequate ideas. Doubtless Spinoza had in his mind the fact that Euclid's axioms are called *communes notiones*; but he would have extended the phrase to include the fundamental ideas of physics, dynamics, and his own ethics. When once these foundations have been laid, accuracy in ratiocination will secure certainty.

Imagination regards things as contingent; reason regards them 'sub quadam aeternitatis specie.'² If a child sees Peter two or three times in the morning, he will associate the morning with Peter. If on occasion James should appear instead of Peter, the child's expectation will waver between the two. Reason, on the other hand, conceives things out of all relation to time. When considering a triangle, it does not consider whether the triangle is new, old, large, or small. Reason, in fact, views nature in an *ordo ad intellectum*.

But this phrase, 'sub specie aeternitatis,' is ultimately deposed in favour of another. To know the *communes notiones*, to know the 'essence' of an individual thing, to know a thing 'under the form of eternity,' are all reduced³ to knowing a thing 'by reference to the eternal and infinite essence of God.' This is a sublime phrase, the full meaning of which will appear only as the whole philosophy is studied. At present a few words must suffice. All properties of matter are known with reference to extension. But extension is the infinite essence of God on one side. And therefore, as our knowledge of extension (the most ultimate of *communes notiones* in one attribute) is adequate, so our knowledge of any extended thing can be adequate only so far as it is referred to that ultimate attribute. Similarly with the other attribute of thought. Deductive reasoning is a safe way of attaining this adequacy—nay (apart from the obscure exception to which we now proceed), it is the only one.

(c) *Intuitive knowledge*.—Still higher than reason is *scientia intuitiva*, which is so darkly delineated that its features are only dimly discerned. We learn, however, the following points.

(a) It deals with the essences of singular things;⁴ not, like *ratio*, with *communes notiones*. A word is here necessary on these essences. Spinoza is generally called a nominalist; and his rejection of 'universals' justifies us in so regarding him. But how, under a system of nominalism, essences can remain is a riddle. Retaining essences, we must mean by them the common properties of things; and so Spinoza does, when he calls the common properties of bodies the eternal essence of the human body—i.e. the essence of the human body is that which it shares with non-human bodies! But as a rule he speaks, as here, of the essences of individual things—a conception almost paradoxical. Yet some such conception seems necessary to explain that agreement between the idea and the *ideatum* which constitutes truth. In this agreement there is a kind of identity between the two, the 'formal' and the 'objective' being only aspects of the same thing; and that 'same thing' is the essence. This essence is not the product of the mind only—such a quasi-Berkeleyan theory is utterly foreign to Spinoza; nor can it be in the body before the mind perceives it—else the body would be made prior to the mind. Such as it is, it is perceived by *scientia intuitiva*.

(B) It acts immediately and not deductively. The example given is as follows.⁵

Required a fourth proportional to three given numbers. Tradesmen arrive at the correct result either 'ab experientia vaga' or by remembering the rules of thumb learnt at school ('ex auditu'). The mathematician sees it 'sub specie aeternitatis,' having seen the laws of proportion and referred them to 'God'—i.e. to the controlling conceptions of space. But with very simple numbers there is no need of either process; in a single flash the correct answer is obtained; and this is intuition.⁶

Whether this intuition is due to long practice in *ratio*, or is a separate faculty, is not quite clear.⁷ Spinoza confesses that the things he knows by this kind of knowledge are few;⁸ but it is

possible to attain it, for¹ 'we can form that kind of knowledge,' though we cannot form images of God as we do of bodies, and therefore fancy we have not as clear an idea of Him as of bodies.

(γ) A third hint as to the nature of intuition is given in *Eth.* v. 31. We there learn that it depends (1) on the mind, (2) on the mind as formal, (3) on the mind so far as the mind itself is eternal. On these enigmatical sentences much has been written. With hesitation we advance the following attempt at solution. 'The idea of every individual thing actually existing necessarily involves the eternal and infinite essence of God.'² If, e.g., we wish to know any individual mode of extension, we must refer it to the attribute of extension in God. *Ratio* does in fact thus proceed. Beginning with space, it adds the differentiae one by one, until it arrives at the definition required. This Spinoza would call 'acting as far as the mind is finite.' Intuition, on the other hand, beginning with the individual thing and acting by its 'eternal' powers, escapes all the intermediate stages, and grasps at once the relation of the thing to God. Seeing the unity of the individual thing as prior to its diversity, it proceeds at once to the unity of God whence that unity flows; whereas *ratio* sees the diversity first. Strictly, indeed, intuition does not proceed at all. Presented with a triangle, it would see at once what properties are general and what special, and would, by the eternity of the mind, refer the universal properties at once to the attribute of extension. Hence, as has often been pointed out, *scientia intuitiva* is really possible only for an infinite mind.

Scientia intuitiva ought, if it transcends reason, to carry us back to a principle that unifies alike the things among themselves and their differences from the perceiving mind. Spinoza has shut out this possibility by confining intuition to the perception of individual things. Nevertheless, he is not entirely unconscious of the obligation; for, when (as in *Eth.* v.) he speaks of the mind that has attained this knowledge, he is led on to speak of that mind as absorbed in the Reality which it grasps; as, in fact, one with God. 'To see God in all things, and all things in God'—Spinoza's ideal—is impossible save for God Himself; and even for Him impossible, since intellect does not belong to *Natura naturans*.

Ratio and intuition exhaust all possible instruments of knowledge. Intellect directed on either of these paths cannot err. To discern the true, all that is necessary is to resolve ideas into their simplest form. Nothing would induce Spinoza to give any other criterion of truth than truth itself; it is the rule both of itself and of the false.³ When, in fact, we see the truth, we see it; and there is no more to be said.

6. Doctrine of the emotions.—*Scientia intuitiva* shows that, while all things depend on God, their individuality is not destroyed thereby. By a noble paradox it asserts that the aloneness of things is precisely the essence which they derive from God. From God they gain the power of existing (so to speak) apart from God. Once launched on the sea of life, they exert a power which is none the less their own that it is recognized to be God's. This doctrine Spinoza expresses in terms of the *conatus*; and it is here that we must seek the transition from knowing to doing, from metaphysic to ethic.

This theory is stated thus: 'Everything, as far as it is in itself, endeavours to continue in its being.'⁴ That this 'endeavour' is a mere metaphor in many cases is at once seen. 'This *conatus* is nothing but the actual essence of the thing.' To some extent Spinoza had been anticipated by Descartes, who asserted the doctrine of *inertia*—i.e. that external causes alone can alter the state of a body. Other philosophers had already treated this *inertia* as a *vis*; and hence we are not surprised to find Spinoza speaking of this passive principle as a '*vis qua res in existendo perseverat*'; while in the *de Deo* it is called the *naturalis amor* of everything for the preservation of its body. In things generally the *conatus* is equivalent to their existence; in living things it is their life; but it belongs primarily to the mind-side of the thing,

³ *Id.* iii. 6.

and in man¹ the mind is conscious of the *conatus*. The existence which we attempt to maintain is the temporal and phantasmal;² but the *conatus* follows from the eternal necessity of God's nature.³ Referred solely to the mind, it is will; referred to body and mind in conjunction, it is appetite. Will, then, is simply 'appetite with consciousness thereof.'⁴ This transformation of the mere essence of a man into the active principle of will is one of Spinoza's most astounding feats.

But observe that the will is, as we have seen, not 'free.'⁵ God alone is free—and that in the sense that He works solely from the necessity of His own nature. Secondly, the will is not a faculty. *Voluntas* is only a general name for the sum of particular volitions, as the mind is the sum of particular ideas. Thirdly, *voluntas* is merely a judgment, not a desire. When I see a triangle and affirm that its angles are equal to two right angles, this affirmation is a *voluntas*. How far this identification, so strange to modern eyes, is absolute may be doubted. It has been well pointed out that the psychological classification of mind into will, feeling, and cognition was not known to Spinoza;⁶ and possibly, as Pollock suggests,⁷ Spinoza simply means to assert that the will is active as the understanding is active. In any case he excludes choice from will, and forbids us to pass what are ordinarily known as 'moral judgments' on any action whatever. Virtue thus reduces to an acquiescence in our fate. When we see that what happens both within us and without us is as 'necessary' as the properties of a triangle are necessary when once its essence is given, we shall endure our lot with even mind.⁸

Hence we do not desire a thing because it is good; we call it good because we desire it. Whatever satisfies the *conatus* in any degree is so far 'good'; whatever hinders it is so far 'bad.' The same series of deeds may be good or bad in different circumstances. Externally, the matricide of Orestes does not differ from that of Nero.⁹

Voluntas, or *appetitus*, being a judgment, may be either adequate or inadequate. From the former arise activities of the mind, from the latter passivities.¹⁰ Whatever increases or diminishes the activity in the body, the 'idea' thereof increases or diminishes the power of thought in the mind.¹¹ Thus the mind can undergo change, and pass, like the body, to a greater or less 'perfection.' These states are called respectively pleasure (*laetitia*) and pain (*tristitia*). The first active exercise of the *conatus* appears when the pleasure or pain has given rise to desire (conscious appetite).¹² Desire is mild or intense according to the intensity of the pleasure or pain in which it originates, and has as many varieties as there are varieties of that pleasure or pain. It is in fact 'the being of a man himself, so far as we conceive it as determined to a particular action by any given affection of it.'¹³ Pleasure has one advantage over pain in that it increases the vitality to which it owes its origin;¹⁴ hence desire arising from pleasure is, *ceteris paribus*, greater than that arising from pain. Desire, pleasure, and pain are to Spinoza the only primary emotions.

To develop his theory of the emotions, Spinoza relies largely upon association of ideas, which had already been applied to the same end, but with far less skill, by Hobbes. The result is universally regarded as Spinoza's masterpiece. His very success, however, makes it unnecessary for us to

follow him in detail. A slight reference will be sufficient. Feelings are twofold: if based on inadequate ideas, they are passive; if on adequate, active. Subjection to the former is human bondage; subjection to the latter is only another word for the highest freedom.

Since we naturally endeavour to preserve our existence, we naturally endeavour to banish those images that lower our vitality, and to maintain those that heighten it. Hence arise the passive emotions of love (or liking) and hate (or dislike). By the law of association we soon come to like or dislike things in themselves indifferent to us;¹ and anything may, accidentally, be the cause of such an emotion.² Thus we explain avarice, regret, jealousy, and rivalry.³ These emotions often, as in avarice, attain a power totally out of proportion to the pleasure or pain from which they spring.

By the very fact that we conceive a thing like ourselves to be affected with any emotion, we are ourselves subjected to a like emotion.⁴ From this principle, applied in the fashion of Adam Smith, Spinoza works in order to trace many of our *affectus* to sympathy. It is this *imitatio affectuum* which, referred to pain, is called commiseration, and, referred to desire, is called emulation.⁵ Thus we explain repentance, ambition, envy, or benevolence.

Contingency and freedom being illusions, we ought neither to regret our own (so-called) bad actions, nor to plume ourselves on our 'good' ones, nor to be angry with a man who injures us. 'Tout comprendre, c'est tout pardonner'; or, rather, to understand is to see that the very notions of approval and pardon are irrelevant. It is from such inadequate ideas that arise anger, remorse, self-approval, revenge.⁶

Such passive emotions, then, subjection to which is bondage, are defined generally as follows: 'Emotion which is called a passion of the soul is a confused idea whereby the mind affirms a greater or less force of existence in its body or some part thereof than it had before, on the occurrence of which the mind is determined to think of one thing more than of another.'⁷

Such emotions of course differ in different men,⁸ or even in the same man. Spinoza would probably have allowed that the quality of a pleasure is to be taken into account as well as its quantity.⁹

We pass on now to active emotions, arising from adequate ideas. Some of these spring from *ratio*, others from *scientia intuitiva*. Where the mind conceives itself as active, it feels pleasure; hence the mind feels pleasure when it forms adequate ideas.¹⁰ Desire also may arise from such ideas; but pain, by the very nature of the case, is excluded.¹¹ Spinoza has thus arrived at last at that *virtus* of the mind, *fortitudo*, which, as we saw, was the practical end he set before himself at the very commencement of his philosophy. *Fortitudo*, or strength of character, is merely the essence of the mind in its self-sustaining endeavour. The utmost that Spinoza can promise (on the other hand, the utmost that is worth having) is knowledge—knowledge more perfect in proportion to the greatness of the object that it covers. Fortitude is the courage to know—to get clear of the passive emotions, and to act from the *conatus* alone. As centred in ourselves, it is *animositas*, or valour; as directed towards others, it is *generositas*, or nobility. By the former is meant the desire whereby we strive to preserve our being in accordance with the dictates of reason; by the latter

the desire whereby we endeavour, solely under the dictates of reason, to aid others and be their friends. Temperance and presence of mind are varieties of the one; courtesy and mercy, of the other. A man of fortitude will never allow his desires to be excessive; he will not be disturbed even by the fear of death, for he will think of death less than of anything. All this is due to his possession of adequate knowledge.

Nor is even fortitude all that is possible to us. There are yet higher emotions, springing not from reason, but from intuition. These Spinoza does not yet consider, pausing to touch on our subjugation to the emotions.¹

7. **Human bondage, or the power of the emotions.**—Though 'good' and 'bad' are relative terms, it is perhaps as well to retain them, provided we keep in mind the sense in which they are used, and Spinoza lays it down that he will use 'good' as the synonym of 'perfect.'² 'There is no individual thing in nature than which there is not a stronger thing that can destroy it.'³ Hence the force whereby a man persists in existing is infinitely (i.e. indefinitely) surpassed by the power of external causes.⁴ Passion, therefore, being due to these external causes, has enormous force, and can at times overcome all the rest of a man's activities.⁵ A passion can be destroyed only by a contrary passion.⁶ Reason may easily be overcome by emotion: knowledge can control the emotions only so far as it is itself one of them.⁷ Desires may be controlled by other desires; and desire of future good is more easily controlled than desire of what is now agreeable.⁸ Desire arising from pleasure we have seen to be stronger than that arising from pain.⁹ Hence we might almost echo the despairing cry of the poet, 'Video meliora proboque: deteriora sequor'; but, says Spinoza, 'I have not written this to draw the conclusion that ignorance is better than knowledge, or that a wise man is no better than a fool. What reason can do in controlling the emotions I shall show later. At present I shall say that reason demands that every man should love himself, and should desire everything which really brings him to greater perfection.'¹⁰

Virtue is based on the self-maintaining impulse. Every man necessarily desires or shrinks from that which he deems to be 'good' or 'bad'—i.e. conducive to his self-conservation or the reverse. The more he endeavours to preserve his own being, the more virtuous he is; and only external causes can prevent his so endeavouring. No virtue can be conceived apart from the *conatus sese conservandi*. A man is not virtuous if he acts from inadequate ideas; for, 'acting' thus, he is really 'passive' and swayed by external causes. Virtue, then,¹¹ is intellect. In accordance with reason, we can endeavour nothing except to understand. Of these assertions, so Socratic in sound, it is certain that the proof would hardly have satisfied Socrates.

The following propositions (29–37) are even harder to follow. Nothing that has not something in common with our nature can do us good or harm (29)—an obvious truism. Yet we are told next (30) that a thing cannot be bad for us through that which it has in common with our nature. In so far as it is in harmony with our nature, it is necessarily good (31). The purpose of these three truisms is to lead up to positions of value in Spinoza's political system—viz. that men necessarily agree if they live in obedience to reason, and that apart from reason no truly social life is possible. A rational life is unfortunately rare; and yet, as Aristotle said, man cannot help being social. Duly to live the rational life, a complex organism is necessary. In Spinoza's Cartesian phraseology, 'Whatever disposes the human body so as to render it capable of being affected in a

greater number of ways, or of affecting external bodies in a great number of ways, is useful to man,'¹ provided only this increased complexity is not purchased at the expense of stability of equilibrium. Such instability is always bad, even though it does not amount to what is usually called death.

To social life and a complex organism Spinoza proceeds to add² reasonable pleasure. Pleasure *per se* is good; pain *per se* is bad. Spinoza is no ascetic. Cheerfulness cannot be excessive, but is always good and an aid to perfection. It is the wise man's part to enjoy what comes in his way as much as possible—not, of course, to satiety, for that would not be enjoying it.

Hence we see what reason demands of man. He who lives by reason endeavours to render love for hatred, kindness for contempt.

'He who strives to conquer hatred with love, fights his battle in joy and confidence; he withstands many as easily as one, and has little need of fortune's aid. Those whom he vanquishes yield joyfully, not through failure but through increase in their powers.' . . . 'He who rightly realizes that all things follow from the necessity of the divine nature, will not find anything worthy of hatred, derision, or contempt; nor will he bestow pity on anything. He who is easily touched with compassion often does something which he afterwards regrets.' Yet 'he who is moved to help others neither by reason nor by compassion seems hardly a man at all.'³

Self-approval may arise from reason, and is indeed the highest object we can hope for. Humility, on the other hand, is no virtue, but a passion. Repentance, likewise, is no virtue; he who repents only makes himself miserable twice over—first by doing the bad action, and secondly by fretting about it. True, as things are, both humility and repentance do on the whole more good than harm; and, as 'sin' is inevitable, it is better to sin in the direction of repentance than in the opposite. It was natural, then, for the prophets, in an irrational age, to recommend so strenuously humility and repentance. Those who live under these emotions are not far from the kingdom of reason. But within that kingdom there is a better way.

Pride and dejection are both signs of weakness; but the latter, as a pain, is more easily cured. Dejection, says Spinoza very acutely, is indeed very near of kin to pride.

To all actions to which we are determined by emotion, we can be determined without emotion by reason.⁴ Desire that springs from reason cannot be excessive; and the rational mind is affected equally whether the idea be of a thing future, past, or present;⁵ hence, if our ideas were only adequate, we should desire a future thing as keenly as though it were present. But, having no adequate knowledge, we are reduced to reliance on the imagination, which prefers present things to future. We are often led by fear, and do good to escape evil, which is contrary to reason, and the lowest of superstitions. Under a reasonable desire we seek good directly and only accidentally shun evil.

The knowledge of evil is inadequate.⁶ Spinoza's proof of this statement has been much criticized, and seems indeed to rest on a confusion between knowledge of a negation and a negation of knowledge. He is more correct when⁷ he asserts that, as good and evil are relative terms, so a knowledge of either is incomplete without a knowledge of the other. If we possessed adequate knowledge, we should know neither. Precisely similarly,⁸ Spinoza gets rid of sin by treating it as a mere negation.

As usual, the practical is not forgotten. Under the guidance of reason we must pursue the greater of two goods and the lesser of two evils; and the greater good in the future rather than the lesser in the present.⁹ A reasonable man, living among the ignorant, will avoid receiving favours from them—but only as far as he can. Only 'free' men, however, are really 'grateful' to one another.¹⁰ But a man is more truly 'free' in a society than in solitude; hence the reasonable man does not seek the fictitious freedom of a hermitage. In fact, he will acquiesce in things as they are, for, 'As far as we are intelligent we cannot desire anything save what is necessary, nor yield absolute acquiescence to anything save the true; hence the endeavour of the better part of ourselves is in harmony with the order of nature as a whole.'¹¹

8. **Human freedom, or the power of the understanding.**—We now reach the most attractive, but at the same time the most enigmatical, part of the *Ethics*. Leaving the indicative mood, Spinoza passes on to the imperative; and, as we shall see, he ventures on daring flights.

'I shall treat,' he says, 'of the power of reason, showing how far the reason can control the emotions, and what is the nature of mental freedom or blessedness; we shall then be able to see how much more powerful the wise man is than the ignorant.'¹²

He leaves to logic the discussion of the means of perfecting the mind, and to medicine that of the means of perfectly adapting the body to its functions. The power of the mind over the emotions is not direct; it is defined by the understanding

solely. In other words, the passions can be subdued only by knowing them.¹

Then follows what has been called a 'great promise.' There is² no modification of the body whereof we cannot form some clear and distinct conception—i.e. we can reduce it to its proper place in the order of nature, and see it in its relation to the God of whom it is part. We have long learnt, by painful experience, that no scientific discovery is absolutely true. But to Spinoza, as to Bacon, it may well have seemed that a few generalizations, and the collection of a great but limited number of facts, would lay open the map of a known universe. Yet even Spinoza is doubtful, for he adds a scholium to the effect that every one has the power of knowing his emotions, if not absolutely, at least in part. The practical deduction is that we should try to form this clear and distinct notion of our passions. Thus we shall know their causes, and see them as necessary. Forthwith the inadequate idea, which is the emotion, passes into adequacy; the emotion fades; and in proportion as we understand things as necessary, in that proportion has the mind power over the emotions. No one, e.g., pities a baby because it cannot walk. But, if most people were born full grown, and only here or there did babies appear, every one would pity babies, because infancy would not seem to be a necessary state.³

The strength of an emotion is in proportion to the number of simultaneous causes by which it is aroused.⁴ So long as we are not assailed by emotions contrary to our nature, we have the power of arranging modifications of our body according to the intellectual order;⁵ and here, practical as usual, Spinoza adds some directions for conduct so obvious and simple that they have often been ridiculed as childish. It is only, however, to plunge us almost at once into one of his most enigmatical utterances. 'The mind can bring it about that all bodily images of things may be referred to the idea of God;⁶ and this clear and distinct understanding (which to us seems far more unattainable than it did to Spinoza) is henceforth to be known as the 'love of God.'⁷ Precisely as rationality suddenly appeared in the emotional garb of *fortitudo*, so, equally suddenly, intuitive knowledge has donned the aspect of love. Some would explain this metamorphosis as due to a desire to accommodate philosophy to theology. Others assume that Spinoza still retained a rag of Jewish mysticism; others again that, like other philosophers, he had an esoteric and an exoteric speech—the one for the initiated, the other for the profane. Whatever the explanation, it is such passages as these that have given Spinoza his hold on men like Coleridge and Schleiermacher, and extorted the cry of Novalis that here was a 'God-intoxicated man.' In reality this 'love' is less emotional than it looks, amounting at most to an *acquiescentia* in our lot. God is without passions, nor is He affected by pleasure or pain; 'he who loves God cannot desire that God should love him in return.'⁸ No one can hate God—a clear proof that this 'love of God' is not the opposite of hate, but something of a different order altogether. This love is fostered 'in proportion as we conceive a greater number of men to be bound to God by the same bond of love.'⁹ In plain prose, a knowledge of the laws of Nature leads us to a sober acceptance of what befalls us, and to a readiness to do without what we cannot attain; and the discoveries of others, as we assimilate them, aid in the same soothing process.

To sum up: the mind's power over its emotions

consists (1) in its knowledge of them; (2) in separating them from the thought of an indistinctly apprehended external cause; (3) in the fact that, with respect to time, the emotions referred to things we distinctly understand surpass those referred to things we conceive confusedly; (4) in the number of the causes which foster the affections having regard to God or to the common properties of things; (5) in the ability of the mind to rearrange and associate its emotions one with another.

We have now reached the most tantalizing portion of Spinoza's work—a portion, indeed, which there is some reason to believe that he wished to mark off from the rest as not absolutely necessary to his theory, however fondly he might himself dwell upon it. At any rate, he says¹ that, even if the whole series of propositions through which we are now about to pass should be rejected, the virtue of *fortitudo* is none the less binding on us.²

So far there has been not the slightest trace of the meaning 'immortality' in Spinoza's use of the word 'eternal.' Eternal truth is simply necessary truth. Nor is there any reason to suppose that the word suddenly changes its meaning. When we read that something eternal remains of the mind after death,³ there is nothing in the words to imply immortality. If, like Camerer, we hold such a view, we must defend it on other grounds. It is certain that Spinoza once maintained the actual immortality of the soul.⁴ True, God, who made the soul, can destroy it; but it is tolerably sure that He never will. In the *de Deo* the position is more doubtful: some, with Sigwart, see in it still an assertion of immortality; to Martineau and others the opposite seems the case. 'If united with the body only, the soul must perish: if with something else that is unchangeable and abiding, then it cannot but be unchangeable and abiding also.'⁵

Adequate knowledge, then, is the only escape from death; even if it be a personal escape, it is open only to the philosopher. So far the *de Deo*; in the *Ethics* the word 'immortal' is dropped. But even from the *de Deo* we learn that (1) the presumed deathlessness of the soul must not interfere with the rigid parallelism of soul and body; (2) the deathlessness is a life to be enjoyed not hereafter, but here and now; (3) it is not open to all, but (in the strict sense) only to the possessor of adequate ideas; (4) the way to attain more of it is to increase our stock of such ideas.

Now the substitution of 'eternal' for 'immortal' would seem to imply the elimination of all idea of time from the conception of the mind.⁶ But, while duration is no part of the definition of eternity, yet eternity must entail some kind of endless duration. Thus in *Eth.* v. 20, schol., the word 'duration' is applied to the mind's existence apart from the body. The arguments of Martineau and others against this are due to confounding duration with time (a confusion, indeed, from which Spinoza himself is not free).⁷ While persistence is not necessity, that which does not persist cannot be necessary; and thus in *Ep.* 36 lack of duration is marked as an imperfection in extended things.

Again, nothing is eternal in its own right but God Himself. The essence of things is eternal, but not their existence.⁸ The mind, then, as being produced by God, has no necessary existence; the existence of mind as such begins with that of the corresponding body.

⁸ *Ib.* v. 14.

⁹ *Ib.* v. 20.

We are now ready to deal with propositions 21 to 41 of pt. v. In spite of the arguments of Camerer,¹ conscious personal immortality is not implied in them; v. 21 shows that imagination and memory expire with the body; v. 34 that personal distinctions between man and man vanish at death; v. 22, an exceedingly obscure proposition, asserts that 'in God there is necessarily an idea, expressing under the category of eternity the essence of this or that human body'—i.e. that the human mind, considered as a necessary element in the thought-side of the universe, is so far eternal. But v. 23 adds more: it asserts duration, in some sense, of this eternal part of the mind. 'The human mind cannot be absolutely destroyed with the body, but something of it remains that is eternal.' Yet even this is not enough; v. 22 applies to the body as much as to the mind. How then does the eternity of the latter surpass that of the former? What is this *aliquid æternum* that survives? To the first question v. 23, schol., seems to supply the answer, viz. that the mind alone can know and enjoy its own deathlessness. To the second question Spinoza gives no explicit reply; but we may perhaps deduce it; v. 24, 25 show that the *aliquid* consists in knowledge of the third kind; but v. 27, asserting that this knowledge leads to *acquiescentia*, manifests also the essentially emotional character of this remnant. It is in fact not only intellectual, but an *amor*. Yet in v. 29 we learn that it arises from contemplating the essence of the body under the form of eternity—i.e. from using our own body as the type of extension, and then passing to adequate knowledge, first of extension generally, and thence of the mind also. An adequate knowledge of the body gives us, ultimately, a knowledge of God.² And this knowledge of God leads not only to acquiescence, but to the love of God—a love eternal,³ and totally different from all other passions; for these disappear when the body dies.⁴

Thus this intellectual love of God endures after the death of the body. But it is no personal survival; for personality, by which memory is implied, perishes with the body.⁵ But in proportion as our body is capable of more activities, in that proportion is our mind eternal,⁶ for our mind will have more means of attaining knowledge, and thus will have more chance of attaining to the intellectual love of God. It is only a natural extension of this to assert that God loves Himself with an infinite intellectual love;⁷ i.e. that the infinite Mind (made up into unity from all the finite minds) must have a complete knowledge of the universe in both its attributes, and must, with an infinite acquiescence, 'see that it is good.' This is not, as Martineau thinks, a mere tautology. The intellectual love of the mind towards God is part of the infinite love wherewith God loves Himself;⁸ but the completeness of knowledge is to be attained only by the union in one of the infinite number of souls that people the universe. It is not, of course, the *Natura naturans* that loves itself; but neither is it the individual mind simply; it is that mind absorbed into the unity of infinite minds. In other words, only the adequate formulation of truth, itself possible only to the united mind of man, can persist unchanged.

To sum up in the words of Taylor:

'Those personal memories and affections which derive all their piquancy and poignancy from the personal reference, perish for ever, as such, at death. They depend for their very existence on just those differences which make the existence of one man separate from that of another; and it is for Spinoza only so far as men are indistinguishably one that they are immortal.'⁹

Similarly with honest but defective scientific thought: the ideas of Ptolemy survive indeed, but metamorphosed beyond recognition. And all men are subject to this mortality; for¹ no man can make himself a mere home of adequate ideas. All men are subject to passion, and therefore mortal.² 'But an adequate idea, once thought, takes its place as a permanent addition to knowledge.'

To Spinoza, then, truth once discovered is absolute and lasting truth. 'Blessedness'—i.e. the intellectual acquiescence which springs from philosophic knowledge—is not the reward of virtue, but virtue itself. The pursuit of philosophy will, indeed, bring us nothing outside of itself; but it will bring us enough.

'The wise man is scarcely at all disturbed in spirit, but, being conscious of himself, and of God, and of things, always possesses true acquiescence. If the way is hard, yet it may be discovered. Needs must it be hard, since it is so seldom found. But all things excellent are as difficult as they are rare.'³

9. Attitude to religion and to theology.—Spinoza's enigmatical language has led to divergence of interpretation. He has been denounced as an atheist; on the other hand, he narrowly escaped being the eponymus of a Church. Pontiaan van Hattem, seizing upon some of his doctrines, and blending them with those of Christianity, produced a system which was in 1714 anathematized by the Dutch authorities. Another minister, Van Leeuhof, in a book called *Heaven and Earth*, endeavoured similarly to adapt Spinozism to orthodoxy. Herder, Schlegel, Schleiermacher, and Coleridge (the last by the most desperate methods of exegesis) also tried to enlist Spinoza on the side of ordinary theism. Even Goethe upheld this view against Jacobi: 'So möchte ich ihn Theissimum und Christianissimum nennen und preisen.'⁴ Hegel, again, declared that he might rather be accused of acosmism than of atheism. By others he has been dubbed pantheist in all the meanings of that much-enduring word.

It is plain, then, that we must turn from the interpreters to Spinoza himself; and we believe that to those who do so, whatever the name they choose to describe him, the main lines of his thought will become clear.

God has neither intellect nor will.⁵ God is 'free'—i.e., He acts from the necessity of His own nature; but He has not the choice to make things other than they are. To deny this is really to deny God's omnipotence; it would imply that He can conceive things that He does not make. Things must have happened as they have happened;⁶ to assert the contrary is to deny the perfection of God. Some would argue that there is no perfection or imperfection in things themselves, but that the perfection or imperfection is due to the will of God. But this would imply that God, who necessarily understands what He wills, could will that He should understand things otherwise than He does understand them.

God does not act to an end; nor is He a thinking thing in the sense of a self-conscious being. Intellect belongs only to *Natura naturata*; and even in *Natura naturata* the larger proportion of 'thinking things' do not really think. They are 'animate,' but not self-conscious. To Spinoza⁷ thought was conceivable apart from ideas; hence, when he asserts⁸ that there is in God an idea of His essence (a passage relied on by Busolt and others to prove the personality of God), we are not to assume more than we do when we assign an 'idea' to a stone. In *Eth.* ii. 11, cor., we are plainly told as much. 'When we say that God has an idea, not as merely constituting the human

mind, but as having along with the human mind also the idea of another thing, this is to say that the *human mind* perceives the thing inadequately.' Nothing is here referred to but *our* mind; and even when, as in v. 40, schol., we are told that finite thoughts together form the infinite intellect of God, it is in a sense we that supply the unifying principle.

All attempts, then, to save any remnant of personality to the Spinozian God are vain. There is no room even for such a 'teleology of the unconscious' as that afterwards developed by Schopenhauer (*q.v.*). Final causes are human figments.¹ Men persuade themselves that everything is created for their sake; they thus tend to consider what is useful to them as 'good,' what hinders them as 'bad.' Hence they are puzzled by seeing so many 'imperfections' in Nature, as if what does not suit them were imperfect. If we ask why God did not create all men so as to follow reason, Spinoza answers that the laws of His nature are so vast as to suffice for the production of every degree of perfection. This is not what even Goethe would call 'Christianissimum.'

Yet the whole argument of the *Tractatus Theologico-Politicus* goes to show that, whatever may do for philosophers, ordinary men need a religion of some sort; and we shall see later that Spinoza thought it desirable that the State should fix the religion for its subjects. No man is the worse for holding a practical rule of life, or for connecting it with a dogmatic system which satisfies his own mind, provided he does not interfere with others. 'All men can obey; there are few that can acquire a virtuous disposition by the guidance of reason'; hence the simple following of the Scriptures is sufficient for the vast majority of mankind.² 'Faith does not demand that doctrines should be true so much as that they should be pious.' Thus between faith and philosophy there is no connexion: the one looks for truth, the other for obedience. Faith therefore allows the greatest latitude in philosophic speculation, while it condemns those who teach opinions tending to obstinacy, hatred, and anger. It is indeed astonishing how far Spinoza, in the *Tractatus*, often carries his accommodation of philosophy to religion. God, *e.g.*, is sovereignly just and merciful, the exemplar of the true life, our equitable Judge. He does not act under compulsion, but by His absolute fiat and grace. He forgives the sins of those who repent.³ It is needless to point out that this is not the language that Spinoza uses to the initiated.

Nevertheless the converse process was necessary; and the religion of the time required to be, to some extent, re-stated in philosophic language. While Spinoza wished the ordinary man to tolerate the philosopher, he also wished so to read the beliefs of the ordinary man as to make them not repugnant to the sage. It is here that, in the opinion of many, his chief glory lies; but he has suffered the usual fate of the pioneer. His results have been made the ladder for subsequent climbers, and have been unceremoniously kicked down when used.

Even he had his predecessors; but his work in the domain of Biblical criticism was amazingly original. He saw that the Bible is not one book, but a literature, produced at widely different dates, by men of widely different characters, and under the influence of widely different degrees of inspiration. On the other hand, he saw many miracles narrated in the Scriptures which the very slightest skill in exegesis would reduce to natural events; for it was his principle—at least ostensibly—that the Scriptures can teach nothing repugnant

to our understanding. 'Truth,' he says, 'cannot be at variance with truth, or Scripture teach nonsense. Were we really to find in it what contradicts natural light, we should reject it as freely as we do the Koran or the Talmud. But'—and here there is surely some irony—'far be it from us to imagine that in the sacred writings there can be found any thing repugnant to the light of nature!'⁴

From this principle flow two maxims. The Bible must agree with science. If they seem to disagree, either we must have interpreted the Bible wrongly or we must apply criticism to discover what the Bible really is—whether it claims inerrancy, whether particular passages are genuine, whether the author is confining himself to his proper sphere. Both these weapons Spinoza uses freely.

Thus prophecy⁵ is an ordinary phenomenon. It is only the Jewish habit of omitting to take account of secondary causes that deludes us into imagining that the prophets derived their revelations directly from God. Those revelations were real when external to the mind of the prophet, imaginary when he was in a state likely to dispose him to fancy that he received them. The voice with which God revealed the law to Moses was real; that which called Samuel was imaginary. Similarly, the dreams in which God appeared to so many prophets seem to indicate imaginary colloquies. The prophets are fallible and self-contradictory.⁶ The style of the prophecy varies with the prophet.⁷ Ezekiel and Amos are less cultivated than Isaiah and Nahum. Even the visions vary in accordance with the character of the seer. Prophets are often ignorant: thus Joshua, or the man who wrote his history, fancied that the sun could stand still.

Similarly with other points. There is nothing special in the Jewish religion or history. The Hebrews had no monopoly in election, in prophecy, in oracles. Their long endurance as a nation is due largely to circumcision.

The masses are accustomed to call anything unusual a 'miracle,' imagining God to be generally asleep, and to wake in order to perform extraordinary deeds.⁸ As a matter of fact Nature is immutable, and God's character is far better shown in ordinary events than in 'miracles.' By the 'will of God' Scripture means nothing but this immutable order; and many a so-called miracle is easily seen to be quite natural—*e.g.*, the call of Saul, the 'creation' of the rainbow, the raising of the Shunammite's son. Every event truly described in Scripture necessarily happened by immutable law. Many, however, are not related truly, but symbolically, fancifully, or in Oriental fashion. Such are the ascent of Elijah, the hardening of Pharaoh's heart, the cleaving of the rock in the desert. Scripture itself asserts unchanging law: 'Whatsoever God doeth, it shall be for ever.'⁹ The Bible, it is true, being written in a dead language and in an Oriental style, is a specially difficult book; but it must nevertheless be interpreted by the same rules as apply to any other book.

Heresy being so dangerous, even Ben Ezra had been obliged to veil his meaning in a cloud of obscure phrases. Ben Ezra is the only predecessor to whom Spinoza acknowledges a debt; but he refers to Maimonides, and may have read the *Systema Theologicum* of La Peyrère (1655). Ben Ezra had already shown that Moses could not have written the Pentateuch; but Spinoza went farther, and pointed out that the book was based on earlier documents, and bears traces of an editorial hand. And that hand can be traced elsewhere, down even to 2 Kings. This compiler¹⁰ may be presumed, in default of certain evidence, to have been Ezra. Whoever he was, some cause prevented him from giving his work complete consistency.

On the rest of the OT Spinoza is less full.¹¹ The books of Chronicles are of very late date, and of such low authority that we may well wonder how they got into a canon from which Wisdom was excluded. The Psalms and Proverbs were arranged about the time of the Second Temple. Jeremiah is a confused compilation, Ezekiel a fragment. It is remarkable that Spinoza does not seem to have detected the double authorship of Isaiah; but he saw much disorder in the prophecies as we have them. Job is possibly a translation from a Gentile poem; for 'the Satan' is not unlike the Greek Momus. Daniel is partly genuine, partly compiled from Chaldean sources about the time of the Maccabees. Whoever the authors, there are many errors in the books. Those who try to reconcile contradictions are undertaking a futile task—'a pretty piety, forsooth, which accommodates the

clear passages to the obscure, the sound to the corrupt.' As to the authority of the canon of Scripture, what is it but that of the council of experts that made it? A fresh council might give a different decision.

Spinoza declines the task of applying criticism to the NT. He has not, he says—perhaps with a touch of irony—sufficient knowledge of Greek. He gives us, however,¹ some indications of his views. The apostles, like the prophets, told what they saw, and needed no supernatural gifts for what they did. Their epistles and sermons—those of Paul especially—reveal men of exceptional, but by no means miraculous, powers. Towards Christ the attitude of Spinoza is very remarkable.

'God can communicate immediately with man; still, a man who can by pure intuition comprehend ideas neither contained in nor deducible from the foundations of our natural knowledge must possess a mind far superior to those of his fellow-men: nor do I believe that any have been so endowed save Christ. To him the ordinances of God were revealed directly, without words or visions. The voice of Christ, like the voice which Moses heard, may be called the voice of God; and it may be said that the wisdom of God took upon itself in Christ human nature, and that he is the way of salvation.'²

To Christ God 'gave revelations unaccommodated to Christ's opinions,'³ so that Christ's knowledge was adequate, and comprehended only *notiones communes et veras*. Yet the orthodox ideas of Christ were to Spinoza not only false but unintelligible. 'The eternal wisdom of God is shown in all things, but chiefly in the mind of man, and most of all in Christ. . . . But as for the proposition enounced by some churches, that God took on him the nature of man, it seems to me as if one should tell me that a triangle had assumed the nature of a square.'⁴

On the resurrection of Christ Spinoza's views are similar to those of some modern thinkers. He takes the death and burial literally, but the resurrection allegorically. 'I admit that the Evangelists believed it literally; but they might well be in error without prejudice to the Gospel doctrine. Paul, to whom also Christ appeared later, asserts that he knows Christ not after the flesh but after the spirit.'⁵

If, then, Spinoza is to be claimed as 'Theissimum et Christianissimum,' it must be on other grounds than his theological and philosophical views as recorded by himself; and, while his life was such that Christians may well own him as a brother, his belief was outside the most comprehensive Christian symbol.

10. Political philosophy.—Though it is likely that to Spinoza political speculation was more congenial than metaphysical, we need not examine his political writings at any length. In the first place, they can be understood with tolerable ease by the ordinary reader; in the second, they have exerted nothing like the same influence as his other works—partly, perhaps, because they were left unfinished. A brief summary, however, is desirable.

As might be expected, he treats men as they are, and not as philosophers or preachers would like them to be. Such writers, he says, have given us satires rather than systems of ethics, and have never produced political theories useful out of Utopia. It has been left for statesmen, with all their faults, to write serviceably on politics. Men are subject to passions; they pity the ill-off and envy the well-off. Those who fancy that men as a whole will follow reason are dreamers. 'And so I have laboured not to lament, mock, or execrate human actions, but to understand them; and to look on passions not as vices of human nature, but as properties as native to it as heat and cold to the atmosphere.'⁶

Looking at facts, then, we find all men living in some kind of social order. Men have already tried all possible societies; all that remains for philosophy is to decide on the best ways of improving known types.¹

There is no such thing as *jus naturæ*. Right is only another word for power. Every man has as much natural right as Nature allows him power. Man does, and can do, nothing not in accordance with the laws of Nature. Even in 'breaking' them we necessarily obey them; and the reasonable man is no more acting according to right of Nature than the fool. But men soon find that a right which belongs to everybody defeats itself. Hence arise commonwealths. Two men, though each has yielded up some of his power to the other, have more power (*i.e.* 'right') than one. One man may secure the dependence of another either by persuading his mind or by coercing his body;² and the same may be done by a combination of men. In a combination the power is proportioned to numbers; and this right or power is called 'dominion.' It is dominion that determines right and wrong, justice and injustice; for in 'Nature' everything belongs to anybody who can get it.

Under any dominion the State is 'civil'; the body under dominion is a 'commonwealth,' and the general business is 'affairs of State.' Whether the supreme authority be a monarch, an aristocracy, or a democracy, it has simple natural right, limited by the power of the multitude considered as one. Obviously, therefore, each single citizen's 'right' is less in proportion as the commonwealth exceeds him in power. Whatever it decrees, he must do; for, even if he knows it to be evil, it is a lesser evil than resistance. But³ plainly those things to which no one can be induced by rewards or threats do not fall within the rights of the commonwealth. Nor are things within those rights which are abhorrent to the majority. Thus the external shows of religion are within, the inner emotions without, the purview of the State. One state is to another state as one man to another man; save only that a state can defend itself more easily than a man can defend himself. Two states are naturally enemies; and unfortunately one can make war, while it takes two to make peace. Two thus agreeing are called contracting powers; but contracts are binding only so long as the circumstances under which they were made remain unchanged. Every state can break its contract when its safety demands such action.⁴ Spinoza sees the apparent immorality of this doctrine, and devotes a few lines to its defence.

The functions of the supreme authority⁵ are to create 'rights' within the dominion, to make laws, to declare war and peace, to appoint executive officers, and the like. In so acting it may do foolishly, but it cannot (strictly) do 'wrong'; for it is itself the fountain of law. Civil jurisprudence depends on the mere will of the commonwealth, which is not bound to please any but itself.

Contracts by which the multitude transfers its right to one council or one man should without doubt be broken when general expediency demands. But to decide when it is thus expedient is within the right of him only who holds dominion. Nevertheless, if the breaking of them weakens the hold of the ruler upon the ruled, by that very fact the commonwealth is dissolved; civil law ceases, and war begins.⁶ The sanction that constrains the ruler to keep the laws is simply this, that beyond a certain point he cannot go without destroying his position. All despotism is tempered by potential rebellion. It is futile to inveigh against the people for rebelling; people never rebel without a

cause. The end of all government is security.¹ Seditions and contempt of law are due not so much to the wickedness of the subjects as to the bad state of the dominion. For men are not born fit for citizenship; it is the business of the State to make them so. Men's passions are everywhere the same; if wickedness prevails more in one commonwealth than in another, it is because the one has not pursued the end of government so well as the other. Where licence is rare and virtue common, the rulers must receive the praise—as Hannibal is deservedly renowned because in his army there never arose a mutiny. Of course all this does not apply to a commonwealth that is held down by force or by the craft of a despot. Spinoza gives no counsel to such a despot; that has been done once for all by Machiavelli. Here Spinoza shows his acquaintance with the 'most ingenious' Florentine. 'If there is one writer,' says Duff, 'whom we may call Spinoza's master, it was Machiavelli';² and Goethe rightly declares that Spinozism is ultimately Machiavellism.

We next discuss in succession the three forms of government—monarchy,³ aristocracy,⁴ and democracy.

With a possible criticism of Hobbes, Spinoza asserts⁵ that a really absolute monarchy cannot exist. The monarch has to seek coadjutors; and the 'monarchy' is thus really an aristocracy, but a concealed one, and thus the worst of aristocracies. Certain checks are therefore desirable. A parliament should be appointed by the king, and chosen from the various families in the State; it should advise the king, but the ultimate responsibility should be his. Smaller bodies should be chosen to form the executive and the council of judges; the latter should serve for only a year and vote by ballot. The army should be composed exclusively of citizens, and be paid only in time of war; the generals should be changed every year, and the officers receive no pay except plunder. By these means Spinoza hoped to prevent the usurpations of Cromwells and Sforzas. Certain laws are to be so firmly fixed that not even the king can abolish them—as Ulysses could not break the rule that he had laid down when about to pass the sirens. Under a monarchy no churches ought to be built at the public expense; nor ought laws to be made about opinions. Let such as are allowed the public exercise of their religion build a church at their own cost.

Under an aristocracy the factions in the governing body will be weaker the more there are to whom dominion is given. Hence that body should be large—a hundred good men at least; and, to ensure that number of good men, the total number ought to be at least five thousand. Thus we shall have enough men to provide ability, and too many to allow of the tyranny of a clique. To such a body absolute power may be trusted; for they could never be guided by one mind except for (at least apparently) honourable ends.⁶ The polity most adapted to aristocracy is a confederation of cities,⁷ but the seat of federal government should not be in one of the united cities. Under an aristocracy the governed are not citizens, but subjects; hence the army should be paid, and promotion should be possible, that *esprit de corps* may be secured. Aristocracies, indeed, by their very origin betray the fact that such *esprit de corps* is often wanting; for they have usually risen out of democracies.⁸ Out of the council are selected syndics, men of some age, to watch and check the councillors. There shall also be chosen an execu-

tive senate, to inspect fortifications, pass laws, deal with other states, and so on. There should be an established religion, to which all patricians should conform, and State-provided churches. Freedom of worship is allowed, but only on condition that it 'goes softly.' Academies founded at the public expense are instituted to restrain men's natural abilities rather than to cultivate them. But in a free commonwealth arts and sciences will be best cultivated if every one that pleases is allowed to teach publicly, at his own risk.¹ The sanction of an aristocracy is the general perception that its destruction would be a great evil. Hence, if wise, it will take care to rule in accordance with the general desire, appealing to reason rather than to fear.

'A government which aims at nothing else than to guide men by fear will be rather free from defects than possessed of merit. Men are to be so guided that they may deem themselves not to be guided at all, but to live of their own free will.'² Hence vexatious and trifling restrictions should be avoided; sumptuary laws should never be imposed;³ and the common vices of peace are never to be forbidden directly, but by laying such foundations of dominion that the many may live—not wisely, for that is impossible, but under the guidance of passions useful to the commonwealth.⁴ An aristocracy thus founded will be, internally, indestructible. Its fall, if fall there be, will come from without.⁵

Spinoza's definition of democracy deserves notice. In aristocracies citizenship is granted by the choice of the supreme council; in democracies it is allowed by law.⁶ It might happen that the law gave this franchise to elder men only, or to first-born sons only, or to the wealthy only; it might be that the number of the enfranchised was far smaller in a democracy than in an aristocracy; but, as long as it is the law that fixes the franchise, a democracy it remains. It is obvious⁷ that such a definition has a wide scope.⁸ But Spinoza confines his attention to 'that in which all, without exception, who owe allegiance to the laws of the country only, and are independent and of respectable life, have the right of voting in the supreme council [he does not touch on representative government] and of filling the offices of the dominion.' He thus excludes aliens, slaves, and women. On the exclusion of women he has an interesting paragraph, with which the work breaks off unfinished.

'It may be asked whether women are under men's authority by nature or by convention. If we consult experience, we shall find the cause to be their weakness. There has never been a case of men and women reigning together; but, wherever men exist, men rule and women are ruled. If by nature women were equal to men, surely among nations so many and so different some would be found where both sexes rule alike, and others where men are ruled by women. And since this is not the case, one may assert that women have not by nature equal right with men.'

Elsewhere⁹ Spinoza touches briefly on democracy, and seems to prefer it to other forms of government. But, under whatever form our lot is cast, our duty is to obey the commands of the dominion, and to recognize no right save that which it sanctions.

LITERATURE.—The literature connected with Spinoza is enormous, and only a small selection can be given here. For further details the reader is referred to Pollock's first ed., to A. Van der Linde's *Benedictus Spinoza: Bibliographie* (The Hague, 1871), and to the British Museum Catalogue.

1. *LIFE*.—J. Colerus, *Leven van Spinoza*, Amsterdam, 1705, Fr. tr. (inaccurate), The Hague, 1706 (in Opera, ed. H. E. G. Paulus, 2 vols., Jena, 1802-03, and elsewhere); the Eng. tr. of the Fr. (London, 1706) is given in Pollock; Lucas, *La Vie de Spinoza* before 1683, reprinted, Amsterdam, 1719 (till recently Lucas was unknown, and this work was attributed to St. Glain and others; it is now established that Lucas is no pseudonym, and the work, once discredited, is now rehabilitated [Meisner]).

Camerer, *Die Lehre Spinozas*, Stuttgart, 1877 (excellent and closely reasoned, limited chiefly to the *Ethics*); I. Elbogen, *Tract. de Int. Em.*, Breslau, 1893; C. Sigwart, *Spinoza's neuerdeckter Tractat (the de Deo)*, Gotha, 1866; R. Avenarius, *Über die beiden ersten Phasen des spinozischen Pantheismus*, Leipzig, 1863; J. Caird, *Spinoza*, in Blackwood's Philosophical Classics, Edinburgh and London, 1888 (containing a brief account of Spinoza's predecessors; *Ethics* only); H. H. Joachim, *A Study of the Ethics of Spinoza*, Oxford, 1901 (difficult, but thorough and reliable); G. Busolt, *Die Grundzüge der Erkenntnistheorie und Metaphysik Spinozas*, Berlin, 1876 (on its special subject admirable); R. A. Duff, *Spinoza's Political and Ethical Philosophy*, Glasgow, 1903 (a standard work on the Politics).

Of slighter works may be mentioned: Matthew Arnold, in *Essays in Criticism*, London, 1865; J. A. Froude, in *Short Studies on Great Subjects*, 1st ser., do. 1873; E. Renan's Bicentenary Address, *Spinoza: Conférence tenue à La Haye, le 21 février 1877*, The Hague, 1877, and *Nouvelles Etudes d'histoire religieuse*, Paris, 1884; J. Iverach, *Descartes, Spinoza and the New Philosophy*, Edinburgh, 1904; T. H. Green, *Lectures on the Principles of Political Obligation*, London, 1895, p. 49 ff., and *Works*⁵, do. 1906, ii. 355 ff.; and, above all, the essay by A. E. Taylor in *Mind*, new ser., v. [1896] 243 ff. Those who wish to see a specimen of the early criticisms on Spinoza may find one in *The Living Temple* (London, 1675) of John Howe, the great Cromwellian preacher.

E. E. KELLETT.

SPIRIT (Holy), SPIRIT OF GOD.—The terms 'Spirit of God' and 'Holy Spirit' are common to several great speculative and religious systems. Zoroastrianism (*q.v.*) speaks of a Spenta Mainyu ('Holy Spirit'), which is variously represented: as a personified emanation of the Godhead, as a created being probably above the rank of angels, and even as identical with the Supreme Creator, Ahura Mazda. He possesses creative powers, ethical qualities, and teaching offices which closely resemble the Christian view.¹ The later Stoics spoke of a *spiritus sacer*=God, the *anima mundi*, who was conceived as a materialistic fiery breath, the intelligent permeating containing principle of the cosmos, resident in man and observant of his good and evil deeds.² In Greek mystery-religions we meet with 'Holy Spirit' (ἅγιος πνεῦμα, ἁγιον, ἁγιον), which comes from God into the initiate at the mysteries.³ The Hebrews appear to have first grasped the concept of the Spirit of God, which in the OT faintly, and in Talmudical literature more clearly, approaches hypostatization. In Muhammadanism the Holy Spirit, probably under Jewish influence, was identified with the angel Gabriel.⁴ Christianity, starting with the monotheistic doctrine of Judaism, included within its doctrine of God an inseparable distinction of agents—the Father, the Son, and the Holy Ghost—each possessing properties and characteristics which resemble, while they transcend, what is termed 'personality' in human beings.

The object of this article is to trace, in outline, the development of the doctrine of the Holy Spirit.

¹ Cf. *Yasna*, xxxi. 7, 9, 11, xxx. 8–5, xlv. 2, xxviii. 2, xlvii. 2, xxviii. 11, xlv. 7, and art. AMESHA SPENTAS, DUALISM (Iranian).

² Cf. Diog. Laert. vii. 134; Stobaeus, i. 322; Cicero, *de Nat. Deor.* i. 7; Seneca, *Ep. Mor.* xli.

³ Cf. R. Reitzenstein, *Die hellenistischen Mysterienreligionen*, Leipzig, 1910, p. 156 ff.

⁴ Cf. *Qur'ân*, ii. 81, 254; cf. *DI*, artt. 'Gabriel,' 'Holy Spirit.'

By way of introduction we shall examine the Hebrew notions of 'spirit' amidst which the OT view of the Spirit of God (Jahweh) took its rise; then we shall mark the development of that conception in Biblical (OT canonical and extra-canonical) and subsequent rabbinical literature (Talmudic and post-Talmudic); and, finally, after examining the Biblical (NT) contributions, we shall trace the formulation of the doctrine of the Holy Spirit's person and work in the thought and life of the Christian Church.

I. *INTRODUCTION: HEBREW*.—Our limits, in this section, are the canonical books (OT), in which the characteristic Hebrew notions of spirit find expression. Towards the close of the canon, and in the apocryphal literature more notably, the term 'spirit' is extended, probably under Babylonian and Persian influences, to include angels and demons.¹ This extension we here lay aside. The term *rûah* (רוּחַ), generally translated 'spirit' in English, comes from a Semitic root, *rûh*, which, in cognate languages, signifies 'to breathe,' 'to blow.' Kindred words in Heb. are *rêah*, 'scent,' 'odour,' and the verb (only in Hiph.) *rûah*, 'to smell,' 'to perceive odour.' With the verb the organs of breathing, the mouth and nostrils, are frequently mentioned. The primary signification of *rûah* appears to be 'air in motion, as wind or breath, and the general idea which is common to nearly all its usages is 'power in manifestation, or energy.' The various usages of *rûah* (which occurs 378 times) may be roughly classified under four heads: (1) physically, (2) physiologically, (3) psychically, and (4) 'supernaturally.'

(1) *Physically* (131 times).—In this aspect *rûah* is used of the air in motion, the wind in all its moods and phases, whether gentle or stormy, hot or cold. Then it serves to denote direction, the quarter from which the wind may blow (Gn 8¹, Ex 15¹⁰, Gn 3⁸, Jer 49²⁶). In later writings it acquires the figurative sense of 'vanity,' 'emptiness' (Is 41²⁹, Job 7⁷, Ec 1¹⁴).

(2) *Physiologically* (39 times).—This usage, which may be derived from the former by observation, denotes the breath in the bodies of men and animals. From the close connexion between the breath and the phenomena of life and energy, the *rûah* came to be considered as the vehicle of life and even as the life itself. In sickness, exhaustion, or swoon the breath and corresponding vitality were reduced, and it was said that the *rûah* had gone away; similarly, after food or under the stimulus of joy the *rûah* returned and man revived (Gn 45²⁷, 1 S 30¹², Jg 15¹⁹, 1 K 10⁵). When the *rûah* left the body entirely, death took place (Ps 104²⁹). The further induction that the *rûah* was the immaterial life principle does not seem to have been common before the Exile; in Ezk (cf. ch. 37) it becomes prominent, and thenceforth *rûah* is used, along with *n'shāmāh* and *nephesh*, to denote the breath-soul in man. In the earlier literature *n'shāmāh* is the usual term (Gn 2⁷) for the normal breathing, *rûah* being reserved for the more violent breathing which marks exertion or emotional excitement. In the passage just referred to we have the first statement of the notion that man's breath-soul is derived immediately from God by spiration;² not until after the Exile does *rûah* occur in that connexion (Is 42⁵, Zec 12¹, Job 27³, Ps 104³⁰), and then it is applied to animals as well (Gn 6¹⁷ 7¹⁵ [P]). Yet a distinction is drawn between man and other animate beings. Both are formed out of the dust of the ground, but he becomes a living being by the direct inbreathing of Elohim, and at death his *rûah* returns to God (Gn 27¹⁹, Ec 12⁷, Ps 31¹). Because man's *rûah* comes from God, it is the

¹ See art. DEMONS AND SPIRITS (Hebrew), vol. iv. p. 693 f.

² For Babylonian parallel cf. *EAT*⁵, p. 626.

object of His regard; He protects it and continues it in being, and so can be called 'the God of the spirits of all flesh' (Job 10¹² 12¹⁰, Nu 16²²). The Hebrew genius was not speculative, and the derivation of man's spirit from God probably expressed the popular opinion of animism, the wonderful power inherent in *rûah* indicating the presence of deity in man. But the ideas of divine immanence or of the divine breath physically extended into man, as Stoicism fancied, cannot be in the Hebrew thought; they belong to later philosophical speculation, the first traces of which become apparent only in the extra-canonical literature (e.g., Wisdom and Philo). Man's divine origin, however, lifts the Hebrew view above the Greek: he is no mere product of nature,¹ the dualism of Greek thought about man is avoided, and through the original connexion of man's *rûah* with God the way was left open for those approaches of God to man which are the glory of Hebrew religious experience.²

(3) *Psychically* (74 times).—As the breath is often the visible index of man's stronger emotions, the term *rûah* readily served to express his inner life in its emotional and mental aspects, and was used in parallelism along with the terms *nephesh* and *leb*. Anger, grief, and zeal were often exhibited with dilated nostrils and laboured breathing; hence we find *rûah* as well as nostril (*aph*) used as a synonym for anger, in both God and man (Mic 2⁷ RVm 'impatient,' Jg 8³, Job 4⁹). In post-Exilic literature the term *rûah* is extended to cover such emotions as sadness, trouble, bitterness, and longing, which are regarded as located 'in the *rûah*' (1 K 21⁸, Gn 41²³ 26³³ [P], Is 26⁹, Job 7¹¹, 1 S 15¹⁵). From Ezekiel's time onward the *rûah* was regarded as the organ of knowledge (parallel to *leb*, the usual term, Ezk 11⁵ 20³², 1 Ch 28¹², Ps 77⁹), and occasionally, though rarely, as the seat of volition (Ps 51¹², 14 [Heb.], Ex 35²¹ [P] 'a willing spirit'), and, lastly, of it are predicated such ethical qualities as 'new,' 'guileless,' 'broken,' 'haughty,' etc. (Ezk 11¹⁹, Ps 32² 51¹⁷, Is 57¹⁵, Pr 16¹⁸).

Rûah and nephesh.—At this point a word on the relation of these terms may fitly come in. It has been held that they express distinct substances or elements in man, which, along with *bâsar* ('flesh'), make up a trichotomy in human nature.³ A comparison of passages where the terms occur together does not sustain this view (cf. 1 S 11⁵, Is 26⁹, Job 3³⁰ 7¹¹). Both express the invisible immaterial element in man as contrasted with the flesh. *Rûah* and *nephesh* are related together as animating principle and animated result: the former denotes the vital energy, which lies more basally in human nature than *nephesh*. From the point of view of experience, *nephesh* is the subject, the ego, whilst *rûah* is less immediately under self-control, and is more moved from without. Hence it is that aspect of human nature more immediately in touch with the Divine Spirit. But it should be remembered that Hebrew thought does not work scientifically as it describes mental phenomena; it moves instinctively and intuitively, and deals with things, not abstractions. And, because *rûah* had a physical quality and connoted power and energy, it was used to denote the causative principle in all actions, whether bodily or mental.

The connotation of power with *rûah* explains its usage to denote the energy of the personality in particular manifestations. Some of these may be more settled—what we call character or disposition; to these the ethical predicates are applied (see above); less permanent manifestations, as humours, moods, whims, are frequently described in such phrases as 'spirit of wisdom,' of grace, of whoredoms, of deep sleep, etc. In so far as they are manifested in the human spirit, they may be grouped under the heading psychical, but by reason of the unusual force which they display,

and in accord with primitive views of personality as liable to invasion by spirits from without, they fall rather to be considered under the next section.

(4) '*Supernaturally*' (134 times).—A stricter definition would be 'extra-human,' since Hebrew thought made no distinction between natural and supernatural, God being regarded as the cause of all that happens, whether good or evil. But for convenience' sake, and because the action of the Spirit of God falls under this head (though its detailed consideration is deferred to II.), the term may be allowed to stand. Under the heading 'supernatural' *rûah* are included agencies operating upon man—only rarely upon inanimate nature—whose source is outside or above him. In the literature, as we now have it, they are all under God's control, but the literary phraseology suggests that in the pre-literary period they were not so viewed. These agencies appear to be 'survivals from the animistic past of Israel,'¹ in which sickness, insanity, abnormal powers of body or of mind, were accounted for as due to a subject becoming possessed by an extraneous spirit. Such were the evil spirit which rushed upon Saul and terrified him (1 S 16¹⁶ 18¹⁰), the ill-will caused by an 'evil spirit' (Jg 9²³), the spirit of jealousy between man and wife (Nu 5¹⁴), and the spirit of whoredom which makes Israel err and wander into idolatry (Hos 4¹² 5⁴). The over-mastering might of such beings is expressed by the vigorous verbs which describe their action. They 'rush upon,' 'fall upon,' 'come upon,' 'pass over upon' men; the action of the Spirit of Jahweh upon Elijah suggests storm-demons (1 K 18¹², 2 K 2¹⁶). In one case a 'lying spirit' is distinctly hypostatized; it stands, speaks, receives commands, and departs (1 K 22¹⁰⁻²²).² This language had a marked influence upon the descriptions of the activity of the Spirit of God in both OT and NT. That Spirit is said to clothe (Jg 6³⁴; cf. Lk 24⁴⁹), come mightily upon, fall upon (Ezk 11⁵, Ac 11¹⁵), carry away (1 K 18¹², Ac 8³⁹), push or move (Jg 13²⁵, Mk 1¹², ἐκβάλλει) men. Another group of phrases, which first appears in the time of Isaiah, ascribes to *rûah* material properties, as a kind of fluid element. Thus a 'spirit of perverseness' is 'mingled' by Jahweh in the midst of Egypt (Is 19¹⁴), a 'spirit of deep sleep' is 'poured out' like a stupefying drug, producing effects like drunkenness (Is 29¹⁰; cf. Ac 2¹³). Such language is repeatedly used of the Spirit of God in the writing prophets (Is 32¹⁵ 44³, Jl 2²⁸, Ezk 39²³, Zec 12¹⁰). It relates itself with the idea of 'anointing' (*g.v.*), whereby is imparted the divinity that 'doth hedge a king' or prophet (1 S 10¹ 16¹⁴, Is 61¹). *Rûah* can be put into a person (Is 63¹¹, Ezk 37¹⁴, 2 K 19⁷), so that he is 'filled' with it (Ex 31³, Lk 1⁴¹); it can be taken away (Ps 51¹³ [Heb.]), and distributed upon others (Nu 11¹⁷). It can be poured out with fertilizing effect upon inanimate nature as well as man (Is 32¹⁵ 44³). As the 'demonic' *rûah* suggested personal actions and so influenced NT terminology, so the fluid-like *rûah* had a far-reaching influence, appearing in the NT conception of the Holy Spirit as a gift, and in the later theological speculations of the Greek Fathers as a kind of substance, which was imparted to believers in the sacraments. From this analysis it is clear that the term *rûah* is a general one embracing, by syncretism, elements collected from various sources, and not derivable from one general principle. Herein lies the difficulty for the modern mind as it approaches the Hebrew idea of 'spirit.' For now spirit denotes, metaphysically, the immaterial as contrasted with the material; and the modern

mind finds it difficult to understand the materialistic view of spirit as an ethereal fluid substance, except in poetic metaphor. Again, the philosophical use of the term to denote a self-conscious subject possessing 'perdurable individuality' has little in common with the animistic meaning of *rûah*, or the primitive psychology of the Semitic mind, which could identify mind with physical organs or physical breath. And yet there was an unconscious logic at work when popular fancies grouped such disparate elements under the term *rûah*. The wind of heaven in its mighty, mysterious, quasi-personal activity is very similar to the action of 'spirits,' and both suggest the miraculous, supersensible power which streams through nature and into human life with such startling effects. Thus, unconsciously, *rûah* expressed the metaphysical notion of causality, the principle of movement, energy, and life in the universe. But, in accord with the Hebrew genius, this principle was expressed, not in abstract static terms as in Greek—the Hebrew language was little fitted for that—but concretely, dynamically, picturesquely, realistically. And so *rûah* was taken into the service of religion as the term whereby could be expressed the nature of the wind, the life of beasts and men, the deepest impulses in the breasts of saints and sages, and the modes of the manifold activities of God Himself.

II. OLD TESTAMENT (CANONICAL AND EXTRA-CANONICAL).—The sources readily fall into two main divisions, canonical and extra-canonical, each of which may be conveniently divided into two sections, viz. canonical: (1) pre-Exilic and (2) Exilic and post-Exilic; extra-canonical: (1) Palestinian and (2) Jewish-Alexandrian.

Our purpose is to trace historically the development of the conception of the Spirit of God, the various spheres of its working, and any hints of its hypostatization in this literature. Any development of the idea of God will be reflected in the doctrine of His Spirit.¹ The predominant designation in OT is 'the Spirit of JHWH,' less frequently 'Spirit of God' (רוח קדש), sometimes with pronouns 'His,' 'thy,' 'my,' rarely absolutely as 'the Spirit,' and only thrice 'Holy Spirit,' and then with pronominal suffix, 'thy' or 'His' (Is 63^{10, 11}, Ps 51¹¹). The distinction between Spirit of Jahweh and Spirit of Elohim will be noted as it emerges in the literature.

What was said of *rûah* in the previous section, as applied to man, is applicable to its use in connexion with God. The wind, in early poetry, was regarded as His breath (Ex 15^{8, 10}, Ps 18¹⁵), and the storm, used frequently to describe theophanies, was the explosion of His wrath (Is 47^{30, 31}, 59¹⁹, Job 4⁹). In some cases there is ambiguity; *rûah* may be viewed literally, as wind, or metaphorically (Ex 15¹⁰, 1 K 18¹², Is 40³, Hos 13¹⁵). But, generally, it is used to denote the higher activities of the

divine nature, which are, by anthropomorphism (*q.v.*), regarded as similar to the energies of thought and volition in man. Yet there is a striking difference. Only rarely (and that in late passages) is the spirit of man within his control as a subject (Ps 77⁶, the earliest example); God's spirit, as befits perfect personality, is always at His command—not that it is thought of as another; the Spirit of God is God Himself. The nature of that Spirit is nowhere discussed; it is not presented metaphysically or statically: it is always an energy; the Spirit of God is God at work manifesting effective power. The various spheres of the Spirit's activity may be formulated as cosmoical, intellectual, inspirational in the prophets and the Messiah, moral and religious in the 'pious'; but this belongs to dogmatics rather than to the scope of an Encyclopædia. The historical method here pursued, while surveying the entire field, has the added advantage of presenting the successive extensions of the Spirit's activity as they arose under a gradual revelation.¹

I. Canonical.—**i. PRE-EXILIC.**—(a) *JE and kindred documents (9th-8th cent. B.C.).*—The earliest documents of the Pentateuch present the Spirit of Jahweh (or Elohim) in materialistic fashion. It is the divine essence which is common to Jahweh and the *b'ne'-elohim*, as contrasted with flesh, the element proper to human beings (Gn 6³ J; cf. Is 31⁸). By means of the illicit intercourse of the *b'ne'-elohim* with the daughters of men, *rûah* has passed into mankind, producing longevity, if not deathlessness, which Jahweh is resolved to abridge. The text is so confused that nothing can be deduced with certainty as to the action of *rûah*.² Materially regarded is the spirit which is transferred from Moses to the seventy elders (Nu 11^{27, 28} JE; cf. 2 K 2⁹), producing a dual effect, viz. an outbreak of ecstatic transitory prophecy (v. 15) and the more abiding gift of rulership. The latter appears also in the case of Joseph (Gn 41³⁸ E) and the early judges (Jg 3¹⁰ 11²⁹). What the outward phenomena of ecstatic prophecy are like is described more fully in the narratives about Balaam and in the earliest stories concerning Saul (Nu 24^{27, 28} JE; 1 S 10¹⁻¹³ 11⁹). In language reminiscent of 'demonism' the Spirit of Elohim is said to rush upon Saul, producing amentia and excited utterances like ravings (*nb'* in Hithp.), so that he becomes another man, breaking out in warlike fury (1 S 11⁶); a later passage states that he lay naked, unconscious, a day and a night (1 S 19¹⁸⁻²⁴). In Balaam's case, he is thrown into a trance by the oncoming of the Spirit of Elohim, in which state he receives visions and messages. In such descriptions we have the onlooker's impressions: the unwonted abnormal excitation upon the person 'enthused' is ascribed to the 'spirit' which has taken possession of his faculties. The phenomena of prophet-bands in Saul's day, the use of music as a stimulus (cf. 2 K 3¹⁵), and the passage of the 'spirit' by infection to others suggest that the earliest prophecy in Israel was akin to the mantic of heathendom (cf. 1 K 18²⁹ of Baal-worship).³ No messages are preserved (the Songs of Balaam are probably later); the deed alone interprets the Spirit's purpose, and so the patriotic fury of warriors, like Gideon and Saul, and the marvellous prowess of Samson are attributed to the Spirit, as in later days the phenomenal strength of Elijah was due to 'the hand of Jahweh' (1 K 18⁴⁶).

³ See E. Rohde, *Psyche²*, Freiburg i. B., 1898, II. 9.

¹ For the idea of God and its development see art. *God*, vol. VI. p. 254.

At this point we may observe some distinction in the use of the divine names. 'Spirit of Elohim' appears to denote the marvellous, the divinely-imparted power, in general; 'Spirit of Jahweh' the working might of Jahweh as it served to deliver Israel, Jahweh's covenant-people, in particular. Spirit of Elohim calls attention to the supersensible cause; Spirit of Jahweh, to the soteriological purpose. But how little of ethical content is conveyed can be seen when the homicidal mania of Saul is ascribed to the Spirit of Elohim (1 S 18¹⁰). Yet ethical discrimination begins to appear. The evil spirit which induces the king's insanity is not Spirit *of*, but *from* (*me'eth*, 1 S 16¹⁵) Elohim; the good spirit is Spirit of Jahweh.¹ The evil spirit is not so immediately in connexion with Jahweh as the good spirit, though originating causally with Him. The development of that discrimination to a separate hypostatic 'living' spirit, and thence to a Satan as personal principle of evil (1 K 22¹⁷, Job 18, Zec 3¹), has a reflex action, beyond the OT limits, on the personality of the Holy Spirit.

(b) *Pre-Exilic writing prophets (8th cent. B.C.).*—The nature of 'spirit' is less physically viewed by proto-Isaiah; indeed, one passage is unique in presenting 'spirit' almost metaphysically, as the principle of the divine nature, dynamically viewed, and the equivalent of deity itself (Is 30¹ 31²). It is described as a 'subtle essence' poured forth from on high, and has a cosmical reference, in that it causes the amazing fertility of the land and ethical qualities in Israel, its people (32¹⁵). But its special sphere is the national life, making Israel independent of foreign alliances, and invincible (31³), but, if neglected, as it speaks through the prophet, the nation adds sin to sin (30¹). If this passage is a reference to the prophet's experience, it stands alone, and in the writing prophets such a reference is exceedingly rare. Hosea and Micah have but one such reference each (Hos 9⁷, Mic 3⁸, text suspect), while Jeremiah and the others, except Ezekiel, have none at all. This striking omission is probably due to the superior elevation of prophecy above the earlier ecstatic form, too closely associated with the term *rûah*. Prophecy is now a clear-minded ethical communion with Jahweh, whilst the symptoms of popular prophecy, resembling drunkenness, and the fact that it could be artificially induced, along with the emphasis on the ecstatic form and not the ethical contents, may account for the preference for the phrase 'hand of Jahweh' (Is 8¹¹, Jer 15¹⁷) to denote the force of the constraining prophetic impulse. Even Hosea's reference (9⁷, 'the man of the spirit') may be only the popular language, cited by the prophet. The purpose of the Spirit's working is more ethically grasped, Micah receiving it as an aid in proclaiming to the nation its sin.

ii. *EXILIC AND POST-EXILIC.*—(a) *From the Exile to the Temple-rebuilding (590-520 B.C.).*—The 6th cent. B.C. witnessed a universal impulse and advance to religion. Within this period two great religions, Confucianism and Buddhism, originated and spread; the genius of Greece blossomed in poetry, art, and philosophy, and prophecy reached its climax in Israel. The doctrine of the Spirit shared in this advance, as doubtless it prompted it. The Spirit of Jahweh is presented in manifold aspects as the principle of life and energy in God, the organ of His intelligence at work in creation, evolving order out of primeval chaos (Is 40¹³, LXX *roûs*, Gn 1²),² executing His purposes in history, even among the lower creatures (Is 34¹⁰), the energizing cause of movement in the suprasensible sphere (Ezk 1¹² 10¹⁷), the principle of life which streams into a dead nation, revivifying it at Jahweh's bidding (Ezk 37¹⁻⁹; cf. Job 32⁴), the immaterial principle and organ of mind in man (Ezk 20²⁷, Job 32⁸), and the agent working ethical renewal within man (Ezk 11¹⁹ 18¹ 36²⁵). Noteworthy is the fact that with the emergence of individualism in Ezekiel's teaching, and the recog-

nition of spirit in man as an integral constituent of personality, the call is issued to man to co-operate with Jahweh in the making of a 'new spirit' into which Jahweh may pour His own (Ezk 18³¹). And that new spirit is to be the possession not only of the prophet but also of the ideal Israel, as an 'abiding' endowment (Is 42¹), enabling it to carry religion (*mishpât*) to other nations (cf. Is 44³⁸), and issuing in a moral life of unbroken fellowship with Jahweh (Ezk 39²⁹). Ezekiel's 'vision of the dry bones' (cf. 37¹⁻¹⁴) is the classic passage in all literature for its graphic portrayal of the might of the Spirit in quickening and regenerating a morally dead people, and marks the highest point reached in the OT doctrine of the work of the Spirit, anticipating the description of the Spirit in the NT and the Creeds, as *τὸ ζωοποιόν* (1 Co 15⁴⁵).

Within this period we mark the first hints of a hypostatization of the Spirit. The apostrophe to the *rûah* in Ezekiel's vision is remarkable, indicating considerable independence (Ezk 37⁹); still more so the passage in Deutero-Isaiah (48¹⁶, but see Comm. on the text) where Jahweh's Spirit is sent as a working ally with the prophet. Similar traces meet us in the prophets of the Return. The Spirit is presented as 'standing in the midst' of the returned exiles, enabling them to complete the rebuilding of the Temple (Hag 2³ RVm, Zec 4⁹)—a task beyond ordinary human might. But the growing tendency to regard Jahweh as transcendent (cf. Ezk 43⁸, the interpreting angel, Zec 1⁹ 10¹⁹) may account for these prophets making no claim to the possession of the Spirit: it is regarded as a medium whereby Jahweh's words were given to prophets of other and earlier days (Zec 7¹²). The ebb-tide of prophecy has now begun.

(b) *From the Return to the close of the canon (520-c.150 B.C.).*—In this period, when Israel had come under foreign dominion and legalism began to take the place of prophecy, references to the Spirit of God are confined, in the main, to the past history of Israel or its future glory under the Messiah. In these references the older terminology survives, like a literary tradition, but the 'demonic' might is associated with utterance, whether in song or in impassioned speech (1 Ch 12¹⁸, 2 Ch 24²⁰), and the materialistic *rûah* accounts for the superior skill of the craftsmen engaged upon the Temple vestments and furniture, whose 'filling' issues in wisdom, understanding, and knowledge (Ex 28³ 31² 25³⁰ P). This materialistic notion of 'spirit' appears again in the 'anointing' (g.v.) of the priest, the king, the prophet, and the Messiah (Ex 29⁷ [Aaron], 1 S 10¹ [Saul] 16¹³ [David], Is 61¹ 11²⁻⁴), as in the ordination of Joshua (Nu 27²²). By means of the Spirit thus conveyed such persons became sacrosanct, and the vehicles through whom Jahweh ruled His people. But the emphasis is laid upon the heightened consciousness, as in the case of the Messiah, who is thereby equipped for all His functions, judicial, executive, and religious (Is 11²⁻⁴; for date as post-Exilic cf. G. B. Gray, *ICC*, *ad loc.*). The inspiration is dynamic, an intensifying of the faculties, though, in the swan-song of David, the very words are said to be the utterance of the Spirit (2 S 23²). We mark an increase in the use of personification as applied to the Spirit. He 'speaks' in David, was the instructor and leader of Israel in bygone days, will 'rest' upon the Messianic King, and was 'resisted,' 'rebelled against' and even 'vexed' by the stubborn, sinful nation (2 S 23², Neh 9²⁸, Is 63¹⁴ 11², Ps 106²³, Is 63¹¹). The last term was much used by the 4th cent. Greek Fathers to prove the personality of the Spirit, but, in view of the passage, a woman 'grieved in spirit' (Is 64⁶), and the personification of the 'Word' and

¹ On texts cf. S. R. Driver, *Notes on the Heb. Text of the Books of Samuel*, Oxford, 1913, *ad loc.*

² Cf. art. COSMOGONY AND COSMOLOGY (Hebrew), vol. IV. p. 154b, n. 1.

'Wisdom' (Is 55¹¹, Pr 1²², where Wisdom has a 'spirit'), such language should not be unduly pressed. Further, ethical attributes are assigned to the Spirit; it is called 'good' (Neh 9²⁰, Ps 143¹⁰ RVm) and thrice 'holy' (Is 63^{10, 11}, Ps 51¹¹). 'Good,' however, may only indicate the results of its operation, and holy, in itself, does not necessarily carry an ethical connotation.¹ Etymologically the word probably means 'separation'; then it gathered about it the notions of the unapproachable—what, in comparative religions, is meant by the term 'tabu' (*q.v.*)—and acquired the signification of the divine as contrasted with the human, and is applied to things and places as belonging to God (cf. 'holy hill, arm,' etc.). Any ethical meaning that the term conveys depends upon how the Deity is conceived. From Proto-Isaiah onwards the prophets had conceived of God as ethical, and ethical requirements had been enjoined upon Israel, so that in fact, as well as in name, she should be God's 'holy people.' And it is precisely in connexion with Israel's refusal to accept the divine leading that the term is employed of the Spirit, and so the phrase 'His (thy) Holy Spirit' indicates 'a principle which is both pure and inviolable, which resents and draws back from the contact of human impurity and especially of wilful opposition.'² With this use of personal language we find an advance in the hypostatization of Jahweh's Holy Spirit when it is used in parallelism with the 'angel of the Presence,' as the medium of the divine guidance of Israel in the wilderness (Is 63^{9-11, 14}; but cf. LXX). 'The angel of His Presence' (*mal'akh pānāv*) appears to be a combination of *theologoumena* (cf. Ex 23^{20, 23} *mal'akh*, 33¹⁴ *pānāi*) which indicate how the transcendent Deity could yet temporarily descend to visibility, whilst 'Holy Spirit' presents His living energy at work in the people. This hypostatization, however, does not reach, though it prepares for, the doctrine of an inner distinction within the Godhead. In philosophical terms, the Spirit is the means whereby the Deity can be regarded as immanent and yet transcendent. Thus the term 'Spirit' could be used as synonymous with 'Divine Presence,' either as subjectively experienced by the penitent, whom it quickens with a poignant sense of sin (Ps 51¹¹), or, more objectively regarded, as omnipresent and omniscient (Ps 139⁷). And so it was the bond uniting the worshipper with his God.

Such experiences in the OT were very rare, and eschatological hopes looked forward to the gift of the Spirit as a distinguishing feature of the day of the Lord, when it would be the perpetual possession of all Israel (Is 59²¹), irrespective of sex or age (Jl 2²⁸⁻³⁰), and there would be fulfilled the great wish of Moses, 'Would God that all the Lord's people were prophets, and that the Lord would put his spirit upon them!' (Nu 11²⁹).

2. **Extra-canonical.**—(a) *Palestinian.*—In this section, which extends to the end of the 2nd cent. A.D., the references to the Spirit of God are chiefly backward to canonical Scriptures or forward to Messianic hopes. The term 'Holy Spirit' is used more frequently, probably to indicate its ethical character and distinguish it from the crowd of spirits that fill the air, but it means little more than a pious disposition in individuals.³ It is a *charisma*, giving skill in dream-interpretation, or pre-vision of the future, in the prophet or the blessings of the Patriarchs.⁴ There is a marked

emphasis on ethical qualities as the condition and result of its operation, and once it is said to be the creator of life, *i.e.* life after death.¹ Its vehicle in the future will be the Messiah, empowering Him for all various functions as ruler and judge by its abiding presence, and He in turn shall communicate it to men.² The hypostatization of the Spirit advances in this period to full personality. His mission at the creation is distinctly asserted.³ He works independently of God,⁴ and, in passages probably influenced by Christian ideas, the Spirit is the mother of Jesus,⁵ a fellow-counsellor of Christ,⁶ and stands in the place of God, as the object of worship,⁷ though in angelic form.

(b) *Jewish-Alexandrian (Wisdom of Solomon, c. 150-50 B.C., Philo, 20 B.C.-A.D. 50).*—The outstanding feature in these authors is the attempt to combine Hebrew conceptions of spirit with those of Stoicism (*q.v.*). In Wisdom the term 'spirit' is bound up with wisdom, with which it is practically identified (1⁵⁻⁷ 9¹⁷), and in which it is inherent (7²²; but cf. LXX A). This Spirit, whether of Wisdom or of the Lord, is presented as a material ductile essence, permeating and pervading the universe, of which it is the cohesive bond (7²² 1⁷ 12¹). Streaming into man by the divine in-breathing, it constitutes him an active soul and originates his spiritual nature (15¹¹, πνεῦμα ζωτικόν), and, in accord with the *kōal ennoiai* of the Stoics, is the cause of his understanding of the phenomenal universe and the hidden counsel of God (7⁷ 9¹⁷ τὸ ἐγὼν σου πνεῦμα). It is an ethical principle, training men to virtue, fleeing from the wicked, and, since it is an extension of the divine Spirit into men, it is the medium whereby God is cognizant of their thoughts and deeds (1⁵⁻⁹). The materialistic implications of 'spirit' check the tendency to hypostatize and personify it, and wisdom, which had been quasi-personalized in earlier literature (cf. Job 28, Pr 8²²⁻³¹, Sir 24⁸⁻¹²), takes its place, and is more personally regarded, without, however, becoming fully a person or ceasing to be an attribute of God.⁸

In Philo both wisdom and Spirit are overshadowed by his doctrine of the Logos (*q.v.*). The Spirit of God (θεῖον πνεῦμα, πνεῦμα θεοῦ) is mentioned only (but cf. *de Migr. Abr.* ch. 7) when making citations from OT, and these are limited to man's creation and inspiration.

'The conception of πνεῦμα [in Philo] may be regarded as being closely analogous to the modern conception of "force," and especially to that form of the conception which makes no distinction of essence between "mind-force" and other kinds of force, such as light or electricity. It is analogous but not identical; for force is conceived to be immaterial, whereas πνεῦμα, however subtle, is still material.'⁹

The spirit which was imparted to man at his creation is the divine Spirit, which is 'a stamp and impress of the Divine power,'¹⁰ a 'colony from that blessed nature,'¹¹ 'the image of the Divine and invisible,'¹² 'the basis (ὀψία) of our thinking reasonable nature.'¹³ But it is not severed from its source, of which it is an extension, as a ray from the sun,¹⁴ and this connexion explains how man is able to grasp God's thought,¹⁵ for the πνεῦμα is 'the pure science of which every wise

man is a partaker.¹ All men have visitations of the divine Spirit, but in men of pleasure, owing to the flesh, it makes no lasting stay, whilst its continuance with the prophet and philosopher requires that their normal faculties lie in abeyance, and, in ecstasy, they are played upon by the Spirit as the harpist strikes his harp.² Personal language is used to describe the mode of approach and the operations of the Spirit. It 'seeks men,' 'guides their feet to truth,' 'strengthens all and conquers all that is beneath'; it has distinctive properties as 'invisible,' 'all-wise,' 'divine,' 'invisible,' etc.,³ but such language, in view of the entire system of Philonic thought, does not denote personality. Whatever personalization and hypostatization of divine qualities take place must be looked for in connexion with the Logos.

LITERATURE.—In addition to works cited, the following may be consulted: E. Kautzsch, art. 'Religion of Israel,' in *HDB* v. 612 ff.; E. König, *Gesch. des AT Religion*, Gütersloh, 1912; H. W. Robinson, *The Religious Ideas of the OT*, London, 1913; H. B. Swete, art. 'Holy Spirit,' in *HDB* ii. 402-405.

III. JEWISH (POST-BIBLICAL, TALMUDIC, AND POST-TALMUDIC).—The Rabbinical teaching concerning the Spirit of God, or the Holy Spirit, belongs to the Haggādāh and shares the discursive, non-systematic character of that branch of instruction. The absence of doctrinal formularies from Talmudic Judaism⁴ gave room for all shades of opinion, provided that they could in some way be connected with the letter of the OT Scriptures and did not contravene the doctrine of the *Shemā* (Dt 6⁴). Hence no systematic or authoritative doctrine of the Holy Spirit can be deduced from the mass of traditions contained in the Gemara and the Midrashim, and the anonymous authorship of many sayings about the Holy Spirit makes the tracing of the historical development of doctrine well-nigh impossible. References to the Holy Spirit increase as we pass from the Mishnāh to the two Talmuds and the homilies in the Midrashim, but this increase is due mainly to the greater quantity of Haggādāic materials contained in the latter sources. From the Targums, notwithstanding the fact that in their present form they are later than the Mishnāh (c. A.D. 200), we may roughly ascertain how the Holy Spirit was regarded in the early Synagogue. In the Talmuds we may see the opinions of the schools from the 2nd to the 6th cent. A.D., and the Midrashim, while containing early materials, bring us to the 11th cent. A.D.

The terms 'Spirit of God,' 'Spirit of Jahweh,' occur sparingly in Targums and Talmuds, owing to the desire to avoid the mention of the divine name, and the Holy Spirit (*ruah haqqodesh*, m. t. *qudshā*) takes its place. The term 'holy' serves to denote that the Spirit belongs in some way to the sphere of the divine, and distinguishes it from the crowd of spirits which filled the air, according to Jewish belief. Sometimes the Targums translate 'Spirit of God,' 'Spirit of Jahweh,' by 'spirit of might' (*ruah g'balah*), to interpret the 'demonic' working of the Spirit upon the early heroes, judges, and kings (Jg 13²⁵ 14⁶ 15¹⁴ 1 S 11⁸ 16¹⁴ 1 Ch 12¹⁸), but more frequently as 'spirit of prophecy' (*ruah nebu'ah*), to denote inspiration in its varied forms. The Holy Spirit is identified with the spirit of prophecy,⁵ and the phrase 'my Spirit' is expanded into 'my Holy Spirit,' when used of God.⁶ Once it is beautifully rendered 'spirit of compassions.'⁷ In Is 63¹⁰ we find 'the words of His holy prophets' for 'His (thy) Holy Spirit,' and this paraphrase may be due to the desire to avoid early Christian applications of that passage to prove the hypostatization of the Holy Spirit. The relationship of *ruah haqqodesh* to God is expressed by the phrase *min qedhem*, lit. 'from before, or the presence of'—a phrase the significance of which is much disputed. According to modern Jewish writers, it is used merely to avoid anthropo-

morphic ideas concerning God, and the use of the divine name, whereas others interpret it as distinctly hypostatizing the Holy Spirit, placing Him alongside of Metatron, Memra, and Shekinah, the beings who mediate the activities of God upon the world and mankind.⁸ The controversy is part of the larger question whether the conception of God in rabbinic Judaism made Him so transcendent and absolute as to require these mediating agencies, and left no room for His immanence in the world and man. This view is valid if Judaism can be presented as a philosophical system, but it overlooks the testimony of religious experience, which felt, especially in prayer, that God was very near.⁹ On the other hand, as W. O. E. Oesterley remarks,⁴ 'it is significant how in modern handbooks on Judaism, this specifically Rabbinical doctrine of intermediate beings between God and man is passed over in silence.' The more recent attempt of Abelson⁵ to extract a doctrine of divine immanence from Rabbinical literature is little else than a *tour de force*. Keeping strictly to the term *min qedhem*, it denotes, as applied to *ruah haqqodesh*, not so much 'the Spirit of God' as the 'Holy Spirit near God.'⁶ As such there is hypostatization, but no clear emphasis upon 'personality.'

Along with Metatron and Shekinah, *ruah haqqodesh* occupies 'an intermediate position between personalities and abstract beings. While, on the one hand, they are represented as being so closely connected with God as to appear as parts of Him, or attributes, they are, on the other hand, so often spoken of as undertaking individual actions that they must be differentiated from God.'

In the Talmud the Memra does not play the rôle which marks the Targums, possibly because it lay too near in thought to the Logos doctrine in early Christian discussions, and Shekinah is more frequently used than *ruah haqqodesh*. They appear to be used indiscriminately and interchangeably, and both are presented as the source of prophecy.⁸ It is difficult to draw any distinction between the two terms, and yet in some passages some distinction seems intended.⁹ Perhaps Shekinah mediates the presence of God more objectively; *ruah haqqodesh* more subjectively to the individual. *ruah haqqodesh* is regarded at times as light and glory. There is a marked difference in the use of language suggestive of hypostatization and personal activities in the Talmudic references to the Shekinah and *ruah haqqodesh*. In several passages *ruah haqqodesh* is clearly distinguished from God, as when He acts as mediator between Israel and God¹¹ and 'cries' to God.¹² Personal activities are described when He is said to speak, cry, rest upon, depart¹³ from any one. He is said to weep,¹⁴ to lead like a shepherd,¹⁵ and even to love.¹⁶ In this usage we find it used as a masc. substantive;¹⁷ more usually, however, it denotes an impersonal power and is used as fem. substantive. A favourite term to describe its coming is *shārā*, 'to settle upon,' whereby its action is presented as staccato and momentary, not as a permanent indwelling. It comes from heaven, or the Holy Place, but, in view of the rabbinical polemic against the presence of two powers in heaven,¹⁸ we are not to think of any distinction within the Godhead. As in OT, so in Talmudic teaching, the nature of *ruah haqqodesh* is often put in materialistic and impersonal terms. It was one of the ten things created on the first day;¹⁹ it can be drawn up, like water, from the wells of salvation;²⁰ it is likened to a weight which God measures out;²¹ more frequently it is described as light and glory which glimmers and shines upon persons (cf. Pauline *δόξα*). It shone in the three court-houses of Shem, Samuel, and Solomon,²² glimmered (*nytz*) upon Jacob, his sons, and Tamar;²³ when it shone upon Phinehas, his face glowed like a torch;²⁴ it shone on Moses, and passed from him to the seventy elders as a light from lamp to lamp.²⁵ In passages

about Samson the Midrash compares it to sound.¹ Once it is compared to a dove, to determine the distance between the upper and the lower waters at the Creation.² The distinctive office of *ruah haqqodesh* in Talmud and Midrashim, as in Targums, is to communicate the knowledge of the divine will to the men and women of the OT. The Tōrah, according to the rabbis, contained in advance the future history of the world, and, on that principle, any passage that could be applied to the events of history was regarded as a prophecy uttered by men 'in the Holy Spirit' (*beruah haqqodesh*; cf. NT, *ἐν πνεύματι*). Thus the naming of children, the Exile, the building and destruction of the Tabernacle, the partition of the Holy Land among the tribes, even the death of workmen engaged upon the Temple-building, were all foretold by *ruah haqqodesh*.³ In marked contrast to the exclusion of women from religious orders in Christendom is the prominence assigned by the rabbis to women as subjects of inspiration. Tamar, Rebekah, Sarah, Miriam, Deborah, Hannah, Esther, Abigail, and even the harlot Rahab were all styled prophetesses,⁴ and in one passage it is declared that 'the mothers of Israel were all prophetesses'.⁵ All the prophets possessed the Holy Spirit,⁶ as did all who crossed the Red Sea,⁷ and even their sons of a later day.⁸ But the prophet *par excellence* was Moses; of him it is said that 'he beheld in a polished mirror,' but 'the prophets in an unpolished one,'⁹ and at his death the Holy Spirit attested his pre-eminence by citing Dt 34.¹⁰ Even the non-Israelites prior to Balaam's time could have inspiration, but because of Balaam's attempt to destroy Israel it was taken from the Gentiles.¹¹ But R. Jose said that the heathen had *ruah haqqodesh* only by night, and so received only half a word of revelation.¹² All the canonical books of the OT were written 'in the Holy Ghost,' but there was much discussion as to whether some of the Hagiographa 'defiled the hands,' i.e. were canonical or not,¹³ but after Jabne (Jamnia, c. A.D. 90) Proverbs, Canticles, and Qoheleth were accepted as written by Solomon 'in the Holy Spirit'.¹⁴ Special verses of Scripture are said to have had unique inspiration, as when David uttered Ps 112, Solomon Pr 10⁹, and Abigail 1 S 25.¹⁵ The OT is especially the book of the Holy Spirit, through which He is ever speaking, the regular formula being '*ruah haqqodesh* saith, or crieth'.¹⁶ In most of these cases *ruah haqqodesh* is a substitute for the divine name, though in others, when he addresses God, a distinction is observable. In many of these utterances of the Holy Spirit the connexion between Scripture citations is very slight; 'no freak of allegory, of word-play, of fantastic juggling with letters and syllables is without illustration'.¹⁷ But frequently moral lessons of great beauty and lofty purity are found, the Holy Spirit dissuading from wine, loose speaking, wicked actions, and sin in general.¹⁸ There are curious passages in which the Holy Spirit is presented as a mystical element (cf. NT, *ἐν πνεύματι*), immersed in which the soul sees 'into the life of things,' discerning the hidden thoughts of hearts, as when Rebekah divines Isaac's thought, Deborah knows the words of Sisera's mother, Hezekiah sees the character of his son, and the Israelites read Pharaoh's secret designs.¹⁹ Such insight was superior to the faculty of dream-interpretation, heathen divination, and the seer's vision; through these stages Balaam passed 'to the Holy Spirit,' and to them he relapsed when it 'left him'.²⁰ At its supreme moment prophecy is 'the knowledge of God,' which is conveyed to the prophet when he is so high to God that 'space is not,' and the divine working lies open to his gaze.²¹

The prerequisite conditions for the illumination of the Spirit are dwelt upon by the rabbis. Sometimes they are physical, as when Jacob's grief for Joseph causes the Spirit's departure, as

it returns to him when he hears that Joseph lives.¹ Wisdom, strength, and wealth are necessary if one is to have the Shekinah²—a passage so expounded by Moses Maimonides as to make the *ruah haqqodesh* depend upon man's work almost entirely.³ More commonly the conditions are moral. 'To join oneself to uncleanness brings the spirit of uncleanness, but to join oneself to the Shekinah merits to receive the gift of the Holy Spirit'.⁴ The Holy Spirit left Phinehas and David because of their sin, and only after long repentance did it revisit David.⁵ In the *scala perfectionis* of R. Phineas (2nd cent. A.D.) the attainment of *ruah haqqodesh* is preceded by holiness and the fear of sin,⁶ and moral renewal precedes the bestowal of *ruah haqqodesh* in the coming age.⁷ Faith as the condition of receiving the Holy Spirit in the NT is paralleled in the Midrash in a fine passage. So great was faith upon Israel at the Red Sea that they were all inspired and burst forth into song *beruah haqqodesh*,⁸ and R. Nehemiah (2nd cent. A.D.) adds that 'every one who takes upon him one precept in faith is worthy that *ruah haqqodesh* should rest upon him.' Such a reward is meet for those who suffer for Israel's sake.⁹ Above all, preoccupation with the Tōrah makes one worthy of this boon. Bezalel's 'filling' with the Spirit of God is explained as in the wisdom of Tōrah, the understanding of Halakāh, and knowledge of the Talmud.¹⁰ The scribes of old were overshadowed by *ruah haqqodesh*;¹¹ the teacher of Tōrah in public merits to receive it, as also he who studies it with a view to practice.¹² The high-priest must speak by *ruah haqqodesh* and have the Shekinah abiding on him when consulting the Urim and Thummim,¹³ from which later rabbis (e.g., Maimonides, Behai, Nahmanides) argue that it was inferior to prophecy but superior to Bath Qōl.¹⁴ The acquisition of the Holy Spirit will lead to other blessings. The joy at the Exodus and at great festivals is due to it;¹⁵ it inspired David to song;¹⁶ like the *gratia praeveniens* of mediæval Christian theology, it effectuated piety, for 'all that the righteous do they do in the Holy Spirit',¹⁷ and in the age to come it will lead to the resurrection from the dead.¹⁸ Life will be its 'note' in that age, as wisdom is in this,¹⁹ and, instead of a few chosen to be prophets, all Israel will prophesy²⁰—a promise extended by Tanna debe Elijah R. to the non-Jew, the woman, and the slave.²¹ How far into Talmudic times the experience of the Holy Spirit was vouchsafed to men is a question raised by the repeated assertion of Abelson²² that it was very frequent. On the one hand, it is stated that in the time of the second Temple there were no manifestations;²³ for *ruah haqqodesh* ceased at the death of the last prophets, Haggar, Zechariah, and Malachi,²⁴ and went above to God.²⁵ On the other hand, a few rabbis of the first two centuries A.D. are said to have 'seen by the *ruah haqqodesh*'.²⁶ The contradiction may be resolved by taking the former passages to allude to *ruah haqqodesh* as creative of Scripture, and the latter to a lower form of inspiration.²⁷ Abelson's assertion rests upon too few examples, and strains the meaning of the word, 'to merit,' 'to be worthy'—surely a different thing from saying that men actually experienced it. In place of *ruah haqqodesh*, it is expressly stated, there came the Bath Qōl, which uttered short sentences to authenticate decisions of the rabbis. Once it announced that Hillel and Samuel the Lesser were worthy to receive *ruah haqqodesh*.²⁸ But that Bath Qōl had not the authority of the Holy Spirit is seen in R. Joshua's (A.D. 250) repudiation of its message.²⁹ It is of interest to note that in early Christian polemics there is explicit statement that the Holy Spirit had ceased in Judaism and passed over into the Christian Church.³⁰

Summary.—The distinctive contribution of Israel to the doctrine of the Spirit of God upon the basis of OT revelation alone completes its term in the

Midrashim. The earliest forms of the Spirit's working in the OT were expressed in terms tinged with animistic associations, and other kinds of spirits were subordinated to Jahweh. The Spirit of God meant God at work, and at first the emphasis fell upon the marvellous and abnormal in the physical and mental life of ecstatic prophecy. Later, when Jahweh had been conceived by the great prophets of the 8th-6th cent. B.C. as the sole ethical Lord of Israel and the world, His Spirit's operations were seen to have a cosmical reference, creating the world, the inner life of man, and especially the moral renewal of the individual and the nation. The later canonical literature, with its view of God as remote and transcendent, exhibited tendencies to regard His Holy Spirit as in some manner (never investigated) distinct from Him, as a localized presence within the Israel of the Exodus and the Return; but these tendencies, under Hellenistic influences, in *Wis. Sol.* and Philo, are transferred to His wisdom and the Logos. They re-appear, however, with greater strength in the Targums and Talmud, where, along with other quasi-personal agencies, the Memra, Metatron, and Shekinah, the Holy Spirit has His distinctive sphere, that of revelation, which is confined to the Tōrah. As the revelation within the Tōrah was, to the rabbis, final and complete as regards this world, any further manifestations of the Holy Spirit were reserved for the world to come, the Messianic age.

Medieval and modern Judaism. — The first attempts to give a philosophical foundation for Jewish dogmas were influenced by the ideas of Aristotelianism and Neo-Platonism, which came from Arabian philosophy. The result was that the Spirit of God was regarded as strictly a property or attribute of God, and not as an independent subsistence, and Saadya Fayyūm (A.D. 892-934) explained the personal actions of the Spirit of God in the OT as merely picturesque language which corresponded with no reality of inner distinction in the Godhead. Division of properties was predicable only of bodies, and, since God was Spirit, inapplicable to Him, and the selection of the properties of life and wisdom by Christian medieval theologians, who hypostatized them in their doctrine of the Trinity, Saadya regarded as arbitrary. Why not hypostatize omniscience and omnipotence? And, if there is manifoldness in the divine nature, why reduce it to a threefoldness only? Maimonides (A.D. 1135-1204) reduced the term 'Spirit of God' to mean simply His intention or will.²

Muhammadanism also modified Jewish ideas of the Spirit of God. In the Qur'an the Holy Spirit was ranked with angels among created beings, and identified with the angel Gabriel. He is the faithful Spirit who brought the Qur'an from heaven to earth³ and strengthened the faithful, among whom Jesus, the Messiah, is included.⁴ Al-Farābī (A.D. 950) identified this 'faithful Spirit' with the 'active intellect' of Arabian philosophy,⁵ and this conception was taken into Judaism by Abraham ibn David (A.D. 1160) to explain prophetic inspiration. He likewise identified the Holy Spirit with Gabriel.⁶ This identification of prophecy with the 'active intellect' was, however, opposed by Judah

Halevi (*q.v.*).¹ The latter preferred to use another expression for the Holy Spirit, 'the Divine Influence,' to which personal attributes are ascribed.² A further modification of the meaning of the Holy Spirit, whereby it generally signifies the inward state of the soul of man as he participates in a godly spiritual nature which is conveyed by emanation, is found in the mysticism of Kabbalism.³

There has been little discussion of the doctrine of the Holy Spirit *per se* by Judaism in the modern period. Of late the doctrine of divine immanence has been brought in to explain the doctrine of the Spirit of God.

'God not only pervades the entire world,' says N. S. Joseph, 'but is within us, and His Spirit helps and leads us towards goodness and truth.'⁴ O. G. Montefiore tends to identify the Spirit of God with reason, which 'is the same divine element which produces, on the one hand, a learned man of science, and, on the other, an unlettered saint.' 'It is the Divine in man which makes him capable of goodness and capable of sin.'⁵

In such a view there is little in common with the OT view of the Spirit as revealer, and renewer of man's moral nature, tainted by sin, and speculative problems are raised by the doctrine of immanence which belong to the realm of philosophy rather than to the Jewish doctrine of the Holy Spirit.⁶

LITERATURE. — The following may be consulted: W. Bacher, *Die Agada der palästinischen Amorer*, 8 vols., Strassburg, 1892-99; *Die älteste Terminologie der jüdischen Schriftauslegung*, Leipzig, 1899; M. Friedländer, *The Jewish Religion*, London, 1891; D. Neumark, *Gesch. der jüdischen Philosophie des Mittelalters*, Berlin, 1907; W. O. E. Oesterley and G. H. Box, *The Religion and Worship of the Synagogue*, London, 1911; S. Schechter, *Some Aspects of Rabbinic Theology*, do. 1909; *Studies in Judaism*, 2nd ser., do. 1890-1903; artt. 'Holy Spirit,' 'God,' in *JE*; 'Holy Spirit' in *Hamburger*. The ed. of *Tanḥuma* cited above is Warsaw, 1873.

IV. NEW TESTAMENT. — The NT is pre-eminently the book of the Holy Spirit. Every writing (except 2 and 3 Jn) refers to it; each Gospel opens with the promise of its effusion; the Acts is devoted to its operation in the creation, guidance, and expression of the Christian Church; whilst the Epistles constantly refer to its working in the individual and collective life of believers. It is variously spoken of as 'the Spirit,' 'Spirit' (220 times), 'the Holy Spirit,' 'Holy Spirit' (τὸ πνεῦμα τὸ ἅγιον, τὸ ἅγιον πνεῦμα, πνεῦμα ἅγιον) (91 times), 'the Spirit of God, of the Lord, of God the Father, of the Father' (19 times), and as 'the Spirit of His Son, of Jesus, of Jesus Christ, of Christ' (5 times). Each of these phrases is full of significance. 'The Spirit,' *par excellence*, indicates how conspicuous is its place in Christian experience; 'the Holy Spirit' (3 times only in OT canon), whilst differentiating it from the host of spirits, often evil, with which popular fears and fancies, Jewish and Gentile, peopled the regions of air,⁷ frequently expresses the ethical working of the Spirit upon Christians, as well as denoting, generally, the divine; and as 'the Spirit of Christ' there is set forth the cardinal feature of NT pneumatology, as compared with OT and Judaism, viz. that the 'Spirit of God, of the Father,' which Christians have received, has been procured for them by Jesus, in whom it dwelt when incarnate, from and through whom it comes, now that He is exalted.⁸

The sources from which the doctrine of the nature and working of the Holy Spirit in the NT can be deduced may be grouped as follows: (1) Synoptic Gospels and Acts; (2) General Epp. (except 1 Jn), Hebrews, and Apoc. Jn; (3) Pauline literature; (4) Johannine literature.

1. Synoptic Gospels and Acts.—(a) *Synoptics*.—The common traditions in the Synoptics (=Q) present the Holy Spirit in the OT conceptions and refer mainly to the Messianic endowment of Jesus and His teaching concerning the reign of God. At the baptism of Jesus the Holy Spirit is manifest in bodily form as a dove (Mk 1¹⁰=Mt 3¹⁶=Lk 3²²), but what the dove symbolizes is not clear, since rabbinical, Syrian, and Philonian symbolism present no real analogy.¹ The anointing of the Holy Spirit is claimed by Jesus as indicating the nature of His mission (Lk 4¹⁸⁻²¹=Is 61¹), and is ascribed to Him elsewhere (Mt 12¹⁸=Is 42¹, Ac 10³⁸). It is regarded as the moving cause of the ecstatic impulse which drove Him to the Temptation (Mk 1¹³=Mt 4¹=Lk 4¹) and the extraordinary energy, tension, enthusiasm, and exultation which marked His ministry (Lk 4¹⁴ 10²¹ RV, Mk 3²¹, 30). The manifestation of the Spirit's power in the expulsion of demons is the proof of the presence of the Kingdom (Mt 12²⁸, but Lk 11²⁰, ἐν δακτύλῳ θεοῦ), all the goods of which are summed up in the Holy Spirit (Lk 11¹³=Mt 7¹¹, ἀγαθά). It is promised as an aid to disciples when they shall be on trial before Jewish and Gentile tribunals—a passage anticipating the Paraclete's office in Jn (Mt 10²⁰=Lk 12¹², Mk 13¹¹=Lk 21¹⁵);² and 'the Holy Ghost speaking in them' clearly suggests personality. In the passages on the blasphemy against the Holy Spirit (Mk 3²³⁻²⁹=Mt 12^{31f.}=Lk 12¹⁰)³ the Spirit is correlated with God, though not clearly hypostatized. The sign of the Spirit's presence is power, supernatural might, which is manifest intermittently, explosively, sometimes ecstatically.

This aspect is specially prominent in Lucan passages. In Luke's 'Vorgeschichte' a remarkable outburst of the Spirit of prophecy accompanied the infancies of John the Baptist and Jesus, inspiring John's parents and Simeon with utterances of lyric beauty (Lk 1⁴¹, 67 22^{5f.}) and reproducing in the Baptist features of ecstatic prophecy as in the Nazirites and Elijah (Lk 1¹⁶⁻¹⁷; cf. LXX, Nu 6⁸, Jg 13⁴, Mal 3¹⁻², [Eph.]). The operation of the Holy Spirit, superseding human paternity at the conception of Jesus, is absolutely unique (Lk 1²⁶⁻³⁸, Mt 1¹⁸⁻²¹). Although OT birth-stories, as of Isaac and Samuel, have coloured Luke's diction, there is strictly no parallel in Scripture, and supposed pagan illustrations can scarcely apply in view of the Jewish-Christian sources from which the narratives must come.⁴ The Spirit is regarded not as personal, but as the 'power of the Highest' (Lk 1³⁵), but that power is humanly conditioned by moral qualities of faith and self-surrender in Mary, and works for a moral end. Undoubtedly Christological speculation has motivated the narrative, but it is observable that the ideas are not shaped by Pauline speculations of the 'Second Adam' (B. Weiss), but reflect 'the beliefs of the Jewish-Christian circle in which they were handed down.'⁵ The closing passage of Matthew's Gospel (28¹⁹)

suggests the divinity of the Holy Spirit and a distinction within the life of God, upon which later theology grounded its doctrine of the Trinity (q.v.). The words hardly come from our Lord, but their early adoption by the Church as the baptismal formula¹ indicates the Christian feeling that they accord with His thought, even as they furnish a succinct statement of the revelation of the Triune God, into living fellowship with whom, at baptism, believers were consciously brought.²

(b) *Acts*.—The Acts presents the historic fulfilment of the Baptist's prophecy and of the promises of Jesus to bestow the Spirit (Lk 3¹⁶, Ac 1⁵ 11¹⁶, Lk 12¹³ 21¹⁵, Ac 4⁸ 6¹⁰, Lk 24⁴⁹, Ac 2³⁹). There are several public manifestations of the Spirit (cf. 4³¹ 8¹⁷ 13² 19¹⁻⁶), but two stand out conspicuously—the Pentecostal effusion and when Gentiles came within the Church (chs. 2, 10–11). At the former there are physical accompaniments of mighty wind and disparting tongues of flame suggestive of OT theophanies.³ A feature common to both is glossolaly, which is represented at Pentecost as capacity to speak foreign tongues—perhaps in imitation of Jewish traditions of the Law-giving in seventy languages at Sinai,⁴ but more probably it signifies ecstatic praise to God (2¹¹ 10⁴⁶).⁵ There was a wide-spread diffusion of the Spirit not only in Palestine, but farther afield in the Roman Empire, and it was manifested, abnormally and explosively, by extraordinary elevation of human faculties, so that miracles, prophecy, glossolaly, and visions were abundant; more normally in great enthusiasm, new courage, liberty of speech, skill in debate, keen insight into and wise use of Scripture, sound judgment of human character, business aptitude, and comfort in suffering. The Spirit is not presented as the principle of ethical life, as in Paul, yet ethical qualities of repentance, obedience, and faith are needed for its reception, and it belonged to every believer (2³⁸ 10⁴⁴ 11¹⁷ 13⁵²). In the communal life of the Ecclesia it inspired mutual service, generous self-sacrifice, joyous fellowship, thus transforming and socializing human nature (2⁴³⁻⁴⁷ 4³²⁻³⁷). The Spirit supervised every stage of the Ecclesia's advance (cf. 1²⁶ 8¹⁷, 23 10³⁹, 44 11¹⁵ 13²⁻⁴ 15³, 23 16⁹⁻¹⁰ 20²²), but neither conferred infallibility (cf. 20²³ 21⁴, 11-14) nor superseded human judgment (cf. 16⁷ with 10 σὺμβιβάζοντες). It is described impersonally as a gift, which God gives or the Son outpours (11¹⁷ 15⁸ 23³⁸), more usually as power (1⁸). Yet personal actions are attributed to the Spirit: it 'speaks,' 'bears witness,' 'separates' for service, 'approves' a conciliar decision, 'forbids,' 'appoints overseers,' and can be 'resisted,' 'tempted,' and 'lied against.' In these last cases the Spirit is co-ordinated with God (5³, 4, 9), but there is no attempt to think out the relation of the Spirit to the Father and the Son. Once, though perhaps the passage denotes merely a vision, it is called 'the Spirit of Jesus' (16⁷). But, as regards men, the Spirit denotes the divine, the supernatural, for it comes from God, indicates Jesus' claim to be Messiah, authenticates His exaltation, fulfils OT prophecy, and is the medium whereby He is present and operative within His Church (cf. 2; J1 3¹⁻⁶ LXX).

2. General Epistles (except 1 Jn), Hebrews, Apoc. Jn.—The few references to the Holy Spirit within this group⁶ are connected with Christian experience and prophecy. There is little mention of the explosive working of the Spirit, as in Acts, except in the Apoc., where it forms part of the

apocalyptic terminology (*ἐγγύμνη ἐν πνεύματι*, 1¹⁰ 4² 17³ 21¹⁰; cf. En. 71⁵, Bel 36); its working is more permanent and more related to the ethical life. Thus it is the source of sanctification (1 P 1²), for which as an indwelling presence it jealously yearns (Ja 4⁶),¹ the atmosphere of prayer (Jude 20), comfort in affliction, for its abiding is nothing less than the Shekinah manifestation of God to Christians as to the Messiah (1 P 4¹⁴=Is 11²); it testifies to the restful state of the blessed dead (Rev 14¹³) and pleads in unison with the Bride, the Church, for the Bridegroom's speedy return (22^{17, 20}). As a supernatural power the Spirit gave the impulse to evangelism, and its diversified effects certified the divine character of the salvation which the gospel brings (1 P 1¹², He 2⁴, *Πνεύματος ἁγίου μερισμοῖς*). It is connected with baptism, wherein the 'illuminati' taste, here and now, of the joys and powers of the age to come (He 6⁵⁻⁶; cf. Ac 2³⁸ 19¹⁻⁶).² The relation of the Spirit to Scripture and prophecy shows a notable advance. As in Talmudic teaching, the Holy Spirit speaks directly through Scripture (He 3⁷ 9⁸ 10¹⁵), and not, as hitherto in the NT, mediately through the OT writers (cf. Mt 22⁴³, Ac 1¹⁶ 4²⁵ 28²⁵). The Spirit which spake in and through OT prophets is described as the Spirit of Christ (1 P 1¹¹, *τὸ πνεῦμα Χριστοῦ*), i.e. either the Spirit of the pre-existent Messiah or, as Hort interprets, 'a spirit of anointing'.³ Either way the revelation in both OT and NT by prophets or evangelists is regarded as continuous, the same Spirit operating in both,⁴ and later 'the Spirit of prophecy' and the 'witness of (i.e. about) Jesus' are interchangeable terms (Rev 19¹⁰). The book of Revelation claims to be 'prophecy,' but its inspiration takes the general form of apocalyptic prophecies, the contents being conveyed when the recipient is in ecstasy, which, in the latest NT writing, is regarded as the normal mode (2 P 1²¹, *φερόμενοι*). Personal actions are ascribed to the Spirit: it 'testifies,' 'signifies' (1 P 1¹¹, *ἐδήλου*), 'speaks' (Rev 2⁷, etc., 14¹³ 22¹⁷), 'longs for,' and 'indwells' (Ja 4⁶, but perhaps human spirit is meant), and can be 'insulted' (He 10²⁹). Its temporal mission is once mentioned (1 P 1¹², *ἀποσταλέντι*; cf. Rev 5⁶), and it is correlated with the Father and the Son (1 P 1², Jude 20¹). It appears to be identified with the Son when He speaks to the Churches (Rev 2⁷, etc.), and perhaps the position of the seven spirits between the names of God and Jesus Christ (1⁴), together with the assertion that they are the possession and eyes of the latter (3¹ 5⁶), indicates that the Divine Spirit is meant, in 'plenitude and perfection'.⁵ But the seven spirits may be synonymous with the seven angels (8²² 15¹²), as in apocryphal literature.⁶ However that may be, they personify the divine activity and mediate the presence and rule of Christ upon earth.⁷

3. Pauline literature.—The main outlines of Pauline teaching concerning the Holy Spirit can be found in the four great controversial Epistles (Gal., 1 and 2 Cor., Rom.), and the teaching in the Captivity and Pastoral Epistles is congruous therewith (cf. Gal 5⁵, 1 Co 6¹¹ with Tit 3⁵). To avoid repetition we shall not present the teaching in its historic sequence, and it would be precarious to affirm development of doctrine from letters written informally and occasionally in the midst of missionary activity. The place of the Holy Spirit in Paulinism is cardinal.

⁷ Cf. Swete, *The Holy Spirit in the NT*, p. 272 f.

'It is the soul of the doctrine, the binding principle which makes all its parts coherent. . . . a specific category of thought fixing the point of view from which the apostle carries on all his meditations and reasonings, co-ordinates and logically develops his entire conception of Christianity.'¹

Hence it follows that the full statement of Paul's doctrine of the Spirit would require a treatise upon Paulinism in its entirety. Our scope limits us to those salient points which mark advance upon earlier NT conceptions, and furnish materials for the later theological formulation of doctrine.

(1) The first point of Pauline teaching which marks advance is the idea of the Spirit as the principle of the Christian's ethical life. Hitherto that aspect had appeared in the OT (Ezk 11¹⁹ 18³¹ 36²⁷, Ps 51) and one Petrine passage but casually (1 P 1²); now it is predominant. The Spirit is the power of God which comes into human life, and, in alliance with the Christian's faith, delivers him from the thralldom of sin, death, and law into the blessedness of liberty (Gal 5¹⁸, Ro 8², 2 Co 3¹⁷). The Spirit's working is grounded upon the redemption which Christ wrought for man by His death, and is the impartation of the positive blessings which mark henceforth the Christian life. Such blessings are justification (1 Co 6¹¹), assurance of sonship to God, with its privilege of access to the Father (Gal 4⁶, Ro 8¹⁵, Eph 2¹⁸), and the Spirit works as a powerful ally in the believer's warfare against sin and Satan (Gal 5¹⁶, Eph 6¹⁷), is an effective helper and co-operant pleader in his weaknesses and prayers (Ro 8²⁶), is continually given by God to procure the progressive realization of a sanctification which covers his entire nature, body, soul, and spirit (1 Th 4⁸, 2 Th 2¹³, Ro 15¹⁶, 1 Th 5²³), and makes the body a shrine of God, wherein the Spirit permanently dwells (1 Co 6¹⁹ 3¹⁶). The Spirit is the source of his new life and the element in which it thrives (Ro 8²⁻⁶, 2 Co 3⁶), the standard by which he walks and advances (Gal 5¹⁶⁻²³), the efficient cause of the ninefold graces of the Christian character (5²²), the renewer of the whole nature, especially of 'the spirit of the mind,' so that it is enabled to understand mysteries and receive revelations and a wisdom from God, compared with which all other knowledge is as folly (Tit 3³, Eph 4² 1¹⁷, 1 Co 2¹⁰⁻¹²). So thoroughly does the Spirit penetrate and change a man that he becomes a being distinct from ordinary humanity, and can be described as 'spiritual' (*πνευματικός*), whilst they are 'carnal' or 'soulish' (*σάρκινος, ψυχικός*). The difference is seen not only in ethical conduct (Gal 5¹⁹⁻²³), but in new knowledge. The 'spiritual' is initiated into the secrets of God's inmost thoughts, and beholds Christ invested with a new significance, and appropriates materials for thought and teaching beyond the grasp of the 'natural' man (1 Co 2⁹⁻¹⁴). His judgment acquires an absolute worth because it is informed by the Spirit of God. Indeed, so marked is the distinction that the non-Christian hardly possesses any human 'pneuma' at all, and, compared with his former condition, the Christian is a 'new creation.'²

(2) The second distinctive contribution to pneumatology is the Pauline valuation of 'charismata.' The explosive staccato manifestations of the Spirit in glossolaly and prophecy which are presented in Acts are supplemented and more fully described by Paul. The order in which they are grouped suggests a valuation from the more intellectual, as wisdom and knowledge, through the miraculous powers, to the gifts most useful in Church-worship, the last of which is glossolaly and its interpretation (1 Co 12³⁻¹⁰; cf. 13²⁻³). 'He proceeds from the

¹ A. Sabatier, *The Religions of Authority and the Religion of the Spirit*, Eng. tr., London, 1904, p. 365 f.

² On the question whether Paul's anthropology is dualistic and Hellenistic or mainly Hebrew cf. Harnack, *NT Theology*, ii. 19 f. with H. W. Robinson, *Bib. Doct. of Man*, p. 110, and Swete, *The Holy Spirit in the NT*, App., note O, *ad fin.*

worthiest to the least worthy.¹ The criteria of valuation are utility and the upbuilding of character (1 Co 12⁷, *πρὸς τὸ συμφέρον*, 14²⁶, *πρὸς οἰκοδομήν*) in the Church (cf. 14^{5, 12, 17}). By these tests prophecy was superior to glossolaly, but transcending all 'charismata' is the grace of love (12³¹⁻¹⁴). Paul hints that they may pass away (13⁸), but faith, hope, and love ever abide. Thus the normal supersedes the abnormal, the inward ethical abiding work of the Spirit is of greater worth than the more striking, spasmodic, miraculous 'charismata.'² Not that Paul deprecated or desired the cessation of the latter; he boasts his surpassing excellency in them (14¹⁸), cites them as proofs of his apostleship (Ro 15¹⁸), and encourages their use in Corinth, provided they are practised with decency and order (1 Co 14⁴⁰). These two conceptions of the Spirit, as miraculous and as ethical principle, are not to be regarded as mutually exclusive;³ they may be simultaneously present, even as electricity may be diffused in the atmosphere and concentrated in the lightning-flash. And the combination is not original to Paul; it is found in Ezekiel, and the idea of worth was finely expressed in the theophany to Elijah at Horeb, in the contrasted storm and the 'sound of a gentle stillness' (1 K 19¹⁴). But Paul restored the ethical-religious Spirit from the background, where popular judgment and rabbinic emphasis on the Spirit as prophetic had placed it, and, although sub-apostolic writings scarcely appreciated it, it came once for all to the forefront in the doctrines of grace in Augustinianism and the Reformation.

(3) A third contribution is found in the mystical phrase 'in spirit,' 'in holy Spirit,' which parallels the ever-recurring 'in Christ Jesus,' 'in the Lord.' In some cases it is difficult to determine whether *ἐν πνεύματι* denotes the human spirit or the divine. Generally, however, the human spirit as energized and impregnated by the divine is meant. In this usage the Spirit is regarded as mediating the union of believers with Christ and with one another within the Church. The Spirit of Christ and of believers mutually interpenetrate, so that each is in the other, as air may surround and penetrate a man (cf. Ro 8^{9, 11}, 1 Co 3¹⁶ 6¹⁹, Gal 2²⁰). Their union is 'more real, more intimately nigh, than e'en the closest earthly tie' of human marriage (1 Co 6¹⁶; cf. Eph 5²⁹⁻³²). To be 'in the Spirit' is to possess all the blessings of God's kingdom—faith, righteousness, joy, and peace; in that element conscience is quickened, love born, holiness attained, and immortality realized (1 Co 12⁹, Ro 14¹⁷ 9¹, Col 1⁸, Ro 15¹⁶ 8⁴). The Spirit is the mode whereby the transcendent, exalted Christ is immanent and dynamic within believing men, and in that close and fruitful fellowship space and time are surmounted, and believers whilst on earth are 'in the heavenlies,' 'hid with Christ in God' (Eph 1³ 2⁶, Col 3¹⁻³). Similarly the Spirit is the cohesive bond of Church-fellowship. At baptism believers were refreshed (*ἐπὶ ὁρίσθημεν*) and merged their several peculiarities, racial, social, sexual, into a higher unity, the 'one body,' in which the Spirit dwells, thereby making it a temple and dwelling-place of God (1 Co 12¹³, 2 Co 13¹⁴, Ph 2¹, Eph 4² 2^{15, 22}).

Other valuable teachings can only be touched summarily. In polemics with Gentile and Jew the place of the Spirit is prominent. As regards the former, the Spirit gave a force to Paul's preaching which proved its divine origin, opened the eyes of the morally blind, freed receptive hearers from the

bondage of demons, and their chief, 'the God of this world,' cleansed them from the impurities of the flesh and evil speech, and imparted a wisdom which gave a knowledge of God such as philosophy could never give (1 Th 1⁵ 2¹³, 1 Co 2⁴, Ro 8²³, Eph 2², 1 Co 6⁹, Eph 4²² 2⁹, 1 Co 12^{1, 30} 26. 10). As regards the Jew, the supply of the Spirit demonstrated the superiority of the gospel to the Law, fulfilling the promise to Abraham of world-wide blessing, by making believers free sons of God and heirs of the promises, whereas the Jew was a perpetual 'minor,' under bondage to the Law (Gal 3, 4, Ro 8). The Spirit was the life-giver, the Law destroyed; the one an enabling power for real service of God, the other powerless, a mere outward form (Gal 3², 2 Co 3⁶, Ro 2²⁹, Ph 3³). The Spirit characterizes the New Covenant, which is as different from the Old as life from death. Moses, the unique prophet to Judaism, is surpassed by every believer, for his glory was waning, whilst theirs is ever waxing and transforming them by virtue of the Spirit of Christ ever being given to them (2 Co 3⁷⁻¹⁸). The Spirit's working fulfilled eschatological hopes; for the Kingdom of God was present where He worked; already the Christian possessed an instalment and parcel of the future inheritance (Ro 14¹⁷, 2 Co 12¹², Eph 1¹³ 4³⁰), and the life which survived bodily death, and was growing, through the Spirit's quickening power, the 'spiritual body' which should resemble the 'body of glory' of the Heavenly Christ (1 Co 15⁴⁴⁻⁴⁹, 2 Co 5¹⁸, Ph 3²¹). As 'firstfruits of the Spirit' the Christian was the prophecy of a redemption which should include the entire creation (Ro 8¹⁸⁻²³).

The nature of the Spirit Paul nowhere attempts to define: he is concerned with His presence and working, which is described in impersonal and personal terms. Impersonally, it is a power or gift, 'given,' 'supplied to,' 'poured out within' believers (1 Th 4⁸, Ro 5⁵, Ph 1⁹, Gal 3²); it is the unction that makes men anointed, the 'ink' of Christ's signature, the 'seal' attesting divine ownership, the 'firstfruits and first instalment' (*ἀρραβών*) of the heavenly inheritance (2 Co 1²¹ 3³, Eph 1¹³ 4³⁰, Ro 8²³, 2 Co 5⁵). Personal terms are more frequent than in earlier NT writings: the Spirit 'dwells' within, 'leads,' 'witnesses along with' the human spirit, intercedes for men (1 Co 3¹⁶, Ro 8⁹ 14. 16. 26¹). He 'searches' and 'knows' the divine mind, 'works,' 'distributes,' and 'wills,' and can 'be grieved' (1 Co 2¹⁰ 12¹¹, Eph 4³⁰). Such attributes as thought, choice, selection, volition—indeed, in one place, identity of subject amid manifold operations (1 Co 12⁴⁻⁹, 'one and the same Spirit')—suggest a self-conscious agent, and so personal in the modern sense of the term. That this usage is more than poetic personification (B. Weiss, Beyschlag, Feine) is manifest from the frequent co-ordination of the Spirit with the Father and the Son (Ro 8⁹⁻¹¹, 1 Co 12⁴⁻¹¹, 2 Co 13¹⁴, Eph 2¹⁸ 4⁴⁻⁶), and the 'supernatural' quality of His working, as life-giving, renewing, sanctifying, indwelling, and equipping the Church. And, as the Spirit of the personal God, His operations are necessarily personal. But personal as Spirit, in distinction from God? There are hints of such, when He is described as the self-consciousness of God, which yet goes forth from Him (*τὸ ἐκ τοῦ θεοῦ*, 1 Co 2¹²) on a mission parallel to that of the Son, whose Spirit He also is (Gal 4⁶; cf. v. 4, *ἐξ ἀπείρου τελευτῶν*), and as interceding for saints over against God (Ro 8²⁷). But God is not the abstract Deity of theism; it is God as revealed in Christ.¹

Of the relation of the Spirit to Christ Paul never speaks explicitly. The Spirit is not Christ's human spirit,² nor was Christ on earth the incarnate Spirit of God.³ The Spirit is imparted as the Spirit of the Risen Christ, and their working is practically identical (Ro 8⁹, 2 Co 3¹⁷, Eph 3¹⁶), though some distinction is apparent (2 Co 3¹⁷, 13¹⁴). But that distinction is never presented as an eternal immanent relation, nor does Paul throw any light upon the Christological question whether the Spirit is Christ's 'very own.' The practical religious purpose of his writings keeps such formal and metaphysical speculations in the background.

Into recent discussions as to the sources and the respective values of the varied elements blended together in Paul's concept of spirit we cannot

enter. Recent research into the mystery-religions¹ appears to indicate that, beyond a few phrases, Paul took little from that source;² and no more from Stoicism;³ and that not in Greek dualism but in the OT the roots of his ideas lie, whilst, above all, in his experience at conversion and the subsequent manifestations of Christ in the Spirit within his breast he found the materials of his doctrine of the Spirit.⁴

4. Johannine literature (Gospel of John, 1 Ep.).—The teaching of the Fourth Gospel concerning the Spirit is based upon sayings of Jesus, but the form of its presentation is shaped by the writer's experience of the Spirit and his milieu towards the close of the 1st century. The critical questions as to the authenticity of these sayings are, in part, met by the writer's view of the Spirit as interpreting and supplementing the revelation of Jesus to meet new situations and ever-enlarging spiritual capacity (14^{26f.} 16^{12ff.}). The Synoptic teaching is presupposed and supplemented. The endowment of the Spirit at Jesus' baptism was abiding, complete, and imparted by Him to the disciples by insufflation after the Resurrection and Return to the Father (1^{32f.} 3³⁴ 20²² 7^{38f.} 16⁷). Instead of being an occasional helper in times of trial, the Spirit is promised as an indwelling perpetual Paraclete (Mt 10²⁰; cf. Jn 14^{16f.}); the meagre account of the promise of the effusion of the Spirit after His departure, in Luke (24⁴⁹), is expanded in the upper-room discourses (Jn 14-16), where the return of the Lord in the Spirit takes the place of, as it interprets, the eschatological discourses in the Synoptic Gospels. Pauline teaching is modified and developed. The explosive working of the Spirit has vanished, prophecy is only mentioned as unconscious in Caiaphas (11⁵¹), or false in heretics (1 Jn 4¹), and 'spirits' are proved by a doctrinal test (1 Jn 4¹⁻⁶; cf. 1 Co 12³), whilst the 'chrism' of the Spirit operates in the normal knowledge of every believer, thus dispensing with the need for discerners of spirits and 'inspired teachers' (1 Jn 2^{20, 27}; cf. 1 Co 12^{3, 10, 29}). The Pauline characteristic of the Spirit as power is dropped, as also that of the Spirit as source of ethical gifts like faith and peace, whilst the operation of the Spirit as life-giving is more emphasized (3⁵⁻⁸ 6⁶³). Eternal life as a present possession is more conspicuous, and the Spirit as 'earnest' is not mentioned. The glory of Christ is presented as His while on earth, and not as a quasi-physical radiance of the suprasensible world, closely associated with πνεῦμα as a light-substance, as in Pauline teaching, and thereby the material implications of Stoical conceptions are avoided. The Pauline view of the Spirit as imparting new knowledge (1 Co 2) is placed in the centre of the Johannine teaching.

The older Hebrew idea of πνεῦμα as wind and life-principle is kept (3⁵⁻⁸ 20²²), but life is viewed not physically but as a moral fellowship with God.

¹ See artt. MYSTERIES.

² Cf. H. A. A. Kennedy, *St. Paul and the Mystery-Religions*, London, 1913.

³ Cf. A. Bonhöffer, *Epiktet und das NT*, Giessen, 1911, p. 178.

⁴ Cf. P. Feine, *Theologie des NT*, Leipzig, 1911, pp. 262, 601 f.; H. Weinel, *Bib. Theologie des NT*, Tübingen, 1911, p. 818.

Along with this appears the closest approach made in Scripture to a view of πνεῦμα as a metaphysical principle, closely akin to that in the mystery-religions, where 'spirit' is the divine essence communicated to men in ecstasy or the sacraments. Spirit is from the supernatural order, is mighty, mysterious, and free in its working; it comes from God to man, and imparts life and knowledge (3⁵⁻⁸ 6^{62f.}). It is the essential quality of the divine nature, the life-giving element in the utterances of the divine Son (4²⁴ 6⁶³), and imparts to the sacraments of baptism and the eucharist their efficacy, the one to initiate, the other to sustain, spiritual life. The language is very realistic, and almost suggests that πνεῦμα is a substance,¹ though its reception is ethically conditioned; faith is prerequisite, and repentance. Spirit operates not magically but morally in the enlightened consciousness of the believer.

There is a fresh proportion observable in the terminology of the Spirit (10 times). 'The Holy Spirit' as full title (τὸ Ἅγιον πνεῦμα τὸ Ἀγιον) occurs but once, 'Holy Spirit' (Ἅγιον πνεῦμα) twice, and a personal designation, 'the Paraclete' (ὁ Παράκλητος, 4 times; of the Risen Lord, 1 Jn 2¹), meets us, which is particularized as 'the Spirit of Truth' (6 times). There is no exact equivalent in English for 'the Paraclete'; 'Comforter,' 'Helper' miss the legal nuance, whilst 'Advocate' does not cover the varied offices predicated in the Gospel, of which intercession forms no part.² The other designation, 'the Spirit of Truth,' must be explained by the Johannine usage of truth, as deepest reality, and no bare abstraction—the reality of the divine life and order which has been revealed concretely, historically, personally, in Jesus Christ, who is the Truth (14⁶). Thus the Spirit of truth is His Spirit—in one passage the Spirit and truth are identified (1 Jn 5⁶)—and its working is confined to believers, as an immanent, permanent agent, invested with personal qualities.

Whether the Paraclete, the Spirit of truth, is a person or not is much debated.

W. B. Inge goes too far when he says: 'It is quite useless to ask whether, for St. John, the Paraclete is a distinct hypostasis in the Godhead,' though his further remark is true, that 'the category of personality is quite foreign to the Evangelist, as to his whole school.'³

The personal activities predicated of the Paraclete, teaching, reminding, witnessing, convincing, leading, speaking, hearing, glorifying (14²⁶ 15²⁶ 16¹³⁻¹⁵), the studied selection of masculine terms for the neuter substantive πνεῦμα (it is ὁ παράκλητος, not τὸ παράκλητον, and the personal pron. αὐτός is steadily used, 16¹³⁻¹⁵), above all, the functions discharged, imply personality.

As Swete puts it, 'That He fulfils the whole of our Lord's personal functions towards the Church, that He belongs to the category of Paraclete—Teacher, Director, Protector, Counsellor—this invests Him with all the essential attributes of that which we understand by personality.'⁴

That the Paraclete is not identical with the spiritual presence of Christ in His Church (Tholuck, Reuss) is clear from the designation of Him as 'another Paraclete' (ἄλλον παράκλητον, 14¹⁶) distinct from Christ, who sends Him, and to whom the Spirit bears witness, as He glorifies Him (15²⁶ 16¹⁴). And, if language means anything, when the Spirit is said to hear and receive the things that He announces, hypostatization is surely implied. And so 'we must think of the Spirit as an independent spiritual Centre, proceeding from both God and the Exalted Christ.'⁵ In the conjoint 'sending' of the Spirit by the Father and the Son we have the basis of the later Western addition of the 'Filioque' clause to the Niceno-Constantinopolitan Creed, though His subordination to the Son is not necessarily implied when His office is related almost entirely to the interpretation and furtherance of the revelation of God made in and by the Son. But there is nothing said about an eternal procession in the word ἐκπορεύεται (15²⁶); the temporal mission is alone in view. The coming of the Spirit is conditioned by the departure and glorification of the Son (16^{7, 29}), though whether the Spirit acquired thereby 'a possibility of His inter-

penetrating human nature,¹ or death was necessary to liberate Christ's spirit from bodily and spatial limitations (Holtzmann, Loisy), is not expressly stated. Rather, the Spirit is withheld until the revelation which it is His office to explain and enforce is completed. The Spirit's relation to the Son is analogous to that of the Son to the Father. He comes not in His own name, to speak self-originated messages, but to testify to and glorify the Son, even as the Son did the Father. Within the Church the Spirit is the mode whereby the Risen Lord is yet present, and, as the 'other Paraclete,' the Spirit is a perpetual immanent teacher and exegete, a colleague in the Church's witness for Christ, convincing and convicting the world of its unbelief, wrongness, peril, and guilt (14¹⁶. 26 15²⁶ 16⁸⁻¹¹). His activity is so real and effective within the Church that all previous workings of the Spirit are, in comparison, as nothing (7³⁹), and 'from the Spirit' the individual gains the assurance that he abides in God and God abides in him (1 Jn 3²⁴ 4¹³).

Denney, W. R. Inge) on 'Holy Spirit,' and 'John, Gospel of,' give good bibliographies.

V. CHURCH HISTORY AND DOCTRINE.—Each of the great periods of Church history—the Patristic, mediæval, and Reformation—has been occupied with some aspect of this complex theme. In the first period (1st to 6th cent.) the Fathers drew the main lines of doctrine concerning the personality, deity, and procession of the Holy Spirit. That doctrine of the procession was, during the mediæval period, one of the causes which, unhappily, still sunder the Eastern and Western Churches. At the Reformation and during the modern period interest centred chiefly in the work of the Holy Spirit in redemption and sanctification, and the constitution and organization of the Christian Church. Such results as have attended these discussions are formulated in creeds, symbols, and confessions. There is, however, a striking disproportion between the place of the Holy Spirit in the formularies of the Church and in its religious experience. For the latter we must have recourse to the liturgies and hymns used in worship, to movements (Montanism, Mysticism, Quakerism) which have often been frowned upon, if not repressed, by ecclesiasticism, and religious biographies; and outside the Church philosophical discussions have modified the concepts of spirit and personality, so that there is a wide-spread conviction in the present age that the Patristic formulation in the Creeds of the doctrine of the Holy Spirit is inadequate and requires to be re-moulded and re-stated in terms of modern thought. These various aspects may be grouped thus, following, so far as possible, the chronological order: (1) to the formulation of the deity and personality of the Holy Spirit in the Nicæno-Constantinopolitan Creed (to A.D. 381-451); (2) the doctrine of the Procession to the Great Schism ('Filioque' controversy); (3) distinctive developments within Roman Catholicism (to Vatican Council, A.D. 1870); (4) Reformation and post-Reformation developments; (5) the Holy Spirit in liturgies and hymnology; (6) mysticism and the Holy Spirit; (7) modern philosophy and the Holy Spirit.

1. To the Nicæno-Constantinopolitan Creed (Chalcedon, A.D. 451).—The doctrine of the person of the Holy Spirit is part of the general Christian doctrine of God,² and the relations of the Holy

Spirit to the other Persons, and to the Son specifically, fall for fuller consideration under the art. **TRINITY**. The deliberate formulation of the doctrine does not begin until the middle of the 4th cent. and could not be attempted until the Church had settled the previous question as to the divinity of Christ. The result may be at once stated. The article in the Nicene Creed, *καὶ πιστεύομεν δὲ εἰς τὸ ἅγιον πνεῦμα*, is expanded in the so-called Nicæno-Constantinopolitan Creed to *καὶ πιστεύομεν δὲ εἰς τὸ πνεῦμα τὸ ἅγιον, τὸ κύριον, τὸ ζωοποιόν, τὸ ἐκ τοῦ πατρὸς ἐκπορευόμενον, τὸ σὺν πατρὶ καὶ υἱῷ συμπροσκυνούμενον καὶ συνδοξαζόμενον, τὸ λαλῆσαν διὰ τῶν προφητῶν*.¹

We may take these two Creeds as landmarks for the historical stages of the discussion: (a) to A.D. 325; (b) 325-381 (?)

(a) *To A.D. 325.*—The apostolic age bequeathed to its successors four views of the Holy Spirit: (1) as an attribute of God without hypostatization; (2) as an impersonal energy or operation; (3) as a gift, expressed in impersonal terms; (4) as a Person with distinct hypostatization. The last was kept prominent before the Church by the baptismal formula,² the constant association of the Holy Spirit with the Father and the Son as the object of faith and worship, and the expositions of the faith such as meet us in the various early forms of the so-called Apostles' Creed.³ The 2nd cent. apologists, in their polemic with heathendom, fell back upon the better-known philosophical terms, the Logos and Wisdom (*g.v.*), to explain the creative providential operations of God in the world, and the inspiration of Scripture (OT), and, like Philo before them, found it difficult to keep the concept of Spirit distinct from that of the Logos.⁴ In the early crude Christological speculations the Spirit, viewed as a divine essence, was frequently identified with the Son.⁵ Gradually, however, the distinction between the Son (=pre-existent Logos) and the Spirit becomes clearer, Justin placing the Spirit third in order⁶ in the divine name, Theophilus introducing the term 'Trinity' (*τριάς*) in a passage where Wisdom (=Spirit) is differentiated from the Logos;⁷ and Athenagoras appears to have grasped the idea of the Spirit as the unifying bond of the divine life, and marks the unity and distinction of these united beings.⁸ Yet he withholds the predicate *θεός* from the Spirit, when it is given to the Father and the Son;⁹ Justin appears to rank Him with angels as objects of worship,¹⁰ and Tatian subordinates Him to the Son as His 'minister.'¹¹ The same position is found in the Gnosticism (*g.v.*) of Basilides,¹² and the necessity of refuting the many Gnostic systems, by reflex action, directed attention to the inner relations within the Deity, though the Son rather than the Spirit was the main theme of consideration. Summaries of the traditional teaching of the Church were drawn up as Rules of Faith, and made the norm by which heretical doctrines were tested.¹³ Irenæus, as against the

emanation theory of Valentinus, who placed the Son and the Holy Spirit remotely and secondarily in a syzygy, unites them with God as 'His Hands' by which He created the world,¹ and Tertullian, unlike Irenæus, does not hesitate to borrow the Gnostic term *προβολή* (Lat. *emissio*) to describe the mode of issue of the Son and the Spirit from God, but he guards against the notion that it implies severance, and uses the illustrations of the root, the tree, and the fruit, the fountain, the river, and the stream, the sun, the ray, and the apex, to express the processions of the Son and the Spirit from, whilst yet continuing in union with, God.² Against the Monarchianism (*q.v.*) of Praxeas he asserted an economical Trinity, in which the Spirit had a hypostatic distinction, being third in order, 'the third name of divinity,' the 'vicar' of the Son, to whom He is subordinate, though He is divine, since He is 'of one substance' with the Father.³ In Sabellianism (*q.v.*) the Holy Spirit receives more mention, but He and the Father and the Son are merely phases of the successive temporal manifestations of God, who is, in Stoic fashion, by a dialectic process, extended into a Trinity and contracts into a monad again, and thereby hypostatic distinction vanishes.⁴ With Paul of Samosata (*c.* 269) the Logos and the Spirit are identical, and simply properties or attributes of God, and the Spirit wrought in Jesus as a mere power or influence, 'not essentially (*οὐσιωδῶς*) but as a quality' (*ποιότητα*). The two forms of Monarchianism, the modalistic and the dynamistic, found in Sabellius and Paul of Samosata their clearest utterance, and their standpoints also indicate the rival theories, representative of heathen pantheism and Jewish monotheism respectively, which confronted the Church. Origen (*c.* A.D. 185–254) rose above the materialistic Stoical view of Tertullian,⁵ for to him the Holy Spirit was no mere influence, but 'an intellectual substance,' 'an energetic essence but not an energy,'⁶ but in his freer speculations he regarded the Spirit, like Tertullian, as subordinate to the Son. Discussing the passage 'all things were made by Him' (*sc.* the Logos, Jn 1⁸), he throws out three possible views: (*a*) that the Spirit was made by the Logos; or (*b*) was 'ungenerate' (*ἀγέννητον*), like the Father; or (*c*) has no proper essence (*οὐσία*) beyond the Father and the Son. He inclines to (*a*), allowing that the Spirit is in honour and rank above all other creatures, but younger than and inferior to the Son, whom He needs for both subsistence and attributes.⁷ As Westcott observed, the temporal manifestation, and not the essential immanence, of the Trinity is in view.⁸ Elsewhere Origen had pointed out that Scripture had nowhere clearly indicated whether the Spirit is to be regarded as born or (like the Father) 'ungenerate,' as also whether He was a Son or not.¹⁰ But a different note is heard when he states that he found no passage in Scripture asserting that He is a creature, and that in the Rule of Faith the Spirit is associated with the Father and the Son in dignity and honour, and that there can be nothing greater or less within the Trinity.¹¹ Both these views came into collision in the next century, the subordinationism finding expression in Dionysius of Alexandria († A.D. 265)

and Eusebius of Cæsarea (A.D. 264–340),¹ the other, based on Scripture and tradition, passing by way of Gregory of Neocæsarea († A.D. 270) —who spoke of the Spirit as 'having His subsistence from the Father'² and 'above creaturely state or servitude, co-eternal, equal in sovereignty, and ever with the Son'³—to Athanasius and thence to the great Cappadocians, Basil, Gregory of Nazianzus, and Gregory of Nyssa. Yet Origen prepared the way for the ultimate solution by his doctrine of the generation of the Son as an eternal immanent relation within the Godhead, which explained the consubstantiality of the Son and the Father, and then, by inference, of the Spirit with both.

(*b*) To A.D. 325–381.—Before dealing with that solution, we must briefly outline the outward history within this period. Although Arius in his *Thalia* regarded the Trinity as composed of persons whose glories and essences differed infinitely,⁴ another generation passed before the question concerning the Spirit's place in the Godhead was definitely considered. The various Arian and semi-Arian synods held between 340 and 360 mentioned the Spirit in their creeds, but confined their attention to His work in the main, admitted His personal existence, anathematized those who regarded Him as a part of God, or, in Sabellian fashion, confused Him with the Father and the Son,⁵ but went no further than affirming a unity of agreement between the 'Persons' of the Trinity, and hesitated about assigning the predicate of deity to the Spirit.⁶ But about A.D. 358 in Egypt, and a few years later in Asia Minor, under the influence of a deposed bishop of Constantinople, Macedonius, and his follower, Marathionius, the doctrine was widely disseminated, reaching the West in a short time, that the Spirit 'was simply a creature, a servant of the Son, one of the ministering spirits, differing only in degree from the angels.'⁷ They were variously styled Macedonians, Marathionians, 'Pneumatomachoi,' and, by Athanasius, the 'Tropicoi,' because they interpreted Scripture passages as *τροπικοί*, 'metaphors.' At once this view was assailed by synods, orations, and the pen. At Alexandria, in 362 and 363, it was anathematized, and the deity, consubstantiality,⁸ and the duty of glorifying the Spirit with the Father and Son were enjoined.⁹ In the West a series of councils were held in Rome (A.D. 369–380),¹⁰ adopting the same course, and a letter from Pope Damasus expressing Western opinion was endorsed by no fewer than 146 Eastern bishops at Antioch in A.D. 378. Finally in 381, at Constantinople, a council (later recognized as the 2nd ecumenical) was held, at which the Nicene Creed was confirmed, the Macedonians anathematized, the worship of the Spirit as co-equal with the Father and the Son enjoined by imperial decree (and rigorously enforced by a subscription test two years later).¹¹ The decisions, however, rested on weightier support than the imperial fiat. Athanasius (*q.v.*), the great Cappadocian triumvirate,¹² Didymus the Blind, and Epiphanius had written treatises or produced orations refuting the Mace-

donians and Eunomianism (*q.v.*), and worked out a doctrine of the Trinity. We summarize their conclusions so far as they bear upon the deity and personality of the Holy Spirit. That the Spirit is a living being is assumed because scarcely questioned. Yet Gregory of Nazianzus discusses every possible view. The Spirit either is a self-subsisting substance, or subsists in another as an accident, or in God. If an accident, He would be an activity of God, actuated but not active, and ceasing to be when the activity ceased. If a substance (*οὐσία*), He is either a creature of God or God. But Scripture says that He is active, 'working,' 'speaking,' 'separating,' etc., so He is more than an energy, an accident of God; and, since also we believe in Him and are perfected in Him, He is no creature, but is included in the idea of God. Therefore in substance He must be God, otherwise a creature *essentially* different from the divine would be intruded within the Trinity, and the unity of the Trinity would be disrupted. And it were blasphemous to worship a creature.¹ Further, the predicates of eternity and omnipresence ascribed by Scripture (Ac 5³, 1 Co 2¹⁰, 3¹⁶ 12¹⁴, 2 Co 3¹⁴⁻¹⁸ 13¹⁴, 1 Jn 4¹³, Mt 28¹⁹, Gn 1² most cited) to the Spirit, His glorious titles, His innate undervived goodness and holiness, His operations in creation and redemption—*e.g.*, perfecting angels, quickening, liberating, sanctifying, 'deifying' men and uniting them to God—are properties and prerogatives of no creature but of God alone, and so the Spirit must be divine.² Again, since the working of the Spirit is similar to that of the Father and the Son, that similarity argues a community of essence.³ Indeed the working of the Godhead is one, and, as the grace of the Father through the Son is completed in the Spirit, 'the Spirit is conjoined with and inseparable from the Father and Son in every operation.'⁴ The Spirit is the perfecting cause in the united threefold divine working, and to reject the Spirit is to make faith in the Son impossible, to frustrate the blessings conveyed in baptism, to forfeit one's sonship.⁵ That conjunction and co-operation imply coequality, and the numerical order of names in the baptismal formula implies connumeration, not subnumeration (*συναριθμησις*, *ὑπαριθμησις*) or subordination.⁶ Further, since the Spirit is the Spirit of the Son, 'His very own,' He stands related to the Son as the Son to the Father, *i.e.* consubstantially and inseparably, and is in God by virtue of being in the Son, who is also in God.⁷ Therefore the Holy Spirit is rightly included in the Godhead, and to be worshipped and glorified with the Father and the Son as divine.⁸

It is not within our province to discuss the Scriptural exegesis which supplies the material, and the Neo-Platonic metaphysics which furnishes the formal, principles of this argumentation. But, before proceeding to the next section, it is imperative to keep in mind that the 'personality' predicated of the Holy Spirit, as of the others in the Trinity, is not the modern concept of a self-conscious, self-determining ego. Rather, 'the three subjects ranked neither as separate persons, nor as attributes of the real divine being, but as three special bearers or independent foci of all attributes and activities of their common divinity, and also of a peculiar and characteristic property.'⁹

2. The doctrine of the Procession (Filioque controversy). — We divide this section, which covers a thousand years, into two parts: (a) the divergence between the Eastern and Western Churches in doctrine, and (b) its conciliar expression.

(a) The Nicæno-Constantinopolitan Creed, after asserting in Scriptural phrases the consubstantiality of the Holy Spirit with the Father and the Son, formulated, in the clause τὸ ἐκ τοῦ πατρὸς ἐκπορευόμενον, that wherein He is differentiated from them. As 'ungeneracy' (ἀγεννησία) denotes the special characteristic of the Father as having the divine essence within and from Himself, so 'generation' (γέννησις) and 'procession' (ἐκπεμψις, ἐκπόρευσις) denote the special characteristic of the Son and the Holy Spirit respectively, as they eternally derive their being from the one fount of deity.¹ As against the Macedonians 'procession' implies that the Spirit is not a creature, and also evades the Eunomian dilemma that He is either 'ungenerate' or 'generate,' whilst the combination of Scriptural passages (Jn 15²⁶, 1 Co 2¹²)² in the formula removed the ground for complaint often urged against the unscriptural Nicene term *ὁμοούσιος*. The relation of the Spirit to the Son is not dealt with in the original form of this Symbol. The Greek Fathers of this period at times touch the matter. They appear to shrink from using the term 'procession' of the Spirit's timeless relation to the Son, sometimes using Jn 16¹⁴, 'receiving from the Son,' in that connexion (so Athanasius and Epiphanius), at other times drawing a distinction between the egress of the Son and Spirit, the former being immediately, the latter mediately through the Son, from the Father. This distinction, shaped by Gregory of Nyssa,³ became the typical Eastern formula.⁴ And yet, in other passages, the Son and the Father appear as conjoined in the origination of the Holy Spirit⁵ — a view which is never directly opposed for four centuries, except by Theodore of Mopsuestia († 429) and Theodoret († 458).⁶

In the West another direction was taken. Hilary (c. 360) had asked, without answering, the question whether the Spirit's receiving from the Son differed in meaning from the Spirit's proceeding from the Father (Jn 16¹⁴ 15²⁶), and Ambrose († 397) regarded the terms as parallel, though he did not teach the doctrine of an eternal procession from the Son.⁷ It was Augustine, Ambrose's pupil, who laid down the doctrine of the dual procession, *i.e.* that the Spirit eternally proceeds from the Father and the Son, who together (and not, as in Greek theology, the Father solely) constitute the *principium* of the Spirit.

Not that they constitute two *principia*, as the Easterns later alleged, or that He proceeds from them as they are hypostatistically distinct, but 'secundum hoc quod unum sunt . . . sicut Pater et Filius unus Deus et ad creaturam relative unus creator et unus Dominus, sic relative ad Spiritum sanctum unum principium.'⁸

He deduces the doctrine from Scripture, from the 'insufflation' in Jn 10²².⁹ Augustine had perceived that in the doctrine of the Trinity, as taught by the Greeks, subordination was not thoroughly excluded so long as the 'procession' of the Spirit was regarded as serial from the Father to and through the Son; so he reconstructed that

doctrine and conceived of the Trinity as an eternal reciprocity of relations.

'Semper atque inseparabiliter, . . . simul in invicem, neuter solus, . . . quia unum sunt relative.'

In that eternal mutual relation the spirit is the mutual love of both the Father and the Son, the harmony of their unity and equality, their communion, essential holiness, very nature and substance.² This doctrine of the dual procession permeated the Western Church and eventually found expression in the inserted clause 'Filioque' in Latin translations of the Nicæno-Constantinopolitan Creed.

(b) '*Filioque*' *Controversy* (*conciliar*).—This controversy strictly belongs to ecclesiastical history and not to the history of doctrine, but, for completeness, a brief outline is given. The first recorded mention of the insertion of the 'Filioque' clause appears in connexion with the Council at Toledo (A.D. 589) on the occasion of King Reccared's conversion from Arianism.³ The interpolated creed was popular in Spain, France, and England, but not even Charlemagne could induce Leo III. to authorize its adoption in Rome (802). The innovation of this teaching was one of the counts of Photius's indictment against the Western Church in A.D. 866, which led to a rupture three years later. Not until A.D. 1017 did the interpolation receive official sanction at Rome, by Benedict VIII., and this was followed by the schism in 1054. At Bari, in 1099, Anselm of Canterbury produced his treatise on this theme; but not till the 2nd Council of Lyons (1274) did re-union appear practicable. An agreement was reached, explaining the dual procession as 'not from two *principia* but one *principium*, by one "spiration" and not two,' but attempts to enforce the agreement met with violent resistance in the Eastern Churches. Again at Ferrara-Florence, 1439,⁴ a formula was reached in which the Greeks accepted *Filioque* as = *per Filium*. But synodal letters revoked the agreement in 1442 and 1453, and the following year the Eastern Church was under the rule of the Turk. At Bonn (1875) the Old Catholics attempted to heal the long-running sore, but the results reached lack official recognition.⁵

LITERATURE.—On the Patristic doctrine the best work in English is by H. B. Swete, art. 'Holy Ghost,' in *DCB* iii. 113 ff.; see also his *The Holy Spirit in the Ancient Church*, London, 1912. Good introductions and summaries may be found in A. Harnack, *Dogmengesch.*, Eng. tr., London, 1894-99, iv. 108-187; G. Thomas, *Patristic Theology*, London, 1904, 236-262; see also F. J. A. Hort, *Principles of Patristic Theology*, 1870; H. M. Gwatkin, *Christianity and the World*, 1900; J. F. Bethune-Baker, *Christian Doctrine*, London, 1903, pp. 197-233.

On the history of the doctrine of the procession see the bibliography in *DCB* iii. 133. The standard works are: J. G. Walch, *Hist. Controversie Græcorum Latinorumque de Processione Spiritus Sancti*, Jena, 1761; H. B. Swete, *The Hist. of the Doctrine of the Procession of the Holy Spirit*, Cambridge, 1876.

3. Later Roman Catholic developments.—These developments, so far as they concern the doctrine of the Holy Spirit, bear upon His work in the inspiration of Scripture and tradition, and as guaranteeing the infallibility of the pope when pronouncing *ex cathedra* the doctrines implicit in the sources of revelation. The former was dealt with at the Tridentine Council (A.D. 1545-1563), the latter at the Vatican (A.D. 1870). Before narrating the developments, a brief résumé of the previous history of opinion may fitly be inserted

here. The organ of the Holy Spirit's utterances was regarded by the sub-apostolic age as supremely the OT,¹ and until the disappearance of prophets towards the end of the 2nd cent. A.D. their presence within the Church visibly attested the Spirit's rule and guidance.² The excesses of ecstatic prophecy in Montanism (*q.v.*), and its protest against ecclesiastical laxity, provoked a reaction and strengthened episcopal organization, and henceforth the episcopacy was regarded as alone possessing a 'charism,' as the custodian of unwritten, apostolic tradition, and the bond of Church unity.³ Against the heresies of the 2nd and 3rd centuries these traditions were used, along with and equal to NT Scriptures, as standards of doctrine; and the presence of bishops in general councils made possible the famous canon of tradition, as 'quod ubique, quod semper, quod ab omnibus creditum est.'⁴ The general councils were held to be specially inspired by the Holy Spirit,⁵ Gregory the Great († 604) even ranking the first four general councils as equal in authority to the four Gospels,⁶ and with this the East was in accord.⁷ One strong objection, indeed, of the Eastern Church to the interpolation of 'Filioque' was that it lacked ecumenical sanction. This is not the place to narrate the long struggles between East and West over papal supremacy, and between the Western Councils⁸ and the popes as to the seat of authority. In sum, the papacy had become virtually an absolutism under the form of a constitutional monarchy, and the Reformers (see below) challenged the entire system. At Trent it was decreed that unwritten traditions were equal in authority with the written Scriptures, since they had come down in unbroken succession from the apostles, who had received them from the mouth of Christ Himself, or from the Holy Spirit's dictation; that the OT Apocrypha is canonical; that only the Holy Mother Church can authoritatively interpret and judge the true sense of Scripture, limited by the unanimous consent of the Fathers; that the Latin Vulgate is the authentic form of Scripture for preaching controversies, etc.⁹ Although the Holy Spirit was supposed to preside at the sessions, only rarely is any decree made alluding to His prompting;¹⁰ and the question whether the pope was the ultimate repository of tradition was adroitly evaded. Bellarmine, however († 1621), threw out the idea that the word of the Church, i.e. either of a Council or of the pope teaching *ex cathedra*, was no mere word of man, liable to error, but in some mode (*aliquo modo*) God's word, i.e. put forth by the assistance and governance of the Holy Spirit.¹¹ The papacy of Pius IX. (1846-78) marks the enactment of that view. His first encyclical (Nov. 1846) asserted infallibility, as also the declaration of the immaculate conception (1854);¹² he asserted that 'In tradizione sono io,' and the Vatican Council, while limiting the exposition of revelation or the deposit of faith so as not to declare new doctrines,¹³ pronounced it as a 'divinely revealed dogma' that,

Fisher, *Hist. of Christian Doctrine*⁴, Edinburgh, 1897 (for good summary of Fessler's exposition of the dogma of infallibility); W. P. Paterson, *The Rule of Faith*⁵, London, 1912, ch. i.

4. The Reformers and their successors.—With the Reformation the work of the Holy Spirit in the personal experience of believers was brought into the foreground. Both the formal and the material principles of the Reformation—the sufficiency of Scripture alone without the accretion of tradition, and justification by faith—were based upon the illuminating regenerating operations of the Spirit. Scripture had its authority, not from the Church, of which rather it was the norm and touchstone, but from the Holy Spirit, for, as Luther (1483-1546) said, it was 'the book, writing and word of the Holy Spirit,' and of that he was certain, because 'the Holy Ghost also writes it inwardly in the heart.'⁶ Of that certainty,⁴ both as to Scripture and as to the subjective assurance of election, Calvin (1509-64) was the chief exponent. It was a self-evident persuasion, wrought by the 'inward testimony of the Holy Spirit,' lifting the mind above doubts, hesitations, and scruples as to the truth of the Scripture; a persuasion superior to reason, needing no external arguments, for the Spirit that spoke in the prophets still speaks in the hearts of believers.⁵ But against the Anabaptists (*q.v.*), who claimed the Spirit's inspiration for their visions, Calvin and the various confessions restricted the Spirit's operation to the Word of God, and thus prepared the way, in the absence of a reasoned theory of inspiration, for the later Protestant legalism,⁶ which could assert that the consonants and vowel points of the Hebrew OT were inspired.⁷ From this new Babylonian bondage to the letter deliverance came—to the heart, with the spread of Pietism (*q.v.*), under Spener († 1705) and Francke († 1727), who deeply influenced Moravianism, and thus the Evangelical Revival in England under Wesley, and to the mind, through the spread of Biblical criticism.⁸ That the Quakers are in the line of the Reformers, notwithstanding the criticisms of John Owen and Richard Hooker, can be seen from George Fox's word in Lancaster court-house (1652):

'The Holy Scriptures were given forth by the Spirit of God, and all people must first come to the Spirit of God in themselves, by which they might know God and Christ, of whom the prophets and apostles learnt, and by the same Spirit know the Holy Scriptures; for as the Spirit of God was in them that gave forth the Scriptures, so the same Spirit of God must be in all them that come to understand the Scriptures.'⁹

All the various Protestant types agree as to the need for the Spirit's work in regeneration, but differ, owing to their anthropological views as to the extent of man's corruption, concerning the degree of this influence and the place of the human element in salvation. We cannot here go into the details distinguishing Lutherans, Calvinists, and Arminians.¹ Luther's beautiful language may be taken as typical:

'I believe that it is not of my own reason or by my own strength that I believe in Jesus Christ my Lord: it is the Holy Ghost that by the Gospel has called me, with His gifts has enlightened me, through genuine faith has sanctified and sustained me, just as He calls, gathers together, enlightens, sanctifies, and sustains by Jesus Christ, in true proper faith, all Christendom.'²

Both Luther and Calvin derive much from Augustine's doctrine of grace, for which Calvin preferred to use the term 'Spirit of God,' thus avoiding the nuance of quasi-physical force which clings to Augustine's thought and the mediæval sacramental theory of grace. He more closely connected the Holy Spirit with Jesus Christ:

'The Holy Spirit is the bond by which Christ efficaciously binds us to Himself, it is the efficient cause of salvation creating faith 'by which he (*sc.* the believer) receives Christ,' and 'where the Spirit illumines to faith Christ inserts us within His body and we become partakers of all goods.'³

The instruments used by the Spirit are the Word of God, read or preached, and the sacraments, which are regarded as 'visible words, pictures of the word, signifying what the word proclaims.'⁴ The retention of infant-baptism, however, scarcely accords with the condition of Church fellowship, which is 'principaliter societas fidei et Spiritus sancti in cordibus,'⁵ and it was left to Anabaptists and Quakers to protest against this inconsistency.⁶ The effect of the Spirit's working is faith, defined by Calvin as 'a certain and steady knowledge of the Divine benevolence towards us, revealed to our minds and sealed to our hearts by the Holy Spirit.'⁷ Personal assurance as a part of saving faith, emphasized by early Reformers,⁸ was ultimately dropped by their successors, though revived by the early Methodists.⁹ Human co-operation with the Spirit in conversion was practically denied by the deterministic thought of Luther¹⁰ and Calvin. Melancthon, however, asserted three conjoint causes—the Word, the Holy Spirit, and man's will (the latter weakened by the Fall), and initiated the controversy over Synergism (*q.v.*); but later the human factor had freer play with ethical gain in the doctrines of Arminianism and Amyraldism (*qq.v.*).

As regards the person of the Holy Spirit, the traditional views were accepted by the Reformers, with the exception of the Socinians, who revived Arianism (*q.v.*), taking the ascriptions of personal activities in the NT as figures of speech, and the Spirit of God as a property of God without hypostatization.¹¹ Although Socinianism called forth a copious literature in opposition, the arguments for the Spirit's personality marked no advance upon Patristic discussions.¹²

Leaving the historical confessional formulation of the Spirit's person and work, we now turn to the presentation of the Holy Spirit as an experi-

¹ The various elements in their Confessions can be readily seen in J. G. B. Winer's *Doctrines and Confessions of Christendom*, ed. W. B. Pope, Edinburgh, 1878.

ence. The remaining sections will treat that experience, normally as exhibited in liturgies and hymnology, distinctively and peculiarly as manifested in mysticism, and critically in the light of modern philosophical discussions of the concept of personality.

5. The Holy Spirit in liturgies and hymnology.—In the cultus of the Christian Church the Holy Spirit has been from the first an object of worship, with His appropriate festival of Pentecost,¹ special seasons (as baptism, the eucharist, anointing, confirmation, ordination [*qg.v.*]), when His presence and operation were invoked, and distinctive organs through whom He was mediated to the Church. In the apostolic age the eucharist was followed by what was practically the celebration of His 'real presence' within the Church.² His operation was represented in diverse fashion: as a sanctifying influence operating as a physical force upon the waters of baptism, and expelling the dragon therefrom,³ as a magic power passing through the oil of unction into the body and soul of the anointed, imparting divine life, removing the traces of sin, charming away invisible evil spirits, producing gladness and making men 'christs.'⁴ Or He comes as light, and the baptized become 'illuminati' and 'see things beyond man's ordinary vision,'⁵ as a 'seal,' stamping the divine image upon the soul, giving it a 'character,' later regarded as indelible,⁶ which served as a mark of identification for aiding angels on earth and the last Judgment in heaven, and as a potent amulet against the devil.⁷ At the 'epiclesis' in the eucharist (*g.v.*) His coming shows forth (*ἀποφύη*), changes, and sanctifies the elements,⁸ and the prevailing Greek view was that thereby the holy food became 'the medicine of immortality.'⁹ At the laying on of hands in confirmation and the ordination of bishops, presbyters, etc., the Holy Spirit came to be thought of as conveyed by physical contact.¹⁰ Yet with all this materialistic and magical terminology, borrowed from the OT and mystery-religions, the religious instinct prevented the more spiritual view of the Holy Spirit as working in the mind and conscience of men from fading altogether away, and there were never wanting voices to assert that the Spirit was not tied to the sacraments, that faith and penitence were indispensable for the acquisition of the Spirit, that the agencies who conferred Him were not fonal but only ministerial, and that He was no impersonal gift but a living being. To these things the hymns of the Church universal give ample witness. Passing by the early doxologies, we may note the beautiful expression of the Spirit's influence in the recently discovered *Odes and Psalms of Solomon*:¹¹ near as the wings of a dove to its brood (23¹⁶), opening the soul as spring softens the hard clods (11), playing as a harpist upon the soul (61⁴), prompting praise and teaching His ways (361⁴ 311⁴). Another Syrian singer, Ephraem of Edessa (c. 378), warns against too much scrutiny as to the Spirit's subsistence. 'Love

the brooding of the Holy Spirit and approach not to pry into Him.'¹² The Latin hymn-writers, however, did not hesitate to set their doctrines to hymns, the dual procession, the Spirit as the bond of the Trinity, as the mutual love of the Godhead, finding frequent expression.¹³ Impressive in its simple majesty is the solitary line of the *Te Deum*, 'Sanctum quoque Paracletum Spiritum'; and, however the inclusion of the *Quicumque Vult* in the service-books of Western Churches, Roman Catholic and Protestant, is regarded, it at least kept in the foreground the personality and deity of the Spirit. Two noble hymns from the 9th and 11th centuries—the 'Veni Creator Spiritus' and 'Veni Sancte Spiritus'¹⁴—have served as models for most modern hymns dealing with the Spirit's work as experienced by devout believers. And, although Ritschl's criticism of Lutheran hymns for Pentecost, that little mention is made of the Spirit as the creator of a common consciousness and corporate fellowship within the Church¹⁵ and 'a purely individual self-contemplation' is disproportionately emphasized, is applicable to most hymns, nevertheless the outburst of hymnody has created Churches, stimulated revivals, overflowed ecclesiastical boundaries, and, along with prayer, kept the Spirit's regenerating, renewing, consoling, teaching, guiding work before the Church, checked the crass materialism which ceremonialism undoubtedly fosters, as it has borne witness also that the Spirit ever indwells the Church.¹⁶

6. Mysticism and the Holy Spirit.—The mystics in their quest for an intense awareness of the Divine Presence meet with a response which they interpret as the direct action of the Spirit of God upon the human spirit. Various are the signs denoting the Spirit's activity—ecstasy,¹⁷ glossolaly,¹⁸ a fecundity of ideas which fall thick and fast as snowflakes on the mind,¹⁹ emotional enthusiasm,²⁰ an inflow of divine love strengthening the will,²¹ an accession of new vigour so that 'the operations of the soul entirely united to God, are all divine,'²² and especially noble fortitude in martyrdom.²³ More generally the Spirit's coming is seen in the enhancement of the mental powers, purging 'the eye of the soul'²⁴ so that the hidden meaning of Scripture grows plain²⁵ and the mysteries of Christianity become clear. Thus Tertullian, the Montanist, claims that the Paraclete is the institutor of a new discipline, making the Catholic faith better known, clearing up obscurities and equivocations in Scripture, and reforming the intellect.²⁶ Origen

alleges that the Spirit enables men to acquire the gifts of learning, wisdom, and knowledge.¹ Cyril of Jerusalem points out that all intellectual beings, even the archangels, need the teaching and sanctifying influence of the Spirit,² and Gregory of Nazianzus claims that aid in the formulation of the doctrine of the Spirit.³ Sometimes messages are received in the mystic state, by audition or vision, which are held to possess objective validity, and to continue, if not supersede, Scripture revelation. But a close scrutiny generally reveals that such messages have some basis in Scripture, or are the offspring of auto-suggestion, and the practical judgment of the Church has placed such communications or revelations in a place below canonical Scripture. A recurring feature is the view of the Spirit or Paraclete as marking the consummating age of revelation—the mature stage, the OT and NT being respectively the childhood and youth of religion. We meet it in Montanism as it protests against officialism within the Church;⁴ in the Middle Ages in the protest against sacramentarianism of Amalric of Bena (c. 1204) and Joachim of Flore († 1202)—the latter the only prophet outside canonical Scripture mentioned by Dante⁵—who taught the supersession of the sacraments in the age of the Spirit; at the Reformation, when the thoroughgoing Reformers, the Anabaptists (*q.v.*), set the inward voice or word of the Spirit above the outward word of Scripture, and in Puritan England with the Quakers' protest against sacraments, orders clerical, and formal religion. Usually the mystic is found re-asserting some neglected or forgotten truth of religion or emphasizing a union with God so close as to verge on the absorption of the soul in God, as in pantheism (*q.v.*), and intensity of emotion is taken as the sign of the Spirit's presence. All movements of the soul are taken as the action of the Spirit, and consequently fanaticism and enthusiasm have been at a premium.⁶ Yet, beyond question, springs of energy have been unsealed (cf. Catharine of Genoa, Mme. Guyon), an exhilaration of Spirit experienced, an inbreaking from the supersensible world apprehended and utilized, which have started revivals, lifted the Christian Church to higher levels of service and devotion, and prevented Christendom from accepting the world as a closed system into which new streams of blessing from God can find no entrance. The phenomena of revivals especially endorse the mystics' claims:

'The impulse of the Great Awakening (in America 18th cent.) was a theological conviction which took shape in (Jonathan) Edwards' (*q.v.*) mind, a belief in the immediate action of the Divine Spirit upon the human soul.'⁷

Of the Spirit's working the mystics have no doubt:

'Whoso hath felt the Spirit of the Highest
Cannot confound nor doubt Him nor deny.'⁸

They are sure that they have reached the essence of essences, have touched the ultimate reality, God. But, when they are asked for further knowledge of the inner life of the Godhead, there is no fresh knowledge conveyed over and above the Christian revelation. The Trinity is still the dispensational Trinity, and, though Eckhart and John of Ruysbroeck may pass beyond that Trinity into the 'stillen Wüste' of Godhead, the secret of an immanent Trinity in the Godhead remains undisclosed. And orthodox mystics, as Sta. Teresa

and St. John of the Cross,¹ fare no better. Behind all their musings we catch echoes of the Augustinian-Scholastic doctrine that the Son proceeds through the divine intellect and the Spirit through the divine will²—echoes which make clear that the human mind is not so bare and empty of earthly reasonings as was supposed. Still, the mystics of a speculative turn have served the race nobly by their scrutiny of the cognitive processes in mysticism. Eckhart's doctrine³ of the *Fünklein*—'the likest God within the soul,' 'the divine spark,' in which all other faculties of the soul meet—as the meeting-place of the temporal and eternal world, one with God in essence, is an advance on mediæval ideas of grace as a magical bestowal, lifts human nature above Augustinian doctrines of total depravity, prepares the way for the Quaker doctrine of the 'Inward Light,' for the modern view of divine immanence, and gives a ground for the working of God in other religions besides Christianity.⁴ But the distinctive feature of Christian mysticism, as it bears on the Holy Spirit, is that the Spirit is the Spirit of Christ, the Eternal Son, who works within believers and brings them into the state of sonship to God, gives an assurance of salvation which no rationalism can shake, and to their 'wondering view reveals the secret love of God.'⁵

7. Modern philosophy and the Holy Spirit.—The Holy Spirit in the specific theological sense has been but little discussed in modern philosophy. Spinoza (*q.v.*) 1632-77, it is true, examined the Biblical data in his *Tractatus Theologico-Politicus*,⁶ but scarcely passed beyond the mediæval Jewish view of the Holy Spirit as the spirit of prophecy, reduced it to designate the contents of revelation or simply the ethical effects which He produces in men, and regarded the inner witness of the Spirit as pure presumption, a product of prejudice and passion, reason being really the light of the Spirit.⁷ Hegel (*q.v.*) used the term 'Holy Spirit' to denote the spirit of logic, but the resemblance to the Christian doctrine is merely nominal. The God of Hegelianism is scarcely personal,⁸ and the rôle of the Spirit as the synthesis of a dialectic process would make it the sole and supreme reality in the Trinity, and the Father and the Son inferior to, and mere abstractions from, its reality.⁹ The *Geistesleben* of Rudolf Eucken's philosophy labours under the difficulty, common to idealistic systems, of showing how its manifold activities are explicable without a personal substrate or subject, and how 'an abstraction' can be 'of itself the most fruitful of realities,'¹⁰ and, though God, as in speculative theism, is regarded as 'spirit,' the

Holy Spirit as an inner distinction within God is not discussed. The critical analysis of self-consciousness, which is distinctive of modern philosophy, has influenced the attitude of mind as it approaches this doctrine of the Spirit. The Kantian epistemology, with its limitation of the pure reason to the phenomenal, has restrained speculation on the transcendental factors experienced in religion, and fostered agnosticism in theology. This is apparent when Kant says, 'We can neither recognize a super-sensible object within our experience, nor exercise an influence upon it,' in his *Religion innerhalb der Grenzen der blossen Vernunft*,¹ in the Ritschlian theology with its exclusion of metaphysics from theology and the meagre attention given to the Holy Spirit's work, and in the 'religionsgeschichtliche' school (Gunkel, Weinel, Volz), who would evaluate the phenomena of the Spirit's working by parallelism with heathen views of demons, gods, and spirits.² The idealist reaction against Kant (Fichte, Schelling, Hegel), by examining the Ego in cognition and volition, has elucidated somewhat the meaning of personality. As a result the traditional interpretation of the Church, whereby personality is construed in terms of substance and accident,³ is felt to be inferior to that in terms of self-conscious spirit. But personality (*q.v.*) as yet has been only partially explored, and the application of one mystery to another can hardly bring much light to the mind.⁴ When applied to the Trinity, speculation can help us to conceive the timeless relation of the Father and the Son as mutually subject and object, but furnishes little explanation why a third is necessary, and the Augustinian interpretation of the Spirit as the mutual bond between the Father and the Son merely gives a relation, and a relation is not necessarily a person.⁵ Even the analysis of the religious consciousness affords little help, for to practical experience the indwelling of Christ and the incoming of the Spirit cannot be differentiated.⁶ In view of these facts, not to mention the divided state of Christendom, the stagnancy of thought in the Eastern Church, and the standardization of Aquinas's theology by the Roman Church, the likelihood of any ecclesiastical reformulation of the doctrine is very remote. The tendency of modern philosophy to postulate the metaphysical reality of spirit has also influenced theological thought on the doctrine of the Spirit. In this view, spirit is 'a substantial, yet immaterial, entity,'⁷ a synonym of mind as the substrate of consciousness, whether in the individual or in a society. This usage is akin to that of the Logos in Greek philosophy, and meets us in the *Zeitgeist* of modern speech. It is of value in so far as it supposes consciousness as a quality of spirit, and points the inadequacy of representing mental phenomena in terms of matter and force. But, when it is applied to the Holy Spirit as the collective spirit (*Gemeingeist*) which animates the collective life of believers,⁸ it does less than justice to the personal activities ascribed by Scripture to the Holy Spirit and repeats the Sabellian heresy. The religious instinct can

acquiesce in no impersonal principle or transitory modality, and any interpretation of the Spirit which falls short of ascribing personal consciousness to Him makes Him cease to be an object of adoration and worship.¹ From the criticism of self-consciousness and the narratives of mystical experiences certain conclusions may be drawn—as that the Spirit is known only in His working, and not in Himself; that it is difficult to represent His personality to the mind, since He is manifested in the gifts which He confers without the medium of a physical body; that His presence is apprehended in the light that He brings rather than in what He is; that what lends precision to the idea of the Spirit is to be sought in the character and life of Jesus, God's Son, whose Spirit He is; that His individuality is suppressed in His mission to glorify the Son (Jn 16¹⁴); and that the organism He indwells, through which His operations are manifested, owing to the divided state of the Christian Church, is but dimly apprehended as the Body of Christ, 'the Temple, the Habitation of the Holy Ghost.'

On the whole question of the Spirit's personality and the difficulty of its expression we cannot better the language of Swete:

'The idea of the One Undivided Essence, subsisting eternally after a three-fold manner and in a three-fold relation, finds but very partial correspondences in the nature of man or in any finite nature. When we try to express it in precise language, our terminology is necessarily at fault; the "hypostasis" of the philosophical East, the "persona" of the practical West, are alike inadequate; in the things of God we speak as children, and we shall continue to do so until "that which is perfect is come." Yet our imperfect terms represent eternal verities. The currency may be base, but it serves for the time to circulate amongst men the riches of God's revelation of Himself.'²
'Trasumanar significar per verba non si poria; però l'esempio basti a cul esperienza grazia serba.'³

SPIRIT CHILDREN.—Different views may be accepted as to the nature of primitive religion, magic, and their relations to each other; but there is no doubt that among the lower races the subject-matter of magico-religious practices and ideas is largely taken from fundamental organic functions and crises of life. Food, matters of sex, economic activities on the one hand, birth, puberty, marriage, death on the other, are all associated with ritual

and belief in the majority of native communities. Death is perhaps the most important fact among those with which primitive ritual and belief are concerned. The opposite gate of life is, on the other hand, probably the least prominent. Though there is no native community which does not speculate about what happens to a man after his death, only very few seem to have any ideas as to when and how life comes into existence. There is, however, a type of belief which deals with this problem and attempts to define the nature and condition of a person before birth. Using a term introduced by Spencer and Gillen and adopted by Frazer, we can apply the name 'spirit children' to such unborn beings waiting to come into this world.

As far as is at present known, the ethnographical area of this type of belief is restricted to portions of Australia and Melanesia. The ideas of the Central and Northern Australian tribes about spirit children are most definite and detailed, and we possess an excellent account of them in the works of Spencer, and of Spencer and Gillen.

1. Arunta.—The Arunta, who inhabit the Alice Springs district of Central Australia, are the tribe among whom this type of belief was first discovered by Spencer and Gillen. Their ideas may be described somewhat in detail as a typical example. The Arunta believe that in remote times their tribal hunting-grounds were peopled by half-human, half-animal beings, whom they call *alcheringa* (*q.v.*), and from whom the members of the present tribe are descended. These mythical ancestors were endowed with powers not possessed by their descendants. They roamed about the country in companies, whose members belonged to the same totem, and performed various deeds, mainly magical ceremonies. As a rule, in association with every important ceremony, they left traces in the form of natural features, such as water-holes, rocks, grottos, or creeks. Many of the tribal traditions are concerned with the manner in which the *alcheringa* ancestors came to be associated with definite localities, scattered over the tribal territory and marked by some striking feature. At some such places the ancestors simply performed a ceremony, and afterwards continued their wanderings; at others they passed underground, leaving behind their bodies or part of their bodies, or else they went down into the earth, spirit and body together. But at every such spot they left behind a number of spirit children (*erathipa* or *ratapa*). These spirit children live in the totemic centre, awaiting reincarnation.

Naturally many details of these beliefs are hazy and indefinite, varying according to the section of the tribe, the tribal status and intelligence of the individual native, and many other circumstances. It must be borne in mind that in this matter, as in every native belief, only the broad outline of the idea is fixed and definite. Within this a certain latitude is left to the individual mind, for, although ritual, custom, and myth cause the main points and many details of unwritten native tradition to become uniform and rigid, concerning other details there may be several currents of tradition.

Thus the relation of the *alcheringa* ancestor to the spirit child (*erathipa*) is not very clear. It seems that in some cases the ancestor is imagined by the natives to have been transformed into the spirit child; in other cases the latter is conceived by them as emanating from the *alcheringa* ancestor. In some instances it seems that a number of spirit children are descended from one mythical individual. Yet the main idea remains stable through every variation in belief, that every spirit child is definitely related to one individual *alcheringa*, and that the man into whom this spirit child will develop will inherit his totemic character from the *alcheringa* ancestor and be associated with the latter's bull-roarer.

The nature of the spirit children seems to be a point on which the opinions of the natives vary. Most generally they are regarded as fully developed babies, male or female, endowed with life. They are invisible to ordinary men, but can be seen by certain magicians.

There are also several opinions on record as to the manner in which the spirit child enters the body of a woman, who can become pregnant only if she passes near the totemic centre, the place of the *erathipa*. An *erathipa* may enter her womb through her flank, or an *alcheringa* ancestor associated with the totemic centre may throw a diminutive bull-roarer at the woman, which enters her body and becomes a child. The spirit child is probably associated or identified, in the ideas of the natives, with the bull-roarer. Again, the natives will affirm that in some cases the *alcheringa* ancestor himself enters the body of a woman and becomes a child. These cases are, as the natives affirm, very rare, and they can easily be diagnosed, since children conceived in this manner have fair hair and blue eyes.

Another point in which the Arunta seem to have no very detailed and definite views is the reincarnation of human beings. After an *alcheringa* ancestor has produced an *erathipa* which enters a woman and becomes a living individual, the question arises, Whither does his spirit or life principle go after death? Is it destroyed, or is it again changed into an *erathipa*? There is a belief among the Arunta, recorded by the missionary C. Strehlow, according to which the spirits of the dead go to an island, where they live a kind of replica of their earthly life and then are finally destroyed and return to this world no more. According to this belief, an individual sooner or later ceases to exist, and there is no reincarnation. Spencer and Gillen make no explicit statement as to the existence among the Arunta of beliefs in the reincarnation of human beings. On the other hand, these two authors found definite views concerning reincarnation among the tribes living all around the Arunta, and it seems more than plausible to assume that the belief in reincarnation does exist among this tribe. Here again it must be emphasized that the existence of variations in belief, of contradictions, or even of two mutually exclusive beliefs in the same tribe, is by no means an exceptional occurrence.

2. Other Australian tribes.—Only a few words need be said about the other Australian tribes among whom similar beliefs have been found by Spencer and by Spencer and Gillen. Thus the tribes living to the south of the Arunta believe in the existence of spirit children, derived from mythical totemic ancestors. These spirit children enter into women and become human beings. Again, each human individual returns after death to the state of a spirit child and reincarnates as a new earthly life. At each reincarnation the sex of the individual changes.

Among the Warramunga, a tribe living to the north of the Arunta, all the spirit children emanate from one ancestor. Human beings again become spirit children after death and reincarnate. Among some other tribes of that region similar beliefs exist, with the exception that women are not supposed to reincarnate, i.e. a woman's spirit ceases to exist after her death.

Among the tribes of the Northern Territory, investigated by Spencer, the same type of belief has been found in a definite form. These natives also affirm that companies of mythical ancestors roamed about the country and that a number of spirit children emanated from them. These spirit children, associated with totemic centres, enter the bodies of women and become human beings. Dead men become spirit children and are born again, the sex of the individual alternating at each rebirth. Every individual in the tribe can be traced to a particular totemic ancestor, and each man bears a name that indicates this relationship. In one of these tribes, the Kakadu, there is an

interesting belief showing that the natives have the idea of a kind of spiritual continuity between the various reincarnations of the same individual ancestor.¹

3. *Melanesia*.—The belief in spirit children, as known to exist in certain districts of Melanesia, is much less definite than among the Australian natives. W. H. R. Rivers has found among the natives of Banks Islands (Southern Melanesia) the belief that in some cases pregnancy is caused by an animal of supernatural character 'entering' the body of a woman. The natives consider this incarnation, not as a material, but as a spiritual act, and the 'supernatural animal' cannot be classed as a spirit child, unless we give this term a much broader meaning. Moreover, this form of conception is believed to take place only in exceptional cases, so that it cannot be considered a general theory of reproduction. It shows therefore very little resemblance to the Australian beliefs. The 'supernatural animal' stands in no relation to spirits of the dead, and consequently these natives cannot be said to believe in reincarnation.

A general theory of birth showing a distinct affinity to the Australian beliefs has been found among the Melanesians who inhabit the Trobriand archipelago off the north-east coast of New Guinea. These natives, who, like the Australian aborigines, are ignorant of physiological paternity, believe that pregnancy is caused by a spirit, who inserts an embryonic baby (*waiawaia*) into the womb of a woman. Each *waiawaia* is moreover a metamorphosis of an individual spirit. Every human being goes after death to the island of the spirits, where he lives through another existence, very much like that which he lived in this world. After a time he undergoes, of his own free will, a transformation; he shrinks into a *waiawaia*, which the natives imagine to be just like an embryo. Then another spirit—as a rule a female one—takes the spirit child and carries it to the village, where she inserts it into the body of one of her near relatives. All these individuals—the spirit child, the ministering spirit, and the prospective mother—are invariably of the same totemic clan; in fact they are always near relatives in the cognate line. There are several variants of this belief: thus some natives affirm that the spirit child is not an embryo, but a diminutive, invisible being of nondescript character, and that it is not inserted into a woman by another spirit, but floats amidst the foam of the sea and enters the girls while they are bathing in salt water. Again, some natives deny reincarnation: each spirit, after a prolonged existence in the nether world, finally dies. According to this version, the spirit children spontaneously come into being somewhere on Tuma, the island of the dead.

4. *Summary*.—Summing up the above data, we may conclude that the following ideas are characteristic of the belief in spirit children: (1) the spirits, or vital principles, of men to be born exist in a definite state before entering life; (2) they pass into life by entering or being inserted into the womb of a woman; the only cause of pregnancy is the entry of a spirit child into a woman's body; (3) sexual intercourse stands in no causal relation to pregnancy; (4) spirit children are a transformation of previous human or mythical beings, who thus become reincarnated. The belief in spirit children involves the ideas of reincarnation or of the continuity of life.

The beliefs in question are closely connected with the problem of totemism (*q.v.*), and they play an important part in J. G. Frazer's attempt

to solve this problem. On the other hand, they are closely associated with the ignorance of physical fatherhood, which has left a distinct imprint on the folklore of primitive and civilized races.

LITERATURE.—The standard works by W. B. Spencer, and by W. B. Spencer and F. J. Gillen, are the most important sources for the Australian beliefs in question: Spencer-Gillen, *The Native Tribes of Central Australia*, London, 1899, ch. iv, p. 112 ff., esp. 119-127, *The Northern Tribes of Central Australia*, do. 1904, pp. 146-148, 166-168, 170; W. B. Spencer, *Native Tribes of the Northern Territory of Australia*, do. 1914, index, s.v. 'Spirit children.' The work of C. Strehlow (*Die Aranda- und Loritja-Stämme in Zentral-Australien*, so far pts. I.-IV., Frankfurt, 1907-13) contains valuable additions in detail, but no new essential features. The claims of this author, who worked after Spencer and Gillen and had their achievements to guide him, to have corrected his predecessors' discoveries on certain vital points are evidently due to Strehlow's failure to grasp the intrinsic complexity of native beliefs.

The Melanesian sources are: W. H. R. Rivers, 'Totemism in Polynesia and Melanesia,' *JRAI* xxxix. [1909] 156 ff.; B. Malinowski, 'Baloma; the Spirits of the Dead in the Trobriand Islands,' *JRAI* xlv. [1916] 353 ff.

J. G. Frazer, *Totemism and Exogamy*, 4 vols., London, 1910, and E. S. Hartland, *Primitive Paternity*, 2 vols., do. 1909, deal theoretically with this problem.

B. MALINOWSKI.

SPIRITISM.—Spiritism (or spiritualism) may be defined as the belief that it is possible to communicate with the 'spirits' of the dead so as to receive from them intelligent messages and proofs of their identity and survival, and as the study and practice of so doing. Thus defined, spiritism is of immemorial antiquity and universal distribution; it has always exercised an important influence on religions and philosophies, and has affected conduct, though not, apparently, to the extent which its theoretic importance would seem to warrant. Spiritism naturally has a strong attraction for those who have suffered bereavement, while their sense of loss is poignant; but the spirit-world is also a source of repulsions and an object of dread, and as a rule this view of it prevails over its attraction. So the religions hedge it round with powerful tabus, and endeavour to monopolize and regulate spiritistic practices so as to render them harmless or nugatory; the philosophies also mostly labour to show that there can be no scientific knowledge of the spirit-world. This contention is more or less justified by the fact that spiritism is much older than science; it embodies a large number of primitive ideas and superstitions, and concerns itself with a mass of obscure and elusive phenomena which science has neglected or put aside, because they did not seem capable of complete scientific explanation. They impress the popular mind, however, and spiritism has contrived to combine them in a more or less coherent interpretation. This interpretation is essentially pre-scientific, but it has nevertheless shown considerable capacity to develop in accordance with the ideas of the time.

The natural starting-point for this development is the world-wide notion of 'spirit' or soul—the 'breath' which animates the body and is its principle of life. This notion is easily suggested, not only by the apparently supernormal experiences to be mentioned, but by the familiar habits of sleeping and dreaming. Accordingly the spirit is conceived as detachable from the body and capable of wandering about at large while its owner is asleep or entranced. It is not, however, necessarily regarded as the real man. In the Homeric eschatology, *e.g.*, the real man (*αἰὼς*) is the body, and is devoured by birds and dogs,¹ while the souls which descend into Hades are devoid of intelligence, until they are enabled to materialize themselves again by drinking the blood of Odysseus's sacrifice.² Being thus already independent of the body during life, the spirit naturally survives at death and becomes a 'ghost,' all the more formidable for being endowed with undefined powers,

¹ *Il.* i. 31.

² *Od.* xi. 153.

¹ Spencer, *Native Tribes of the Northern Territory*, pp. 270-274.

and with a tendency to linger among its familiar haunts, especially if it is not 'laid' by proper burial rites. Their hankering to return to bodily existence renders 'spirits' capable of obsessions, i.e. of occupying and using, temporarily or permanently, any bodies into which they can find admission. The owner of a body so receptive of spirit influence then becomes a natural intermediary between this life and spirit-life, a 'medicine-man' or priest; in modern spiritist phraseology he is technically called a 'medium.' Moreover, whereas a spirit was originally supposed to produce effects in virtue of its own powers, the tendency in modern spiritism is towards a subtler theory which regards the presence of a medium as always necessary, even where it is not recognized. The rarity of mediumship and lack of mediumistic quality can then be used to explain why so few 'see ghosts' and have abnormal experiences, and why phenomena attributable to 'spirits' are on the whole rare everywhere.

The theory of mediumship and the idea of using a code of signals for spelling out communications are the two chief developments which characterize what is called 'modern spiritualism.' This arose in 1848 at Hydesville, New York State, in the family of John D. Fox, out of mysterious knockings, which appeared to be intelligent. One of the daughters suggested a code, three raps for yes, one for no, two for doubtful; and communication was established with what claimed to be a 'spirit.' The three Fox sisters became the first 'mediums,' and the practice of sitting in 'circles' (holding *séances*) for the purpose of communicating with 'spirits,' who answered by raps, tilts of the table, or other signals, rapidly spread over the whole world.

As time went on, the 'phenomena' of spiritism became very various. They are usually classified as (a) psychical and (b) physical. (a) Under psychical phenomena may be enumerated the various forms of automatism, of speech, of writing, of vision (e.g., crystal-gazing [*q.v.*]), obsessions, impersonations, trances, apparitions, hallucinations, clairvoyance, clairaudience, hyperæsthesia, prophecy, and the like. Any supernormal knowledge elicited by any method of communication or in any of these states, or in 'veridical' dreaming, especially when yielding evidence of 'spirit-identity,' may also be claimed in favour of the spiritist interpretation. (b) As physical phenomena there are said to occur in *séances* inexplicable movements of bodies ('telekinesis'), sounds, lights, 'direct' spirit writing, the passage of solids through solids, as in the untying of knots, the 'materializations' of human and other forms, the bringing in of objects from a distance ('apports'), levitations, spirit photographs, immunity from the effects of handling fire, etc. In many cases, however, the question whether a phenomenon reported—e.g., a spirit-light or an apparition—is 'physical' or 'psychical' (i.e. hallucinatory) may be the very point to be decided, and, if the evidence pointing to the occurrence of *collective* hallucinations is admitted, the ordinary criteria of physical reality rather break down. It should be remembered also that the convenient distinction between the physical and the psychical may not ultimately apply and that it may be unwise to take it too absolutely.

The examination of these phenomena, and in general the investigation of the subject, are beset with extreme difficulty. Nearly all the facts are in dispute, nearly all are susceptible of alternative interpretations. Nearly all the theories are vague and too ill-defined to be tested experimentally. Indeed, there is so little control of the phenomena that crucial experiments cannot be made. Those who interest themselves in the subject are commonly animated by strong prejudices and the most virulent forms of bias. The subject itself is essentially a 'borderland,' and it is not the business of any established science to concern itself with its systematic and persistent exploration.

But for these very reasons it provides excellent material for those who are desirous of studying the making of a science.

Of the current interpretations the simplest is undoubtedly that of (1) fraud. It is certainly capable of disposing of much of the evidence, and no investigator can afford to disregard it so long as frauds of all sorts are possible and easy, as they must be so long as the phenomena are allowed to occur in the dark or in insufficient light, with little or no control of crude observation by apparatus, with mediums who are paid by results and are dependent for their livelihood on their success, or who resent ordinary precautions as imputations on their honesty. Still there is nothing genuine on earth that cannot be simulated, and the possibility of fraud is not always a proof of it. And it is fairly clear that ordinary fraud is not an adequate explanation of everything that is reported. The sitters often deceive themselves, and, e.g., regard as supernormally acquired information which they have themselves inadvertently given to the mediums. The mediums, again, may be self-deceived, for their mental constitution is frequently abnormal, and, especially in the case of psychical phenomena, they are often in conditions of 'trance,' etc., in which they act out dreams, suggestions, and hallucinations, and are hardly responsible for their actions. Moreover, it has been shown experimentally¹ that many of the successful frauds are due, not to the ordinary methods of conjuring-tricks, but to a special source of error, viz. the impossibility of continuous observation, lapses of attention of which the observer is not himself aware.

When fraud has been sufficiently discounted, there still remains a choice of non-spiritistic interpretations which may or may not admit that the phenomena are in part supernormal. (2) Many of the 'psychical' phenomena—e.g., impersonations, obsessions, premonitions, automatic writing, exhibitions of supernormal knowledge, etc.—appear to be genuine products of the subliminal, subconscious memory, multiple personality, and other imperfectly understood processes of the human mind, which can simulate spirit-communications to a surprising extent. It should be noted also that the phenomena appear spontaneously to assume a spiritistic form and that the communications regularly claim to come from 'spirits.'

The weakness of this method of explanation is that no definite limits are set to it. If even the faintest, and normally imperceptible, stimulus may impress the sense-organs, and if there can be submerged records of everything that ever has been, or might have been, noted, the feats of hyperæsthesia or of 'memory' may border on the miraculous. Consequently this explanation easily shades off into (3) the telepathic, which frankly admits that the phenomena transcend the limits of recognized human faculty, but refuses to ascribe them on this account to the spirits of the dead. This interpretation, though not incompatible with spiritism—for, if there can be telepathy between living minds, why not between the living and the dead?—is detrimental to it, because it renders it impossible to regard even the best evidence for spiritism as conclusive. It seems sufficient to suppose that knowledge may percolate from one living mind to another, supernormally but subliminally and unconsciously; for, if the supernormal knowledge is to be verifiable, it must have passed through some human mind. The existence of telepathy (*q.v.*), however, rests on a somewhat narrow experimental basis, while the principle itself is too negative to be a good explanation, and there is no evidence for it in the extended form,

¹ Cf. R. Hodgson and S. J. Davey, 'The Possibilities of Mal-Observation and Lapse of Memory,' in *The Proceedings of the Society for Psychical Research*, pt. xl. [1887] p. 331.

which assumes that any knowledge possessed by any mind may be reproduced in any other. Still even the spiritists are beginning to reckon with the possibility of telepathic percolation of knowledge from the mind of the sitter to that of the medium, and also to admit that the communications received from 'spirits' do not come directly from the nominal communicator, but are affected considerably by the mind of the medium, conscious and 'subliminal,' and by the 'control' of the medium in the 'spirit'-world, who forms a sort of second mediator. Communication thus becomes a highly complex process, and errors may be ascribed to failures of transmission, either from the communicator to the controlling spirit, or from the latter to the subliminal, or from the subliminal to the trance-consciousness of the medium, or lastly to the abnormality and lack of power of the medium.

(4) In addition to telepathy, some philosophers (e.g., William James and Maeterlinck) have suggested, as a possible source of the supernormal knowledge, a sort of cosmic reservoir of knowledge which the medium's mind subconsciously taps.

(5) Lastly, many theologians, especially Roman Catholic, with some philosophic support,¹ still ascribe all the phenomena of spiritism to 'devils,' simulating the spirits of the dead.

To meet these alternatives, the supporters of the spiritistic interpretation have endeavoured to strengthen the evidence of spirit-identity with a certain amount of success. Experiments with sealed test-letters deposited by the departed have indeed hitherto failed, almost completely. Attempts have also been made to get what can be recognized as the same intelligence to manifest through a number of independent mediums. The difficulty of excluding telepathy in such cases has led on to the theory of 'cross correspondences,' as developed in the *Proceedings of the Society for Psychical Research* (from 1903), in which an often very complicated series of allusions is given, piecemeal, at different times, and through different automatists. Each allusion is unintelligible or nonsensical as it is given, but nevertheless, when the case is complete, they all dovetail together into a coherent and intelligible whole which is suggestive of the personality of a particular communicator. In this way it is claimed that the possibility of telepathy may be eliminated, since no living human mind knows the answer to the puzzle until it is given, and it is then also seen that an intelligence other than the medium's, and identical throughout, was at work all along, constructing the enigma. But of course chance coincidence can never quite be excluded, and the method of proof is too subtle to be popularly convincing. The chief exceptions taken to the character of the alleged spirit-communications have been ingeniously met: the triviality of the messages relied on to prove spirit-identity has been closely paralleled, in some experiments initiated by J. H. Hyslop, by the methods used among friends, (a) in determining the authorship of intentionally vague and general messages, and (b) in detecting impersonations. It was found that apparently quite inadequate clues were recognized as characteristic and led to correct identifications.² The objection that nothing of scientific novelty or value is ever imparted by spirits is met by pointing to the difficulty of verifying such information if it should be given; the frequent confusion and dreaminess of the messages is explained by the difficulties of communication 'with one asleep through one asleep.' To the objection that the 'spirits' do not

behave in a dignified manner worthy of spiritual beings it is replied that there is no reason to think that the mere fact of death should entirely transform their character and outlook, and, besides, we know too little about their life to judge what behaviour would best fit them. This reply has value if it acknowledges that at present the term 'spirit' is not much more than a name for our ignorance. Altogether, then, the evidence for the 'psychical' phenomena has to be left in a very ambiguous and unsatisfactory condition.

Nor is the situation any better as regards the 'physical' phenomena. They are of course far more improbable *per se* and very susceptible of explanation by fraud. Nevertheless, the evidence for their occurrence is quite copious, and by no means inferior in quality to that for the 'psychical' phenomena. Indeed, from first to last, from the mediumship of D. D. Home (1850) to that of Eusapia Paladino and Marthe Béraud (1914), some of the best and most elaborately recorded evidence has concerned 'physical' phenomena. Besides fraud and collective hallucination, the spiritist interpretation has here to reckon with the theory that the phenomena are due to some unknown force emanating from the medium, to which some of the observers have given the preference. In conclusion it may be said that, whatever view is taken of the phenomena as a whole, and even if they are destined to serve only to enlarge our conception of the possibility of fraud and self-deception, they are deserving of more, and more scientific, study than they have received.

LITERATURE.—The literature of the subject is immense, but much of it is of very little value. The year 1882 may be taken as the dividing point between the older and the later literature; for it is the date of the foundation of the Society for Psychical Research, by Henry Sidgwick, Edmund Gurney, Frederic Myers, W. F. Barrett, and others, with which may be said to have begun the continuous, systematic, and co-operative study of the phenomena alleged. The publications of this Society (*Proceedings and Journal*) are indispensable to the student, alike for their records and for their critical contents.

Among the works of the earlier period may be mentioned E. W. Capron, *Modern Spiritualism*, Boston, 1855; J. W. Edmonds and G. T. Dexter, *Spiritualism*, New York, 1853; R. Hare, *Experimental Investigations of the Spirit Manifestations*, do. 1856; A. de Gasparin, *Des Tables tournantes*, 2 vols., Paris, 1854; M. Thury, *Les Tables tournantes*, Geneva, 1855; A. De Morgan and Mrs. S. E. De Morgan, *From Matter to Spirit*, London, 1863; *Report of the Committee of the Dialectical Society*, do. 1871; William Crookes, *Researches in the Phenomena of Spiritualism*, do. 1874; Alfred Russel Wallace, *Miracles and Modern Spiritualism*, rev. ed. do. 1890; D. D. Home, *Lights and Shadows of Spiritualism*, do. 1877; W. Stainton Moses ('M.A.Oxon.'), *Spirit Identity*, do. 1870. Abroad Allan Kardec (M. H. D. L. Rivall), *Le Livre des esprits*, Paris, 1853, 181865, the chief of the reincarnationist spiritists, and the works (1852-67) of K. von Reichenbach, the discoverer of paraffin, on the (really subjective) manifestations of 'odc force' visible to his 'sensitives,' may be mentioned; also J. K. F. Zöllner, *Leipzig*, 1878-81, tr. C. London, 1885, in which of space were invoked.

Since 1882 the work deserves special attention. Of these E. Gurney, F. W. H. Myers, and F. Podmore, *Phantasms of the Living*, 2 vols., London, 1886, was the first; F. W. H. Myers's magnum opus, *Human Personality and its Survival of Bodily Death*, 2 vols., do. 1903, appeared posthumously. F. Podmore's works, of a highly critical, not to say sceptical, character, include *Studies in Psychical Research*, do. 1897, *Modern Spiritualism*, 2 vols., do. 1902 (largely historical), and *The Newer Spiritualism*, do. 1910. The writings of Richard Hodgson, Mrs. E. M. Sidgwick, J. G. Piddington, W. W. Baggally, and Mrs. Verrall are confined to the publications of the S.P.R.; but those of Andrew Lang (*The Making of Religion*, London, 1893), William James (two brilliant essays in *The Will to Believe*, do. 1897, and *Memories and Studies*, do. 1911), J. H. Hyslop, Secretary of the American S.P.R. (*Psychical Research and Survival*, do. 1918), Oliver Lodge (*Raymond*, do. 1916), W. F. Barrett (*On the Threshold of the Unseen*, do. 1917), J. A. Hill (*Psychical Investigations*, do. 1917), Hereward Carrington (*The Physical Phenomena of Spiritualism*, Boston, 1907), Eusapia Paladino and her Phenomena, New York, 1903, *The Problems of Psychical Research*, London, 1914), and F. C. S. Schiller (two chapters in *Humanism*, do. 1903, on the psychological and philosophic aspects) are also available in book form.

¹ E.g., F. H. Bradley, in *Essays on Truth and Reality*, Oxford, 1914, p. 440.

² Cf. *Proc. Soc. Psych. Res.*, pt. xii. [1901] p. 537 f.

In Switzerland T. Flournoy of Geneva maintains a scientific attitude very similar to that of the S.P.R.; his *Des Indes à la planète Mars*, Paris, 1900, with a supplement in *Archives de Psychologie de la Suisse romande*, no. 2 (1901), is a model study of an important case of somnambulic mediumship. Cf. also his *Esprits et médiums*, Paris, 1911. J. Maxwell, *Les Phénomènes psychiques*, do. 1903, Eng. tr. *Metaphysical Phenomena*, London, 1905; E. Morselli, *Psicologia e Spiritismo*, Turin, 1908; C. Lombroso, *After Death—What?*, Eng. tr., London, 1909; A. von Schrenck-Notzing, *Materialisations-Phänomene*, Munich, 1914; Mme. Alexandre Bisson, *Les Phénomènes dits de matérialisation*, Paris, 1914; and W. J. Crawford, *The Reality of Psychic Phenomena*, London, 1916, are mainly records of experiments. The Report (Philadelphia, 1887) of the Seybert Commission on spiritualism was negative, and enabled the testator's funds to be used to endow a chair of philosophy. Hostile criticism is also represented by A. Lehmann, *Aberglaube und Zauberei*, Stuttgart, 1898; A. E. Tanner, *Studies in Spiritism*, New York, 1910; and I. L. Tuckett, *The Evidence for the Supernatural*, London, 1911; and, as a specimen of dialectics, by F. H. Bradley's art. 'Evidences of Spiritualism,' in the *Fortnightly Rev.*, new ser., xxxviii. [1885] 811 ff.

Of periodicals there may be mentioned, in addition to the *Proceedings and Journals* (monthly) of the English and of the American S.P.R., *Light*, the official organ of English Spiritualism (weekly), *The Occult Review* (monthly), *Psychische Studien*, ed. A. Aksakow, and *Annales des sciences psychiques*.

F. C. S. SCHILLER.

SPIRITUALISM.—1. Spiritualism is a popular term for what is more correctly called Spiritism (*q.v.*).

2. In philosophy spiritualism is the opposite of materialism (*q.v.*), i.e. the doctrine that reality is ultimately spiritual in its nature. Of this doctrine there may evidently be two varieties, according as this is asserted of all reality or only of some; in the latter case spiritualism is compatible with a dualism which admits the reality also of material substance, as in Cartesianism.¹ In the former sense it is not easy to distinguish spiritualism from idealism (*q.v.*) (in some of the many senses of that term), and indeed the two notions are often used interchangeably. It may be said, however, more strictly that, whereas idealism renders all reality relative to and dependent upon mind, spiritualism regards it as consisting of 'spirits,' which are not wholly or chiefly minds, and so does not make the cognitive process essential to reality. It will follow from this distinction that the same philosophy may be both spiritualistic and idealistic; Berkeley's doctrine, *e.g.*, is idealism in that it denies the reality of material substance and conceives physical reality as existing only for minds and having for its *esse percipi*; but it is spiritualism in that it composes ultimate reality of spirits, whose *esse* is *percipere*.² F. C. S. SCHILLER.

SPIRITUALITY.—The term 'spirituality' has been used in a great variety of ways. The French have appropriated it as the name for the finer perceptions of life; by the American transcendentalists it is used as a special mark of superior intellects; it is often applied to those mediums through whom communications from departed spirits are said to reach common earth; Evangelical Christianity reserves the term to describe the warmer religious emotions; and it has its proper and peculiar application as the distinguishing quality of NT believers.

The substantive 'spirituality' does not occur in Scripture, but the adjective 'spiritual' (πνευματικός) is frequently employed to describe the character of the man who has entered the Kingdom of God. Such a man has the Holy Spirit as the vital, determining principle of his life. The NT usage does not permit us to apply the epithet to any one who has been moved in some vague way by holy impulses, for a definite and well-marked character is indicated by this description. Of spiritual persons Newman writes:

'He [the Holy Spirit] pervades us (if it may be so said) as light pervades a building, or as a sweet perfume the folds of

some honourable robe; so that, in Scripture language, we are said to be in Him, and He in us.'¹

Spirituality can best be understood by first considering the promises of Jesus and thereafter noting the experience of it in the early Church.

1. Spirituality the promise of Jesus.—The esoteric state called 'spirituality' is a legitimate outcome of the Christian life as it was conceived by its Founder. Our Lord went everywhere offering to men an effective holy life which would issue from union with Himself, but, as the days approached when He would be called upon to leave this earth, He began to promise another Presence, the Comforter, who would maintain this union. The life in Jesus would not dissipate itself as a tender memory on the rough sea of human history, but would communicate its virtues continuously to the faithful.

That spirituality was the chief feature of the life offered by Jesus is evident from His insistent demand, 'Ye must be born again' (Jn 3⁷; cf. v.⁸). Entrance into the Kingdom of God is possible only to that man who has undergone a distinct change in the character of his affections. The new birth² is further described as being 'born of water and of the Spirit' (Jn 3⁵). After the manner of an inspiration, the heart is mysteriously moved towards the ideals of the Kingdom of Heaven, and the decisive moment in this change is an inward awakening to the presence, near a man, of a sphere of life infinitely more valuable, because more spiritual, than the natural life of mankind. In its mode of action the birth in the Spirit less resembles the heightening and deepening of moral instinct—common enough in human history—than the creation of a new kind of being. Mysterious in its origin, this new birth is not, however, dissociated from the ordinary workings of human faculty. It employs both the will and the heart; it works by convincing the one and softening the other.

The new life in the Kingdom was adequately described in the teaching and illustrated in the conduct of Jesus; and the promise of another Comforter was kept ever in strict agreement with that teaching and life.

The beneficial effects of the gracious operation of the Holy Spirit are three.

(1) When the Holy Spirit is come in His fullness, He will be present as an immediate and effective moral power in the heart: 'He . . . will convict the world in respect of sin, and of righteousness, and of judgment' (Jn 16⁸). 'The idea of "conviction" is complex. It involves the conceptions of authoritative examination, of unquestionable proof, of decisive judgement, of punitive power.'³ The result of the Holy Spirit's work will be to put believers in possession of clear moral ideals, so that they must be seen and acknowledged as true. The real nature of sin, the necessity of righteousness, and the inevitability of judgment will be alike recognized. In other words, the first effect of the Spirit's illumination is a clear insight into the moral relation of human action to the universe as that was conceived by Jesus. The conscience is at once enhanced in value and becomes more authoritative by the indwelling of the Holy Spirit.

(2) The second effect of the Spirit's presence will be a new possession of truth: 'He shall guide you into all the truth' (Jn 16¹³). Truth was to Jesus, as to His Jewish contemporaries, that practical wisdom by which conduct was guided. The modern conception of truth as 'that which satisfies the intellect' was not in His mind. By 'truth' our Lord means a knowledge of that which is necessary for life in harmony with God. To those disciples who would obey Him Jesus promised a knowledge of the truth, and 'the truth shall make you free' (Jn 8³²). This was evidently a promise of practical freedom—freedom for action as well as for thought. It would, however, be a mistake to confine this understanding to practical truth alone, for in the gradual approximation to a complete knowledge of conduct the intellectual qualities would be brightened and a new point of view acquired. The spiritual mind may not only feel more warmly moved by the knowledge of moral truth; it may also act with greater intellectual prescience.

(3) The Holy Spirit will glorify Jesus; i.e., He will reveal to

¹ *Parochial and Plain Sermons*, new ed., London, 1863, II. 222.

¹ See art. DESCARTES.

² See art. BERKELEY, PERCEPTION.

the heart of man the majesty and unspeakable beauty of the character and work of Jesus. Like a treasure of inexhaustible wealth, the Spirit will find Jesus an object adequate for all His blessed operations in the human soul (Jn 15²⁶). New aspects of the character, new satisfactions in the finished work, and new delights in the friendship of Jesus remain to be discovered to men by the Holy Ghost. In this, His most proper work, the Holy Spirit will be the witness of that divine love of which Jesus was the conspicuous agent.

In view of our Lord's promises, we may say that humanity and history, broadly conceived, will determine the limits of genuine spiritual experience; for, however mysterious in its origin, the new life in the Spirit identifies itself with the conscience and the heart of man; and the Spirit Himself lives more and more to exploit the perfect character of Jesus as that manifested itself in history. These two positions, clearly established in the Incarnation, must be the norm by which all spiritual pretensions are to be judged. Does any spiritual claim contradict an enlightened moral consciousness? Does it get ever quite out of touch with the historical Jesus? If so, it has thereby discredited itself in the Christian view of spirituality.

2. Spirituality the experience of the Church.—In striking agreement with the forecast of Jesus is the experience of the apostles, notably of St. Paul. For him the peculiar feature of the life in Christ is the presence of the living Saviour in the hearts of those who love Him. Love for God and man, efficient moral power, and the whole new life and hope of the gospel come from the indwelling Jesus, who more and more identifies Himself with the Christian—soul of his soul, heart of his heart, the life within his life. This blessed indwelling the apostle describes in other places as the indwelling of the Holy Spirit. For him, as for all the apostles, Pentecost was the birth-place of modern Christianity. What is noticeable in his Epistles is the growth of an experience which fully justifies the prophecies of Jesus about the Comforter.

The virtues foretold are precisely those which now appear in the experience of the Church.

(1) The presence of the Holy Spirit is a new principle of moral power. The Christian is free from the bondage of iniquity; the body is dead because of sin; and in the age-long struggle between the lower and the higher nature victory is now with the spirit (Ro 8, Gal 5). This domination of the Christian's conscience by the Holy Spirit extends to the farthest thought of the imagination which, with all other motions of the heart, is to be brought into subjection to Jesus (2 Co 10⁵). So powerful is this influence that the body itself, the seat of so many imperfections, shall one day be quickened by the Spirit into an immortal existence (Ro 8¹¹). In one famous sentence St. Paul lets us understand his sense of the moral efficiency of the Holy Spirit in a Christian; 'where the Spirit of the Lord is, there is liberty' (2 Co 3¹⁷). In this freedom, the summit of moral attainment, where the law becomes a habit of the soul, St. Paul recognizes the legitimate and inevitable effect of the indwelling of the all-powerful Holy Spirit.

(2) No less emphatically does the apostle describe the illuminating grace of the Holy Spirit. The Christian is an enlightened person, whose inner principle of intelligence is the infallible light of the Spirit of God (1 Co 2¹⁴⁻¹⁶). With full knowledge of the seriousness of the claim that he is making, the apostle proceeds to declare that in the light of the Holy Spirit a humble Christian is better informed than the princes of wisdom or the teachers of the schools (vv. 10-13). Here, as to his Lord, truth is for St. Paul practical wisdom—that which relates to conduct as it touches God and as it affects men. But St. Paul claims, without fear, for every spiritual man that he is so enlightened in those matters which most deeply influence human life that he may without presumption set himself up to teach. 'The man of the Spirit', he says, 'in all practical truth is its own teacher' (1 Co 12³). 'The Church claim those virtues promised by Jesus.'

(3) The promise that the Spirit should testify of Jesus becomes so certain a maxim that St. Paul scarcely feels himself called upon to justify it. Only once, and that in an argument about the moral blindness of the Jews, does he declare that the Lord, i.e. the Christ, is the Spirit (2 Co 3¹⁷). In all other places he allows himself to speak indifferently about the indwelling Christ and the indwelling Spirit. The total result of the Spirit's influence in the heart is that Christ is formed in us (Gal 4¹⁹).

In this vital spiritual union with Jesus the virtues of Jesus are reproduced. The love of God is shed abroad in our hearts by the Holy Ghost (Ro 5⁵);

towards God the Christian attitude is the affectionate trust of a child (8¹⁵); and in this loving experience joy rises to its crown, for therein Christians know themselves the children of God, assured of final salvation. In his relation to his neighbour the Christian is animated by the Spirit in tender affection. The apostle urges his converts not to grieve the Spirit by bitterness, wrath, and anger, but rather to please Him by being 'kind one to another, tenderhearted, forgiving each other' (Eph 4³⁰⁻³²). In the Epistle to the Galatians St. Paul consciously and definitely describes the conduct of the spiritual (*πνευματικοί*); they are to bear one another's burdens, to communicate their knowledge to the ignorant, and never to weary in well-doing (ch. 6). But it is in 1 Co 13 that the ardent apostle crowns love and sets it on the throne of Christian character. The conclusion of the whole matter is summed up in one sentence: the Spirit of God is a spirit of 'power and love and discipline' (2 Ti 1⁷).

3. False spirituality.—This enlightened, holy, and loving life, the possession of all believers, is the mark of a true Christian and constitutes 'the spiritual man.' Such a lofty life runs the risk of all high things—it may be misunderstood. It is misunderstood by the formalists of all ages, who insist upon religion confining itself within strict rules or laws. This temper is always with us, but it was bravely faced and triumphantly defeated by St. Paul in his encounter with the Judaizing teachers. In the Epistle to the Galatians the supremacy of the Spirit and its inherent freedom are courageously expounded.

On the other hand, the promised gifts of the Spirit have led many to make extraordinary claims of spiritual enlightenment and independence. Mysticism (*q.v.*), so closely akin to the temper of the Indian *yogi*, the Buddhist *dhyaṇa*, and the Muhammadan *ṣūfi*, has appeared in the Church from time to time, believing itself to be the natural development of the teaching of St. Paul. Numerous and sometimes moving attempts have been made to justify the mystic claim of 'immersion in the infinite ocean of God,' but these can be successfully dealt with only as St. Paul handled them. He adopted instinctively the norm which lies latent in Christ's promises. All pretended insight on the part of so-called 'spiritual' persons must be judged by one criterion: Does it testify of Jesus? To the Gnostic claims which began to make themselves felt in the church at Colossæ St. Paul opposes the history of Jesus. Do the Colossians believe themselves to be possessed of a wisdom (*γῶσις*) superior to that of ordinary Christians? St. Paul replies that there is no need of any wisdom or help which could not be found in Christ (Col 2³⁻¹⁰). To the refined ideals of Gnosticism (*q.v.*), which shuddered at the thought of the contamination of the pure Deity in the creation of this material world, St. Paul simply cites Jesus, who so little considered matter evil that He was the medium of creation; and, so far from requiring some intermediate angelic agency, God had been pleased to make all fullness (*πλήρωμα*) dwell in Jesus (1⁹ 2⁹). Spirituality is a character in closest touch at every moment with Jesus as He revealed Himself in history.

In the same way all practical results of spiritual possession must be tested by the moral standard of the gospel. Asceticism (*q.v.*), the cherished ideal of the Gnostics, is an error. 'Touch not, handle not' has a show of humility, but is not effective against the lusts of the flesh (Col 2²). The true deliverance is in union with Jesus through the Spirit, whereby our affections are lifted to higher things (3¹). Even the earnest believer's desire for the supernatural gifts of the Spirit is

not to be encouraged. There were, indeed, gifts of tongues, of prophecy, of faith, and such like; and without doubt some heightening of the natural qualities of man does follow the presence of the Holy Spirit in the heart, and may be beneficial for the extension of Christ's Kingdom; but the essential and particular characteristics of the spiritual man are these three things, enlightenment, love, and power. 'If I have the gift of prophecy, and know all mysteries and all knowledge; and if I have all faith, so as to remove mountains, but have not love, I am nothing' (1 Co 13¹). The heightened powers of knowledge, of insight, and of superhuman gift are all, in the Holy Spirit, closely and intimately moral—after the morality of Jesus. From St. Paul's time to the present no better test has been found for the valuation of the spiritual phenomena of religion.

Spirituality is the essential temper of a Christian, and it consists in the possession of the individual by the Holy Spirit of Jesus, whose blessed presence is manifest in an increasing moral insight and conquest, a growing knowledge of the deep mysteries of God, and an ever more tender and sensitive love towards God and man; in a word, an ever closer approximation to the likeness of the Son of God as He lived among men. In the preservation and cultivation of this spiritual union the Christian finds the duty of his high calling. Kinship with Jesus through the Spirit has to be maintained by a life-long reaching unto consecration. In this task a ready and willing obedience is the surest means. Moral kinship grows with acts of morality, the kinship of loving hearts grows with acts of love, and the kinship of the Holy Spirit grows with acts of faith and spiritual conduct.

SPITTING.—See SALIVA.

SPONSORS.—I. Origin and meaning.—The word 'sponsors' was and is still applied to those who undertake certain spiritual responsibilities for the baptized, in some cases for infants who are unconscious of the vows of renunciation, faith, and obedience required before baptism, and in others for those who by strange circumstances have been placed in the same condition. St. Cyril of Alexandria¹ tells us that, when men were seized with extremity of sickness and it was thought proper on that account to baptize them, there were some appointed to make both the renunciation and confession of the same. For this reason they were also called *susceptores*. Directly the Church admitted the necessity of infant baptism, something of the kind was obviously necessary. To baptize children without demanding of them some profession of faith and obedience would be to abandon one of the most important parts of the rite and to lead to the opinion that baptism availed for salvation independently of the co-operation of the will of the baptized. If we believe that by baptism we put on Christ, as the seed may be said to put on the earth into which it is placed, then, just as the seed requires the care of the gardener, so the soul of the infant requires the care of the sponsor till it shoots up and is able, with the friendly help of the Sun of Righteousness and the dew of God's

Holy Spirit, to take care of itself. The Church naturally shrank from placing a seed into the garden of the Lord unless there were some who by raking and weeding would give it the opportunity it needed.

2. Who may be sponsors.—In the first days the sponsors were ordinarily the parents of the child; they would be best fitted and naturally the most desirous so to train the child that it might realize and fulfil the promises and vows made in its name. And yet even then the Church was anxious to emphasize the truth of the spiritual birth of the child by making as little of the natural tie as possible. The natural parents became spiritual parents, representing the Mother Church whose children the infants became by baptism. Of course in many cases, especially during the days of persecution, there were no parents to stand for the child, and the Church would then provide deacons, deaconesses, or virgins, who would act in her name and make the profession demanded. So too in the large number of adult baptisms it must have often happened, as it does in the mission field, that the parents were heathen or so ignorant as to be unable to be responsible for the spiritual education of the candidates. Hence it became more and more exceptional to find parent sponsors, until at last parents were forbidden to take on themselves the office. It was doubtless felt that the new tie of god-parent, as the sponsor was called, was never very seriously recognized by those to whom the old tie was everything, and that there was a distinct gain in obtaining those outside the family to whom the spiritual tie was all important.

3. Sponsorial responsibilities.—It has sometimes been said that the pledges which the god-parents are asked to make are profoundly unreal. How can any one make a promise for some one else of whose character he knows nothing? And yet it has its analogy. Estates are held by trustees in behalf of children on special conditions, such as that they profess the Protestant religion or become Roman Catholics. These trustees pledge the children so far and do their best by providing them with suitable teachers to see that they fulfil the promises made in their name. And, as the children grow up, they are told that the property will not be theirs unless they accept the responsibility long ago made for them. So too the god-parents ought to see that their god-children realize the splendid inheritance which is to be theirs and the conditions on which alone they can hope to win it.

4. Number of sponsors.—The English Book of Common Prayer orders that there be three god-parents, two of the same sex as the baptized; but the Roman Church, in this more strictly in accord with primitive usage, requires only one, or at the most two. Bingham is very emphatic here:

'We never read of more than one in all the accounts of the ancients, and one of the same sex for adult persons. . . . Some rules forbid more than one, either in baptism or confirmation.'¹ The number demanded by the English Church may be due to early stormy days when it was felt necessary to throw about the child as strong a bulwark of Christian friends as possible. They were, as is seen by the 29th canon, obliged to be communicants, and therefore naturally expected to be keenly interested in the spiritual training of the child. It was their duty to see that their god-children were taught to know the Creed, the Lord's Prayer, and the Ten Commandments, to learn their Catechism, and to be brought to the bishop to be confirmed by him.

5. Present practice.—It is to be feared that great laxity in practice is now to be found, partly through unwillingness to interfere with the right

¹ *Comm. St. John*, xi. 28.

¹ *Antiquities of the Christian Church*, bk. xi. ch. viii. § 11.

of the parents, partly through the choice that is so often made, not of those who will be of spiritual help, but of those to whom the offer of the responsibility seems to be a compliment. And it is largely owing to this want of care in seeing that the baptized are spiritually educated that we find thousands of the baptized so ignorant of the most elementary principles of Christianity, in this particular offering a sad contrast to the intelligence and knowledge of catechumens in the mission field.

LITERATURE.—J. Bingham, *The Antiquities of the Christian Church*, bk. xi. ch. viii., *Works*, new ed., Oxford, 1855, iv. 143 ff.; *DCA* ii. 1923–1925; *The Prayer Book Dictionary*, ed. G. Harford and M. Stevenson, London, 1912, p. 371; F. Procter and W. H. Frere, *A new Hist. of the Book of Common Prayer*, do. 1901, p. 576n.; Darwell Stone, *Holy Baptism*, do. 1901, p. 100 ff. G. H. S. WALPOLE.

SPONTANEITY.—Spontaneity, in its most general meaning, denotes some form of internally initiated action. It is usually opposed to externally caused events, and probably arose in the defence of some sort of freedom as distinguished from determined or necessitated action. It is not exactly co-extensive with the idea of free action, as the latter implies reflexion and deliberation. Spontaneity seems to consist with unconscious action, though implying that it originates in the subject of it as distinguished from externally initiated actions.

In the physical world actions and motions connected with its natural order are supposed to be caused by some agency outside the subject in which the event takes place. Matter is supposed to be inert, which means that it will not change its present condition, whether of motion or of rest, without the interposition of external causes. Physical events do not take place of themselves—i.e., they are not spontaneous. Hence we say that they are determined, and we mean by this that they are caused from without. But in living organisms we observe a type of actions that, whatever ultimate mechanical influences are supposed, seem to originate wholly within the subject of them. They apparently have no external causes. Consequently we have come to call them spontaneous. Plato called all such action 'self-motion.' This was his conception of free action. Later philosophic thought added self-consciousness and purposive mental states to the notion of freedom, and included spontaneity in it. This freedom implied the possibility of alternative choice as well as self-originate action, and the idea of spontaneity had either to be synonymous with this or to represent the unconscious but subjectively initiated actions of the lower organisms, which did not seem to be mechanically caused. It thus stood as a conception half-way between determined and free actions.

Thus spontaneity is a condition or element of freedom and responsibility, but does not constitute the whole of them. Responsibility implies conscious choice and the knowledge of the distinction between right and wrong, as well as subjective causation. Freedom may not imply more than conscious choice and self-caused actions, and so is not coterminous with responsibility. But spontaneity denotes nothing more than subjective causality, and may occur without conscious choice or the distinction between right and wrong. It is therefore the initial stage of development, or the point of transition, between mechanical and consciously determined actions.

SPRINGS AND WELLS.—See **WATER, WATER-GODS.**

STAFF.—A staff or wand carried in the hand has been put to many and various uses by man in the development of culture. The most obvious use for such an instrument is defence or attack. A piece of wood from two to four inches long is the constant companion of women in Australia and elsewhere; by its aid yams, fish, game, honey, and so forth are procured. By people to whom writing is unknown notched sticks are employed as helps to memory and as a means of carrying messages from one tribe to another. In this article, however, we shall confine our attention to the use of staves as instruments of magic or divination and as ensigns of dignity and authority.

1. The magico-religious use of staves.—In most parts of the uncivilized world wands carried in the hand are used for magico-religious purposes. Staves form part of the equipment of the medicine-man almost everywhere. These wands are regarded as endowed with supernatural power in various ways; sometimes it depends on an incantation sung over the instrument, as in the case of the pointing stick, at other times the magical virtue is inherent in the material itself, as, e.g., the twigs of hazel or the mistletoe bough. Again, a rod may be possessed of magical power only on certain occasions (Midsummer Night, St. John's Day, etc.) or at particular places (e.g., a tree grown on a grave).

The conception of sacredness in primitive society is generally allied to that of authority. It is therefore not surprising that the staff of office is often at one and the same time part of the insignia of rank and a magical instrument. The horse-staves of the Buriats may be quoted as an example of this class of wand. It is only in higher culture that the sceptre proper is found, usually having evolved out of an implement originally intended for defensive purposes.

The classification of the so-called *bâtons de commandement* is by no means easy, as their function is not yet clear. It seems almost certain from their ornamentation that they were used for ritual purposes, though their name suggests that they were wands of office. For the sake of convenience we shall consider them under the heading 'wands of office' (below, 3), although they seem to be more closely related in function to the Australian *churinga*.

2. Magic wands.—(a) *The pointing stick.*—One of the commonest forms of magic is the 'pointing' of a stick or bone at some individual with the object of injuring him. Among the Arunta tribe of Central Australia these pointing sticks are known under various names, such as *injilla*, *irna*, *ullinka*, etc. These may be taken as typical examples of a class of magical instruments of world-wide distribution. The *injilla* and *irna* are small bones about six inches long, at one end of which is a small lump of resin, and round this a few strands of human hair are wound. When a man (sometimes called *kurdaitcha*) goes forth to avenge the death of one who is supposed to have fallen a victim of evil magic, he equips himself with this instrument, and, after charging it with magical properties by muttering over it an incantation such as 'May your heart be rent asunder!', he points it in the direction of the foe. In due course the victim invariably dies, unless the evil magic can be removed by a medicine-man.¹ In the Malay form of *tuju*, or pointing, the sorcerer points a magic dagger or other weapon, repeating a similar curse, towards an enemy, who forthwith sickens and dies.²

The *irna* differs from the *injilla* by being rather longer, tapering to a point at one end, and not having a hair string

¹ Spencer-Gillen, p. 534 f.

² W. W. Skeat and C. O. Blagden, *Pagan Races of the Malay Peninsula*, London, 1906, II. 199.

attached to it. The *ullinka* is a special form of *irna* with a hooked end instead of a lump of resin, and is supposed to be the charm used by the *iruntarinia*, or spirits, to annoy and often to kill men against whom they have some special grudge.¹

Any stick, wand, or weapon which has been thus 'sung' is thought to be endowed with *mana* (q.v.) of a malignant nature—*arungquilltha*, as the Australian native would say. So strong is this belief that there are several cases on record of slight wounds from a charmed spear or boomerang proving fatal, by the power of suggestion.²

(b) *Churinga*.—When a man in Central Australia desires to use magic to help him to secure a wife from a distant group, he takes a small wooden *churinga* (sacred instrument of wood or stone), about six or eight inches long, called a *namatwinna*, and goes into the bush, accompanied by two or three friends. All night long the party keep up a low singing of songs and amorous phrases addressed to the woman. At daylight the man stands up and swings the *churinga*, causing it first to strike the ground as he whirls it round and round and makes it hum. The sound is supposed to reach the woman and stir up her affections towards the man.³

Special *churinga* may be used in various ways for particular magical purposes. Thus the *churinga unginia*, which has a lump of resin attached to one end and is painted with alternate stripes of red and black, is thought to promote the growth of the beard. Another is used to allay inflammatory affection of the eyes, consequent upon the bites of flies. Women, by procuring the spear-like seed of a long grass, and charming it by singing some magic chant over it, are able to injure a male enemy by pointing and throwing it towards him.⁴

(c) *Divining-rods*.—A tree that grows on a grave is regarded by the S. Slavonian peasant as sacred.

'Whoever breaks a twig from it hurts the soul of the dead, but gains thereby a magic wand, since the soul embodied in the twig will be at his service.'⁵

In Europe magical properties are attributed to certain flowers, seeds, and branches of trees gathered at midsummer.

Thus in Moravia, Mecklenburg, and apparently in England and Scotland, branches of hazel were cut down by night on Midsummer Eve, as mystic divining-rods, capable of revealing treasures buried in the ground, and also of detecting thieves and murderers. In the neighbourhood of Berlin it is said that 'every seventh year there grows a wonderful branch on a hazel bush, and that branch is the divining-rod.' This can be found only on the evening of St. John's Day, by 'an innocent child, born on a Sunday and nursed in the true faith.' If the rod is to discover gold, it is named *Casper*; if it is to reveal silver, it is called *Balthasar*; if it is to point out hidden springs of water, it is dubbed *Melchior*. In Sweden Midsummer Eve is also the usual time for procuring the divining-rod. Sometimes it is cut from a mistletoe bough, and sometimes from four different kinds of wood—mistletoe, mountain-ash, aspen, and another. When such a rod is laid on the ground directly over treasure, 'it will begin to hop about as if it were alive.'⁶

Plants like the mistletoe are frequently regarded as possessing magical virtue—perhaps, as Frazer suggests, because they do not grow on the ground. Branches of these plants are often to be found attached to the ceiling of a house or over a stable door to prevent the ingress of witches. The famous golden bough that grew on a holm-oak in the Arician grove at Nemi is compared by Virgil to the mistletoe⁷—a view revived by Frazer in his immortal work which takes its title from the legend.⁸ The mistletoe may well have been described as the 'golden bough' on account of the rich golden tinge which the plant assumes in withering. The yellow colour of the bough may have suggested its supposed property of discovering the spots where gold exists in the earth.⁹

Iron rods are used in rain-making among the Bari of Africa. One of these rods is provided with

a hook, and another is a two-headed spear. With the hook the rain-maker hooks and attracts the rain-clouds; with the two-headed spear he attacks and drives them away. To make women fruitful, the rain-maker chief takes an iron rod with a hollow bulb at each end, in which are small stones. Grasping the rod by the middle, he shakes it over the would-be mother, rattling the stones and muttering an incantation.¹

These are a few examples of sticks carried in the hand that are used as instruments of magic. Closely associated with the Australian *churinga* and pointing sticks are the various poles and posts erected in connexion with solemn magico-religious rites—e.g., the *nurtunga*, the *kauaua*, the *ambilyeri-kirra*, the *wananga*, the *arachitta* poles used by the natives in their initiation ceremonies.²

3. Wands of office.—(a) *Bâtons de commandement*.—Before considering examples of staves used as insignia of office, a word must be said regarding the somewhat mysterious *bâtons de commandement* found in palaeolithic caves. In their simplest form they are rods of reindeer horn, having one or more holes bored through them. Sometimes they are carved into a simple symmetrical form without ornamentation; at other times they are elaborately decorated with engravings of animals, especially the horse. One of these implements found by Lartet and Christy at La Madeleine is engraved on both sides with figures of horses following one another, four on one side and three on the other. Another staff from the same shelter has engravings of two fishes and a horse. In several cases the end is fashioned to represent the head of an animal. On a baton found in the cavern Mége Teyjat (Dordogne) appear the head of a hind, serpents, swans, a finely-engraved horse at a trot, and three curious anthropomorphic figures.³

Among the carvings on bones collected by M. Piette there are several skinned animal-heads, which surely can be explained only in terms of magic, since, as Salomon Reinach has pointed out, it is unthinkable that the pre-historic designer worked from a skinless model to improve his art.⁴ What, then, is the significance of these elaborately decorated objects? De Mortillet called them *bâtons de commandement* because he imagined that they were sceptres, similar in type and purpose to the ivory wands ceremonially carried before persons of importance among the Eskimos, and to the clubs used in like manner by certain chiefs in N. America. Others have identified them with hooks for fastening garments—a rude kind of fibula.⁵ It is not easy to believe, however, that a piece of bone about 18 inches in length would have been employed for this purpose, since the Magdalenians were quite capable of making more convenient fasteners. Moreover, there is not the slightest trace of similar objects used in this way by the Eskimos. Boyd Dawkins's view that they were arrow-straighteners is more plausible, though by no means convincing.⁶ Sollas favours this explanation owing to the remarkable resemblance between the Magdalenian staff and the Eskimo's arrow-straightener,⁷ but it has yet to be proved that Magdalenian man was acquainted with the bow. By other authors the *bâtons* have been identified as parts of reindeer harness, hunting trophies, tent-pegs, drum-sticks, and magic wands. That they have some magico-religious significance seems to be apparent from the elaborate ornamentation and their similarity to staves used for ritual purposes among modern people in a primitive state of culture. Bernardin compared the genealogical staves of the Maoris with the *bâtons de commandement*, interpreting the notches with which they are often marked as indicative of the chief's genealogy, and the drawing of an animal on one side as a tribal badge.⁸ If they are taken in conjunction with the smooth pebbles painted on one side with dots and bands in red and black ochre, found by Piette at Mas d'Azil, it seems more than probable that these so-called staves of office were used ritually in 'pre-historic sanctuaries' as *churinga* or magic wands. In the present state of our knowledge it is not possible to affirm definitely that they were part of the ritual machinery of a palaeolithic totemic cult, since the existence of the practice of totemism in this age is not con-

clusively proved. It is not too much to say, however, that the gradually accumulating evidence is pointing to the latter conclusion.¹

(b) *Horse-staves*.—Although we do not follow de Mortillet in his interpretation of the function of *bâtons de commandement*, yet there is abundant evidence that in all stages of culture a rod or staff has been regarded as a token of authority. The shamans among the Buriats of Baikal, in S. Siberia, are equipped with two horse-staves, made of wood or of iron, as part of the insignia of their office. When a novice is about to receive his first consecration, two planks are cut out of a birch-tree growing in the forest where the shamans are buried. This is done in such a manner that the tree does not die, as its death would be a bad omen for the shaman. From these planks the wooden horse-staves are made. The implement is 80 cm. long, having a horse's head carved at one end, and at the other the form of a hoof. Some distance from the lower end the knee-joints of the horse are cut out. Little bells, one of which is larger than the rest, are tied to the horse-staves, together with small conical weights of iron, blue, yellow, and red ribbons, and strips of ermine and squirrel fur. To add to the effect, miniature stirrups are also attached. The iron horse-staves, which the shaman does not receive till he is given the iron cap after the fifth ablution or consecration, resemble the wooden staves, and represent the horses on which he is supposed to ride to the upper and lower worlds.² The horse-staves, drums, and other ritual implements are kept in the *shiré*, a box 3½ ft. long and 1 ft. deep, standing on four legs. According to Klementz, the horse-staves take the place of the drum among the Buriats.³

(c) *Clubs and maces*.—The staves of office among people in higher stages of culture have for the most part developed out of the wooden club, originally intended for defensive purposes. The simplest form of club is that made by cutting off the root ends of small trees to form a 'head,' the root-stumps making the weapon the more formidable and effective. The latter advantage has led to other clubs, not similarly provided with natural projections of this kind, being furnished with them artificially. In process of time these imitation root-stumps became conventionalized, especially when iron displaced wood in the manufacture of weapons.⁴ An examination of mediæval maces and similar staves of office will reveal their lowly origin. In the ceremonial maces of the 17th cent. the clubbed end has become the handle, while the handle end has become the larger and more imposing by the addition of crowns and other ornamentation.

In America every tribe used clubs for defensive purposes, but after the adoption of more effectual weapons, as the bow and the lance, clubs in many cases were relegated to ceremonial functions. The chief man of the Mohave carried a potato-masher-shaped club in battle, similar to those found in the caves in S. Arizona. The Zuñi used in certain ceremonies huge batons made of agave flower-stalks, and in the new fire ceremonies of the Hopi a priest carries a club of the same material, shaped like a plumed serpent. Carved wooden batons were frequently carried by chiefs, shamans, and song-leaders on state occasions, as emblems of authority or rank, among the north-west tribes of America. In pre-historic times long stone knives, beautifully flaked, appear to have been frequently employed as ceremonial weapons, and

their use still continues in parts of California. Among the Kwakiutl tribe club-shaped batons, carved to represent various animals, are used by the leaders in ceremonial dances.⁵

(d) *The scipio*.—In early classical times the sceptre was a long staff tipped with a metal ornament carried by persons in high official positions—kings, judges, consuls, priests, military leaders, etc. The sceptre of King Agamemnon was worshipped as a god at Cheronæa; a man acted as priest of the sceptre for a year at a time, and sacrifices were offered to it daily.⁶ Representations on the walls of the painted tombs of Etruria show that among the Etruscans sceptres of great magnificence were used by kings and priests. From these the Roman *scipio cburneus*, the ivory rod carried by the consul, was probably derived. On the medallions of the later Empire figures are represented holding rods tipped with an eagle (*sceptrum Augusti*).

(e) *The pastoral staff*.—With the advent of Christianity the *scipio* became an episcopal ornament.⁷ Some writers regard the crozier as the survival of the *lituus*, or rod, used by the Roman augurs in their divinations, because this was curved at the top, recalling the shepherd's crook of the mediæval pastoral staff. But, since the crook did not appear till towards the end of the 9th cent., this suggestion seems to be highly improbable, if not altogether impossible. The only instance of a curve at the top of a pastoral staff before this time is in the sacramentary of Autun (c. 800),⁸ but, as the date of the document is uncertain, the evidence is of little value. The early illustrations of croziers represent them as long rods held in the left hand and surmounted by a sphere.⁹ This type persisted till the 10th century. The curve first appeared in the West as a right-angular band at the top of the staff resembling a modern walking-stick—e.g., St. Fillan's staff at Edinburgh. This fact has led some to find the origin of the ornament in an ordinary walking-stick, but the more probable explanation seems to be that it was evolved out of the ancient staff of office carried by persons of rank as a symbol of jurisdiction. This view is supported by the fact that it has been customary from the Middle Ages for church officers to bear *ferules*, or wands, on certain occasions¹⁰—a custom that still survives in the wands carried in procession by churchwardens.

(f) *The beadle's staff*.—Just as the pastoral staff is the symbol of ecclesiastical jurisdiction, and the mace the outward sign of the corporation, so, as the movement towards local self-government developed, the authority exercised over the parish by the local officers was marked by the beadle's staff. Staves were borne by the parochial authorities from the time of Elizabeth and perhaps earlier. It was, however, after the Restoration that the beadle's staff came into general use. The creation of 50 new parishes in the City of London in Queen Anne's reign gave occasion for the making of a considerable number of staves, which accounts for the fact that very many in this district bear a date about that time. The numerous examples of staff-heads may be divided into: (1) plain pear-shaped knobs, (2) statuettes of saints and models of buildings such as Cripple Gate, the Tower of London,

etc., (3) medallions, mitres, crowns, crosses, etc.¹ The beadle in his official robes, staff in hand, is still to be seen in a few churches conducting the preacher from the priest's stall to the pulpit. The devout, however, will hardly regret that the quaint emblem of civil authority has, in most cases, given place to the symbol of redemption surmounting a tall wand of wood and metal, borne at the head of processions.

STATE.—I. Evidence.—The nature of the state is to be discovered by the observation of about forty contemporary organizations; each must be analysed and its value estimated both from the point of view of those (citizens or subjects) who belong to it and from the point of view of those who are not its citizens or subjects. But, since all states are results of growth, they must be understood by reference to the past. The number of states in existence is always changing: their organization is often entirely transformed and the relations of one to the other vary infinitely. Again, since there are many other forms of social organization (churches, clubs, trade unions, capitalist companies, etc.), the state must be understood by comparison with these, both as to past history and as to present circumstances. But underlying all organizations are the passions and ideas of men and women. These are to be seen not only in the actual structure of the forty or more states now existing, but also in the tendencies of government and law; for these point to a future which is somewhat different from the present. And, since the actual tendencies do not always indicate the intentions or ideals of men, such ideals should influence our judgment of the state; for an effective ideal sometimes corrects a tendency and sometimes illuminates actions which appear to be irrational.

An analysis of state structure at present should be derived less from philosophical treatises than from official reports and the unofficial comments on administration; for the philosopher is often unable to believe his eyes, even when he determines to use them. But the agent of the state and the practical man, on the other hand, seldom understand what they are doing, as the oarsman seldom understands mechanics. We must therefore interpret; and for this purpose we refer to philosophic writers, allowing always for their tendency to emphasize the obsolete and discounting the national or provincial limitations of all 'classical' authors.

From such evidence, from about forty specimens in contact one with the other and each with many different social organizations, from tendencies, ideals, reports, comments on administration, and philosophical opinions, we must discover the nature of the state. Every state to which we refer is independent of others in its internal administration and equal, at least in theory, to all others in its external rights; therefore it is called sovereign. Other uses of the word 'state' (e.g., United States) we neglect, and we omit the discussion of part-sovereignty (e.g., Oman). But, even if we limit the name to sovereign states, it must be recognized to be a name for a changing object and only for what is common to many different specimens.

2. General idea.—The state is at present the supreme organization of political life, and political life is that part of social life which is concerned with setting in order the various interests of man.²

The state is not, therefore, necessarily concerned with religion as the Church is, nor with trade as the company or the trade union is, nor with art as the academy is, although the state must take account and adjust the claims of all these. In that sense politics is architectonic; but the state is not for that reason superior, as the policeman is not superior to the artist. There are, however, certain issues in which the state must take precedence, not only in authority, but also in affection, as, e.g., when order or liberty is threatened. The precedence due to the state in purely political issues and in certain crises does not imply worship, since the state is a means to full social life and individuality and in no sense an end in itself.

It is implied in this conception of the state that social life takes shape in different forms of 'community,' if we understand by that word any unit of social grouping the 'frontiers' of which are sufficiently definite to be felt as dividing those who belong to the group from those who do not. Some of these communities are more permanent than others; some imply a more conscious common purpose among the members. A village community is more permanent than a committee; the members of a scientific society are more conscious of a common purpose than the members of a church. And among all the forms of community there are now distinct and co-ordinate communities or social organizations representing purposes or tendencies of men which are not normally confused or subjected one to the other: these are states, churches, labour organizations, capitalist companies, etc. The present distinctions of social organization are the result of a long development; for in earlier times only one form of social organization fulfilled vaguely all the functions now fulfilled separately by very many different 'communities.' That earlier form is sometimes called a state; but we shall not include that meaning in our use of the term. At present there is a distinct form of social organization through which administration, law, police, 'defence,' and other distinct social functions are fulfilled, and this alone we call a state. It is co-ordinate with religious or trade organizations; but its relations with these are not yet clear, either in theory or in practice. All that is obvious is that a church or religious society is not a part or a dependency of the state; nor is the state inferior to any church. Associations of those who have a common economic purpose are, also, not necessarily parts or dependencies of the state; nor is the state an economic unit. The state, however, must not be identified with 'the government.' It is the whole group of those who have, consciously or unconsciously, a common political purpose. We may, therefore, speak in metaphor of the soul of the state, as men used to speak of the soul of the Church. The members of a state, whether divided or not in religion, trade interests, or intellectual pursuits, are bound together by a sentiment, which is the expression of a vague purpose. On the other hand, this soul of the state is nothing without administration, which is the invariable sign of political life. Thus obedience to law is ultimately dependent upon enthusiasm for or acquiescence in a particular form of state life; but few men are 'politicals' in their inmost thoughts or for most of their lives, and perhaps very few men find in a state and its activities the highest and most permanent object of their enthusiasm, although many can be easily persuaded that all they hold valuable would be destroyed if the form of state life to which they are accustomed happened to disappear. In subordination to the state are all other forms of organization of the same social 'order' (i.e. the

¹ M. and C. Thorpe, *London Church Staves*, London, 1895.

² See art. POLITICS.

political order)—*e.g.*, municipal or provincial councils, systems of education and sanitation. As the activities directly connected with political organization tend to increase, the differentiation of subordinate state functions proceeds farther; but there is no likelihood of trade or religion or science or art being entirely absorbed by the state, although some would aim at such an artificial simplification of social organization. The tangled luxuriance of modern society annoys many; it is an object of perception, without emotion, for our present purpose. The state is the result of a relation between individuals, but all individuals are grouped in various ways, and the state may therefore be also the result of a relation between their groupings; that is to say, the 'members' of a state are not only individuals but also groups of individuals of the political order.

3. *Internal structure.*—The development of social life through which the state has reached its present form and position is dealt with in the art. *POLITICS*. Here we must analyse the present situation in political life; and for this purpose it is necessary to distinguish the inner structure of the state from its external contacts, although we must admit that neither would be what it is but for the other. Internal discord promotes external wars, and wars assist domestic tyranny. The internal structure of states is more highly developed, it has been given more thought, than the external contacts; for frontiers were once the limits of interest for the majority of citizens, subjects, or rulers.

(a) *Administration.*—The most important feature of internal structure is administration. The so-called executive is, therefore, the most general phenomenon of state life; the members of the executive are theoretically agents of the state group, and their action is state action. There is indeed a pious belief of philosophers that they express the 'real will' of the members (citizens or subjects) of the state; but the words imply too conscious a political life. In fact in most states most inhabitants acquiesce in the acts of an executive. This is an inherited attitude; and the forms of executive or administrative action are also in great part inherited. There are emperors, kings, and also presidents, and, more powerful in normal life than these, permanent officials generally belonging to a close social caste, with others of subordinate castes under them—secretaries, burgomasters, prefects, town clerks, inspectors, and policemen. In the administrative acts of these the state used to appear as repressive (a hindrance of hindrances), and now begins to appear as directive.

Internal structure differs in homogeneous (national) states and heterogeneous (non-national or imperial) states; for in the latter selected members of one (predominant) race administer the affairs of districts inhabited by other races. The subject races are necessarily not citizens, since that word implies a right to assist in choosing the form of administration. The frontiers of states therefore do not always mark distinctions of nationality; but in most states the administration is marked by the characteristics of one nationality, and unity of administration tends to eliminate the antagonisms of race, unless one race is oppressive to the other.

Local government is roughly of two kinds—regional, as in Great Britain and the United States, or centralized, as in France and Germany. In the regional type of government the inhabitants of small districts choose their own administrators for local interests (sanitation, housing, roads, etc.); in the centralized systems prefects or burgomasters are appointed by the central government, and the

inhabitants of the district are allowed only advisory functions. The two systems tend to assimilate through an inspectorate in the regional and local patriotism in the centralized state.

As regards larger units of population (above about 5,000,000) administration is either unitary or federal. In the former nearly all provincial affairs are dealt with at one centre; in the federal system large powers (in education, taxation, etc.) are given to provincial (sometimes called 'state') groups under the general control of a federal council and executive. The growth in the size of states has led to an increase of federal government, sometimes proceeding by the 'devolution' of powers from a central executive to provincial or district administrations, sometimes by the organizing of close political dependence upon a central authority of groups hitherto independent.

All these differences of internal structure within one common character of all states show the desire to make administration effective over large areas, while allowing for divergent interests of different localities, nationalities, or political capacities. There is no universal method of distinguishing interests peculiar to small groups from those common to many groups or indeed to the whole human race, and all good methods of administration allow for a continual change in such interests.

(b) *Legislation.*—Administration is, as it were, the action of the state, but legislation is its mind or will. A permanent instrument of continuous legislation is, however, a comparatively recent development in the life of states; and, although the executive has always depended upon the mind, will, or opinion of the state group, there was for long no voice for such will or opinion. Even now in many states (France, Italy, etc.), by a device known as 'administrative law,' the members of the executive are given a legal position which divides them from the ordinary citizen. The state, acting by its appointed agents, is given special privileges (courts, etc.) as against the ordinary citizen. This system, although it is a development of the old autocratic government, is not simply primitive, and it does not tend to disappear. It seems to be a distinct line of development, and is contrasted with the 'rule of law,' under which the agents of the state itself can be tried in the common courts. The latter system is peculiarly English; but it has no hold in countries in which the strength of state administration is believed to be of the first importance.

The vitality of the state is generally concentrated in a representative body, parliament, or chamber, in which new needs are met by new enactments. But some states have fixed or rigid constitutions, or bodies of law within which the powers of the representative chamber are confined, while other states depend upon an undefined tradition which may be indefinitely modified by the legislature. Between these two extreme types are the majority of state systems. Where the unity of the state is not 'natural,' or where the sense of that unity is not innate in the citizens, the fixed or rigid constitution is strongest; but, where there is a long tradition of unity, what seems to be the very essence of the state can be changed by the legislature of the day. The judicature is often said to be a third function within the state, but it is hardly on a level with the two others. In most states those who decide the meaning of law or apply it to cases are subordinated either to the legislature or to the executive. The judicial system is, however, an expression of the will or mind of the state, intermediate between the legislative and the executive.

(c) *Parties.*—The life of the state in the legis-

lature, and sometimes even in the executive, is shown in modern times by political parties, which with many variations in different lands seem in every state to conform roughly to two types—one devoted to the maintenance and development of established tradition, the other concerned with general principles of reform. Parties are also sometimes formed by social or economic classes for their own advantage; and sometimes the party is only the following of a strong person. It is usual to suppose that the parties in any state stand for differences which are subordinate to the common interest of all the citizens of that state; but this view is difficult to maintain in cases where the principles of the party refer to policy in general and not to specific local means to order and liberty. There is a tendency to underrate the value of parties in giving political consciousness, because of the abuses of party manipulation for trivial ends.

4. **External contacts.**—It is essential to the understanding of the state to note that every state is commonly regarded, by those who do not belong to it, as an armed band. The structure of every state and the attitude of its citizens are indeed greatly affected by the fact that every state is in contact with other states. The inherited contact may be described as suspicion tempered by diplomatic comity; but economic and cultural development has led to important beginnings of inter-state organization (the Universal Postal Union, etc.). There are administrative changes in the external structure of the state, and administration of this new kind tends to increase. It will undoubtedly change the common attitude towards 'other' states; and therefore it will affect the nature of the state. But the older non-administrative and quasi-legislative system of international law, together with its culminating expression in The Hague Conferences, has also considerably modified the nature of the state. Under such influences the state in its external contacts appears as one among many co-ordinate and equal political institutions; and state action, though not politically 'sanctioned,' is morally estimated by reference to a vague consensus of civilized opinion in all states. This section of state life is now developing rapidly, and therefore no conclusive or schematic view can be had of it.

In the external contacts of the state, where political organization has made no progress, crises occur which lead to a periodic atavism known as war. Preparations for this affect the structure and conduct of all states, and some states are so greatly affected that certain writers have thought war the highest function of state life. In war the external contacts of the belligerent states are reduced to force and fraud. There have been stages in state development when it seemed as if force and fraud would be delimited by distinguishing citizens from soldiers, neutrals from belligerents, and otherwise combining political and military conceptions; but it seems likely that such attempts will fail, because of the economic interdependence of groups and the more destructive mechanisms of modern times.

5. **Tendencies.**—The facts which we have so far analyzed are the result of about 2000 years of development, and the development has not ceased. In order to understand the state, therefore, we must look towards the future. The general tendencies are as follows.

(1) There has been an increase in the size (area and population), with a decrease in the number, of states. This decrease was most marked in the 19th cent. and has been due not only to conquest but also to political subordination following economic pressure. It is not clear whether, as

some expect, the tendency will result in small states becoming mere satellites to empires; but already, in spite of the theory of international law, the 'Great Powers' arrange differences without consulting other states. The increase in the size of states involves that similar administration and similar laws are established among great numbers who inhabit vast spaces; and therefore the frontiers of political administration are fewer. If frontiers are regarded as sources of friction, the decrease in their number involves a decrease in the probabilities of war; and the greater size of states is, from this point of view, an advantage. But a larger state involves a greater number of officials and, what is more important, a greater separation between citizens and these officials, their agents. The result is that state action tends to become dehumanized, and no responsibility is felt by the general body of citizens for the acts done on their behalf. Thus the good effects of democratization are often counteracted by the evil effects of officialism. This obviously is not peculiar to political organization. The same causes have led to increase in the size and decrease in the numbers of businesses; and large financial companies tend to destroy the sense of moral responsibility among their members for the actions done in their interest.

(2) The second important tendency is the increasing frequency of contact between all states, even those far distant. Frontiers have become lines of contact as much as marks of division. Commercial treaties increase in number, and diplomacy is a continuous process, inter-relating all states. Here also the political world is like the economic; and, as in the economic sphere a world market is created by contact, so in the political sphere contact produces similarity of moral standards, of action, and even of administrative structure. If the trend of events in the 19th cent. continues, there will be much more common political ground for the whole human race, and this may possibly result in developing the League of Nations.

(3) On the other hand, there is a third tendency to variety of political structure. The monarchies of the 18th cent. were much more like one another than are the republics of the 20th. Political consciousness is more highly developed, and the result is a greater variety in the devices of administration; e.g., new methods of local government are being tried in various states.

(4) Underlying the variety of structure there is a general tendency towards what may be called by the old name of democracy. The simple-minded faith of Rousseau, indeed, is not accepted without corrections; but there is undoubtedly an increasing control of government in most states by the ordinary citizen. This is no obstacle either in theory or in practice to the recognition of special ability. With this we may connect the increase of state action in favour of the greater number of the inhabitants of the territory of the state. The rights of the majority are being recognized even before their power is acquired. Wage-slavery, starvation, and premature death, now suffered by nine-tenths of the human race, may yet be regarded as of greater political importance than the 'rights of property' or the development of trade; but the nine-tenths of the race are politically powerless, and state-action—e.g., to decrease infant mortality—will depend, not upon the number who have the vote, but upon the sense of responsibility among voters. In the new democracy the citizen thinks in new terms, not in the terms of family, trade, party, or frontier.

6. **Interpretation.**—Such tendencies as these indicate the ideals which fitfully illuminate politi-

cal change. The intention of all those who are conscious of state life appears to be the attainment and maintenance of order and liberty—as much order as will allow all members of the state to develop their powers and as much liberty as will permit security of tenure or certainty of expectation. The kind of life desired, however, varies so much in different localities that what satisfies one group seems to another to be tyranny or licence. We are driven therefore to a philosophic interpretation of those human passions and ideas which result in ever-changing political organizations. A great part of the traditional interpretation is obsolete, and the inherited language is somewhat misleading. The state is not to be confused with society, and we must not identify individuality with citizenship. The problem of the citizen and the state is only one phase of the general problem of the individual and society. The 'real will' of the philosophers' creed is to be found in various social forms, not all in a hierarchy, but some co-ordinate. Any one civilized man is normally a meeting-place, occasionally a point of conflict, between different social allegiances which arise out of his different interests or emotions. He has special relations to others in accordance with their common dwelling-place, or language, or religion, or trade, or culture; and the state is that group of men, women, and children so related as to accept or to maintain a special method of obtaining order and liberty. Men so related are different from what they would be if, by an impossible hypothesis, they can be supposed to be separate atoms. There is no atomic individual. But, on the other hand, the state is not a new mind or soul. It is a reality of the social order, and metaphors drawn from the individual are misleading. The unity and fullness of state life are, however, often greater than those of a church or a trade union.

We have pointed out the signs of state life in administration and policy; but the State of which men sing, for which men die, is not the officialism of Washington or Whitehall. It may in metaphor be called a spirit or a soul, and it is expressed in myth as Britannia, La France, or Deutschland, although confused in such myth with the spirit of

a nation. A nation, as distinct from a state, is usually held to be a group of those who speak the same language, are physically related, and accept the same moral tradition; and, where the boundaries of a state administration do not coincide with national distinctions, there are conflicts of allegiance. Other social groupings, such as churches, trading companies, and trade unions, also cause conflicts with state loyalty. The limit of allegiance is to be found by reference to the purpose for which state administration exists. No man is bound to support the action of a state official or even of the whole body of citizens in the sphere of fine art, for the state is not an institution for the purposes of artistry, nor is it supreme over art institutions. The precise delimitation of state functions may be difficult, but a limit does exist. In normal life, however, the conflict of claims is infrequent, and few are driven to decide a conflict of allegiance. The majority act impulsively on no consistent principles. It is therefore almost useless to define what we mean by the word 'state,' as it would be useless, except for purely legal purposes, to define what we mean by 'man.' State administration must be believed, by those who benefit directly, to exist for securing order and developing freedom. But every one of the institutions now called states is performing other functions besides this; and some such states appear to non-citizens to be obstructing that for which the state should exist. Again, every state is changing its nature under our very eyes; and it seems probable that the political and social life of the next century will create clearer distinctions between the different forms of organization within society and a rapid development of state activities.

STATE OF THE DEAD (Primitive and Savage).—I. Introductory.—No subject connected with his psychic life has so engrossed the mind of man as that of his condition after death. Savages in all regions of the world have generally very clear and vivid conceptions of the spirit-world—its life, its characteristics, its landscapes—and this suggests an intense preoccupation with the subject. The wide-spread fear of the dead points to a very primitive idea that their state was not one in which life had ended. Death had cut off energies; that was obvious enough; but were there not other energies at work, or were not those energies

capable of manifestation in subtle, mysterious ways? Whether men at first believed in a spirit, soul, or ghost, separate from the body, or not, there seems every reason to believe that they regarded the dead as still carrying on some kind of existence, which rendered them objects of dread. Where burial was in use, perhaps the simplest idea was that the dead man lived on in the grave in bodily form. Such practices as binding the dead with cords, laying heavy stones or a mound of earth on the grave (doubtless to prevent their egress), or feeding the dead at the grave, or, again, the idea that the dead could come forth from the grave,

not merely as spirits, but in the body—the root of the vampire superstition—all point in this direction. It is even confirmed by the fact that, where a separable spiritual essence is believed in, the spirit or ghost is invariably associated for a longer or shorter time with the grave, lingering round it for some days. The grave is the dead man's house—an idea surviving in the Scandinavian belief that the barrow is the abiding-place of the dead in bodily form. The idea of a subterranean world of the dead was probably of early origin, many graves together merging into one wide region underground, the individual grave or tumulus affording entrance to or egress from it. In the belief of many tribes the subterranean region is in the west, towards the setting sun. As the sun dies each day and sinks in the west, often to shine in the place of the dead, so man also goes in that direction. This idea of a western region of the dead is still found where an island spirit-world is believed in, or even, as with many prairie tribes of N. America, a distant paradise on the plains into which the sun seems to sink. Often, too, the idea of a return to the place whence the ancestors of the tribe first came, whether that was underground or not, is entertained. Again, where the spirit-land is on the surface of the earth, it is situated in distant mountains or valleys. Probably the conception of a spirit-world in heaven, or on the heavenly bodies, was not of primitive origin. As some think, it may have been suggested by the custom of cremation: as the smoke of the pyre rose upwards, so also did the soul.

The clear view of the other world found in many savage beliefs shows that men had thought much about it. Their fundamental idea of it was necessarily its likeness to this world: imagination then made it all that man could wish for; it was better, pleasanter, happier than this world. On the other hand, it might not be so good, but such an other world was usually for unworthy persons, and here retributive ideas, though not always on strictly ethical grounds, begin to dawn. The thoughts of men affected their dreams or trance-states. They believed that they saw the other world or that their spirits had been transported there. Dreams, trances, swoons, affected by the belief, reacted upon it in turn and gave greater detail to it.

Savages often assert that their knowledge of the state of the dead is derived from dreams. The Andaman Islanders, who think that no mortal has ever gone to the other world, assert that a medicine-man once had a dream about it.¹ The New Caledonians derive their knowledge from convulsionaries who have visited the land of the dead in trances—i.e. from their vivid dream experiences.² The Sia also have gained acquaintance with it from men who died for a time (passed into a swoon) and looked into the spirit-region, though they, like many other tribes, say that much knowledge was gained from the dead, who once returned bodily to enjoy a feast.³ Medicine-men, who are very commonly believed to project their spirits into the other world, are also propagators of knowledge regarding it.⁴

The long journey to the other world, the obstacles encountered, the ordeals to be undergone, the spirits or demons to be met with, are often the subject of elaborate mythical accounts, and due preparation is made for the journey and its trials by the burying of objects with the dead, by the possession of necessary tatu marks, mutilations, and the like, or by acquaintance with what is likely to befall one. Where the sea has to be crossed, the boat is generally more or less magical. Constantly, too, we meet with the idea of a bridge over a river, ravine, or gulf. To cross this narrow log, serpent, or knife-edge

bridge is usually an ordeal.¹ The journey of souls to the other world is often the subject of detailed descriptive myths, affording knowledge to the soul of what it will encounter, just as in the Egyptian *Book of the Dead* and the Orphic-Pythagorean tablets buried with the corpse. In Fiji it forms the subject of a long poem,² and elsewhere it is almost equally elaborate, or may even be roughly mapped out.³ To aid the dead man on the way, to give him light or warmth, fires are very commonly lit on the grave, and in order to satisfy his hunger food-offerings are placed there, or regular feasts for the dead are made from time to time,⁴ while moccasins or (at higher levels) shoes may be supplied to the corpse as protection against the rough journey.⁵ Having once reached the other world, the spirit, according to well-nigh universal belief, can return to earth, mostly to its old haunts, often invisibly, but sometimes manifesting itself in various ways.

The beliefs of most savage peoples regarding the state of the dead are seldom of one exclusive pattern. There are instances of this, but often different views are held, even of a contradictory kind. Where no fixed dogmatic creed is taught and believed, traditional belief will vary, and different beliefs, perhaps evolved by one people or taken over from other tribes, will be found in different sections of a tribe. A savage may entertain alternative or even contradictory beliefs without feeling their incompatibility. Such beliefs, however, become more reconcilable when they concern the fate of the various souls with which a human body is often supposed to be animated.

How soon man began to believe in a state of the dead cannot now be discovered. But, while skeletons unearthed belonging to the earlier stages of the palæolithic culture have not apparently been those of corpses carefully buried, this need not preclude the supposition that burial-rites were in use then.⁶ In late Acheulean times evidence of these begins to be found. Then and in the Mousterian period the dead were buried in or laid out on the floors of grottos and caverns. Some of the skeletons are in a crouching position, and stone tools or bones of animals, possibly remains of food-offerings, are found with them.⁷ In the next, or Aurignacian, period the evidence of ceremonial burial and the existence of grave-goods continues. Some skeletons are embedded in a mass of small shells, or the head rests on a stone, or has a necklet and a crown of shells. Others lie in a bed of red earth. Implements are also found with the skeleton, as well as remains of food. In some cases a number of skeletons are carefully interred together.⁸ The Magdalenian age burials (e.g., at Laugerie Basse and Chancelade) and those of the Azilian-Tardenoisian horizon (as at Ofnet, Mas d'Azil, and Fère-en-Tardenois) show equally and even more elaborate traces of ceremonial burial.⁹ In all these cases the frequent connexion of tomb and hearth, the carefully prepared attitude of the body, its interment in a special layer of foreign material, the custom of collective burial, and the presence of grave-goods and food-offerings point to reverence for the dead, to some religious concep-

tions, and to some belief in survival after death.¹ In the neolithic age the ritual of burial and the graves and sepulchral monuments are still more elaborate, the rites including discarniture, painting and adorning the body or skeleton, very complete deposition of grave-goods, and occasionally secondary burial. So, too, in the bronze age similar respect for the dead is found. Such careful attention to them argues fixed religious beliefs and some clear conception of a future life, and this is confirmed by the existence of similar burial customs among savage tribes known to possess elaborate beliefs regarding the state of the dead.²

For a comparative view of the subject, the various beliefs of different peoples may be classified and each described under a different heading, but always with the condition, noted above, regarding variety of beliefs among the same people. Often, too, those beliefs merge into each other. In most cases savages limit their conception of the other world to their own people, not troubling themselves about the fate of other tribes, except in some instances regarding souls of enemies as their slaves or allotting to them an evil destiny. How far an unending immortality is consciously believed in is seldom quite clear. In some instances the soul dies a second or even a third death, and there is an end of it. Probably in most cases savages do not trouble much about the condition of long-dead ancestors, unless these are famous enough to have their memory preserved for generations. As little do they trouble themselves about the duration of the future life. Ghosts are feared as long as they exist or have power to revisit the earth. The fear is greatest for those most recently dead; more distant dead persons are forgotten by degrees, hence not feared, and their existence is not a matter of inquiry. Frequently, according to Hertz, the fear is greatest as long as the process of decomposition lasts, and until the secondary funeral rites are accomplished.³

See further art. BLEST, ABODE OF THE (Primitive and Savage), § 1.

2. Extinction after death.—There are very few savage peoples who believe in utter extinction, and, where the belief exists, it arises perhaps as much from lack of interest in other-world conditions—an unusual attitude with the savage—as from a sceptical outlook. On the other hand, it is not uncommon to find that extinction or some very undesirable fate is expected for the common herd or for certain persons obnoxious to society.

Some American Indian tribes, or individual members of tribes who believe in a future life, are said to entertain no such beliefs; and among the natives of Kiwai on the Fly River, British New Guinea, while there is a definite belief in a future life, some think that there may be no such state.⁴ Hyades and Deniker report of the Fuegians that they have no belief in a future life, yet some of them believe that the *walapatu*, who make strange noises at night and try to enter the huts and eat them, are spirits of the dead. Others, however, regard them as men of a neighbouring tribe.⁵ The Abipones, again, are said to be ignorant of what becomes of the soul after death and not to think of inquiring. Yet they believe that spirits of the dead become visible at the call of the necromancer,

and that certain small ducks which fly by night are souls. There is also some belief that ancestral spirits are in the Pleiades.¹

3. Vague ideas of a future state.—The case of the Abipones just mentioned illustrates what is not uncommon among some savages, viz. a vague conception of the future life, joined with the view that there is no special region of the dead. They remain about the homestead or in some neighbouring part of the country, or haunt the grave, or wander aimlessly around.

The Aetas, a Negrito people of the Philippine Islands, believe that the spirits of the dead are all around, or that they enter one spirit inhabiting a large boulder.² Some of the Dravidian tribes of India are equally vague in their belief. The Kotis worship a stone into which the spirit of the dead man is supposed to have entered on the eleventh day after cremation.³ Among the Coorgs of Mysore large forests, untrodden by human foot, are set apart as abodes of deified ancestors.⁴ On the fifth day after a death the Gonds recall the soul, and, catching a fish or an insect, bring it to the house and place it among the sainted dead of the family, believing that the spirit has thus been brought back to the house. Sometimes the animal is eaten in the belief that the spirit will be reborn as a child. Ancestors are represented by pebbles kept in the sacred part of the house. Good souls are easily appeased, but bad souls and spirits of those dying a violent or unnatural death are mischievous.⁵ The Nāgas of E. Assam are doubtful whether the spirit remains in the corpse or at the grave or goes to a far country. Some think that it dwells on a high hill to the west, others that it remains in stone monuments near the village, and others that it goes to an underground paradise, like this world, where it dies a second time and goes to a lower state. Dying there once more, it returns to earth as a butterfly or small house-fly and then perishes for ever.⁶ The Khonds bring back souls to the house through the medium of a cock or a spider, and feed them twice a year with rice, but they also believe that souls are reborn in children. Spirits of men killed by tigers are believed to guide tigers in search of fresh victims.⁷ Among the Veddas of Ceylon the *nac yaku*, or recently dead, are believed to attend on Kande Yaka, though there is no idea as to his whereabouts. Spirits of the dead are vaguely supposed to be all around or in hills, caves, and rocks. Spirits of wives of headmen haunt slopes or tops of hills, where they are sometimes jealous of people gathering honey. Certain *yaku*, probably those of the forgotten dead, are regarded as attached to forest glades, large trees or rocks, and hill-tops. In the last case they tend to take the name of the hill. A regular cult is offered to all these spirits.⁸

In Africa many Bantu tribes appear to have little or no idea of a future place of souls.

Of the southern Bantu Macdonald says that the spirit-world is very hazy and uncertain to their minds.⁹ Sometimes, as with the Thonga, several ideas seem to be current. Thus these people think that spirits go to a great village under the earth where everything is white, and where they till and reap, and possess cattle and everything else in abundance. The funeral rites, however, suggest that the grave is the house of the dead, while a third belief places ancestral spirits in sacred woods,

intrusion on which is tabu, and where they live a family life under human form, but appear to the living as snakes.¹ The Bageshu think that spirits remain about the house, making their wants known through dreams.² The Awemba speak vaguely of their friends as becoming good spirits in the other world, but nothing is said of its whereabouts. Souls of chiefs haunt the thickets in which they are buried, and sometimes appear as pythons.³ The Ba-Huana think that man possesses two souls: one, the *bun*, disappears at death, none knows where, except that the *bun* of a man with many fetishes may enter a large animal; the other soul, the *doshi*, lingers in the air, visits its friends, and haunts enemies.⁴ The Baganda believe that spirits had to appear before the god of death, Walumbe, to give an account of their deeds and to pay their respects to him. They do not appear to have been rewarded or punished, and after this audience they returned to the places where their bodies lay. Ghosts dwell among the living and played at noon-tide in the gardens, but they were also attached to their jawbones, and those of kings were kept in special temples.⁵ Ghosts of common people among the Ba-hima wander round the kraals, after having visited a distant land. Kings are believed to become lions, princes and princesses serpents.⁶ The Ba-Mbala think that the soul wanders about, and, if the grave is neglected, it disturbs or causes the death of its relatives. If it is satisfied, it takes the form of some animal, the kind and size of which depend upon the position held by the deceased in life.⁷

Among the Wagogo of E. Africa, though souls are worshipped, little is known as to a spirit-land, but there may exist some belief in transmigration.⁸ The A-Kamba and other E. African tribes think the *aiimu*, or spirits of ancestors, of which every one has several in his body, sit at death in trees, good and bad apart. Miniature huts are built for them, and the woods cannot be trespassed on with impunity. These spirits are controlled by the impersonal deity Mulunga and speak through mediums. Each wife of a mortal man has also a spirit-husband, on whom largely depends her fruitfulness.⁹ The A-kikuyu think that spirits wander about and haunt the huts, while some pass into animals. Others, again, go to Mi-i-ri-nuja Mi-kon-go-i, a residence of the dead of former generations. The whole belief regarding the dead is vague.¹⁰ The tribes of E. Central Africa—Angoni, Manganya, etc.—believe that the dead live on in the old place and see all that goes on there, but sometimes they appear as animals in order to play pranks.¹¹

The Hottentots abandoned the village at a death, lest the dead should return and torment them; medicine-men had the power to exorcize the ghosts, whose presence was indicated by rattling noises, while they beat the living almost to death. Prayer was made at the grave, however, and water was thrown on it soon after burial, 'to cool the soul.' Souls were said to go to God, but where precisely their locality was is uncertain, though the belief that stars were souls or eyes of the deceased may indicate that they were somewhere in the sky. Criminals and slaves killed by their masters were left to be devoured by beasts and so annihilated.¹²

Unlike some other African Pygmies, those of the Congo region are said to have little or no belief in a life after death, though some of the dead are vaguely thought to live on as snakes or red bush-pigs, whose strange bristles attract the attention of these people by their bright colour.¹³

above, most African races—Negroes, etc.—have more definite beliefs regarding the dead, which, indeed, other Bantu groups are known to possess.

While with most of the Papuo-Melanesian tribes in New Guinea the belief in the other world is full and clear, with some of them it is not so.

The natives in the Cape King William district regard the spirits of the dead as playing by day in open meadows and hiding at night in the forest. There is also a belief in transmigration, while some think that spirits go eastwards to Bukaua on Huon Gulf to spend a shadowy existence there.¹ The Papuans of Wakatimi (Dutch New Guinea) regard *niniki* (ghosts) as 'things which you could not see but are here and there in the air about you,' and when asked where souls have gone point vaguely to the horizon, repeating the word 'far.'²

Other sporadic instances of vague beliefs are found in S. America, where certain tribes in Colombia think that the ghosts wander round their earthly dwellings after death, or, in the belief of the Orinoco tribes, round their graves.³ The Lenguas of Paraguay have similar beliefs and think that the spirits can be seen at night. There is also a belief in a gloomy under world.⁴

The Mafulu, a Negrito people modified by Papuan influence, think that the ghost at death goes to the mountains, where it becomes, if under 45 years of age, the shimmering light on the ground where the sun penetrates the forest, or, if older, a fungus. What precise meaning is attached to 'become' was not ascertained. Ghosts come down from the mountains to get ghostly food, but whether as shimmering light and fungus is not clear. If a ghost is dissatisfied with his mountain abode, he may return to the village, not apparently as light or fungus, and there he does harm. Natives avoid this shimmering light and fungus when on the mountains.⁵

4. The state of the dead similar to earthly life.

—Such a similarity is definitely asserted in the beliefs of many widely scattered peoples; of others it may be deduced from the available data. But it should be observed that occasionally the conditions of life in the other world may be slightly better than those here, though not enough so to mark these instances as distinctively apart. Less often, too, the state of the dead may be regarded as not so good as that which they enjoyed on earth. We shall consider here some instances of such a future state in which it is more or less clearly expressed that it is open to every one.

Where a definite future life is believed in by the Bantu tribes of Africa, it is usually conceived as being on the whole similar to this life. The Basutos conceive it as underground—*mosima*, 'the abyss'—with green valleys and villages like those of earth, where man's feelings, ideas, and doings are much the same as here. Others think that the shades are calm and silent, without joy and without grief.⁶ Where the Zulu belief is definite, it also refers to an under world which men have visited from this world, but combined with this is the common idea that the dead re-appear as snakes—a general Bantu belief.⁷ The Bondi belief is that souls go into a mountain (Mlinga) by a brass door, but they can also wander about on earth and cause dreams.⁸ Among the western Bantu, while the future life is vaguely conceived, it is still a shadowy replica of this life. The spirit-world is regarded as being all around men, good and bad living together in Njambi's town, much as they do here, but free from the limitations of this life. The great, good, and rich remain in the spirit-world and form a class of spirits called *awiri*, who may

⁸ G. Dale, *JAI* xxv. [1896] 232.

wander as ghosts, or take some visible form, or be born as children or as animals.¹ The Yaos think that the *lisoka*, or soul, leaves its earthly abode never to return, and goes to Mulungu (God, or the spirit-world, or the aggregate of all spirits). The spirit is there endowed with such powers as it never had on earth and is worshipped in the ancestral cult which predominates among the people.²

Several Negro tribes believe in different non-material parts of man, the fate of which after death is of a varied kind.

Among the Tshi and Ewe-speaking peoples there is a clear belief in two non-material parts: (1) the *kra* (Tshi), *luwo* (Ewe), a sort of guardian, indwelling spirit, which existed before a man's birth and has already served many men; its connexion with an individual terminates at death, when it becomes a *sisa* (Tshi) or *sioli* (Ewe). The *sisa* may be reborn at once or may remain with the corpse as a *kra*, but then must eventually become a *sisa* and retire to the land of the *insisa*, across the river Volta, where the *insisa* live and build houses. Thence it may return and annoy the living if their *kra* is absent—e.g., in sickness or dreams. The *sioli* lingers by the grave for a time and then enters a newly-born child or an animal, becoming a *luwo* again. Failing this, it wanders about, doing good or ill according to its disposition. (2) The *srahman* (Tshi) or *edsieto* (Ewe) is a ghostly counterpart of the man. If he dies before his time—e.g., in battle or by accident—it lingers round his dwelling before setting out for *Srahmanadzi*, the land of ghosts. *Srahmanadzi* is a shadowy counterpart of this world, where chiefs are chiefs and slaves are slaves, but it is gloomier than life here. Houses, forests, and rivers there are all ghosts of those once existing on earth. Every one retains the age at which he died, as well as any bodily imperfections possessed in life. *Edsieto* is the Ewe counterpart of *Srahmanadzi*; by the eastern Ewe it is called *Kutome*. There is no belief in immortality among the Ewe: their Dead Land is inhabited only by ghosts of the recently dead, who are cognizant of what goes on here and sometimes cause sickness when they desire the services of their descendants.³

The Kagoro of the Niger believe that all men have shadows or souls with the voice and form of the body. The soul must cross the stream which separates this world from the next by a bridge, and, if its body is not really dead, it is sent back. Ghosts or souls (*mohiroi*) lead the lives of men, fighting, eating, drinking, but without houses. Ghosts are always hungry and thirsty, and punish their living relatives if their wants are not attended to. A ghost has also the power of transmigrating into the body of a descendant, after which it is reborn.⁴

The Nandi identify the shadow with the soul and hold that all souls, whether of the good or of the bad, go underground and live there. The poor are still poor; the rich are still rich. This region has hills, rivers, plantations, and a sea, just as on earth.⁵

Several American Indian tribes regard the state of the dead as differing but little from that of men here, but the more general belief is that it is better, or, again, that there is a division between souls on various grounds.⁶ To the Kiowa the other world is a shadowy counterpart of this, but they have also a vague idea of transmigration, owls being supposed to be animated by the souls of the dead.⁷ The Seri believe that the dead return to the primordial under world where all things originated, but they are apt to come by night and work mischief among the living.⁸ The Tewa Indians think that in their under world the sun shines at night, but is as pale as the moon. The human race lived there until they forced their way up to earth. The sun passes through a lake and enters it, but it is gloomy and dank. In it is the happy hunting-ground of the spirits, *teajima*, described as a *kiva*-like place.⁹ The Mandans have a similar myth about their earliest home underground. Souls go there again after death by means of an underground lake, which the sins of the wicked are said to prevent them from crossing,

but this is probably a reflexion of Christian belief.¹ The Seminoles know little about Po-ya-fi-tsa, the place where spirits go, but they call the dead 'the people of Po-ya-fi-tsa.' At burial the feet are placed to the east, so that, when the dead man rises to go to the skies on the fourth day, he may reach the sky-path at the place of the sun's rising. Otherwise he may be lost. Burnt wood is placed in the hand of the dead to protect them from evil birds on the skyward journey.² Similar beliefs regarding the shadowy likeness of the other world to this are found among the Carrier Indians, Chinooks, Cherokees, Chibchas, Hurons, and Hopi, as is shown in the artt. on these tribes.

The beliefs of the Papuans and the Melanesians and of those tribes which show a mixture of both races are very circumstantial regarding the other world. Among the Papuans of Dutch New Guinea the Noofoor think that it is under the earth or beneath the sea, and that everything there is as on earth, save that vegetation is more luxuriant. Every one goes there, but the dead still help the living, who pray to them and often revisit the earth. Souls, however, are also described as remaining in the grave with the corpse or residing in images which are made for them.³ In the islands to the west souls also reside in images or miniature houses, but the mountain tribes of these islands locate the spirits among branches of trees, where food is placed for them.⁴ The people of Windessi allot two spirits to every one. There is an under world where the dead dwell in a large house, where the two spirits of a woman are incarnate in a body and live idly. One of the spirits of a man also departs thither; the other is re-incarnated as a man or sometimes as a woman, who now becomes a medicine-man. Images of the dead are in vogue here also, and spirits can do mischief through them.⁵ To the west of British New Guinea the people of Kiwai on the Fly River think that the spirits live in the ground beside their bodies, but easily come up to this world. This region in the ground, Adiri, was at first a dismal place, but was made fertile by Sido, the hero who first went there, as all do now.⁶ In the island of Paho the region of spirits lies in the west and is very like this world. The dead appear to men in dreams, and offerings and prayers are made to them by the living.⁷

The Temi, a Melanesian people in New Guinea, think that men have two souls; one, which is long, appears at the moment of death to relatives at a distance and then goes to a village on the northern coast; the other, the short soul, after remaining for a time with the body, goes to Lamboan, an underground region, where the offerings made to it cause it to be well received. At first it is cold, but the friendly ghosts who meet it heat stones, by which it is soon warmed. It sometimes returns to earth. Lamboan is said to be a better place than earth, but life there continues the life here, and ghosts even die, after which they become ants or worms or mischievous wood-spirits.⁸ The tribes about Wedau and Wamira say that a spirit goes to a valley in the mountains approached through a hole in the ground. Many questions are asked of it by the other spirits, after which it is admitted and lives feasting, dancing, and fighting. Should it be killed, that is the end of it.⁹

Outside New Guinea the Melanesians of Murua (Woodlark Island) place the region of spirits on the island of Watum, where good and bad live together under the rule of Paidogo.¹⁰

The general belief among the Melanesians is that a division is made between spirits, generally on ceremonial grounds.¹

Among the Yakuts there is a belief that the region of the dead is beyond the eight grades of heaven to the west, where constant night reigns and winter prevails instead of summer, the sun there being turned upside down. Maidens never get husbands, and youths never get wives. Houses are of stone and iron, the top narrow, the bottom flattened out, and the centre bulging.²

Similar beliefs regarding one state for all, the conditions of which are similar to those of earth, are found among the Gilyaks, Lapps, Lithuanians, Ostyaks, to some extent in Indonesia, Indo-China, and among the Daphlās and Orāons in India.³

5. The state of the dead happier than earthly life.—In this section only such a state is described as is open to all, without any division being made between them.

Such a belief seems to have existed among the Tasmanians and among several Australian tribes, especially in the west and south and in New South Wales.⁴

Among the Melanesians the natives of the Hood Peninsula, New Guinea, think that the ghosts live in an underground region, which is better than this world, with good houses and gardens. Spirits have also access to the abodes of the living and harm those who displease them.⁵ At Tube-tube the spirit-land is one of eternal youth, and all are changed into the prime of life. It is located on Bebweso, a wooded hill which the natives avoid. Death and sickness are unknown. Married people are reunited, and the unmarried marry; children are born; and the spirits of animals follow those of men thither. All things are plentiful; fighting and stealing are unknown.⁶ Among the southern Massim of Bartle Bay the soul (*aru*) goes to Maraiya in the south-east, where the lord of the dead assigns it a place. After passing up the Uruam river to the mountains, it is met by waiting souls which have knowledge of its coming, and, after questioning it, lead it to its own friends, who take it to their village. The skin of the spirits is now white; there is plenty to eat, but no sickness or evil. Yet souls fight there, and, if one is killed, it dies for ever.⁷

The Monumbo in N.E. New Guinea believe that souls go to a region where there is no work or suffering, and where they engage in all the pleasant pursuits which they loved on earth. They can help or torment men and are seen flying through the air as shooting stars. When they grow old, they die and become plants or animals.⁸ The Roro-speaking tribes distinguish between the shadow (*oriorema*) and the soul (*tsirama*). The latter haunts villages and sends bad luck if too many quarrels occur, or it steals away other souls. The abode of souls is Arizo in the bush, where a large garden is cultivated by them and all are happy. If a living man ventures there, he dies, and plants taken thence to mortal gardens are carried back or wither. A fiery spirit meets the soul and asks if its ears and nose are pierced, and by what death it died. According to the manner of death, the soul is sent by one of several roads all of which reach Arizo.⁹

The Papuan people of Rossel, south-east of Woodlark Island, believe that souls go to a mountain at the west of the island which, they say, is covered with beautiful gardens and houses, though to the eye there are only rocks and scrub.¹⁰

In New Caledonia the other world is under the mountain Mu and is like this world, but its fruits are finer and larger. Good men are welcomed, but quarrelsome and rancorous ghosts are beaten by dead chiefs, and ghostly monsters are said to devour souls. The dead also appear as lizards to the living. Lambert gives another account referring to the natives of the Belep group and the Isle of Pines. All souls go to a region under the sea, Tsiabloum, where everything grows in profusion without cultivation. Souls are first caught in a net by a spirit called Kiemoua and beaten, after which they go to Tsiabloum. Sickness, death, sorrow, sleep, and darkness are unknown there. In daytime on earth souls revisit their graves or the places where their souls are preserved, and where they receive worship.¹¹

Melanesian beliefs are further considered in § 6.

Among the N. American Indians instances of a better state in the other world are found—e.g., among some of the Pima, who think that souls

go to the land of the dead in the east, where the sun rises, separated from the region of the living by 'earth crack,' a chasm. In this region there is rejoicing, gladness, feasting, and dancing. Others hold that souls live round their old places and play pranks on the living, causing sickness by showing themselves to these. Others, again, believe in transmigration into owls.¹ The Thompson River Indians think that the land of souls is underground, towards the sunset, reached by a long track, at the end of which is a great lodge with doors at its eastern and western sides and a double row of fires extending through its length. When the spirit reaches this, he hears his dead relatives, who have assembled there, laughing, talking, and singing. He is welcomed and, on entering, finds a beautiful region with plenty of grass, flowers, and fruit. Warmth, light, and a pleasant perfumed air characterize this country where the people are joyful and happy.² The future state, according to the adherents of the Sioux Ghost-dance religion, will be such that the whole Indian race, living and dead, will be reunited on a regenerated earth to live a life of unalloyed happiness, free from death, sickness, and misery. Each apostle of this religion has filled in the details according to his mental capacity and his ideas of happiness.³ The Paiutes also believe that, when earth has grown old, it will be made new. All Indians will rise again or awake to immortality after a deep sleep.⁴ The Porto Rico tribes believed that the dead go to a valley called Coaibai, where their ancestors lived, and where they will have many wives, and plenty to eat, as well as all kinds of pleasures.⁵

Other examples of such American Indian beliefs in a happy state for all are given in the artt. BLEST, ABODE OF THE (Primitive and Savage), § 6, ANCESTOR-WORSHIP (American), § 10, BEOTHUKS, § 5, CALIFORNIA, § 4, NATCHEZ, § 12, OJIBWA, § 4 (c).

The Indian tribes of the West India islands conceived the dwelling-place of the dead as situated within their own territory or, as some thought, among the valleys on the west side of Hayti. There in shady harbours they passed the time with beautiful women and in the enjoyment of delicious fruits.⁶

Similar beliefs exist among many S. American tribes. In Venezuela some of the tribes believe that the spirits go to certain lakes and are swallowed by great serpents, which carry them to paradise, where they enjoy a life of dancing and drinking.⁷ The Boro, Witoto, and other tribes of the Issa-Japura district bury grave-goods with the dead and light fires upon the grave, round which (or in the house or the woods) the soul hovers for a time, and then departs to the happy hunting-grounds of the good spirit. There everything is on a pygmy scale, including the souls themselves. According to some tribes, this paradise is above the sky; in the opinion of others, it is in the far distance towards the setting sun. Evil things are excluded from it. Hunting is always successful, women are beautiful and obedient, and friends meet again. Souls are regarded as immortal, so long as they are remembered by the living or appear in dreams to them. This paradise is open to all tribesmen with whom the good spirit is not vexed, but enemies whose bodies have been mutilated or divorced from all their possessions wander in the forest or go down into holes in the earth. Medicine-men who have the power of assuming

tiger-shape in life may do so after death. The sun is said to be the abode of great priests, and stars are also thought to be souls of chiefs or great men.¹

The Guarani revere Tamoi, who once dwelt among them, and, after having taught them agriculture, left them, promising to bring them at death to heaven, where they would have plenty of hunting and rejoin their friends and find their wives more youthful. When one of them dies, Tamoi raises him on a holy tree to heaven, and such a tree is always found near the dwellings as a perch for the departing souls.² The Tupinambas believe that all souls are immortal and dwell in beautiful regions watered by fine rivers and stored with many fruit-trees, where they pass their time in dancing.³ The belief of the Warraus in rich hunting-grounds and luxuriant arable land in the other world is illustrated by a verse of the death-song: 'Bring him [the spirit of the dead man] to his friends whom thou hast robbed us of before, and may he find yams and cassava and hunt apes and ajuti.'⁴ The Mokoschi think that they will dwell in another region of the earth, where their only occupation will be hunting, and hostile tribes will be their slaves.⁵ The Chani Indians call the world of the dead Aguararenta, 'fox-village.' It is in the east, and there all the dead dwell, existing by day as foxes, rats, etc., but by night resuming human form and enjoying great drinking bouts. The dead sometimes appear to the living or take them on a visit to Aguararenta, and their death follows soon after.⁶

The anonymous 16th cent. author of *A Treatise of Brazil* speaks of the belief of the tribes (met with by him) in Elysian fields by the side of a fair river, with many fig-trees, where the spirits do nothing but dance.⁷ This seems a wide-spread belief in S. America, as the instances cited have shown, together with those already referred to in art. BLEST, ABODE OF THE (Primitive and Savage), § 6, and in the artt. CHILE, § 9, PAMPEANS, § 3, and PATAGONIANS, § 4.

6. The state of the dead one of differing conditions upon various grounds.—While a division among the dead or a series of different fates based upon moral grounds is not uncommon even among savages, attention must be paid to what, in the savage moral code, constitutes good and bad, since 'goodness' may only mean bravery as opposed to cowardice, or the slaying and possibly the eating of many victims. No doubt bravery is a virtue, and sometimes the moral code goes beyond this. We have also to inquire whether Christian influences may not have been at work as regards savage retributive notions. But in other instances (and these by far the more numerous) the division may be based upon the nature of the death, the sort of burial, the character and amount of the funeral-offerings, the status of the deceased, or even upon his possession or non-possession of certain distinctive marks. Something approaching retribution may also be seen in the ordeals which the spirit has to undergo on his way to the other world, often at the hands of supernatural beings. These are to some extent judges of the dead, while sometimes ghosts themselves act as judges of a newcomer and decide whether he will be admitted to more blissful regions or not. Or again they may themselves punish an unworthy ghost. These ideas do not always occur with clear precision and often mingle with each other.

It is curious to observe that with many of the Pygmy (Negrillo and Negrito) races there is a certain idea of retribution, or of a division between good and bad, or of an ordeal to be undergone, the bad falling victims while undergoing this, but generally being released to the better world after a time. 'Good' and 'bad' must here be interpreted

liberally, though by no means empty of moral content. We find this among the Andaman Islanders, and the Sakai, Semang, and Jakun of the Malay Peninsula.¹ The beliefs of the Pygmies of Central Africa have not yet been fully studied, but certain aspects of their beliefs regarding the dead are known. There is little or no cult of ghosts. The Ajongo tribe in the Gabon believe that the spirit or shade sinks into the ground, afterwards rising to the supreme god, who then rewards or punishes it. Punishment is meted out to such as have stolen the wives of others, to poisoners, and the like.² Judgment after death upon souls is ascribed to the supreme being Indagarra by the Wa-Twa of Urundi.³

Few Bantu tribes in Africa believe in a division between different classes or morally different persons in the other world, though, even where the state of the dead is vaguely conceived, some approach to this is found in the fact that translation into animal form is for chiefs only or is regulated according to the position of the spirit in this world. But the Bangala of the Upper Congo believe that a man who has been good according to the native code of morals remains in Longa, a subterranean region in which the conditions are the same as on earth. Men whose position in this world prevented their being punished for their crimes receive retribution in the other world, though by whom is not stated. Ghosts of the bad haunt the forest and river, where they do mischief to the living.⁴ The Fan believe that the spirit dwells in a mysterious underground place, governed by a king who condemns to a second death those who conduct themselves badly there. They go to a terrible place, where they are unhappy and whence they never return. Men who were very bad in this life go there directly at death. This second death is the most terrible thing which can befall a man. Spirits of the dead have knowledge and power superior to the living. They regret their earthly life, however, and are hostile to those left behind. The spirit is also said to have the power of entering into any animal.⁵

With the Yoruba-speaking tribes of the Gold Coast, at the moment of death an invocation is said by the priest that the road may be open and good for the soul and that nothing evil may meet it. Similar invocations are said at the grave, where a goat is sacrificed and also a fowl, which is said to 'buy' or open a right of way for the ghost. The ghost goes to Ipo-oku, 'the land of the dead,' beneath the earth, but he does not reach it unless the prescribed ritual has been performed. If it is omitted, he wanders homeless or is cast by evil spirits into Orun-apadi, 'the unseen world of potsherds.'⁶

The retributive ideas of some Negro tribes have already been discussed, as well as their idea of goodness.⁷ Some of the Dravidian tribes of India also make a division among the spirits of the dead. The Lushei Kuki clans think that the dead go to Mi-thi-kua, 'dead man's village,' beyond which is Pial-ral, an abode of bliss open only to those who have duly performed sacrificial rites, killed men and certain animals, and been successful in love affairs. Pupawla, the first man who died, shoots at all spirits except those of certain men whose prowess with women is specified. Those whom he hits cannot reach Pial-ral, but remain in Mi-thi-

kua, where life is troublesome and difficult, and everything is worse than on earth. Those who reach Pial-ral are called *thangkhua*, and they enjoy there food and drink without labour. Women can pass there only if taken by their husbands. The spirits are sometimes re-incarnated as hornets, or as dew which, if it falls on a man, is born as his child.¹

The place of the dead among the Todas is known as Amnodr, and it lies to the west, but below the surface of the earth, where it is lit by the sun as it sinks in that direction. Amnodr is presided over by the god On. The dead are known as the *amatol*, and it is believed that at one time the living could pay them a visit, returning again to earth, but that this was stopped by On because of the behaviour of one man. Life in Amnodr is like life on earth. There are buffaloes and dairies, just as the living Todas have, but no pigs or rats are permitted there because they would spoil the country by rooting it up. There are definite routes for the spirits, and at one point they knock on a stone and lose all affection for this world. Another stone causes them to be sound and vigorous. A ravine is crossed by a thread; the bad fall from it into a river and are bitten by leeches; they are then helped out by people on the banks, and remain with them for a time proportionate to their badness. Others cross the bridge easily. Bad people include the selfish, jealous, grudging, and all offenders against the sacred dairy. The prospect of this punishment has little effect on conduct, while the inhabitants of certain districts can cross the bridge, however wicked they are. As spirits walk about Amnodr, their feet and legs wear down; and, when they are worn to the knees, On sends them to this world to be reborn.²

The Naga tribes of Manipur have various beliefs. Thus the Tangkhuls hold that spirits force their way into heaven by means of the spirit of a buffalo. There the deity judges them, and spirits are divided into two classes according as they acquired animals by stealing or by honest hunting. Thieves have now to take a road where they meet with dreadful things, honest men follow a pleasant road, but both finally arrive on the banks of a river, whence they go to the house of the deceased in the upper world. In Mao spirits are thought to strive with a deity. If they wound him, all is well; if not, they are enslaved for ever. A deity called Kechira is also said to sort out the dead according to merit (success in love) or the manner of death. Those dying in battle go to one place; those who have their ears split to another; those dying in childbirth to a third. There is also a pleasant place within the earth where the dead are said to go. In other cases the good and bad are thought to be divided, but what these worlds signify is uncertain. Some of the tribes also hold various theories of rebirth.³

The ideas of retribution current among American Indian tribes are frequently moral, though often bravery or status determines the place of the dead. The moral retribution has been in some cases coloured, if not more, by knowledge of Christian beliefs. To the instances already cited⁴ may be added others.

The Omaha put the sign of the tabu with the dead, for recognition by friends in the other world—e.g., moccasins of the skin of the male elk on the feet of him to whom the animal had been tabu. The Milky Way is the path of the spirits. Life in the other world is like life here, but free from sickness and want, and on the whole happier. There are seven spirit-worlds, each higher than the preceding, and progress is effected by the soul dying to each in succession. On the Milky Way sits an old man directing spirits of the good and peaceable by a short route to the region of souls. The contumacious have to take a longer way and wander wearily to it. Another account tells of a log over a chasm, whence the bad fall off and are lost. Murderers are thought to wander always without rest. The dead still take an interest in the affairs of earth and can revisit it.⁵ The Hidatsa believe that each man has four souls which join together after death and are restored to the mansions of the ancestors underground, where life goes on as it does here. Ghosts of suicides, however, have a separate place in the Ghost Village. The idea of a narrow bridge over a river also occurs: brave warriors and good hunters easily cross it, but the worthless slip off into the stream and to oblivion.⁶ The Sia of the Pueblos locate the region of the dead to the north, underground, in the place first occupied by their ancestors. The road thither is crowded with spirits of unborn infants coming to earth and with the spirits of the dead. These never return to earth, though they once did so and informed the living of the state of the other world, its fields, high mountains, lakes, and rivers. The spirits sleep by day and work by night—i.e., when the sun reaches their world. The Sia wish to die when the body ceases to develop, so that they may gradually return to the conditions

of infancy. At such a period a man does not die, but sleeps to awake as an infant in the other world. The spirit goes there four days after death and meets two guards, who ask for his credentials. If he has not got his *hāchamoni*, he must roam about somewhere in the north. Others are shown their relatives and bidden to join them and be happy. The wicked are in no case allowed to enter, but are placed in a great fire. If theurgists have performed their duties with an unwilling heart, they must live apart in the spirit-world, without nourishment, for a time varying according to the amount of the purification required.¹

The Assiniboin believe that the dead go to a land in the south where game is abundant and the rivers are full of fish, and where the good and brave find many women and buffaloes. But there is a region of perpetual snow and ice, or an island, where the wicked and cowardly are confined, deprived of all the pleasures of life. Ghosts of the dead may be seen, but more often heard, by the living, or may even become materialized and marry and live as ordinary human beings. Some Indians of this tribe, however, believe that there is nothing beyond this life.² To the Dakotans there is ascribed a belief in four spirits—one which dies with the body, one which always remains near it, a third, which goes to the other world in the south, and a fourth, which lingers with the dead man's hair kept by the relatives. This is thrown into an enemy country, where it roves to and fro causing disease and death. A fifth spirit is sometimes supposed to be reborn in an animal or a child.³ An old woman sits on the road to the 'Many Lodges' and examines the spirits for tatu marks. Such as do not possess these are pushed over a cloud and fall to this world as wandering ghosts. A report of the New England tribes, dating from the 17th cent., states that souls of the great and good dwell with the gods; the bad are not allowed to join them, but wander without rest or home.⁴

The Tlingit Indians distinguish between the shadow and the ghost or spirit. The 'Ghosts' Home' is above the plane of this world, and some go to the sun, moon, or stars. If a person was unhappy in this world, a dead relative would bid him come to the spirit-world, and his death followed. A house there is called 'Sleep-house,' where the ghosts rest. This name was also given to the next higher region, to which those dying by violence go. It is reached by a ladder, guarded by a being in human shape. If a man dies unavenged, he cannot mount the ladder, but drifts about on the wind. Below the earth is a third region, for the drowned. The bad are said to go to the 'Raven's Home.' In the other world the spirits share the offerings made them by the living. The way there is difficult, and spirits are attacked by wolves and bears.⁵ Two lower worlds are assigned to the dead in the belief of the Bellaçoola Indians; and from the upper of these souls may be reborn into this world. This subterranean ghost-world is described as stretching along the banks of a sandy river. The ghosts walk head downwards and speak in a different tongue from that of the world above, while the seasons there are the contrary of those on the earth.⁶

According to Zuñi belief, the ghost hovers round the village for four nights after death and then starts for Ko'thluwaláwa ('dance village'), the abiding-place of the council of the gods, situated in the depths of a lake and containing the great ceremonial house of the gods. Then it proceeds to the undermost world, whence the Zuñi came, and whence the dead supply the earth with water. But the ghosts often return to Ko'thluwaláwa to join in the sacred dances. Ghosts of members of the Bow priesthood, however, join the Kúpshtaya, mighty warriors who control the lightning, and become lightning-makers.⁷

The Eskimo of Bering Strait think that there may be three forms of the spiritual essence or soul—one destined for a future life, one which takes flight into the air at death, and a third, which remains with the body and possesses evil powers.

After lingering for a time at the grave, the first of these departs to the other world. Spirits of shamans and of those who die by accident, violence, or starvation go to a land of plenty in the sky, where there are light, food, and water. Their state becomes still better by the offerings of food made by relatives at the feasts of the dead. Those dying from natural causes and also shades of animals go to the underground world of the dead, where each kind of animal lives in a village of its own. Here their state entirely depends upon the aforesaid offerings. Thieves from fellow-villagers, witches and sorcerers, bad shamans, and people who practised forbidden ceremonies are unconscious after death, though they may return to haunt the living.¹ On the Lower Yukon the distinctions after death seem to be based entirely upon the offerings made. The shade sees nothing until it is placed in the grave-box, when it perceives other shades, who show it the way to the other world. On the way it subsists on the food buried with it, and in the spirit region it lives an aimless existence, dependent upon the offerings at the feasts on earth to which it is invited. It there temporarily enters the person chosen as its namesake or the next child born. Having eaten, it is then dismissed. If a person dies without any one to make a feast for him, he is forgotten and lives just as the poor and friendless do on earth. There appears also to be some idea of retribution for social offenders.²

The beliefs of the Central Eskimo differ from these. Their supreme being, Anguta, has a daughter Sedna, who is mistress of the land of Adlivun under the earth, living in a large house with a dog at the threshold. The dead are taken by Anguta and carried there. The dog just allows them to pass, and they remain for a year, pinched by Anguta. Some of the tribes know of a still lower region, Adliparmiut—a dark place where snowstorms rage and trouble abounds, and whence there is no return, according to Hall. He also says that a happy region in heaven is called Qudliun or Qudliparmiut, or these are happy and light regions one above the other. They abound with deer which are easily caught, and there is neither ice nor snow, trouble nor weariness, and spirits there sing and play without end. The good—those who have been kind to the poor and who were happy on earth, also suicides, those killed by accident, starvation, or murder, and women dying in childbirth—go to Adliparmiut, and all who are unkind and unhappy, and all who die of diseases or infringe

Sedna's orders go to Adlivun and remain there a year. Murderers and offenders against human laws never leave it. Other souls are taken to Adliparmiut, where they live comparatively at ease, though not so blessed as the 'Qudliparmiut.' They hunt whale and walrus, and are always troubled by ice and snow. These accounts vary, but the belief of the tribes is undoubtedly that all dying through accident or violence and women dying in childbirth go to the upper world. The general belief seems to be in a series of abodes of ascending or descending value.⁴ Lyon, an earlier traveller, cites heaven as a delightful place, while four lower worlds exist through which the dead pass, the lowest being the best. He thinks that the soul leaves the body Adliparmiut, the tribes of Davis Strait three days with the body. While it is as a malevolent spirit and frequently roams round the villages. Its touch kills a man; the sight of it causes sickness and mischief. When a soul passes to Adliparmiut, it is at rest and ceases to be feared.⁶ The older writers on Greenland give varying accounts of the state of the dead, and probably the native accounts varied from tribe to tribe.

The Hudson Bay Eskimo hold that the place of spirits depends on their condition on earth, and especially on the manner of their death. The violent, starved, and women dying in childbirth go to the sky, where they lack many luxuries. They are called *Kelungmut*, from *keluk* ('sky'), the name of this region. Others go down into the earth (*nuna*) and are called *nunamut*. The two classes can communicate with each other. All desire to go below and enjoy the pleasure of communion with those on earth—a pleasure denied to those in the sky-world. But, if a person dies from natural causes, his spirit dwells on earth and after four years rests in the grave.⁷ This belief is the reverse of

that of the Central Eskimo, though it agrees with that given by Rink, Crantz, and Nansen.¹

Among the S. American tribes some allot a better fate in a cheerful paradise to chiefs, heroes, and wizards, especially such as have killed and eaten many enemies. They dwell in pleasant gardens behind the mountains, with clear streams, rich fruit-trees, and abundance of game, fish, and honey, and there they amuse themselves with songs, dances, and laughter.² Where a distinction exists, it is generally one between the great and the common people or between brave warriors and cowards. This is even expressed by the Isannas and Zaparo in transmigration doctrine: souls of brave men become birds of beautiful plumage and enjoy pleasant fruits, whereas others become reptiles or evil spirits.³

The Araucanians held that souls were invisible but corporeal. A long journey had to be made to Galicman, the spirit-land, and the sea had to be crossed. The island of Mocha was the starting-place, and a narrow path was followed where an evil old woman met the souls and demanded tribute. If it was refused and if she overcame them, she poked out an eye. Another old woman in the form of a whale carried them over the sea, or they were carried in canoes, according to the belief of the inland tribes. Evil spirits could not enter paradise, where the same castes existed as on earth. There was abundant feasting, drinking, and dancing, and men were waited on by their wives. Poor people, those robbed of their possessions, and public women went to a cold region where food was plentiful but of poor quality. The dead could return to earth, and generally appeared transformed and visible to the *pilli*. Another account says that souls were divided according as they died by drowning, in the forest, or in their huts.⁴ The heaven to which the Bakairi go was once nearer the earth or part of it, and was the place where the first ancestors lived, and there all exists as is related in the old traditions. Heaven is richly endowed with fish and game. Worthless and evilly-disposed men continue their character in another place as malevolent ghosts wandering round and spreading fear and terror.⁵ The Uaupes believe that they go to Jurupari, their ancestor, but, if they did not honour him in life, the way is difficult and they lose themselves. Women come to a shed of which the owner is Bichid, an infernal spirit. It is full of various objects. If the women have seen the dance-masks and dresses or Jurupari on earth, they remain in the shed, which forms a kind of hell. If not, they go to the heaven of the *pilli* with the men in merriment and

evil place, the locality of which is arrive after having lost themselves on the way. There they live as on earth, but endure unhappiness and suffering.⁶ In the province of Cumana the dead are believed to pass to the cave of Guacharo in the mountains on their way to the other world. If they are good, they go on immediately; if not, they must remain there for a longer or shorter period. The cries of birds heard from the cave are their groans and lamentations.⁷ Lery gives an account of the Tupinambas different from that cited above.⁸ Souls which have been virtuous, i.e. avenged them of their enemies and eaten many, fly beyond the mountains to join their ancestors, where they lead a joyous life in pleasant gardens. Souls of cowards, who did not care to defend their land, are violently carried away by Ayman and live in torment with him.⁹ Another idea of division is seen in the belief of the Bororo, who think that the sun is made up of dead *baris* (medicine-men), who rise daily with red-hot irons before their faces, after prowling about the earth at night. In the sun dwells also the head of all the *baris*, who is intermediate between men and spirits. Less important *baris* dwell in the moon. Stars are Bororo boys, or houses of dead children. Ancestors also dwell in the rocks in the form of parrots. Deer, jaguar, and vultures also contain souls of ancestors. Souls of the dead (*arude*) may appear in the world and be seen by relatives, but all become of one sex, female, at death.¹⁰ Another method of distinction is found with the Otomacs, who think that souls go to the west and dwell there without trouble or toil. But on the way they are met by Tigtigtig, a bird, which swallows all who are afraid to fight it.¹¹

The belief in a species of fiery hell, entertained by some tribes, is probably of Christian origin, a

retributive doctrine tacked on to a simple belief in continuance of the soul in another region.

The Payaguas think that evil souls go to a place full of cauldrons and fire, but the good dwell under water-plants and are nourished on fish.¹ The Paressi believe that a fire which flickers up on the way to the other world destroys the wicked, but, should they survive it, a horrible monster tears out their eyes and kills them. Souls of the good dwell in heaven with ancestors as they did on earth and procreate many children.² The Maipures place the good in a pleasant region, but the evil go to a spring where a continual fire burns them.³

See also artt. BRAZIL, vol. ii. p. 863* (Arawaks), and BLEST, ABODE OF THE (Primitive and Savage), § 7.

Among the Massim of British New Guinea the abode of the dead with the tribes of Waga-Waga is a land called Hiyoyoa under the sea, where it is day when night comes on the earth. Tumudurere, a being who was never a man on earth, receives the ghosts and tells them where to make their gardens. But only those buried with their faces to the east are able to reach Hiyoyoa.⁴

In Tube-tube (Slade Island), S.E. New Guinea, the spirit rises from the grave the night after the burial, and a fire is therefore kindled to keep it warm on the journey to Bwebweso, which is a place of eternal youth. The spirits are in the prime of life, and there are no evil spirits, sickness, or death. There are reunions between husbands and wives, and the children born never grow older than maturity. Gardens yield plentifully, and spirits of useful animals abound. Fighting and stealing are unknown, and brotherhood prevails. The spirits, however, act as judges, and those who do not attain the right standard are kept in an outer circle whence Elysium is seen by them. The very wicked must wander up and down the earth for ever in great pain.⁵

The beliefs of the Eastern Melanesians from the Torres group to Fiji have already been considered,⁶ but it is important to notice that ghosts are not eternal in the underground Panoï. They die a second death, or, as some believe, there are two regions called Panoï, one above the other, and, when ghosts die in the upper one, they live again as white ants' nests in the lower one.⁷ The people of the Trobriand Islands think that at death the spirit splits up into two, or that there are two spirits—*kosi*, which remains near the village for a time playing tricks, and *baloma*, which goes to Tuma, an agreeable spirit-land on earth's surface, underground, or on an island. If to the last, it goes by a spirit-canoe. On the shore it bewails its fate along with spirits of kinsmen. At a well it washes its eyes and becomes invisible; then it knocks on two stones, and at the second knock all other *baloma* crowd round and welcome it. Now it meets Topileta, the headman of Tuma, who admits or rejects it according to the payment made of the *baloma* of things buried with it. According to the cause of death—by magic, by poison, or in war—the spirit traverses a different road to Tuma, that for spirits of men killed in war being the best, by poison not so good, and by magic the worst. Those unable to pay are banished to the sea and changed into mythical fish. Relatives now meet the *baloma*, and a house is built for it. It weeps much, but receives comfort, especially from female *baloma* with whom it forms connexion. After a time it dies, but is not annihilated. *Baloma* can revisit the earth from time to time, where they play tricks like the *kosi*. In Tuma they live the life of man, sleeping, eating, and love-making. According to one view, at the second death the spirit descends to a lower stage of Tuma, the underground view of its locality being the most general. *Baloma* may also be reborn on earth, according to a curious theory which connects all pregnancy with the act of a *baloma*.⁸

At Maweo, in the New Hebrides, the ghost is thought to sit in trees mocking the relatives who are mourning over the dead body. It then departs to a ravine, over which it must leap, and, if it falls short, it returns to life again. Finally it reaches the shore, where the ghosts meet it. Those of men whom its owner has slain or killed by magic now avenge themselves on it. It is also thought that, if the ghost falls at a gully on the way to the other world, it is dashed to pieces. A fierce pig also meets ghosts and eats those who failed to plant pandanus trees on earth. In Panoï a ghost may not drink water if the ears were not pierced, or eat good food if he was not tattooed.¹ In general over this area ghosts of men who possessed *mana* are worshipped, and they still work for the living. Ghosts are believed to be present and partake of the feasts, and are also associated with places or objects where their power is felt. Ghosts may also take up their abode in certain animals, which are accordingly held sacred. At Efate in the New Hebrides the soul passes through six stages of existence and finally is extinguished. The other world is in the west of Efate, and there the ghost meets Seritau, the cannibal executioner, and his assistants. If it cannot reply to his questions, it is handed to Maseasi, its tongue is cut out, its head split open, and then twisted round. But people of the Namtaku tribe and those with certain bodily markings pass those ordeals safely. In Malekula belief there are three stages of existence after death, the first 30 miles underground, and in these the soul becomes more and more ethereal and finally fades out. The ghosts rule the affairs of earth, and punish with death those on earth who transgress, especially in the matter of providing them with pigs.² In San Cristoval the soul may pass into an animal or be reborn as a child or exist as a ghost, going to Rotomana, the situation of which is variously described, but life there is like life here. A spirit at the entrance admits ghosts with ears and noses pierced and the proper marks under the right eye. Another belief is that of the continued life of the ghost in the village. Souls incarnated in animals still preserve human powers and may help the living.³

In north and east Melanesia the dead are believed to visit the earth from time to time, and they especially dwell about their skulls, which are duly preserved. There is a long journey to the other world, for which provision is made at the grave. Among the Sulka people who acted wrongly in life, or were murdered, or left few relatives, are not buried, and their ghosts perhaps do not enter the other world. Falling stars are ghosts descending to bathe in the sea, and the phosphorescence on the waves is caused by their movements there.⁴ In New Britain the spirit-land, Matana nion, has no certain location, and it is said that, 'if our eyes were turned so that what is inside the head were now outside, we should see that Matana nion was very near to us.' Life there is like life in this world, but niggardly men are chastised, and breaches of custom—e.g., theft—are also punished, after which the soul may enter an animal. There are also separate places for people who have died by sling or tomahawk and for those who have died of sickness or sorcery.⁵ In the Gazelle Peninsula, New Britain, the natives believe that the island paradise is guarded by a being who asks the ghosts their names, their residence, and the amount of shell-money which they left behind. Rich ghosts are allowed to enter and enjoy the pleasures of paradise. Others are debarred from it and become wandering spirits, who avenge their fate on the living. But, if some one makes a feast and distributes shell-money on behalf of such a ghost, he can then enter into bliss.⁶ On the mainland of New Britain there is a separate region for poor people and for those at whose burial no shell-money was offered.⁷

The beliefs of the Polynesians are considered in art. BLEST, ABODE OF THE (Primitive and Savage), § 3; see also art. HAWAII, vol. vi. p. 530^b. For the Dayaks see ERE II. 683* and vii. 245^b.

7. Rebirth and transmigration.⁸—The state of the dead is sometimes one of rebirth in human form or of transmigration into animal form or a

series of these. This belief is, however, sometimes associated with belief in another world, because of the inconsistency of savage ideas, because different strata of belief originating in different sources may exist, or because one of the non-corporeal parts of a man transmigrates, while the other goes to the spirit-world. Or the ghost may return from the other world and assume a new bodily form temporarily or permanently. Again, transmigration may be the fate of the wicked or of common people, others going to paradise, or, again, it may be the lot of the good. Some examples of such beliefs have already been recorded, but a few other typical instances may here be mentioned.

(a) Sometimes there is no belief in another world, but merely in transmigration. We find this with the Suk, who think that the spirit passes into a snake at death. It may enter the huts; and, if so, the ghost is hungry, and milk, meat, and tobacco are placed for it.¹ So, too, the people of Khé, E. Africa, hold that souls of ancestors inhabit the bodies of the colobus monkey, and under no circumstances will they kill that animal or allow it to be killed.² The Yaguas of S. America believe that the soul first mounts to God in heaven and then recommences life on earth.³

(b) Sometimes, along with belief in another world, we find women flocking to the death-bed of a tribesman in the belief that his soul will pass into their bodies and be reborn as a child, as among the Algonquians.⁴ Other American Indian tribes bury their children by the roadside that their souls may enter women passing by, or medicine-men effect the transfer of soul to a relative, whose next child is animated by it, as among the Tacullis.⁵ Many of the mountain and desert tribes believe in re-incarnation, though some of them limit it to the souls of children.⁶ There are similar beliefs and customs in W. Africa, as in the Oil Rivers district, where re-incarnation is believed to be the common lot of human souls.⁷

(c) Transmigration is held with other beliefs—e.g., among Australian tribes, where the return of the soul in animal shape or its rebirth as a white man may be believed in along with definite ideas of the other world.⁸ So in Guiana this belief in the return of a native as a white man co-exists in some tribes with a belief in the continued presence of the spirit near the place where it lived or in a paradise of souls.⁹ In New Guinea the Papuans of Sialum and Kwamkwam have various beliefs—e.g., in a shadowy life in another region, in spirits hovering near the village, and in transmigration into animals.¹⁰ In Melanesia it is also thought that ghosts may take up their abode in animal forms, the animals when known being then regarded as sacred, although the belief in another world is clear and vivid.¹¹

(d) Again, while the rich, chiefs, and the like go to a better world, common people roam the earth as animals, as the Ahts believe.¹² In the Himalaya region spirits haunting mountains are believed to be those of people who have not

gone to heaven, and who assume animal forms temporarily and attack men.¹ Or, again, while the doctrine of transmigration is diffused among the American Indian tribes, it is sometimes regarded as the fate of the wicked, as among the Dogribs, who think that these become wolves.² This is also found among several S. American tribes.³ Or it may take this form that, while nobles and warriors have pleasing animal forms after death, the common folk pass into unattractive or detested forms, as among the Tlascalans and also the Isannis of Brazil.⁴ The idea of the Pankhas and Bunjogeos of India is, on the other hand, that, while all go to the hill whence men first emerged, none can return who led a bad life on earth, but Khozing, the patron god, sometimes sends back the good in a new body.⁵

(e) Re-incarnation may be merely a temporary matter for the spirits of the dead, as it was a privilege in ancient Egyptian belief. The general Bantu belief in souls as snakes and the like seems to be of this kind. The souls make themselves manifest to men in these animal forms, but pass a spirit life in another region, more or less vaguely conceived. In W. Africa belief in this occasional transmigration into an animal also occurs,⁶ and we find it again among the Eskimo, with whom, e.g., a woman would not eat walrus because her husband's soul had adopted it as a temporary habitation. The *angkok* announces to the woman the animal into which her husband's soul has entered.

(f) Among the Mohaves we find that the souls of the dead die a second death, now becoming owls. As owls they die a third time and become water-beetles, finally changing into air.⁷ The Chiriguanoes believe that souls go to Iguihoca, where they pass several years in enjoyment, and then become foxes or tigers.⁸ On the other hand, the Bellacoola do not admit transmigration for souls which have died a second death and passed to the lowest under world.⁹

(g) The idea that stars are the souls of the dead is also met with, especially among S. American tribes. The Patagonians think that they are older members of the tribe, or that these hunt on the Milky Way, though the general belief is that souls return to the caverns where the gods live and where the Indians were created.¹⁰ The Araucanians also think that their forefathers watch them from the sky as stars moving in the Milky Way,¹¹ and the Abipones place their ancestors in the Pleiades.

STATE OF THE DEAD (Babylonian).—The ideas of the Babylonians and Assyrians of the state of the dead must have varied greatly in different places and at different periods as religion developed, or at times suffered relapse, but our knowledge of the origin and composition of the religious or mythological literature is not sufficient to enable us to form any other picture of these eschatological beliefs than a general one, valid certainly at some one period, but of what origin and in what period we cannot say. Our knowledge in this case is therefore far below that attainable in the religion of Israel, since the application of criticism has permitted the approximate dating of the relevant parts of the religious literature. Yet that which is known is important in itself, for no picture of civilization in the great valley of the Tigris and Euphrates would be complete without the colour of religion, and in religious thought nothing touches man more intimately than his thought of the life after death. Besides this, the religious ideas of these peoples touched Israel so closely that, while light is reflected upon them from Palestine, there is also light from them upon the ideas of the Hebrews.

Our knowledge of Babylonian and Assyrian ideas concerning the state of the dead is primarily derived from three sources: (a) the epic of Gilgamesh, (b) the story of the Descent of Ishtar, and (c) the legend of Nergal and Ereshkigal. We do not know the date of the origin of any of the three, but the last-named has come to us in a form much earlier than the other two and may best be considered first.

Among the literary material in old Babylonian script found at Tell el-Amarna in Upper Egypt, in 1887, are two fragments of a legend concerning Nergal and Ereshkigal. They were deposited there during the reign of Amenophis IV. (Ikhnaton or Akh-n-Aten), king of Upper and Lower Egypt about 1360 B.C., and are therefore as old as or older than that time, but how much earlier the story was composed we do not know. So much literature is associated with the reign of Hammurapi, king of Babylon (2130–2087 B.C.), that there has grown up among Assyriologists a tendency to ascribe much else to that same period without positive evidence. This may be so old, but there is no proof of it, and to assign it to the period would be as uncritical as is the assigning to the Mosaic period of great pieces of Hebrew literature. Whatever its age or origin, it witnesses to a view of the world of the dead at about 1400 B.C., in Babylonia, and was considered of enough importance to have been carried into Egypt. This legend begins:

'When the gods prepared a feast
To their sister Ereshkigal
They sent a messenger:
Even if we should descend to thee,
Thou wouldst not come up to us,
Therefore send (hither) and take thy portion [lit. 'food'].'

Here then we have a goddess in the nether world, among the dead, summoned to participate in a feast held among the gods above. She is called Ereshkigal ('ruler of the great place'), and the story represents her as an angry being, full of grim menace, easily provoked, fit indeed as a warder of the dead who might try to escape from hands more lenient. She is not married, for the place of the dead is not fit for the propagating of human kind—that belongs to the genial earth above. She has, however, a minister named

Namtar, whom she sends to the feast of the gods above.

As the story runs, when Namtar entered the assembly of the gods, all but one rose to receive him, honouring him as the representative of Ereshkigal; the god Nergal kept his seat. When this was reported to Ereshkigal, she was furious and sent Namtar back to bring Nergal before her, threatening to kill him. To answer this summons, Nergal had to pass through fourteen doors, at each of which he stationed a demon whom his father Ea had sent with him as a body-guard. When at last he had reached the abode of Ereshkigal,

'Within the house he seized Ereshkigal,
By the hair, bent her down from the throne
To the ground, to cut off her head.'

Overcome by the god, her brother, Ereshkigal offered marriage to him, was accepted, and installed as the sovereign of the region.

The story is instructive. The abode of the dead was a prison-house indeed with a warder so severe as Ereshkigal, and now with a new master in the god Nergal, who was so much more severe than she that he could beat her into submission. In a kingdom of the dead, barred within no fewer than fourteen gates, these two ruled over their prisoners, of whose state nothing specific is told us.

For a little light upon that we must now turn to the story of Ishtar's Descent to Hades, the text of which is found on three tablets from Kuyunjik which probably belonged to the library of Ashurbanipal about 650 B.C.¹ The story appears to be a nature-myth in origin, in which Tammuz represents the spring vegetation which is parched by the summer heat and vanishes from earth during winter to be restored again by the goddess of fertility in the spring season. The cult of Tammuz spread widely, and appeared in Palestine (Ezk 8¹⁴), and in Greece in the story of Adonis and Aphrodite. The Babylonian story represents the goddess Ishtar as seeking entrance to the abode of the dead to search for her husband Tammuz. It begins thus:

'To the land of No-return, the region [. . .].
Ishtar, the daughter of Sin, directed her thought,
The daughter of Sin directed her thought,
To the house of darkness, Irkalla's dwelling-place,
To the house from which he who enters never returns,
To the road whose path turns not back,
To the house where he who enters is deprived of light,
Where dust is their sustenance, their food clay,
Light they see not, in darkness do they sit.'

Here then we have a picture of the miserable gloom in which the dead live, or rather maintain an existence of unending wretchedness. In this, as in the former legend, Ereshkigal is their warder, and now her estate is guarded by seven doors, instead of by fourteen, though there is no comfort to be taken from that, for the seven are quite as effective in holding the dead inside. As Ishtar comes to each of these doors, she is successively stripped of her ornaments and clothing until she comes at last nude into the presence of Ereshkigal and her prisoners. Not a ray of hope is there anywhere in it, until the god Ea determines to arrange a release for Ishtar, who is passed successively through the doors by which she had entered, receiving again each article of apparel or adornment. If Ishtar, having once entered this realm of the dead, could be released from it, faith might have taken wings and invented a hope that the dead also might find release in some fashion. We must next see whether there is any light upon this question in Babylonian eschatology.

The third source of Babylonian ideas of the state of the dead is the Gilgamesh epic found upon a series of tablets belonging to the Nineveh collec-

¹ The text is best published in *Cuneiform Texts from Babylonian Tablets, etc., in the British Museum*, xv. pls. 45–49; for tr. see Rogers, *Cuneiform Parallels*, pp. 121–131.

tions buried in the mound of Kuyunjik.¹ The hero of this epic is Gilgamesh, and the stories are woven about a historic character once king in Uruk (Erech), and are made the medium for the expression of the views and speculations of Babylonian priests, theologians, and philosophers concerning the mysteries of the universe. The only parts of the epic important for the present purpose are those in which Gilgamesh is associated with his friend Engidu and with the hero of the deluge whose name is read Ut-napishtim. Engidu has perished through the machinations of Ishtar, and Gilgamesh has good reason to fear that death will claim him also. He wanders in search of immortal life and, coming at last to the maiden Sabitu at the seashore, asks of her this great boon. He hopes to learn the great secret if he can find a way to reach Ut-napishtim amid the dead. Coming after much effort into his presence, he is surprised by his appearance.

'I consider thee, O Ut-napishtim,
Thy appearance is not changed, thou art like me,
Thou art not different, even as I am, thou art.'

Here then is a man who once lived among men, who is not in such a sorry plight as those of whom we have heard in the other stories. He has been exalted, and Gilgamesh would know why or how. This question opens the way to the telling of the story of the deluge and the great deliverance from it. After the story has been told, a way is made for Gilgamesh to return from his fruitless journey, for he has learned nothing. It would seem, as we survey the story from this great distance, that the stage was set for a larger hope, but it did not appear. If Ut-napishtim had found a life and not a mere existence after death, might not faith rise to grasp the idea that perhaps to another this might also happen, and, if to another, perhaps to many more? But Babylonian thought was unequal to so great a leap into the darkness. The utmost attained seems to be a hint that he who died in battle or in war (if this be really the meaning of a very obscure line) has a happier issue in the life to come.

'He who dies the iron death (?), saw you such an one? I saw,
Upon a bed of ease he rests, clear water he drinks.
He who dies in battle, saw you such an one? I saw,
His father and mother hold his head, and his wife bends over
(?) him.'²

This is something, however vague, which is better than the state of the dead portrayed in the Descent of Ishtar. But it does not carry far, nor did it become general so as to be represented elsewhere in any literature yet recovered. Instead of rising into this and thence onward into a more spiritual belief, progress was apparently ended, and despair of any better future state drove man back into taking gain of this life. So it happens that in another and unhappily fragmentary text³ we have Gilgamesh (herein called Gish) confronted with despairing advice:

'Gish, whither goest thou?
The life, that thou dost seek, thou shalt not find.
When the gods humanity did make,
For humanity did death determine,
But life held in their own hands.'

What then is the conclusion of the whole matter? It is to make use of this life and abandon the hopeless search for immortality.

'Thou, Gish,—let thy body be filled,
Day and night be fraught with pleasure (?),
Daily make a feast of joy,
Day and night dance (?) and joy (?).

Clean be thy dress,
Thy head be washen, in water bathed,
Look joyously at the child that holds thy hand,
Hold thy wife in pleasurable embrace.'

Here is the end of it all. The centuries of thought and aspiration have ended in finding the be-all and end-all of hope in this, and not in the next, life. A study of the Hebrew ideas will show how much surer was the advance among them of thought from ideas quite as sombre as those of their great neighbours into a faith on which Jesus might later build a great assurance.

LITERATURE.—(a) *Texts and translations.*—Of the story of Nergal and Ereshkigal one piece is in the British Museum and is published by C. Bezold and E. A. W. Budge, *The Tell el-Amarna Tablets in the British Museum*, London, 1892, no. 82; the other is in the Berlin Museum and is published by H. Winckler and L. Abel, *Der Thontafelfund von El-Amarna*, Berlin, 1889, no. 240. It has been often translated, most recently in R. W. Rogers, *Cuneiform Parallels to the Old Testament*, New York, 1912, pp. 131-135, with further bibliography. The Descent of Ishtar is published in the original text in H. C. Rawlinson, *WAI* iv. [1891] 31, and better in *Cuneiform Texts from Babylonian Tablets, etc.*, in the *British Museum*, xv. [1901] pl. 45-48. It also has been frequently translated, last by Rogers, pp. 121-131, and by M. Jastrow, Jr., *The Civilization of Babylonia and Assyria*, Philadelphia and London, 1915, pp. 453-461, who also discusses its interpretation. The Gilgamesh epic is published in the original text by Paul Haupt, *Das babylonische Nimrod-Epos*, 2 vols., Leipzig, 1884-01, with supplements by the same in *Beiträge zur Assyriologie*, i. [1889] 49 ff., 97 ff. Parts of it have been much translated, especially the portion recounting the deluge. Certain portions are in Rogers, p. 80 ff., and in Jastrow, p. 443. But for a full treatment see A. Ungnad and H. Gressmann, *Das Gilgamesch-Epos*, Göttingen, 1911.

Jastrow, Jr., *Aspects of Religious Belief and Practice in Babylonia and Assyria*, New York and London, 1911, p. 351 ff.; *Hebrew and Babylonian Traditions*, London, 1914, p. 196 ff.; P. S. P. Handcock, *Mesopotamian Archaeology*, do. 1912, pp. 399-405; S. H. Langdon, *Tannuz and Ishtar*, do. 1914.

ROBERT W. ROGERS.

STATE OF THE DEAD (Buddhist).—Buddhism, like other religions, makes the distinction between the transitory world and the eternal, but except for the *arhat* death is merely the beginning of another life-course (*gati*) through this mutable universe. The individual may become an inhabitant of hell, an animal, a *preta*, a human being, or a god,¹ the three first being states of unhappiness (*apāya*). After *pretas* some schools place another unhappy state, that of *asura*, but the Hinayāna refuses to recognize it as a separate *gati*.

1. *Conditions of rebirth.*—The kind of rebirth is determined by the individual's *karma* (q.v.). The view of R. C. Childers is often repeated, that at death the constituent elements (*khandhas*) of the individual perish, 'but by the force of his kamma a new set of khandhas instantly starts into existence, and a new being appears in another world.'² As pointed out in art. INCARNATION (Buddhist), the view that *karma* is the only link between two existences is unsupported by the texts. So also is the further inference that there is no real transmigration. There is of course no transmigration of an *ātman* in the sense of any permanent, stable, unchanging mind or consciousness. The link between two states of the individual, whether in one birth or in succeeding existences, is the causal relation between any one combination of elements forming the individual and the previous states. This combination is not a permanent *ātman*, nor is there any one element in it, such as consciousness, that forms a permanent basis.

The combination is "'a living continuous fluid complex," which does not remain quite the same for two consecutive moments, but which continues for an endless number of existences, bridging an endless number of births, without becoming completely different from itself.'³

² *Gilgamesh Epic*, xii. 151-154.

³ The Meissner Fragment; see B. Meissner, 'Ein altbab. Fragment des Gilgamesepos,' *MFG* vii. [1902] pt. 1.

That the individual in this sense was previously a certain being, and that he may remember many previous existences, is not a mere accommodation to popular notions, but appears as a commonplace throughout the *Suttas*.

Rebirth in *Kāmaloka*, which includes the lower universe from the lowest hell up to and including the six sensual heavens, is in accordance with a man's moral or immoral acts. More than mere morality is required for rebirth in the higher realms. The four classes of the heavens of form, and the four stages of the formless world, correspond to the stages of trance, and are attained by the practice of the spiritual exercises.

2. The eight hot hells.—It is not clear that the Pāli Scriptures recognize one consistent system of hells (*niraya*, *naraka*). What is usually described as the Buddhist view is a system of eight hells. It is not found in the *Vinaya* or the *Suttas*, but occurs in the later books (*Jātaka* and *Abhidhamma*), and also forms the basis of the more developed Mahāyāna systems. These hells are below the earth, and their description in the commentary on *Jātaka* 530 (v. 270) is as follows:

(1) *Sañjīva*.—Beings are here cut to pieces by the keepers of hell, and come repeatedly to life to suffer the same punishment. Hence the name, which means 'resuscitation.'

(2) *Kālasutta*.—Beings are struck down with blazing weapons, and, while lying on the ground, are cut into eight or sixteen pieces with an instrument called *kālasutta* (Skr. *kālasūtra*).

(3) *Samghāta*.—Beings on burning mountains are crushed like sesame seeds or sugar-cane by 'smiting' (*saṃghāta*).

(4) and (5) *Rorūva*.—There are two hells of this name, *Jālarorūva*, 'Rorūva of flame,' and *Dhūmarorūva*, 'Rorūva of smoke,' where beings are correspondingly tortured. In Sanskrit works the names are *Raurava* and *Mahāraurava*, interpreted to mean 'wailing' and 'great wailing.' The Pāli form appears to be a derivative of the proper name *Ruru*.

(6) *Tapana*.—'Heating,' where beings are fixed on spikes the height of a palm-tree and burnt.

(7) *Pratāpana*.—'Great heating,' where beings are cast down from a blazing iron mountain, below which blazing stakes are set up.

(8) *Avīchi*.—Flames arise from each of the four walls, and from the top and bottom, and strike the opposite sides. The name, if divided *a-īchi*, means 'without a wave,' but the commentaries, probably to get an intelligible meaning, make it signify 'without rest or cessation.' 'Here there is no interval of cessation either of the flames or of the pain of the beings.'¹ Kern has pointed out that it is probably from *avāch*, *avāchi*, 'downwards,' formed on the analogy of *udach*, *udichi*, 'higher,' and means 'lowest point.'² This view is strengthened by the fact that it is the lowest point of the universe, and that in the Yoga system *Avīchi* is not a hell, but the lowest part of the universe, over which are placed the six hells of this system.³

3. Minor hells.—Besides these hells there are, according to the commentator, sixteen minor hells (*ussada*, 'excrement') attached to each great hell, making 128 or, in all, 136. This account agrees essentially with the *Mahāvastu*, i. 4 ff. It is probably a systematizing of earlier and inconsistent accounts, as it contains details which do not harmonize, and of which the relation to the main features is not clear. The *Pañcagatidīpana*, a Pāli work known only from a Siamese source, gives four *ussadas* to each great hell: *Milhakūpa*, the hell of dung, where beings are pierced by worms; *Kukkula*, the hell of hot ashes; *Asipattavana*, the forest with leaves of swords; and *Nadi* (*Vetarāṇi*), the river of bitter water. The *Mahāvastu*, i. 7, has essentially the same, but *Kunapa* ('carriage') replaces *Milhakūpa*. It is usually taken for granted that these are the names of the four *ussadas* of each hell. This may be so, if we assume that the system is consistent, but, as will be seen, it is more probable that several systems are combined.

4. Earlier systems.—The *Suttas* know nothing of the eight hells, but have several passages in which hells are described. In *Ānguttara*, i. 141, seven tortures are described.

The king of hell, Yama, hands the culprit over to the keepers of hell, who torment their victim by thrusting an iron stake through each hand and foot, and breast (the 'five-fold bonds'); they chop him with axes; they set him upside down and chop him with adzes; they fix him to a chariot and move it backwards and forwards over the burning ground; they make him go up and down a mountain of burning coal; they put him head first into a blazing copper cauldron (*lohakumbhā*); they throw him into the great hell (*Mahāniraya*).

An evident modification of this occurs in the commentary on *Petavatthu*, iv. 1, 8, which speaks of the five-fold bonds, sprinkling with molten copper, ascending the mountain of coals, throwing into the copper cauldron, entering the forest with leaves of swords, crossing the *Vetarāṇi*, and throwing into the great hell. These are here called the seven *ussadas*, and, though the comment rests on a doubtful interpretation of *sattussada*, it illustrates the divergent conceptions and the attempt to harmonize them.

The above passage of the *Ānguttara* recurs in the *Majjhima*, iii. 183, where it is followed by a description of the great hell (*Mahāniraya*), the great carriage hell (*Gūtha*), the great hot-ashes hell (*Kukkula*), the great silk-cotton tree forest (*Simbalivana*), the great sword-leaf forest (*Asipattavana*), and the great bitter-water river (*Khārodaka*). Here they are not *ussadas*, and there is no trace of the eight hells, but we find later the *Mahāniraya* (which is the proper name of a hell in the Hindu system) treated as the same as *Avīchi*, and the *Gūtha* and other hells termed *ussadas*.¹ With the absence of any mention of eight hells in the *Suttas*, and the existence of divergent descriptions, this probably implies the combination of two independent systems. The *Mahāniraya* is identified with *Avīchi*, and the *Gūtha* and other great hells are reduced to *ussadas* round the eight great hells. Both systems are no doubt in their main features pre-Buddhist. Several of the names are identical with some in the system of the 21 Hindu hells² and the six of the Yoga system.³

There are still other unlocated hells, which appear to have developed out of the description of special kinds of tortures, *Kākola*, *Khuradhāra*, *Sataporisa*, *Sattisūla*, *Sunakha*.⁴ In Sanskrit works we find as 'great hells' *Sālmali* (the *Simbali* forest of Pāli), *Agnighāta*, *Andhakūla*, *Sitodaka* (*Sit-?*), *Asichchheda*, *Sāmbara*.⁵

In *Dīgha*, ii. 12, there is a reference to beings in the *Lokantārikā*, the space between every three adjacent universes, which is quite dark. It is described in the commentary⁶ as a great hell, where sins of violence against relatives and virtuous ascetics are punished. In *Jātaka*, vi. 247, it is the penalty for heresy. The inhabitants have long nails, and like bats on trees they hang from the *chakkavāla* walls that encircle the world. Then, finding no food, they drop into the salt water below. They are classed as *pretas* in R. S. Hardy's Sinhalese sources,⁷ but there is no indication of this in the Pāli.

A system which shows no relation to the eight hells is described in the *Suttanipāta*, iii. 10. Buddha is asked how long is the length of life in the *Paduma* hell. He answers that it is not easy to say how many years, but that it is possible to make a comparison. If a man were to take a single grain every century from a load of sesame seed, the task would be finished in less time than the period of the *Abbuda* hell. Then follow nine other hells, the length of time in each of which is twenty times longer than the preceding: *Nirabuda*, *Ababa*, *Ahaha*, *Atata*, *Kumuda*, *Sogandhika*, *Uppalaka*, *Pundarika*, *Paduma*. This makes the length of the *Paduma* hell 512,000,000 times that of the *Abbuda*.

There is nothing to show that these are not

³ *Vyāsa* on *Yoga-sūtras*, iii. 25.

distinct hells, as they are termed in the text. The commentator, however, says that they are not separate hells, but indicate the length of time in Avichi. It is certain that the names do signify high numerals, but the identification with Avichi is probably another case of harmonizing, as the punishments described in the verses following are not those of Avichi. They are those of *Āṅuttara*, i. 141, and of what are called the 'seven *ussadas*' in the *Petavatthu* commentary. Although these verses may not be contemporary with the previous prose account of Abbuda, etc., there is nothing in either to suggest the system of eight hells. The commentator also shows that his view was not of unquestioned authority, as he states two other interpretations: (1) that the names Abbuda, etc., are due to the variety of pains and punishments in each, (2) that they are cold hells.

5. Cold hells.—It is as cold hells that eight of these ten hells appear in a modified form in Sanskrit works. The names in *Dharmasaṃgraha*, 122, are Arbuda, Nirarbuda, Ataṭa, Apapa, Hāhādharma, Utpala, Padma, Mahāpadma, the Pāli Kumuda, Sogandhika, and Pundarika being omitted, and Mahāpadma being added. The Pāli is more systematic, as the last five of this list are the names of the five kinds of lotuses. From the *Abhidharmakośa*¹ and Chinese sources we know that the names like Apapa and Atata are interpreted as the sounds uttered by their inmates, and those named from the different kinds of lotuses (Utpala, Padma) are due to the frozen flesh of their victims exfoliating in the form of these flowers. There is no reason to think that this, any more than the whole system of cold hells, is anything but a development of scholastic exegesis, and the reduction to eight is probably due to a desire to make them conform with the hot hells.

6. Locality of hells.—The Scriptures imply that the hells are below the earth, apparently in descending order corresponding to the ascending heavens. Later writings give various inconsistent accounts, showing that they are merely the elaborations of commentators. Avichi, according to *Abhidharmakośa*,² is 20,000 leagues (*yojanas*) below Jambūdvīpa. Other authorities put the hells 500 leagues down, and below the southern extremity of Jambūdvīpa. *Dharmasaṃgraha*, 123, makes Sañjīva and the other hells the lowest of the *pātālas*, or subterranean regions, with Avichi consequently at the bottom of the universe. Accounts of the size are equally contradictory. The *Jātaka* commentator makes Avichi 1800 leagues in diameter and 5400 in circumference, showing that he conceived it as circular.³

7. Crimes punished in each hell.—The criminals punished in the first hot hell are strikers, murderers, and those moved by covetousness and anger; in the second slanderers, liars, and those undutiful to father, mother, or friends; in the third those who kill rams, antelopes, and other living beings; in the fourth those who inflict torments on living beings; in the fifth those who destroy the property of the gods, of Brāhmins, of their *guru*, though charged to guard it; in the sixth those who burn forests and live animals; in the seventh the infidel (*natthika*) who reverses right and wrong; in the eighth those who kill disciples, father, mother, or *guru*. This is the arrangement of the *Pañchagatidīpana*, with which the *Mahāvastu* agrees in the main. It is naturally absent from the *Suttas*, which usually mention the traditional list of ten sins as leading to hell.

The *Jātaka*, v. 267, puts parricides and slayers of ascetics in the first (*Kālasutta*), unrighteous kings in the sixth (*Tapana*).

The absence of certain notorious crimes is noticeable. These are punished in the minor hells—a fact which is not surprising, when we know that in the *Sutta* accounts they were not *ussadas*, but great hells. Violators of morality suffer in *Milhakūpa*; adulterers climb the thorny *simbali* trees; in the *Asipattavana* the destroyers of confidence are cut to pieces; robbers swallow hot balls of iron, and killers of fish are plunged into *Vetaraṇi*. In these *ussadas* the *Jātaka* also puts matricide, abortion, and adultery. The slaying of father or mother, slaying an *arhat*, shedding the blood of a Buddha, schism, and heresy are also said to be punished in Avichi.¹

8. Length of life in the hells.—There is no fixed duration of life for beings in states of punishment, according to *Abhidhammattha-saṃgaha*, v. 4. In *Itivuttaka*, 18, it is said that he who causes a schism suffers in hell for a *kappa*. Schism is punished in Avichi according to later accounts, but there is no indication that the system of eight hells is recognized here. The passage became later a matter of controversy in different schools, especially as it was not agreed whether the *kappa* was a great æon, the period between two destructions of the universe, or a subdivision of this, an *antara-kappa*.² The account of the Paduma hell recognizes no definite period, since the unit of the ten periods is undetermined, and similarly in other parts of the *Suttas*, where the refrain occurs, 'and they die not until their evil karma is exhausted.'

An arrangement found in the *Abhidharmaśāstra* quoted by Feer makes the periods correspond to those of the heavens of *Kāmaloka*, i.e. in the Sañjīva hell 500 years, a day and night of which equal 50 human years. These periods are doubled for each succeeding hell, till we get for Avichi 64,000 years, with a day and night of 6400 human years. The arrangement in Hardy's Sinhalese authorities³ is apparently the same.

9. Animals.—Animals are classed as eaters of grass, of carrion, living in darkness (i.e. blind), in water, in filth. The foolish man, who formerly in this world has taken pleasure in these things and has done evil deeds, is born in one of these classes. As there is no morality and accumulation of merit in such existences, it is exceedingly difficult to escape from this state, and, if even after repeated animal births the individual reaches the state of man, he is born in a very low caste.⁴ The *Pañchagatidīpana*, 45–50, makes animal birth correspond with the supposed characters of different kinds of animals. The licentious are born as geese and pigeons, the stupid as worms. Through anger they become serpents, and through pride and insolence asses and dogs. The envious and avaricious become monkeys, the meat-eaters tigers and other carnivorous animals.

In Mahāyāna the saving power of the *bodhisattvas* extends to all realms. Avalokiteśvara empties the hells and *preta*-world, he takes the form of a bee, and by humming his teaching to innumerable worms causes them to remember the Buddha, the Doctrine, and the Order, so that they are reborn as *bodhisattvas* in *Sukhāvatī*.⁵

10. Pretas.—A *preta* (Pāli *petā*) is properly one who has 'gone before,' a departed person. Hinduism developed a very characteristic form of worship of the dead.⁶ Buddhism modified this by making *pretas* a special class, who have to expiate a certain kind of *karma* in the *preta*-realm (*pettī-*

visaya). In the Buddhist view it is only the departed condemned to this realm that can benefit by offerings (*saddha*, *śrāddha*) made to them by their relatives and friends. In the other four courses the life of the departed person depends upon the means of support in the world to which he has gone.¹ The *Tirokuddasutta*² describes the worship (*pūjā*) as consisting in actual offerings of food and drink set out for the departed.

Those who are compassionate give to their relatives pure and excellent food and drink at the proper time, saying, "May this be for our relatives; may they be made happy." . . . The *petas* live on what is given from this world.

The commentary explains that the offerings are made by giving alms to the Order, and the merit is assigned to the *pretas*, whereby they benefit. The monks performing the ceremony, in fact, take the place held in the Hindu rite by the Brāhman priests, who represent the deceased ancestors.³

11. Preta-realm.—The *pretas* are ghosts, which live at cross-roads and congregate outside the fences and at the doors of houses. They are described in the commentary as having long dishevelled hair and beard, lean, rough limbs, looking like burnt trees after a forest fire, some scorched with flames arising from their stomachs and issuing from their mouths through their burning hunger and thirst, some with bellies like mountains and their throats the size of a hole made by a needle. The effect of their *karma* is to make their relatives forget them, and then their only food is indescribable filth. Several kinds are mentioned: *kuppi-pāsika*, 'afflicted with hunger and thirst'; *vantāsa*, 'eating vomit'; *paradattupajivin*, 'living on what is given by others'; *nijjhāmatanika*, 'burning with thirst.'

12. Sins punished in the preta-realm.—The special sins leading to *preta* existence are niggardliness or refusing to give alms and envy of the blessings of others. Those who have dissuaded from giving become needle-mouthed, and those who, though intending to give, have afterwards regretted it become eaters of filth. This sin is put by *Samyutta*, i. 92, in the *Mahārōruva* hell. One who says unpleasant things in anger becomes a *preta* with fiery throat.⁴

In the *Kāraṇḍavyūha*⁵ the city of *pretas* (*pretanagara*) is an abode adjoining *Avīchi*. It has door-keepers, and is mentioned in several passages along with various hells.

After *pretas* the *Pañchagatidīpana* groups several classes of superhuman beings, which, though strictly speaking divine, do not generally reside in heaven. They are chiefly beings whose *karma* is mixed: *kumbhāṇḍas*, demons attendant on *Virūlhaka*, one of the four great kings; *rākṣasas*, cannibal demons; *gandharvas*, divine musicians; *pisāchas*, *pamsupisāchas*, mud-demons; *yakṣas*, demons, especially those attendant on *Vessavaṇa*, one of the four great kings; and *asuras*, gods expelled from the heaven of the Thirty-three, and forming a separate *gati* in some schools.⁶ *Nāgas* and *garuḍas*, whose natural forms are serpents and birds respectively, are classed with the animals.

13. Man.—Rebirth as a man, whether from a previous higher or from a lower existence, implies that the individual has some good *karma* to his credit. The punishment of hell is monitory and retributory, not a purification as in the Christian purgatory; but, although a being in a state of punishment cannot acquire merit, he may be reborn as a man or god owing to the ripening of *karma* from a still earlier existence. Such *karma* may result in an individual being reborn as a man,

who has done deeds that otherwise would have led to heaven or hell. If he has formerly been a shedder of blood, he will be short-lived; if an injurer and striker of living beings, he will be diseased; if of an angry and despairing nature, ugly; if eager for gain and honour, weak; if he is not a giver, poor; if proud and insolent, of low caste; if not an inquirer as to what is good and worthy, stupid. And the practice of the opposite virtues leads to long life and the other corresponding blessings.¹

14. Heavens.—The arrangement of heavens, though peculiarly Buddhist as a system, is based upon Hindu conceptions, and the names of the lower heavens are often similar to or identical with those of the Yoga philosophy. There is little doubt that they are pre-Buddhist, and hence it is not surprising that the original meaning of several of the names of different gods and heavens was apparently unknown to the Buddhists, who interpreted them in more than one way. The series of heavens as given in *Majjhima*, i. 289, is as follows:

A. THE SIX HEAVENS OF SENSUAL ENJOYMENT (Kāmaloka).—(1) *Chātummahārājika devas*.—This is the heaven of the four great kings, the gods of the four quarters, and protectors of each of the four continents. They are *Dhātaraṭṭha* (*Dhātarastra*), king of the east; *Virūlha* (*Virūdhaka*), of the south; *Virūpakkha* (*Virūpākha*), of the west; and *Kuvera* or *Vessavaṇa* (*Vaisravaṇa*), of the north. Their attendants are respectively *gandharvas*, *kumbhāṇḍas*, *nāgas*, and *yakṣas*.² Their abode is half-way up Mount Meru, the centre of the world.

(2) *Tāvātimsa devas*.—The 33 gods, with Sakka at their head, dwell on the top of Mount Meru. The *asuras* are placed below or at the foot of Mount Meru, after being expelled from *Tāvātimsa* by Sakka. Other superhuman beings of general Hindu mythology (mentioned under *pretas*) properly belong to this region. Rebirth in the vegetable world is apparently absent from the Buddhist system, but trees and plants are really divine beings, *devatā*, and their life is that of the tree-spirit inhabiting them.

(3) *Yāma devas*.—This would naturally mean gods of the heaven of Yama, Yama being the Vedic king of the heaven of the fathers. In Buddhism, however, Yama has become king of hell and the *pretas*, and the commentaries interpret *yāma* in various ways—e.g., 'the misery-freed gods'³ or in the sense of a watch (period of three hours), as being the period by which these gods reckon time. *Dhammapāla* on *Therīgāthā*, 197, derives it from the root *yā*, in the sense of 'having attained divine pleasure.' Their king is *Suyāma*.

(4) *Tusita devas*.—These are the 'delighted or satisfied gods,' and their abode is the heaven from which the *bodhisattvas* descend to become Buddhas. The king is *Santusita*.

(5) *Nimmānarati devas*.—This means gods who delight in creation or transformation. The commentary on *Vimānavatthu*, 80, explains the name as those who take delight and sport by changing their forms at pleasure. *Digha*, iii. 218, interprets it as those who exercise their power over sensual desires created by themselves. Their king is *Sunimmita*.

(6) *Paranimmitavāsavatti devas*.—According to *Digha*, iii. 218, these are gods who exercise their power over sensual pleasures created by others. Their king is *Vasavatti*, and as ruler of the highest of the Kāma heavens he is later identified with *Māra*.⁴ As this and the previous heaven correspond to the Yoga *Aparinirmitavāśavartin* and *Parinirmitavāśavartin*, they are probably ancient terms, interpreted variously without reference to their original application. The Yoga terms show that *para-* may be a mistake for *pari-*, and the Buddhist interpretations consequently mere etymological illusions.

B. HEAVENS OF THE WORLD OF FORM (Rūpaloka).—The following list of 13 is that of *Majjhima*, i. 289. Other lists vary from 16 to 18, and have also minor differences in arrangement. The usual number of 16 is obtained by subdividing the first *dhyāna* into three, and adding the *asaññasattas* in the fourth *dhyāna*. The principle of division in all the lists is the classification of the heavens above Kāmaloka into eight planes, according to the four *dhyānas*, and the four higher 'attainments.'

(1) *First dhyāna*.—*Brahmakāyika devas*, gods of the troop of *Brahmā*, subdivided in *Vibhanga*, 424, into (a) *Brahmaparissajja devas*, gods of *Brahmā*'s retinue, (b) *Brahmapurohita devas*, family priests of *Brahmā*, (c) *mahābrahmas*, great *Brahmās*. In the *Suttas* only one great *Brahmā* is at any given time supreme.

(2) *Second dhyāna*.—*Abha devas*, gods of brilliance, including (a) *parittābha devas*, gods of limited brilliance, (b) *appamāṇābha devas*, gods of unlimited brilliance, (c) *ābhassara devas*, radiant gods.

⁴ *Pañchagatidīpana*, 52-59.

⁵ Pp. 12, 35, 66.

⁶ Cf. *Kathāvatthu*, viii. 1.

(3) *Third dhyāna*.—*Subha devas*, gods of beauty or lustre, including (a) *parittasubha devas*, gods of limited lustre, (b) *appamāṇasubha devas*, gods of unlimited lustre, (c) *subhakiṇṇa devas*, gods of complete lustre.

(4) *Fourth dhyāna*.—(a) *Vehapphala devas*, gods of great fruit, (b) *aviha devas*, gods of non-increase (?), (c) *atappa devas*, gods of coolness, (d) *sudassa devas*, gods fair to see, (e) *sudassi devas*, well-seeing gods, (f) *akaniṭṭha devas*, gods among whom none is the youngest—a Vedic epithet of the *maruts*, but with no discernible reference to those gods.

In *Digha*, ii. 50, 52, the last five of this *dhyāna* are called the *suddhāvāsas*, 'gods of pure abode.' Another class of this *dhyāna* is that of the *asaññasattas* or *asaññisattas*, beings of unconsciousness.¹ *Vibhaṅga*, 425, puts them first in this class. In Sanskrit lists are further found the *anabhrakas*, 'cloudless' gods, and the *pūṇyaprasava*s, 'merit-producing' gods.

C. HEAVENS OF THE FORMLESS WORLD (Arūpaloka).—The four divisions of this world correspond to the four attainments (*saṃāpattis*).

(1) *Ākāśānāchāyatanānūpaga devas*, gods who have reached the stage in which the object of thought is space realized as infinite.

(2) *Formless stage* in which the object is nothingness.

(3) *Formless stage* in which the object is nothingness.

(4) *Nevasaññā-nāsaññāyatanānūpaga devas*, gods of the stage in which the object is neither consciousness nor unconsciousness.

15. Life of the gods.—The *Vimānavatthu* commentary describes life in *Kāmaloka* as consisting of sensual pleasures like those on earth, but on a grander scale. The gods have each a palace of gold, ruby, etc., and retinues of nymphs. They move through space on flying couches, and sport in the Nandana grove, or in boats on the great lakes. The sun, moon, and other heavenly bodies are among the vehicles of such gods. Sakka has female attendants skilful in dancing and singing. They marry and intermarry with the gods of the four great kings and the *asuras*.

In *Rūpaloka* there is no sensual desire—i.e., according to *Abhidhammattha-saṃgaha*, vi. 12, those groups of material qualities constituting smell, taste, body, sex, and those produced by food, are absent; and among the unconscious beings also the groups of seeing, hearing, mind, and voice. In *Arūpaloka* all the groups of material qualities are absent.

Birth in *Rūpaloka* and *Arūpaloka* is attained by the practice of the corresponding *dhyāna*, and birth in one of the three divisions of each of the first three *dhyānas* is in accordance with the limited, medium, and eminent exercise of each. *Vibhaṅga*, 425, includes in the fourth *dhyāna* also the four stages of *Arūpaloka*, and makes birth in the seven divisions from *asaññasattas* to *akaniṭṭhas* correspond to seven ways of practising this *dhyāna*. Birth in *Arūpaloka* is in accordance with the object of thought of each division. A somewhat different arrangement occurs in *Abhidhammattha-saṃgaha*, vi. 10.

16. Length of life in the heavens.—In the heaven of the four great kings a day and night equals 50 human years, and the length of life is 500 divine years—i.e. 9,000,000 human years. These figures are doubled for each of the following *Kāma* heavens, giving for the *paranimitavasa-vattis* a day and night equal to 1600 human years, and a life of 16,000 divine years.

The three divisions of the *brahmakāyikas* have a life of one-third, one-half, and a whole *kappa*; of the *parittābhas* it is two *kappas*, and, by successive doubling for each of the following, 64 *kappas* for the *subhakiṇṇas*. *Asaññasattas* and *vehapphallas* both have 500 *kappas*, and the following to *akaniṭṭhas* successively double. In *Arūpaloka* the ages are 20,000, 40,000, 60,000, and 84,000 *kappas*.²

Further cosmological details will be found in

¹ *Digha*, iii. 263; *Kathāvatthu*, 260; *Dhammatamgraha*, 128.

² *Anguttara*, i. 213, 267; *Vibhaṅga*, 424-426. In *Compendium of Philosophy*, p. 142, the meaning of *kappa* in this connexion is discussed.

EDWARD J. THOMAS.

STATE OF THE DEAD (Christian).—I.

General character of the Christian view.—The distinctive feature of the Christian doctrine of immortality, as distinguished from that of Greek philosophy, is its insistence upon the survival, not of a part only, but of the totality of human personality. The Greek view is sometimes spoken of as the doctrine of the immortality of the soul, but it is only of part of the soul that persistence is affirmed. If Plato at times, in accordance with popular ideas, speaks of friendship with the great and good as among the pleasures of the next world, thus implying the permanence of man's emotional and affective nature, his more usual view is cold and intellectual. In theoretic Platonism what survives is little more than the power of abstract thought, and eternal bliss consists mainly in the calm and unemotional contemplation of the eternal, unchanging 'Ideas.' In Aristotle this intellectualist tendency is still more pronounced. What survives at death is simply the divine principle of pure intelligence (*νοῦς*), which apparently is absorbed into the Divine Mind, so that it becomes a serious question, in spite of such passages as *Nic. Eth.* i. 11, whether Aristotle can rightly be regarded as a believer in individual immortality.

To the Jew the life of the affections, of the emotions, of the senses, and of active volition, seemed of more worth than the life of abstract thought. As soon as ever he conceived a blessed life beyond the grave as possible at all, he demanded that it should have all (and more than all) the warmth, the fullness, and the vivacity of earthly life. Eternal life, in his view, meant the enhancement and enrichment of life, not its impoverishment, and impoverished it would surely be, in his opinion, if it lost one single element which in the earthly life possesses artistic, moral, or emotional value. The Jew, then, stood for the survival of human personality in its entirety.

But this position, when logically thought out, seems to imply a life lived in a material environment, and even the survival (in some sense) of the human body. Sensation, e.g., seems to require organs of sensation, emotion some sort of bodily organization, the recognition of friends some kind of visible form by which to distinguish them; furthermore, it seems impossible to understand how the artistic faculties can be exercised except upon sensible objects possessed of æsthetic charm. If, therefore, eternal life implies, as to a Jew it does, the most perfect and satisfying life imaginable, it must imply a life lived in the body, and in a material universe, both of which, however transfigured and glorified, must still be thought of under the category of matter.

This point of view, characteristic of the main stream of Jewish thought, as distinguished from the speculations of the Platonizing school of Philo, was that which commended itself to Christ and the first Christians. Hence their descriptions of the life to come are pictorial, vivid, almost æsthetic, employing largely the current apocalyptic imagery. Such descriptions are undoubtedly symbolical, but they do not symbolize a purely spiritual existence. When we read of harpers with their harps, of the new song of the redeemed, of

the new heavens and the new earth, of the new Jerusalem paved with gold, of its joyous inhabitants clothed in white and carrying palms, we are not meant to think of disembodied spirits existing *in vacuo*, but of visible human bodies gloriously arrayed, and of real sensible things corresponding in the heavenly sphere to what we should here call beautiful music, beautiful literature and poetry, beautiful architecture, and beautiful scenery.

But the Christian view of heaven, though containing an element which (in a good sense) may be called 'sensuous,' is not sensual. Christ was careful to guard from the first against those gross and carnal conceptions of future bliss which among His contemporaries tended to attach themselves to the doctrine of the resurrection of the body. According to His teaching, in the world to come man will have outgrown his lower animal propensities, such as the appetite of sex (Mt 22³⁰, Mk 12²⁵, Lk 20³⁵) and the desire of eating and drinking (Ro 14¹⁷). Allusions to feasting in the next world are certainly to be understood symbolically, as is especially evident from Mt 26²⁹.

Occasionally, but very rarely, the same spiritual view of the resurrection life appears in rabbinical writings:

'In the world to come,' said Rabbi Rab, 'there is neither eating, nor drinking, nor sexual pleasure, nor strife, but the righteous with their crowns sit around the table of God, feeding on the splendour of His Majesty.'¹

The risen Lord's eating with the disciples during the great 40 days is not inconsistent with this view. He ate, not as needing food, but in order to afford a convincing proof of His bodily resurrection (Lk 24³⁸⁻⁴², Ac 1⁴ Rv^m, 10⁴¹).

The resurrection bodies of the saints were conceived of not as natural, but as glorious and spiritual (Mt 22³⁰, 1 Co 15⁵⁰), like the bodies of the angels, whom the ancient Jews and the early Church (at least to the close of the 4th cent.) regarded not as strictly incorporeal, but as invested with spiritual bodies, it being the privilege of God alone to be purely incorporeal.² Although the identity of the resurrection body with the earthly body is often suggested, or even insisted on in the NT (see Mt 5^{29, 30} 10²⁸, Ro 8^{11, 23}, 1 Co 15⁵³; cf. also Mt 27⁵²), the identity thought of was probably one of continuity, rather than of identical materials. The doctrine of the full material identity of the earthly with the resurrection body seems not to be part of the original tradition, and is probably inconsistent with the Pauline doctrine (see especially 1 Co 15). It cannot be proved by the analogy of the resurrection of Jesus Himself. That resurrection was indeed a type and figure of the resurrection of the saints, but it was also a convincing sign of the Lord's victory over death, and of the triumph of matter over spirit. Accordingly, for apologetic reasons the actual buried body rose, leaving the tomb empty, but at the moment of resurrection it was transformed into a glorious and spiritual body, belonging henceforth to the heavenly sphere, and perceptible to mortal senses only by virtue of a voluntary and temporary accommodation to earthly conditions. Such at least seems to have been the view of the first disciples, and it is still the belief of the majority of Christians.

2. The locality of heaven.—Undoubtedly heaven is a state rather than a place, but a religion which, like Christianity, teaches the resurrection of the body and the glorification not merely of the spiritual, but even of the material universe, cannot dispense altogether with the idea of locality in connexion with heaven. What appears to be the teaching of the NT is this. At present, owing to the imperfection of the universe, God's glory and

majesty cannot be fully manifested in it. The boundaries of heaven (*i.e.* of the sphere in which the divine glory is fully manifested) are consequently restricted. But in the consummation and regeneration of the universe (*παλιγγενεσία*, Mt 19²⁸; *ἀποκατάστασις πάντων*, Ac 3²¹), which will accompany the resurrection, when the whole creation, which, being enslaved in the bondage of corruption, groaneth and travaileth in pain together (*or together with man*) until now, shall be delivered into the liberty of the glory of the children of God (Ro 8²¹), then the glory of God, at present manifested within a limited heaven, will be manifested throughout the entire universe, and the boundaries of heaven and of creation will be conterminous (2 P 3^{10, 13}, Rev 21¹; cf. Is 65¹⁷ 66²², Rev 11¹⁵, etc.). The distinction between heaven and earth will then have no meaning. Wherever God's servants may be, on whatever employment, God will be with them, and they will see His face—in other words, they will be in heaven, just as at present the holy guardian angels, while performing their ministry on earth, never really leave heaven, because they always see God's face (Mt 18¹⁰).

3. The essential bliss of heaven.—Since God is the object of a Christian's supreme love, to see Him face to face must be a Christian's supreme bliss. This unveiled vision of God, which is the unending joy of the angels (Mt 18¹⁰), will also be the final reward of the pure in heart (Mt 5⁸). Both St. John and St. Paul agree in this doctrine, but it is the author of the Apocalypse who works it out into the fullest detail.

'Beloved,' says St. John, 'now are we children of God, and it is not yet made manifest what we shall be. We know that, if he shall be manifested, we shall be like him; *for we shall see him even as he is*. And every one that hath this hope set on him purifieth himself, even as he is pure' (1 Jn 3^{2, 3}). 'For now,' says St. Paul, 'we see in a mirror, darkly [*lit.* 'in a riddle']; but then *face to face*: now I know in part; but then shall I know (*ἐπιγνώσωμαι*) even as also I have been known' (1 Co 13¹²).

This immediate contemplation of the Infinite Essence of God, which, as conferring the highest conceivable degree of bliss, is generally spoken of as the Beatific Vision, must be regarded as a strictly supernatural endowment of grace, not analogous to any faculty at present possessed by man. Here on earth even our own personality, in its full depth and reality, is mysteriously veiled from us. What the thinker is in distinction from his thought, what the self-identical soul is, as distinguished from its changing states, we have not the least idea. The more we try to fix our gaze inward upon our true selves, the more confused our vision becomes, and we have to abandon the task as hopeless. If, then, we cannot by nature know our own selves, how much less can we know the Absolute Spirit! Hence Christian thought has always recognized that in order to attain to the immediate vision of the Divine Essence, the human soul must be lifted above the natural order altogether, made to partake of the Divine Nature (2 P 1⁴), and, so far as this is possible without complete absorption into the Godhead, even 'deified,' as the Greek Fathers did not hesitate to express it.

The richness, magnificence, fertility, and comprehensiveness of this doctrine must be admitted even by those who cannot share it. It sums up and includes all lesser ideals by transcending them. It satisfies the Platonic ideal, because God is Himself the *ἰδέα τοῦ ἀγαθοῦ*, and, in contemplating Him, the soul contemplates the Absolute Good. It satisfies also the Aristotelian ideal of perfect intellectual knowledge, because in God the soul sees the universe no longer in scattered fragments, but as a single whole, from which standpoint the cosmos appears to be what it really is, *viz.* an orderly rational system.

The need of satisfying the intellectual faculties

¹ Ber. 17a.

² See, for a full presentation of the evidence, 'Angéologie d'après les Pères,' in Vacant, *Dict. de Théol. cath.*

of man is not ignored by Christianity. It emphasizes the essential rationality and intelligibility of the universe by regarding creation as the work of the Logos, or Reason of God, which, having from the beginning been immanent in the world, was finally manifested in the person of Jesus Christ, and is the object of Christian worship. A religion which pays the homage of adoration to Reason cannot fairly be accused of neglecting the claims of intellect. Intellectual knowledge has always been one constituent in the Christian ideal of human blessedness. St. Paul longs for *ἐπιγνώσις*, which certainly includes intellectual knowledge; and Origen considers that the satisfaction of the thirst for knowledge, which God has implanted in the soul, will be among the greatest of the joys of heaven. According to him, the cultivation of philosophy, and even of natural science, will be among the principal occupations of the glorified saints of God.¹

But Christianity does not fall into the mistake of ranking intellect above moral goodness. It is not mainly as the Supreme Reason, but as the All-Holy, that God is adored by angels and men (Is 6³, Rev 4⁸). Religion has always recognized that the true being of God is best expressed in terms of moral personality. Thus the ancient Jews regarded Him mainly as Monarch and Judge. Christianity, without rejecting these ideas, transfigured them by conceiving of God as Unbounded Love (Jn 3¹⁶). God, then, for Christians, is primarily 'Our Father which art in heaven,' and from this point of view heaven is regarded in Scripture as *the home*, where God gathers His children round Him in the loving intercourse of family life. 'In my Father's house are many mansions; if it were not so, I would have told you; for I go to prepare a place for you' (Jn 14²).

The most wonderful representation of God in this aspect is the parable of the Prodigal Son. Here the Infinite Creator appears as running (*δραμών*) to meet the repentant prodigal, falling on his neck and kissing him fondly (*κατεφίλησε*), bringing forth the best robe, putting a ring on his hand and shoes on his feet, and killing the fatted calf and making merry (Lk 15²⁰⁻²²). In the same spirit, the author of the Apocalypse exhausts the resources of language and imagery in trying to describe God's tender and familiar intercourse with the saints in heaven (Rev 21³).

As in the love of God Christianity finds the supreme satisfaction of the human affections, so in the worship of God it finds the chief satisfaction of human emotion. Of all the emotional states experienced on earth the profoundest and the most uplifting is the sense of boundless adoration, joined with abject self-abasement, which thrills through the devout soul as it contemplates the infinite perfections of God. In heaven this rapture of adoration will never cease. 'They have no rest day and night, saying, Holy, holy, holy, is the Lord God, the Almighty, which was and which is and which is to come' (Rev 4⁸).

Worship is the emotional expression of man's consciousness of God's absolute transcendence, and of the infinite gulf which separates even the most exalted creature from the Infinite Creator. The Christian cannot feel towards His God like the pantheist, who knows no God higher than the universe of which he himself forms a part. The Christian's God is absolute, self-existing, self-sufficing, not dependent upon the universe in any way for His perfection and blessedness, but transcending it to an infinite extent, and therefore claiming a homage that is absolutely unbounded. The Incarnation, though it bridges the abyss, does not destroy it. Even as incarnate, immanent,

and holding familiar intercourse with His creatures, the Creator still maintains His awe-inspiring and ineffable transcendence. Indeed, it is just this ever-present consciousness of His immeasurable elevation above all created being that lends to the idea of the incarnation of God its profound emotional value. Even before God incarnate the heavenly host falls down in boundless adoration (Ph 2¹⁰).

Heaven, therefore, both in the OT and still more in the NT, is represented as a glorious sanctuary in which God's servants worship Him unceasingly with inward purity of heart, and with the outward expression of a magnificent ritual. There will be no temple (*i.e.* no special temple) there (Rev 21²²), because the whole universe will become one vast temple of God; and the worship will be ceaseless, because every activity of whatever sort, having as its end the glory of God, will be an act of worship.

Chs. 4 and 5 of the Apocalypse give an ideal picture of the perfect worship of heaven. It is a worship in which all creation (nature as well as man) harmoniously joins. How precisely the writer thinks of nature is not quite clear. It is possible that he regards nature as offering its worship vicariously, through its king and high-priest, man. More probably, like most ancient thinkers and like St. Paul (Ro 8²²), he regards nature as animated, and thinks of a vast graduated hierarchy of nature-spirits, culminating in the soul of the physical universe regarded as created, joining with angels and men in the anthem of praise. The worship is paid not only to God, but also to God incarnate, 'the Lamb as it had been slain' (Rev 5^{12, 13}, etc.; Ph 2¹⁰, etc.).

4. Heaven as a perfect society.—Trinitarianism regards God not as a monad, but as a perfect society, and finds in the nature of the Godhead itself the heavenly archetype of the family and of the state. The idea of the Church and of the communion of saints is therefore of the essence of Christianity. Religion, from the Christian standpoint, is man's approach to God as a member of a brotherhood, a family of God, a holy Church, in whose fellowship his spiritual life is nourished and perfected. Christianity makes men members one of another, puts in their mouths a social prayer ('Our Father,' not 'My Father'), helps them on their way by social worship and social sacraments, and teaches them to regard the service of man as one with the service of God (see especially 1 Jn 3¹⁸⁻¹⁹ 4^{20, 21}). Heaven, therefore, as realizing the social ideal, is continually represented in the NT as a perfect society, city, or state (He 12²²).

All war, violence, and danger from enemies external and internal will have ceased, and therefore the gates of the city 'shall in no wise be shut by day' (*i.e.* not shut at all), 'for there shall be no night there' (Rev 21²⁵). Heaven will be a sinless society, for 'there shall in no wise enter into it anything unclean, or he that maketh an abomination and a lie: but only they which are written in the Lamb's book of life' (21²⁷).

5. The activities of the heavenly citizens.—The unceasing worship of heaven is not to be taken as implying that there will be no other activity than worship there, but rather that all occupations of every sort, being undertaken for the glory of God and in His service, will partake of the nature of worship. Many NT passages imply that all worthy faculties of individuals and races will find due employment in heaven (Rev 21^{24, 25}).

Thus, since heaven is a state or city, there will be a scope for faculties of government and administration there (cf. Lk 19¹⁷, 'Have thou authority over ten cities'). Our Lord teaches both in the parable of the Talents (Mt 25¹⁴⁻³⁰) and in the parable of the Pounds (Lk 19¹²⁻²⁷) that all faculties worthily employed in this world will receive additional scope in the world to come. If the indications in the Apocalypse are to be trusted, there will be great scope for the artistic faculties. In heaven there will be beautiful architecture and craftsmanship (Rev 21³), beautiful poetry (5¹³ 14³

¹ *De Principiis*, li. 11, etc.

15³), and beautiful music, both vocal and instrumental (14² 18²³), or at least some higher reality corresponding to these. Of the cultivation of philosophy and science in heaven we have already spoken.

6. Relation to time.—Christianity took over from Greek philosophy, and to some extent developed independently, the profound and fruitful idea of the distinction between time and eternity, and between becoming and being. First clearly stated by Parmenides, c. 500 B.C. ('True Being never was and it never will be, since it is present all of it together, only in the *now*, one and indivisible'), it is worked out in considerable detail by Plato, c. 390 B.C., especially in his *Phædrus* and *Symposium*. Plato regards time, which is divisible into successive moments of which only one is actual at a time, as a half-unreal shadow of eternity, which latter cannot be divided into parts, is present whole and indivisible in the changeless now, and is the only true duration. Similarly he regards becoming (*γένεσις*), i.e. evolution or change, which takes place in time, as an imperfect shadow of true being (*οὐσία*), which is changeless and self-consistent, and exists only in eternity. This view is also found in the NT.¹

The doctrine of eternity has an important practical bearing upon our conception of man's future beatitude. One of the greatest imperfections of our present thinking is its piecemeal character. Geometry, e.g., must be painfully and imperfectly acquired as a series of successive propositions, each of which requires a separate demonstration. A perfect intelligence would grasp in one mental act all the possible spatial relations of bodies. For such an intelligence there would be no 'proofs,' for all geometrical truths in all their relations would be grasped in a single intuition. In this world all our thinking is of the same disjointed and unsatisfactory character. We think of God in church, but forget Him as soon as we leave, because we have other things to think about. When talking to one friend, we forget for the time all our others. We cannot think of history as a whole, but only of a succession of incidents, of which only one can be clearly grasped at a time. In all our attempts to take comprehensive views details drop out of sight; hence our best generalizations are unsubstantial and unsatisfying. Neither of God, nor of nature, nor of ourselves, nor of our neighbours, nor of our future destiny, can we form anything but fragmentary and inadequate views.

Christian theology teaches that one of the chief results of the Beatific Vision will be that the soul, seeing all things in God, will see them, as God sees them, 'sub specie aeternitatis,' i.e. entire and complete, in all their mutual relations, in one undivided and indivisible mental act. Partial knowledge will be replaced, not indeed by omniscience, but by complete and adequate knowledge of all things, at any rate, which come within the intellectual capacity of creatures. There will be a similar unification of the emotional and affective life, so that all the affections and emotions will be felt *at once*. This inner unification of our mental life, by virtue of which our total knowledge of ourselves, of God, of our friends, and of the universe, together with the whole of the affections, emotions, and volitions,

which our relations to these will evoke, will be simultaneously present to the mind in one majestic harmony, will give to life lived in eternity a richness and a vivacity of which a life lived amid the distractions of time and change can give no conception whatever. It is this inner unification of life, and not its mere endlessness, that is signified when the life of heaven is spoken of as 'eternal' (*αἰώνιος*).

It does not, however, follow from what has been said that time will have no sort of existence in the world to come. It may be that the lower creation will still be subject to time and to some degree of change. But, for the redeemed (at any rate in the higher aspects of their life) time and all essential change will have ceased to be.

7. Heaven regarded as a state of progress.—Of late years the traditional view of heaven as a timeless and changeless state of perfection has been sharply challenged both from the standpoint of the evolution theory and from that of the philosophy of Bergson. Both these systems postulate unending change, and Bergsonism regards change, and its accompaniment time, as ultimate realities belonging to the very essence of true life. There is a certain tendency, therefore, among modern theologians to regard heaven not as a state of perfection, but as one of continuous progress towards perfection. Westcott¹ even claims NT support for this view, and interprets the heavenly *μολα* of Jn 14², not as dwelling-places, but as temporary halting-places for the soul in its never-ending journey towards perfection.

To the present writer this view seems a serious impoverishment of the Christian ideal. If we admit that the essential life of God is eternal and not temporal, and that the Christian hope is to share it, then it seems natural to suppose that Christians will share in the eternity of that life. If they do not, the expression 'eternal life' is denuded of a large part of its meaning. Moreover, the modern theory seems to err by interpreting the higher in terms of the lower. If heaven is a state of the highest conceivable good, then it seems quite illegitimate to describe it in terms of analogies taken from the imperfect conditions of this fleeting world. Evolution and change are not good in themselves; on the contrary, they are signs of imperfection. They mark a struggle towards a goal, and, when the goal is attained, no place remains for them. Heaven, according to traditional ideas, means the attainment of the goal, the actual and abiding possession of the highest possible good that a creature can attain. That is surely a far more satisfying conception than unending progress towards a goal that is never reached.

8. The state of the lost.—The final condition of the lost is a problem of secondary importance. The possibility of final impenitence, and therefore of final perdition, seems necessarily involved in the accepted doctrines of the freedom of the will and the immortality of the soul; and Christ frequently warned His hearers against the danger of incurring final reprobation (Mt 25⁴¹⁻⁴⁵ 5²² 27 8¹² 10¹¹ 11²² 12³¹; cf. Mk 3²⁹, Mt 13⁴² 50 18⁸ 22¹³ 23¹⁵ 24⁵¹ 25³⁰, etc.). But it does not seem to follow from the possibility of this doom that any will actually incur it. It may be that the providence of God will find means to avert it, and that the solemn warnings of Christ are among these means. Even if we grant, as the general tenor of the NT seems to suggest, that some will remain hardened and impenitent to the end, yet assuredly these will be rare and exceptional cases. NT teaching, taken as a whole, suggests, not indeed universalism, but

¹ See particularly Jn 8⁵⁸, 'Before Abraham was, I am,' where the *πρότερον* of Abraham is contrasted with the *εἶναι* of Jesus; Rev 10⁴, *χρόνος οὐκέτι ἔσται*, where the RV, following all ancient authorities, correctly translates, 'there shall be time no longer'; 14, *ἀπὸ ὧν καὶ ὁ θεὸς καὶ ὁ ἐρχόμενος*, where the absence of inflection shows that immutable duration, i.e. eternity, is meant; also *αἰώνιος* in such phrases as *ζωὴ αἰώνιος*, both in St. John's Gospel and in the Synoptics, means 'eternal' very much in the Platonic sense.

¹ On Jn 14².

certainly the salvation of the great bulk of mankind.

God 'willeth that all men (*πάντας ἀνθρώπους*) should be saved, and come to the knowledge (*ἐπίγνωσις*) of the truth' (1 Ti 2⁴). He 'is the Saviour of all men, specially of them that believe' (1 Ti 4¹⁰). The Son of God came to seek and to save that which was lost (Mt 18¹¹), and to be the Saviour of the world (Jn 4⁴², 1 Jn 4¹⁴). 'God sent not the Son into the world to judge [condemn] the world; but that the world should be saved through him' (Jn 3¹⁷).

Salvation, then, will be the rule, reprobation the rare exception. The process of reclamation may in some cases be difficult, the expiatory and cleansing discipline may be severe and prolonged, but in the end, after whatever perils and sufferings, the great majority of God's children will stand before Him, pardoned and sinless.¹

With regard to the finally impenitent, our task here is not to investigate their probable fate as a question of pure philosophy, but to ascertain, as nearly as we can from the documents, what the original Christian view was. And, in the opinion of the present writer, an impartial criticism will in the end be driven to admit that Christ believed and taught that their doom will be eternal (Mt 25⁴¹⁻⁴⁶, 18⁸, Mk 3²⁹ 9⁴³⁻⁴⁸, 2 Th 1⁹, Jude⁷). Of the various expedients devised by modern criticism to avoid this conclusion the best is certainly that which interprets eternal death as annihilation (*q.v.*). Annihilation was an idea not altogether unfamiliar to our Lord's contemporaries. Not to mention apocalyptic writings,² Rabbi Hillel taught that, whereas hardened sinners will 'go down to Gehenna and be punished there for ages of ages,' sinners of lesser delinquency will be annihilated and cease altogether to exist at the judgment. According to Edersheim, annihilationism even became the favourite rabbinical doctrine in the 2nd century.³

Annihilationism has the indubitable advantages (1) of being possible historically; (2) of giving an adequate meaning to *αἰώνιος* (the wicked are destroyed for ever); (3) of providing for the final extinction of all evil, moral and physical; and (4) of thus establishing the absolute and unchallenged supremacy of good.⁴ But, attractive as it is, it cannot be reconciled with the NT evidence taken as a whole. It may satisfy *ὁλεθρὸς αἰώνιος*, but not *κόλασις αἰώνιος*. Still less can it explain or satisfy such passages as Mk 9⁴⁶, 'Gehenna, where their worm dieth not'; and Mt 13⁴²⁻⁵⁰, 'the furnace of fire: there shall be the weeping and gnashing of teeth' (cf. 8¹² 22¹³ 24⁵¹ 25³⁰, Lk 13²⁸, etc.). The conscious existence of the lost is expressed or implied in so many NT passages that only a drastic and quite uncritical purging of the text can get rid of it.

The final question now arises: Is it possible to reconcile eternal punishment with the Divine benevolence and with the ultimate victory of good over evil? Probably it is. The general principle of the judgment will be the loss of faculties which have been abused (Mt 25²³, Lk 19²⁴). Now, the faculty which, in the case of the finally impenitent, has been wholly and irremediably abused is that of free will, and, therefore, whatever else eternal loss may involve, it must involve the loss of this. But with the loss of free will disappears also the power of sinning, and of resisting God's will, and, therefore, at the judgment, moral evil will disappear, and the holy will of God will be supreme. The lost, deprived of all power of volition and choice, will sink to the rank of necessary agents, and will do the will of God, like the lower creation, by necessity. Thus all creation will be subject to its Creator, and God will be all in all (1 Co 15²⁸).

¹ See below, § 5.

² See art. ECHATOLOGY.

³ *The Life and Times of Jesus the Messiah*, London, 1893, II. 791 ff.

⁴ See art. CONDITIONAL IMMORTALITY.

It is not necessary to regard the condition of the lost as absolutely intolerable, though, in contrast with the bliss of the redeemed, it will appear most sad. Its sadness will consist mainly in regret for the loss of the Beatific Vision, and remorse for the criminal folly which has led to their degradation from the rank of responsible beings. On the other hand, their condition may admit of important alleviations. Thus they can sin no more, and will perform the will of God unerringly, which will surely be for their good. Moreover, their enjoyment of natural goods, though impaired, will not be destroyed. In fact it even seems possible to regard their condition as one of relative happiness of a purely natural kind. At any rate, we may be sure that their condition will be better than absolute non-existence, for we cannot imagine an omniscient and all-merciful God calling into being creatures whose final state will be worse than non-existence. The purely proverbial expression made use of, Mt 26²⁴, is not sufficient evidence to the contrary.

9. The intermediate state and purgatory.—The expectation that the final judgment would come within their own generation caused the doctrine of the intermediate state to appear relatively unimportant to the first Christians, and, as some think, even to Christ Himself. The references to it in the NT are accordingly not very numerous, and, were there a sufficient motive to do so, might possibly be explained away by the use of a little critical ingenuity. This has, in fact, been attempted even in so recent and judicial a work as Salmond's *Christian Doctrine of Immortality*. But, inasmuch as the doctrine in question (in the most usual form of which the intermediate state was divided into two main compartments—a state of blissful expectancy in which the righteous awaited their reward, and a state of painful confinement in which the unrighteous expiated their crimes, and were in some cases cleansed from sin) had already attained considerable development before the Christian era, and is found in full possession of the field immediately after the apostolic age, there is nothing to prevent, but everything to suggest, our taking the relevant NT passages at their full face value.

The *locus classicus* is the parable of Dives and Lazarus (Lk 16¹⁹⁻³¹), which embodies the Jewish conception entire, with only this difference, that the righteous are separated from the unrighteous by a great gulf, instead of by 'a hand's breadth' (the rabbinical view). Lazarus rests in Abraham's bosom—a common rabbinical designation of the intermediate abode of bliss—while Dives is in torments. That the torments of Dives are to be regarded as temporary is probably indicated by the use of *αἰών* instead of *γένηα*, and by the softening of his hard and selfish nature indicated in v. 24.

The purgatorial aspect of the punishments in Hades is still more clearly indicated in Mt 12³², which seems to suggest that all sins, except one, may, under certain circumstances, find pardon in the world to come (a common Jewish expression for beyond the grave); also in Mt 5²⁶, which appears to imply that even grievous sinners may be released from their torments after adequately expiating their crimes. The possibility of the pardon of sin after death is also presupposed by 1 Peter (probably the work of the apostle himself), which represents Christ as preaching in Hades, not only to the righteous, but even to those sinners who rejected the preaching of Noah, and who, according to popular belief, were hopelessly lost (1 P 3¹² 4⁶). This, the natural and obvious sense of the passage, and that in which it was almost universally understood in ancient times, is now very generally recognized as the only tenable one.

The fact is that purgatorial ideas were well established in Judaism long before Christ, and that Christianity simply adopted them. Judas Maccabæus is represented as offering prayers and sacrifices for the sins of his soldiers fallen in battle, and thus making 'a reconciliation for the dead, that they might be delivered from sin' (2 Mac 12³⁹⁻⁴⁵). Shammai taught that, whereas the sins of desperate sinners are punished for ever, others 'go down to Gehenna, and moan, and come up

again.¹ The early Church, while taking a very gloomy view of hell, took, on the whole, a hopeful view of Hades. Hades was regarded as a great mission-field for the evangelization of the heathen and of imperfect believers. As the Lord Himself had preached the gospel there, so, after their deaths, had the apostles. According to Hermas, they had even baptized there, thus rendering unnecessary the practice of vicarious baptism for the dead to which St. Paul alludes.² Clement of Alexandria says expressly that 'God's punishments in Hades are saving and disciplinary, leading to conversion, and choosing rather the repentance than the death of a sinner.'³

Along with the Jewish doctrine of Hades, Christianity took over the closely connected Jewish practice of offering prayers and oblations for the dead. This must have happened early in the apostolic age, since at a later period the mutual hostility of the Church and the Synagogue would have prevented it. It is true that the NT evidence is not demonstrative (though, if we accept the now widely prevalent view that the Kingdom of God preached by Christ is eschatological, it is difficult to exclude the dead from the petition, 'Thy kingdom come' in the Lord's Prayer; and the prayer for Onesiphorus, 1 Ti 1¹⁸, is now almost universally regarded as a prayer for the dead; 'cf. also 1 Co 15²⁹); but, at any rate, the practice was well established in the 2nd century. In the East there is the inscription on the tomb of Abercius (c. A.D. 175), inviting the Christian passer-by to pray for his soul, while in the West the incidental allusions of Tertullian (c. A.D. 200) point to an organized and long-established custom.

C. HARRIS.

STATE OF THE DEAD (Greek and Roman).

—I. Greek.—The spirits of the dead were regarded by the Greeks, all through their history, as still retaining a material vesture, but extremely attenuated. Their appearance to mortal eyes was shadowy and dreamlike. Homer¹ described them as ἀμεινὰ κάρηνα, figures without vital strength (μένος), and especially bloodless. As is shown by the Νέκυια,² they are capable of feeding on the blood of sacrifice, which gives them temporary vitality; but without this reinforcement they seem to have neither speech nor memory. Ghosts were very commonly supposed by the Greeks to hover about the spot where their material remains were interred. Yet the conflicting idea that there is a common abode, vaguely named as 'the unseen' ('Αἴδης), in which all spirits normally dwell, became current in the earliest times. In the Homeric poems a few souls, by special favour of the gods, awarded apparently with no regard to moral merit, reach the home of bliss in the Elysian fields, and become in a sense divine. Such are Teiresias, Menelaus, Rhadamanthus, and Achilles. Homer presents also, very dimly, a picture of a region of woe beyond the grave to which are consigned a few abnormal sinners, such as Tityus, Tantalus, and Sisyphus; also the men who have taken an oath and forsworn themselves. From the earliest times the fate of the perjurer was conceived by the Greeks as especially dark. Later feeling about the dead was largely influenced by the mysteries and by philosophy. There floated about a conception that the origin of the soul was really divine, and that its imprisonment in earthly barriers was a punishment; that the body was in reality a tomb (σῶμα σῆμα). These ideas were largely spread by the Orphic and Pythagorean brotherhoods, in whose rituals was expressed the longing of the soul on earth to find its way back, after death, to the home of its origin. Empedocles described the soul in its earthly sojourn as 'an exile from the gods, and a wanderer' (φύλας θεῶν καὶ ἀλητής). He held the doctrine of successive periods of existence, in which the soul is invested with different material forms, its fate in each period being determined by its conduct in previous stages. The best conditions are reserved for the ethically best, who become seers, poets, physicians, and princes. Sin-laden souls have to pass into the lower forms of life, and occupy the bodies of animals and even of plants. The persistently better spirits make their way back to the regions of the divine. These doctrines embody elements drawn from the East. They were accepted by Plato and elaborated by him with much mystic and poetic embroidery. In his writings the vision of life after death became vivid and pictorial. The teaching of transmigration (g.v.) was of course bound up with the idea of a judgment of souls after death. The judgment is conspicuous already in Pindar, but some of the details which were

¹ Od. x. 521, 536, xi. 29.

² Od. xi.

popularly accepted in later times—e.g., the functions of the three judges, Minos, Æacus, and Rhadamanthus—appear first in Plato. In the *Gorgias* and *Phædo* the incurable souls enter on an eternity of misery. In Plato the references to pre-existence (q.v.) become explicit and detailed, and the process of recollection (*ἀνάμνησις*) becomes very prominent. By it the mind can recover memories of its primal happy state in possession of heavenly knowledge, which was obscured by its descent to earth. The means to this consummation was philosophic exercise. Later belief about the dead was influenced to a considerable extent by Stoicism. The Stoics believed in a periodic destruction and reconstruction of all created forms; therefore the departed spirit maintains its individuality only until the cataclysm that follows next after its death on earth. In later times a whole series of divinities came to be connected with the judgment and the governance of the dead, and notions of Elysium and Hades became more distinct. Hades was now conceived as a god and 'a discipliner of mortals' (*εὐθυνὸς βροτῶν*). Among the many gods to whom functions connected with the dead were assigned Hermes took a special place. He was the conductor of the spirits from earth to their place of abode in the other world, and obtained the title of 'conductor of souls' (*ψυχοδόμος*). In the great mysteries celebrated at Eleusis Demeter and her daughter Persephone were the grand figures, and it is well known that due participation in their ritual was deemed to ensure the happiness of the soul after death. Other mysteries served the same end, and pictured the journey of the soul from earth to the other world. Only in comparatively later times did Pluto (*Πλούτων*) come to occupy the infernal throne (first in the Attic poets of the 5th cent. B.C.). His name (connected with *πλοῦτος*, 'wealth') appears to be one of the numerous euphemistic titles bestowed on the powers of darkness. As in the case of the fairies among modern peoples, it was thought dangerous to assign to supernatural beings titles which implied evil, however truthfully. There were many spots in the Greek world at which there were popularly supposed to be gateways of the infernal abode, as at Cape Tænarus in Laconia. The same idea connected with Lake Avernus in Italy is doubtless of Greek origin.

In the late Greek age writers like Plutarch present a strange mixture of notions concerning the condition of the dead, and their abodes, and their migrations from form to form—a compound of popular Greek superstitions with elements drawn from mysteries and philosophy (especially Platonic and Stoic), and also from Oriental religions. The lore by which spirits might be invoked and compelled to disclose the future was greatly elaborated, and necromancy was one of its chief forms. It may be remarked that the Greek ghost did not often appear to mortals gratuitously—that is to say, without the compulsion which the sorcerer was able to lay upon him. The Homeric ghost is usually, like the Homeric god, seen by mortals in dreams; and in the whole age of Greek civilization the connexion of ghosts with dreams was very close. The modern 'ghost-story' has remarkably few counterparts in ancient literature, either Greek or Roman, although tales of haunted houses were not unknown, and such tales were made the theme of several Greek comedies, of which the authors are known, and doubtless of others of which there is no record. The Greek original of the *Mostellaria* of Plautus cannot be traced.

The belief in the dependence of the dead upon the offerings of the living for their comfort and

consideration in the other world was universal in Greece, and was treated as rational by Aristotle; so was the belief that the dead spirits can powerfully affect the living, more for evil than for good. Among the Greeks the cult of ancestors did not occupy so prominent a place as it held among the Romans, who believed that the family had for its chief object the maintenance of this cult. The family *sacra* did not in Greece make nearly so deep an impression on religion and law and social usage as was the case among the Romans. And public ritual for the appeasement of the dead was not nearly so conspicuous in the area of Greek civilization as it was in the Roman area. In Athens and in a number of Ionic communities there was a ceremony called Anthesteria, celebrated in spring (February), when all life revives and the life of ghosts is unusually active, so that they come in numbers about the homes of the living. It was vitally necessary to protect the community against them. During the time of the ceremony many public and private activities were suspended. On the conclusion of the ritual the spirits were warned away by a cry which one of the ancient grammarians has preserved: *ὄπαγε κῆρες, οὐκ ἐστὶν ἀνθεσθέρια* ('Out, ye ghosts, the Anthesteria is over'). The word *κῆρ*, which is here used of the ordinary ghosts, came to mean an avenging spirit, like the name Eumenides. There can have been originally no sharp dividing line between the non-human and the human avenging spirit. At the time of the Anthesteria the doors of houses were smeared with pitch, to keep the spectres aloof; this wears the appearance of a homœopathic remedy. Sulphur was also a prophylactic. The ceremony of Anthesteria probably derived its name from its occurrence in the season of spring flowers. Flowers were not conspicuous among offerings pleasing to the dead in the Greek ritual. They were far more prominent in later Roman civilization, when days were appropriated to the service of the spirits which bore the name of *dies rosa* and *dies viola*.

2. Roman.—It is clear that the Romans, from the remotest times, regarded the spirits of the dead as in some sense divine. All through their history the tomb was regarded as an altar, and it is often so described in inscriptions. Varro and other ancient scholars set forth the evidence relating to this matter. Servius, commenting on the expression *divi parentes*, put by Virgil into the mouth of Æneas¹ when he had accomplished the funeral ritual in honour of Anchises, quoted the expression *dei parentes* as commonly applied to deceased ancestors. But the word *divi* (properly used of deified mortals) better expresses the feeling of the classical age. In his ideal code of law in his *de Legibus* Cicero has: 'Leto datos divos habento.'² Certainly all through their history the Romans believed not merely that the living could influence the condition of the dead by assigning to them or withholding from them due honour and offerings, but also that the dead had great power to affect the fortunes of the living. Primarily, the duty of assuring to the dead their rights rested upon their living descendants. The Roman conception of the family regarded it as a perpetual corporation which included both the dead and the living. This sense of the perpetual unity and unbroken continuity of the family found expression in all the observances paid to the departed, beginning with the funeral procession, in which men walked, invested with the ancestral *imagines*, personating the dead to whom these belonged. 'Peace with the dead'³ was important, not only to the separate families, but to the whole body of citizens collectively; it was hardly less

¹ *Æneid*, v. 47.

² *Il.* 13.

³ 'Pax mihi cum mortuis' in Plautus, *Mostellaria*, ll. 2, 82.

so, indeed, than the *pax deorum*. Therefore we find that, on the days in the calendar on which occurred ceremonies expressing the private reverence for the world of spirits, there were also celebrations ordained by the State and conducted by public religious and secular authorities.

The original Roman idea about the abode of the departed was that the soul of every deceased man whose funeral rites had been duly performed by the living dwelt in the tomb in which his body or his ashes had been deposited. Some ancient Roman scholars and many modern scholars have believed that in primitive times the bodies of the dead were actually buried within the family dwelling. But in the most distant pre-historic time to which research in Italy has enabled us to penetrate there were great cemeteries outside the bounds of the town-settlements. And in historic times burial within city limits was very unusual, except at the Greek city of Tarentum, where the intramural cemetery figures conspicuously in the stories of sieges and captures of the place. The life of the departed soul was envisaged as a continuance of his life before death. He has a 'house,' for *domus* is a common designation of the tomb.¹ Pre-historic funeral urns found in Latium are actually shaped like the huts in which the people lived at the time. In later Roman times phrases like *domus eterna* were quite common in inscriptions on tombs. The emperor Julian² speaks of *sepulcrum* as '*domus defunctorum*.' The deceased was supposed to need in the other world everything that he required while on earth. Hence the multiplicity of articles which were buried with him (or burned with him, for material things seem to have been thought to have a ghostly survival) and the periodical offerings to him of food and drink—simple things in the earliest time, such as milk, honey, eggs and beans, and flowers to grace his repasts; later on wine occupied an important place. The ghost was thought of as a sort of 'breath' (*anima* or *spiritus*) and as bloodless. Hence his desire for blood to revive his strength. This was afforded by sacrifices at the tomb, the victims chosen being especially those of dark colour. The desire of the dead for blood is depicted in *Odyssey*, xi., where Odysseus lures the heroes slain at Troy to the upper world by the blood poured into a trench. The desire for blood is also attested by the history of the gladiatorial games, which, for some centuries after they were introduced from Etruria, were always ostensibly performed in honour of some particular deceased person. The chief form taken by the veneration of the dead was that of a meal celebrated at stated times at the tomb by the members of the family. Doubtless the deceased ancestors were imagined as present. The chief occasions were the anniversaries of the birth and death of the departed. Very often there were round about the tomb appurtenances for the convenience of these recurring observances—an assembly room (*schola*), a dining-room (*cenaculum*), a kitchen (*culina*), a garden. Many references to all these appear in inscriptions. Gifts to the dead man were *inferiæ* (a name obviously connected with *inferi*), whether given at regular times or irregularly.

In order that the deceased man might have rest in his tomb, it was necessary that the due ritual should have been gone through by the living (the *iusta*). Otherwise he had an evil influence on the survivors, and would hover about and torment them. It was the duty of every man who came across a corpse to throw earth upon it, in order that the

spirit might have rest. Drowned men's souls flitted about above the water.³ Even a priest, who was ordinarily deemed to be defiled by the presence of a corpse, was strictly held to the duty of appeasing the spirit by attending to the funeral rite. The only persons who had no claim to funeral honours were executed criminals, suicides, and men struck dead by lightning—a sign of divine wrath.

Departed spirits were most generally spoken of as *manes*, literally 'the good people.'⁴ As some spirits were hostile to the living and others benevolent, the application of *manes* to all must be euphemistic, just as the phrase 'good people' is applied in Ireland to all the fairies, though not all are beneficent. The title *dis manibus* (often indicated by *D.M.* or *D.M.S.* [*dis manibus sacrum*]), which appears at the head of innumerable Roman tomb inscriptions, calls for some comment. This kind of titulature did not come into general use till the early imperial period. When the words are written in full, we find *diis* or *dis*, hardly ever *divis*.⁵ In general, it is clear that the *di manes* are the family ancestors who are in amity with the living, and have been to some degree elevated to a superhuman level. The epithet *inferi* is often attached to them, as by Tacitus, *Annals*, xiii. 14: '*inferos Silanorum manes*.' Passages such as that just quoted throw doubt on the idea which is often accepted, that, when *dis manibus* or *D.M.* is followed by the name, in the genitive, of the person to whom the tomb is dedicated, then the words indicate the spirit of that individual person.⁶

The conception of a general dwelling-place of departed spirits is much later than that of the tomb as the abode of the deceased members of the family, and may very possibly be not indigenous in Italy, but borrowed in very early times from the Greeks. In the prologue to the *Casina* of Plautus it is called *communis locus*, and quite early in Roman literature *plures* is a euphemistic phrase for the dead collectively, borrowed of course from the Greek *πλεῖστες*. But the mass of the people never abandoned the older idea, and the two views continued to exist side by side. There is no proper Latin name for this abode; it is generally designated by Greek names, such as Acheron. Some particular spots in Italy, especially Lake Avernus, came to be regarded as affording communication with the infernal world. There is practically no indigenous Italic mythology connected with this world; all the tales concerning it are borrowed from Greece. When, in his first book, Lucretius declaims against *superstitio*, his illustrative tales are those of Tantalus, Sisyphus, and the like. All definite Italian beliefs about judgments after death and rewards and punishments in the world beyond the grave seem to have been derived originally from the Greeks. Yet the notion of a general receptacle for departed souls, if not absolutely primitive among Romans, is involved in some practices which, as we shall see presently, are relatively early.

The ghosts were conceived as consisting of highly attenuated matter, and were generally denoted by the words *anima* and *spiritus*, both of which meant, originally, air or breath.⁷ Their appearance was ugly; hence the epithet *deformes* was often applied. Sometimes the skeleton was supposed to be visible. Ghostly visions rarely appeared to waking men; the ghost is usually an accompani-

¹ Horace, *Odes*, i. 23.

² Cf. the opposite, *im-manis*.

³ But cf. *divi parentum* in an ancient formula quoted by Festus, p. 230.

⁴ Phrases like *patriis deis* (*CIL* iii. 3633) and *manes paterni* (Ovid, *Fasti*, v. 443) point in the same direction; rather the company of the family spirits is indicated.

⁵ Virgil, *Æn.* v. 740, compares them to smoke.

¹ So *casula* in H. Dessau, *Inscriptiones Latinae selectae*, Berlin, 1892-1906, no. 7519, and the curious phrase *domus Romula*, 'the grave of a Roman,' in inscriptions from Mauretania.

ment of dreams. It will be remembered how important are these dream-visions in the explanation which Lucretius gives of the origin of the belief in immortality.¹

The principal ceremonies for the appeasement of the dead took place on nine days in February (13th-21st); on the latter day the great State ceremony of the *Feralia* was performed. The other days were *dies parentales* as being sacred to the *di parentum*, the ancestors of the various families, and were days for private celebrations.² The day after the *Feralia* was called *Caristia* or *cara cognatio*, on which a kind of family reunion was held, embracing both the living members and the reconciled dead. The preceding ceremonies were supposed to have ensured perfect harmony between the upper and the nether worlds.³

The *lares* of the home were especially connected with this last celebration, and their relation to the *manes* is to be considered. Although the existing evidence shows the *lares* to have been pre-eminently protecting divinities of localities rather than of persons, they were so closely connected with the home that they presented themselves to the imagination of the living as the spirits of departed ancestors. While *manes* is a plural without any corresponding singular, the *lar familiaris* was the mythical ancestor who founded the family. He appears as a character in the *Trinummus* of Plautus. Another word applied to ghosts is *larvæ*. Those who bear the name are the unreconciled spirits who are malignant in their feeling towards the living. A madman was often called *larvatus*, i.e. one plagued by the *larvæ*, just as in Greece the madman was supposed to be harassed by the Furies. The word *furæ* is indeed in Latin literature often used of the malignant ghost, as, e.g., of the ghost of Clodius, who desired vengeance on Milo.⁴ Another word applied to malevolent spirits is *lemures*. A very ancient ceremonial of reconciliation called Lemuria, originally public, but in a later time left in private hands, was performed on three days in February. In ancient literature *lemures* and *larvæ* are often synonymous terms. The object of this celebration was to expel the dark spirits from the house.⁵ Black beans, thrown by the *paterfamilias* behind him, over his shoulder, were prominent in the ritual.

One other ceremony must be mentioned. There was a pit called *mundus*, which was the central spot in the old supposed Palatine 'city of Romulus.' This was closed by a great stone, called *lapis manalis*. On three days in the year this stone was lifted and a ritual was gone through which certainly had for its object the propitiation of the dead. It seems therefore that, whatever purpose this *mundus* primitively served (some scholars suppose that it originally contained reserve stores of provisions for the primitive community), it was assuredly regarded later as one of the openings to the infernal regions.

If the dead dwell together, it is natural to imagine them as having an ordered polity, governed by divinities, as in the upper world. To those of the lower regions the general term *di inferi* was applied, as opposed to *di superi*; but the circle of the *di inferi* is not easy to depict. The contrast between the two divine circles was very marked.⁶ On days devoted to the veneration of the infernal powers the temples of the *di superi* were closed. In the classical age the supernal gods were figures borrowed from Greece; the Roman antiquarians, however, preserve the names of primitive Italic

divine figures such as Mania, Dea Muta or Tacita, Furina, Laverna.

When Greek philosophy gained influence over the education of the Romans of the upper classes, many conceptions of the condition of departed souls were borrowed, especially from Plato and the Academies and Stoics, who sometimes regarded souls as fragments of the divine element in the universe. Souls were deemed to have an affinity with fire, and after death good souls, which had not lost affinity with what is divine, were supposed to flee to the abode of fire in the upper circles of the sky, where they were in touch with the gods. This idea is often represented in the works of Cicero.¹ Traces of it are to be found in very early Latin literature, in the writings of Ennius and others. Some even went the length of supposing that the souls became stars.² The bad or common souls defiled by sin were still relegated to Tartarus. Sometimes the soul was identified with the man's *genius*, which was sent out from Juppiter at birth and returned to him at death.³

The monumental inscriptions of the imperial age oftenest represent death as eternal sleep, but many times it is intimated that this perfect rest is a boon dependent on a good life.

LITERATURE.—Information on this subject may be found in works on Greek and Roman religion, particularly in O. Gruppe, *Griechische Mythologie und Religionsgeschichte*, 2 vols., Munich, 1897-1906; G. Wissowa, *Religion und Kultus der Römer*, do. 1902, 1912; W. Warde Fowler, *The Roman Festivals*, London, 1899; also many artt. in Roscher, especially those by H. Steuding on 'Manes' and 'Inferi'; others in Daremberg-Saglio, especially that by J. A. Hild on 'Manes.' Greek and Roman ideas of the state of the dead are treated and compared with the ideas of other peoples in GB³.

J. S. REID.

STATE OF THE DEAD (Hebrew).—The early Hebrew ideas of the state of the dead are those common to all primitive peoples. Existence continues after death, but in a shadowy, dreamlike state which does not deserve the name of life. Most of these early ideas are illustrated in the story of the calling of Samuel by the witch of Endor (1 S 28). The dead are the replica of their living selves: Samuel appears as an old man covered with a cloak, but recognizable by Saul. They keep their personal characteristics: Samuel berates Saul as in life. They are divine beings (*elohim*) and foreknow the future, but are subject to the call of human spells. They are 'disquieted' by being brought back to earth, but are obliged to obey the summons of the necromancer.

The qualities of this existence were, so far as revealed by the literature, conceived mostly in a negative way. No one looked forward with pleasure to the life after death. A man to whom life has brought suffering may be pictured as longing for the refuge of death, but it is only as a place of rest from the unbearable tortures of life (Job 33²⁷, 137, 217, Ps 49^{11, 15}). The term 'life' is not used of their existence. The dead are not living, for the spirit (*ruah*), which is the principle of life given by God, has been taken from them and returned to God (Ps 104²⁹, Job 34¹⁴, Ec 12⁷). They are not, then, souls, persons (*nephesh*) in any true sense. In the late codes H and P (Lv 19²⁸ 21^{1, 11} 22⁴, Nu 5² 6¹¹ 9^{3, 7, 10}) and in Hag 2¹³ *nephesh* is used of the dead, but in most of the passages the reference is to the dead body which defiles the living person, not to the dead as existing in another realm. The early literature has no special name for the dead, but the Wisdom literature and other late passages use *reph'aim* (Job 26⁵, Is 14⁹ 26¹⁹, Ps 88¹¹, Pr 2¹⁵ 9¹⁵ 21¹⁶). The word is from a root meaning 'sunk', 'flaccid,' 'powerless.' How early this name was used we cannot

say, but the idea which it connotes belongs to primitive thought and continued as long as the realm of the dead was a factor in Hebrew thought. The dead are weak, even kings having lost their power (Is 14⁹⁻¹⁷). They are nowhere represented as able to bring harm to the living, though they may give useful information and presumably aid.

The early Hebrew writings give no detailed picture of the state after death to correspond with the pictures of Muhammadanism, Zoroastrianism, the religion of Egypt, or mediæval Christianity. The conceptions of Greece and Rome, which remained to the end remarkably primitive, are more vivid and pictorial than the Hebrew. The reason for this barrenness is not lack of imagination—there is no reason to suppose such lack of imagination—but rather the fact that the prophetic influence was against any emphasis on the life after death. Possibly, had the prophetic writers felt free to record all phases of the popular belief, the meagre outline of the picture might have been somewhat filled in. It is probable that the popular imagination was less barren than the literature would lead us to think. The place of the abode of the dead was called Sheol. The origin of the word is uncertain; it possibly means 'the hollow place,' 'the pit,' possibly 'the place of inquiry,' with reference to necromancy.¹ It is beneath the earth (Gn 37³⁵, Pr 15²⁴, Job 11⁸, Is 14⁹), and is called the pit (Is 14¹⁵). Like most primitive races, the Hebrews attempted no sharp distinction between the realm of the dead and the grave. They brought to the grave offerings for the dead, whether for worship or for sustenance.² The dead dwell in the grave, but also in Sheol (Ezk 37^{12†}, Gn 37³⁵), while sometimes terms are used which imply that Sheol is the grave (Is 14¹¹). R. H. Charles holds that Sheol signifies 'all the graves of the tribe or nation . . . united in one.'³ The meaning then expands to embrace the departed of all nations, and so Sheol comes to be the common home of the dead of all nations (Ezk 32²¹⁻²⁷ 31¹⁵⁻¹⁷). L. B. Paton⁴ holds that the early idea of the dead was connected only with the tomb, and that Sheol was a Sumerian conception borrowed by the Canaanites, and from them by the Hebrews. However that may be, it is very common to find, in all early thought, the grave and the realm of the dead confused. Soon the grave loses its local and literal connotation, and is almost a synonym for the land of the dead. Even so, in Hebrew thought, to die is to be gathered to the fathers, even where, as in the case of Abraham, one is buried far from the ancestral tombs (Gn 25⁸). When David says of his son, 'I shall go to him, but he shall not return to me,' he does not have the grave in mind (2 S 12²³).

The religious aspect of the state after death was determined by a singular belief: Jahweh had nothing to do with the dead. In Sheol no one praises Jahweh (Is 38¹⁸). Jahweh is the God of the living, not of the dead. A psalmist reasons with Jahweh, 'Why will you kill me? If you do, I cannot praise you, and you will lose a worshipper' (Ps 6⁵). It was one of the terrors of death to the devout worshipper of Jahweh that he would be deprived of the presence of God. In a late Psalm the writer feels so confident of the care of Jahweh that he says, 'If I make my bed in Sheol, behold, thou art there' (Ps 130³); but this only expresses an extreme faith in the power of God and is a poetic rather than a credal statement. Jahweh's blessing was concerned with this life. If He 'delivers from Sheol,' it is in the sense of keeping

His people from death (Ps 30⁵ 49¹⁵ 86¹³, Pr 23¹⁴, Jon 2², Hos 13¹⁴). With the growing conception of the power of Jahweh in the universe, it became more difficult to think of even Sheol as outside His vision and authority. Jahweh controlled all the world, and nothing lay beyond His ken. In the post-Exilic writing it became possible to say, without, however, carrying the statement to a logical conclusion, that Sheol lay open before Jahweh (Job 26⁶, Pr 15¹¹). Even the early prophets had used such figures (Am 9²). It is possible that in some of the passages the writer was using more than a figure, that his sense of the permanent relation of God to man pierced the veil of death with a venture of faith. It could not be that God would let go His hold for good or ill on the person of man. Some have seen this hope in Ps 16^{10†} 17¹⁵, but these passages are of doubtful import. It is more likely in Ps 49¹⁵. Many suppose Job 19²⁵⁻²⁷ to represent such a mood of faith, but it may show only the confidence of a final vindication on earth. All these passages point the way to a religionizing of the ancient idea of Sheol. If the dead could be conceived as still standing in the presence of God, not cut off from Him, then this shadowy existence would be filled with life, and the dead might become living souls, whose destiny of happiness or unhappiness would be the result of good or evil in their life on earth. The growing emphasis on the universal power of God pointed the way to this result, but it never was attained. The deliberate suppression by the prophetic religion of attention to the state after death worked strongly in the opposite direction. Existence in Sheol became less and less real. The writer of Ecclesiastes leaves the impression that Sheol had come to be so negative that it was practically non-existent, and that death was thought to end all. Who can tell if man has a different future from the beasts (3²¹)? The dust returns to the earth as it was, and the spirit, the principle of life, returns to God who gave it (12⁷). In Hebrew thought the primitive conception of a shadowy existence after death was slowly lost, pinched out by the richer, fuller value of a religion which had to do with life, not death.

Another primitive quality of Sheol was its non-moral character. It was not a place of punishment or reward. There were no compartments for good and bad, nor could the unsatisfying character of the existence after death be alleviated by any act of righteousness while alive. If Jahweh had no relation with Sheol, He would of course neither punish nor reward its inhabitants. His favour was shown by keeping the righteous from it, while allowing the wicked to be swept into it by death (Ps 49^{14†}). Rewards and punishments belong to this life. But what of those who do not receive their due rewards and punishments? It was this ethical problem that caused a new conception of the state after death to arise.

The tragedy of the problem of suffering in the book of Job lay in the belief that there was no life after death where God could do justice to the innocent sufferer. As Hebrew history went on, those faithful to Jahweh suffered and sometimes died for the preservation of the national faith. Would God give them no recompense? Would the triumphant wicked die in prosperity and God bring upon them no punishment? These ethical problems cried to heaven for solution, if the Hebrews were to keep faith in the justice of their God. Under this pressure a new factor, the resurrection, was added to the picture of the state after death. Two influences contributed to the rise of the belief in the resurrection. One was the hope of the renewed nation. The theory of the resurrection furnished the promise that the Jews who had laboured for their nation would be brought back to share in

its future glory. The other was the Hebrew psychology. The Greeks thought of the soul as naturally immortal. This idea was borrowed by the Alexandrian-Jewish writers. It appears in Philo, in the Wisdom of Solomon (31-9), and also in Josephus: 'Souls have an immortal vigour in them.'¹ But most Jewish thought held consistently to the old Hebrew psychology. Man was a divinely given soul in a living body. Body and soul were both necessary to constitute life. Jewish thought had not yet arrived at Paul's subtlety of a spiritual body (1 Co 15²³⁻⁴⁹). If God was to give life to men, He must restore them to earthly bodies. The earliest passage reflecting the thought of the resurrection belongs perhaps to the 4th cent. B.C.: 'Thy dead shall live; my dead bodies shall arise' (Is 26¹⁹). So far as this passage shows, the thought of the resurrection was then limited to righteous Israelites, who will rise in Palestine and share in the glories of the renewed nation. The only other OT passage which offers a hope of resurrection is Dn 12², 'Many of them that sleep in the dust of the earth shall awake, some to everlasting life, and some to shame and everlasting contempt.' Since the time of the former passage the idea had grown. It had come to include the wicked as well as the righteous; but it was not yet universal. Those who had received due rewards and punishments in this life were not to be brought back from Sheol. The resurrection was a theory for satisfying the demand for justice. But the belief in resurrection did not grow up without protest. The writer of Ecclesiastes spoke for the conservative element which regarded this new speculation as an unproved hypothesis that might easily displace the sane balance of life. He insisted that no one could be sure of any reward after death. Existence after death was to him entirely negative (3¹⁹⁻²² 9²⁻⁶ 12⁷). The Sadducees continued the conservative tradition, but all the other schools of Jewish thought accepted the new theory of the resurrection. In forming a picture of the state after death, there was some attempt to combine the new theory with the old belief in Sheol. In *Enoch*, 1-36, Sheol was said to contain four divisions: for the wicked who have received due punishment in this life and will not be raised; for the wicked who will be raised for punishment in the day of judgment; for the moderately righteous, who will be raised for their reward; and for the heroes of faith, who are waiting resurrection in a paradise of bliss. Gradually, however, the belief in resurrection became enlarged to include all the dead. Sheol in the old sense tended to disappear, and the state of the dead tended to become happiness for the righteous and misery for the wicked, while waiting for the resurrection.²

IRVING F. WOOD.

STATE OF THE DEAD (Hindu).—I. Vedic.—The chief source of our knowledge of the eschatology of the *Rigveda* is a short collection of funeral hymns in the late tenth book (xiv.-xviii.), composed to accompany the rite of burying or cremating the body of the dead. The latter rite was clearly becoming the normal form of disposal,

but the fate of the soul had come to be regarded as independent of the mode of treatment of the body: those burned by fire and those not so burned are alike deemed to find their way to a heaven in the sky presided over by Yama, the first of mortals to die, and by the god Varuna. In this new abode the dead man retains his full personal identity; his spirit is united with a body, a sublimated form of his earthly frame; and the future life is a glorified edition of the life on earth. Yama, with the gods and the fathers, sits under a tree rich in foliage, while the flute sounds and songs are sung.¹ Soma places the worshipper in the heaven where there is light everlasting, where all desires are fulfilled, and every kind of pleasure abounds.² The spirits abiding in heaven are distinct from, but in the closest unity with, the gods; they come in thousands on Indra's car to share the offerings of men;³ some drink the soma, others honey or melted butter.⁴ But in addition to offerings the dead profit by their sacrifices and their gifts to the priests (*iṣṭāpūrta*) while on earth, for in some manner they are united with them in the new life.⁵ Their descendants implore their favour, deprecate their anger for any sin committed against them, and entreat them to bestow boons, especially that of offspring—which may be a faint trace of a belief, long anterior to the doctrine of transmigration, that the ancestor is in some sense reborn in the infant which he is asked to bestow. As there are families in earth, so in the sky there are families—the Angrasas, the Vasiṣṭhas, Bhṛguas, Atharvans, Navagvas, Vairūpas, etc.

Those who attain to the heaven are specified in a late hymn;⁶ they comprise the warriors who lose their life in battle, the bestowers of a thousand-fold largesse to the priests, the sages of a thousand songs and performers of penance—in other words, the warriors, the rich men of the clan, and the priests themselves, who naturally enough have depicted a heaven which is more in keeping with their vocations than with those of warriors. But there is no indication in the *Samhitā* of the mode in which the boon of heaven is allotted by the gods who are implored to accord it. Yama is not a judge of men's deeds; and, though he has two fierce dogs, with four eyes and wide nostrils, past whom the dead man has to go on his way to Yama's abode, their function seems to be that of messengers who bear to mortals the summons of death rather than of powers which discriminate the good and the evil. The grant of heaven must therefore be deemed an act of free grace bestowed by the gods on their worshippers rather than a reward adjudicated by a judge of souls. The fate of those who failed to achieve such a boon may then have been, as R. Roth⁷ held, mere annihilation, with which would accord the stress laid by the *Rigveda* on length of life as the great aim of man. But we hear also⁸ of a deep abyss made for those who are false, like women who are unfaithful to their husbands; a hymn⁹ against demons consigns to an abode under the three earths the one who plots against the singer, and there are references to the wicked being consigned either to a pit (*karta*)¹⁰ or to the lowest darkness,¹¹ which may be interpreted as allusions to a place of punishment.

Of other fates of the dead there is no direct proof in the *Rigveda*. It is a plausible conjecture that in the seers who guard the sun¹² we are to

recognize an allusion to the idea that the stars are the souls of the holy dead—a conception natural enough when the sun, himself a god, is conceived as the home of the fathers. Of greater interest are those allusions which connect the dead more closely with the earth. We hear of the fathers as divided into the uppermost (those of the sky), the midmost (those of the air), and those who are among the abodes of men.¹ The distinction between the way of the fathers and that of the gods² may reflect a contrast between the fathers' abode on earth and that of the gods in the sky. The eye of the dead man is bidden to go to the sun and his breath to the wind, and he is invited to go to the sky, the earth, or the waters, and to enter into the plants with all his members.³ In the ritual of burial the earth is conceived as according the dead a resting-place.⁴ Yama, first of men to die, is described as proceeding along the mighty *pravatah*⁵—a term which suggests a journey to the limits of earth rather than an ascent to the sky. In these passages we may doubtless see relics of the older belief which tied the spirit closely to its former abode on earth, but the *Rigveda* throws no light on the ideals which promoted the setting in the sky of the abode of the dead. If it was an outcome of the practice of cremation, the connexion between the two ideas had disappeared in the Rigvedic period, which sets the dead in the heaven, whether cremated or not; and it is not impossible that the fathers were gradually elevated to the sky because of their assimilation with the gods in power and attributes, and that cremation was adopted after the belief in the heavenly abode of the soul had come into being as harmonizing well with that conception.

The later *Samhitās* and the *Brāhmaṇas* render more definite the description of heaven and hell. The *Atharvaveda* lays stress on the reunion of the dead with his wife and children,⁶ and promises him abundance of sexual enjoyment,⁷ as well as freedom from the exactions of temporal superiors.⁸ The *Satapatha Brāhmaṇa* explains that, in accordance with the nature of the sacrifices which a man offers on earth, in heaven he is freed from the necessity of eating: the mere offerer of the *agni-hotra* must eat night and morning, but the piler of the fire-altar can exist for a hundred years of unalloyed bliss without nutriment.⁹ The delights of heaven are a thousand times those of the happiest of mortal men.¹⁰ Great stress is laid on rebirth in the next world with perfect members (*sarvatanūḥ sāṅgaḥ*), and for this the most careful collection of the bones of the dead man is necessary on earth, so that the theft of the bones is a most severe punishment.¹¹ Between men and the gods there is established the essential distinction that the former must lay aside their earthly bodies to attain immortality.¹² Immortality is essentially a second birth,¹³ and its character is determined by man's deeds on earth,¹⁴ and diverse ways of sifting the good and bad are laid down: after death the man must pass between two fires which consume the evil and permit the good to pass on, or he is weighed in a balance—perhaps a conception borrowed from the balance ordeal of ordinary life.¹⁵ But the heaven which is attained is no longer necessarily the abode of Yama. A contrast is drawn between the world of heaven and that of the fathers, the entrance to the former being in

the north-east, while that to the latter is in the south-east.¹ The due performance of rites leads to the performer attaining union and identity of world with the god in question, Agni, Aditya, Varuṇa, Indra, or Brahmā;² and in unequivocal terms the souls of the dead are declared to be stars.³

Hell now attains definite form: the oppressor of the Brāhman sits amid streams of blood chewing hair,⁴ and the world of hell (*nārakaloka*) is definitely promised to the miscreant who refuses to give a priest the cow for which he asks.⁵ The vision of Bhṛgu recorded in the *Satapatha Brāhmaṇa*⁶ preserves in a priestly form⁷ a conception of hell as a place of retribution in which men are repaid by their victims the same tortures as they inflicted on them in life, and the *Kauṣītaki Brāhmaṇa* reinforces the same view.⁸ But comparatively little prominence is given to hell in the *Brāhmaṇas*; there appears a more serious conception, that of repeated death in the next world, an idea of peculiar horror to the Vedic Indian, whose chief prayer was for length of days in this world and freedom from death (*amṛta*) in the world to come. But this conception, that of *punararmṛtyu*, appears only in the latest of the great *Brāhmaṇas*, the last book of the *Āitareya*, the *Satapatha* and the *Kauṣītaki*, and it is not without importance that these are also the works which present hell as a place of retribution, rebirth and hell alike appearing as the penalty for ignorance of ritual, not as punishment for moral wrongdoing.

In the *Upaniṣads*, though not in the earliest portions of them, the decisive step is taken of transferring the rebirth to earth, which is foreshadowed in the *Satapatha Brāhmaṇa*, and of making the fate of man depend on his metaphysical knowledge and his conduct. The new ideas necessitated a substantial revision of the old eschatology: the distinction between the way of the fathers and that of the gods was adopted, and the oldest text which adopts the full doctrine of transmigration, the *Bṛhadāraṇyaka Upaniṣad*,⁹ distinguishes between the man who attains through true knowledge the way of the gods, to be merged ultimately in *Brahman*, the man whose good works entitle him to proceed on the way of the fathers to the moon, there to enjoy recompense for his works, and then to return to earth in a human form, and the wicked for whom the third place is reserved and who are fated to be reborn as inferior animals. An important change is made in the scheme by the *Chhândogya Upaniṣad*,¹⁰ which distinguishes between two classes of those who go to the moon—those of good conduct who are reborn as men, and those of abominable conduct who are reborn as dogs, pigs, or out-castes—but which illogically retains the third place, though the distinction between the two sets of those who go to the moon has robbed that category of its validity. The *Kauṣītaki Upaniṣad*, apparently in an effort at greater system, sends even those with the saving knowledge to the moon, whence they proceed after examination as to their knowledge to Brahmā, while the others return from the moon for rebirth according to their merits. The prominence of the moon in these views is remarkable, and is brought into combination with the clearly popular idea that the waxing and

waning of the moon is connected with the movements of the souls, as they ascend to it or descend from it. But beside this complicated system, which endeavours to unite the popular belief in heaven and hell with the new faith of transmigration, there remains the simpler view that rebirth on earth is the fate of the soul, and occasionally there is enunciated the doctrine that for the possessor of true knowledge there is no rebirth, no reward in heaven or punishment in hell to face, but that by reason of this knowledge he is merged after death in the absolute spirit.

In the *Gṛhya*- and the *Dharma-Sūtras*, which deal with the domestic and legal rules prevailing at the end of the Vedic period, the new doctrine of transmigration appears side by side with, and united with, the simpler view of heaven and hell, while a new element appears in the conception that all creation, including heaven, is periodically destroyed. Thus Apastamba¹ holds that the fathers exist in heaven until the end of a world-order, that after this destruction they exist again there as the cause of seed, that immortality consists in rebirth in the person of one's son, and that the wicked are extinguished. More important than these expressions of opinion as to the fate of the dead, which vary from *Sūtra* to *Sūtra*, are the ritual prescriptions for the tendance and worship of the dead, which in substance are doubtless older than the more elaborate ritual of the *Rigveda*. The dead are the recipients of many offerings, especially each month at the new moon, and these offerings are deposited in shallow pits, to which they are deemed to come in order to extract the heat from the food offered to them. After they have eaten, they are bidden to depart, and to return in a month's time bearing with them offspring.² But a clear distinction is made between the newly dead and those who have died before. The great-grandfather, grandfather, and father are normally alone invoked by name, but, for a period usually fixed at a year after death, a special offering is made to the dead man, and he is not included with his ancestors; at the end of this offering his spirit is not dismissed, but merely bidden to be at peace³—a clear indication that for this period the spirit was supposed to dwell in the neighbourhood of its former abode. Originally perhaps this belief may have stood in relation with the practice of a provisional followed by a final interment of the bones, but the connexion is not recognized by any Vedic text. To this view may be referred the allusion in the *Rigveda* to the fathers who are on earth: the *Taittirīya Samhitā*⁴ threatens him who wounds a Brāhman with exclusion from the world of the fathers for as many years as the Brāhman's blood wets grains of sand; and, in contrast to the prevailing view of the fathers as dwelling in light, the *Satapatha Brāhmaṇa*⁵ and the *Kaṭha Upaniṣad*⁶ see in the world of the fathers an abode of dreams. The same *Brāhmaṇa*⁷ speaks of the fathers as creeping about the roots of the trees—apparently a relic of the belief that the soul of the dead clung to the tree under which its bones were buried or which served to supply its coffin.⁸ Two *Sūtra* passages may be adduced for the view that the dead might pass into an animal form, apart from transmigration proper. When the bones were collected for final interment, if they could not be found, a garment might be spread out, and the

dead invoked; if any animal then alighted on the garment, it was deemed to represent the dead;¹ and Bandhāyana² declares that the fathers go about in the semblance of birds.

2. *Post-Vedic*.—In the post-Vedic literature, whether Brāhmanical, Buddhist, or Jain, none of which can in its present form be dated with any certainty or probability earlier than 200 B.C., the ideas regarding the state of the dead which are developed in the Vedic period are further elaborated, but without the addition of any conception of importance, and without any greater success in the effort to combine the older beliefs with the doctrine of transmigration. Nothing shows more convincingly the persistence of the popular belief in heaven than the dominant influence which it exercised on philosophical belief. The *Upaniṣads* tend on the whole to teach the doctrine of annihilation of personality for the possessor of true knowledge, but the *Vedānta-Sūtra*³ clearly rejects this view in favour of the doctrine that the sage attains a future of unlimited power and bliss, inferior to the Lord only in not having the capacity of creating and maintaining the world, and this view, though rejected by Śaṅkara in his esoteric doctrine, is accepted as valid by Rāmānuja and by the sects of Vaiṣṇavas who follow the main lines of his philosophy; a similar view is held also by the Śaivas. Buddhism, which equally in its logical theory regards annihilation as the reward of enlightenment, admits for ordinary purposes the existence of heaven, and the Mahāyāna school exalts the attainment of heaven to the highest hope of man, depicting its joys in such works as the *Kāraṇḍavyūha* and the *Sukhāvatīvyūha* in the most exaggerated terms. Jainism similarly imagines in elaborate detail a complicated system of heavens for beings of diverse merits. The same tendency is seen in the epic: a scale of heavens is gradually evolved; the heaven of Brāhmā is placed above the lower heavens, but even it is not a final abiding-place, and the heaven of Viṣṇu is superimposed upon it as the place where there is no change, and where the sage is exempt from the departure from the lower heavens entailed by the periodical destruction of existence.⁴ The number of heavens is now unlimited, for each deity has his special world; many of them are described in the *Svargakhanda* of the *Padma Purāṇa*, and most *Purāṇas* contain some mention of them.

Parallel with the multiplication of heavens is the multiplication of hells. The *Mārkaṇḍeya Purāṇa* enumerates seven, and the Jains have also a list of that sacred Indian number. Multiples of seven are also known, 21 (which is given by Manu) being a special favourite, while there is preference with the Buddhists for eight and its multiples in reckoning hells, the number of which later is increased indefinitely. In the description of their horrors fancy runs riot, as in the long enumeration in the *Mārkaṇḍeya Purāṇa*,⁵ and in the later art it is plain that the Indian conceptions were influenced by Christian legend and art. It is possible that an early example of such influence⁶ is to be seen in the legend of the visit of King Vipācchit to hell, which he refuses to leave until the pains of the inmates are removed, as recounted in that *Purāṇa*.⁷ A somewhat similar tale is recounted also in the *Padma Purāṇa* of King Janaka and in the *Kāraṇḍavyūha* of Avalokiteśvara, and there is much earlier evidence of the existence of the legend of the visit of Christ to hell. With the development of the hell as a place of punishment, the necessity of providing some means of allocating

⁸ The practice in the marriage ritual by which stepping on the threshold is avoided may be due to the belief that the spirits of the dead, once buried under the threshold, have their abode there (cf. M. Winternitz, *Das altindische Hochzeitsrituell*, Vienna, 1892, p. 72).

heaven or hell to the soul is felt, and in the *Purāṇas* Chitrāgupta appears as the recorder of the deeds of men and Yama as a judge who sends them to heaven or hell according to their deserts.¹ But Yama tends to sink from his rank, and to become merely the lord of one of the hells, and the prevailing view is that heaven is essentially the result of divine grace, whether or not evoked by effort on the part of the recipient of the boon. Similarly, while the fate of the dead in theory depends on their own deeds, in practice it is regarded as dependent also on the actions of their descendants. An epic legend tells how Agastya saw his ancestors hanging head downwards in a hole called hell, because of his failure to beget sons, and the utmost stress is laid throughout the literature on the necessity of the due performance of the funeral rites, and of the offerings, generically entitled *śrāddhas*, requisite to secure the welfare of the departed soul. These offerings not only serve to provide the spirit, disembodied in the process of creation, with a celestial body, but also avail to raise him from one stage of existence to another; the *nārāyaṇabali* is especially commended in many texts as a means of securing the advancement of the dead to the Vaikuṇṭha heaven. The closeness of the dead to the living is seen in the daily offerings of food which are made to them; they are also fed specially at every occasion of family rejoicing, and with special solemnity before a marriage—a clear trace of their abiding concern with the continuance of the race.

Practically new in the literature of this period is the recognition of the spirit of the dead as a ghost appearing on earth in close contact with man. The absence of such accounts in the earlier texts may reasonably be ascribed to the character of the Vedic literature, for the distinction between the recently dead and the ancient fathers in the *Sūtras*, and the whole nature of the ritual, suggest clearly that there was nothing strange in the idea of the presence of the dead in the vicinity of human dwellings. The regularity of such presence is emphasized in the Buddhist *Peta-vatthu*, which reveals ghosts entering into conversation with men, lurking about houses and at cross-roads (a favourite place of burial and the resort of spirits), as wandering about unhappy, clothed only in their own hair, tormented by heat which neither wind, water, nor shadow can alleviate, unable to find anything to drink even in the midst of the Ganges, which turns to blood as they seek to swallow its water. The influence of the doctrine of transmigration is, however, obvious, as the dead often declare that they are fated to die again in a brief period and then to go to one hell or other. This belief in ghosts is universal in the later literature: the *Divyāvadāna*² tells of a ghost city, the *Jātaka*³ of an island inhabited by female ghosts; and a famous scene in the *Mālatīmādhava* of Bhavabhūti describes a common theme, the presence of countless ghosts at the place of the burning of the dead. A more poetic use of the same idea is seen in the *putradarśana* scene in the *Mahābhārata*,⁴ where Vyāsa by his magic power summons up before the eyes of Dhṛtarāṣṭra and Gāndhārī the spirits of those who fought in the great battle. In modern tales stress is laid on untimely and violent death as a frequent source of the wandering of the restless spirit. Thus a legend in the late *Garuḍa Purāṇa* tells of a robber whom a tiger killed and who in consequence wandered about as a ghost until a crow dropped his bones in the Ganges, when the sanctifying power of its waters transferred his soul to heaven. The idea is doubtless primitive,

though not expressly recorded in the earlier texts, save in so far as it may be inferred from the notice in Baudhāyana¹ that the spirit of an embryo becomes a blood-sucker, and from the bitterness against the slayer of embryos which is recorded as early as the *Samhitās* of the *Yajurveda* and may be ascribed to the resentment felt against a person who lets loose on the world so uneasy a spirit.

In the Vedic period very little stress is laid on the dangerous side of the dead. The *Rigveda* indeed deprecates the anger of the ancestors for sin committed against them;² the fathers are entreated to defeat the enemy of their descendants; and reference is made in the *Atharvaveda*³ to fiends who creep in among the fathers, assuming the likeness of kinsmen, which may point to the spirits of the unfriendly dead. But, even if, as is possible, in the *raksasas* and *pisāchas* of the *Brāhmaṇas* and the later *Samhitās* we may see spirits of the hostile dead converted into demons, it is at least plain that the consciousness of such an origin was not normally present in the Vedic period. The later literature freely recognizes friendly spirits of the dead, which give good advice to men, and regards the ancestors as able and willing to aid, but it also lays stress on the malevolent tendencies of hostile spirits, and is especially prone to attribute to their agency the workings of disease, which, by perhaps an earlier stage of thought, are directly made personal powers in the *Atharvaveda*.

In this prominence of the idea of the hostility of the dead it is possible to see the result of the gradual Hinduization of the Indo-Aryan religion. The belief in the sending of diseases by spirits of the dead is widely present among aboriginal tribes,⁴ but in itself it is too easily explainable as a natural development to be available as a proof of borrowing. Among the primitive tribes, apparently without Hindu influence, systems of belief as to the state of the dead have developed themselves which have often a somewhat striking similarity to those produced by Hinduism. The Khands have a god of judgment who dwells on a high rock surrounded by a black river, and the souls of the dead climb up the rock with much effort to await his decision. The good are accorded life in the sun, or are reborn in the tribe, the priests having the power to reveal in each case who is reincarnated in the newborn child, and the wicked are reborn as diseased and endure misfortune, or, if very wicked, suffer annihilation. The Oraons are less advanced, for they do not accept the belief in a life in heaven; unfortunate people survive death as unhappy ghosts; a man eaten by a tiger comes again to life as a tiger, but the ordinary man suffers annihilation. There are also traces of the belief that the spirit of the dead can pass directly into an animal—a belief which may have had a share in the development of the doctrine of transmigration.

LITERATURE.—For the Vedic period the most important works are J. Muir, *Original Sanskrit Texts*, v. 4, London, 1884; H. Zimmer, *Allindisches Leben*, Berlin, 1879; H. Oldenberg, *Die Religion des Veda*, do, 1894; W. Caland, *Allindischer Ahnencult*, Leyden, 1893, *Die altindischen Todten- und Bestatigungsgebräuche*, Amsterdam, 1896; A. A. Macdonell, *Vedic Mythology* (= *GIAP* iii. 1a), Strassburg, 1897; A. Hillebrandt, *Vedische Mythologie*, 3 vols., Breslau, 1891-1902; *Vedische Opfer und Zauber* (= *GIAP* iii. 2), Strassburg, 1897; S. Crooke, *PR*, 2 vols., London, 1896; H. H. Risley, *The People of India*, do. 1915; E. Thurston and K. Rangachari, *Castes and Tribes of Southern India*, 7 vols., Madras, 1909.

A. BERRIEDALE KEITH.

STATE OF THE DEAD (Iranian).—The Mazdean doctrine of the state of men's souls after death is exceedingly simple and remarkably consistent through the whole range of literature from the *Gāthas* to the most recent Pahlavi treatises. It is summed up in the belief in a heaven and a hell for the virtuous man and the sinner respectively, each (at least in the *Gāthas*) apparently eternal in duration.

1. **Heaven.**—The celestial abode is designated in the *Gāthas* by the beautiful and poetical name of Garō-demāna, 'house of song'¹ (i.e. of hymns of praise), the dwelling-place of Ahura Mazda and his holy ones. It is also designated as the 'house or kingdom of Vohu Manah, the kingdom of blessing.' In the Later Avesta it assumes the form Garōmāna, but also is styled Vahištā Anhuš, literally 'the best existence,' which has remained the ordinary term in subsequent epochs, down to the Modern Persian Bihist. In Pahlavi literature it takes the form Garōtmān. Another term which seems to indicate the heavenly abode is Anagra Raocā, 'the everlasting lights.' Bartholomae, however, surmises that of all these terms Garō-demāna, in its various forms, may signify a kind of inner heaven, a 'holy of holies,' in paradise itself.² Dhalla writes:

'In contrast to the single heaven referred to in the *Gāthas*, we meet with Garōmāna, the realm of heavens, cal Words, and Hvashtha, or Good Deeds, as beatific abodes for the soul.'³

The same writer also considers that, whilst Anagra Raocā in the Later Avesta designates Garōmāna, the expression Vahištā Anhuš is a generic name for all four heavens. Söderblom, on the other hand, takes Vahišt as signifying the three inferior heavens, as opposed to the supreme Garōtmān, 'la félicité suprême auprès de Dieu,'⁴ which seems less likely. The fourfold conception of heaven persists unchanged through the Pahlavi and subsequent periods. So does the presentment of heaven as a place of ineffable bliss, in company with Ahura and his celestial court, and of brilliant, dazzling light.

2. **Hell.**—In accordance with the Iranian love of symmetry, the place of the wicked after death is in all details the exact opposite of the heavenly abode. The Gāthic name of the Inferno is Drūjō-demāna, 'house of the *druj*' (or of the lie)—the later Pahlavi Drūzōtmān, or again Drūji gereda, 'pit of the *druj*' (i.e. Angra Mainyuš). Similarly it is Achištā Anhuš, 'the worst existence'—in the Later Avesta *duz-ahū*. Dhalla also holds that there

are in the Later Avesta, by contrast to the one hell of the *Gāthas*, four abodes of the damned—Dushmata ('evil thought'), Dushukhta ('evil word'), Dushvarshta ('evil deed'), and lastly the fourth or lowest hell, which has no specific name of its own in the Avesta, but is known as *anaghra temah* ('endless darkness').¹

The miseries and tortures of the souls in hell are terrible indeed. Moulton sums them up in a striking passage.

'Hell is full of darkness, sad voices, stench, foul food, and cold. It would seem that the conception of it sprang from the privations of winter on the steppes during the migration southward, when the preciousness of the house-fire made Atar the very symbol of all that was best for man.² For the Iranian, hell and the demons were always in the north. The idea of darkness is the distinguishing feature of the House of the Lie. It is worked out in the later fancy which conceives the damned so close together that they seemed an indistinguishable mass; yet in the darkness each ever wails, "I am alone!" The symbolism of Fire was kept out of this eschatology for obvious reasons.'³

3. **Purgatory.**—Thus Mazdeism had its Paradise and Inferno; had it also a Purgatorio? Several scholars hold that such a state is indicated in *Yasna* xxxiii. 1, by the verb now read by Bartholomae⁴ as *hememyāsaitē*, the whole sentence then reading:

'The Judge shall act most justly towards the wicked, the just, and him in whom the false and the right are commingled': ('bei dem sich [zu gleichen Teilen] mischen was falsch und was bei ihm recht ist').

Moulton⁵ seems to consider that this 'discovery' of Bartholomae is in some sort of opposition to the view on the Pahlavi *hamistakān*⁶ expounded by E. W. West, C. de Harlez, and other writers. The difference, however, is one of etymology merely. If the above view of *Ys.* xxxiii. 1 is right, then we shall have the 'middle state' recognized in the Avesta itself: if not, it must be looked upon as a later Pahlavi development. But in either case there does not seem to be the idea of a place of *purgation* for souls after death.

4. **Vision of Artā-i Virāf.**—As mediæval Christianity had its Dante who embodied the doctrine of the world beyond the grave in his immortal vision, so Sasanian Mazdeism had its famous prose legend of the somewhat similar vision, by an unknown writer, of the saintly Virāf, which very probably was based on much more ancient traditional material.

This short Pahlavi religious tractate known as the *Artā-i Virāf Nāmak*, 'Book of Artā-i Virāf,'⁷ has for centuries been a favourite work with all classes of the Parsi community. It was sometimes read before large assemblies, with the effect thus described by its learned editor, Dastur Hoshangji:

'It speaks volumes both for the effective style of the *Artā Virāf Nāmak* and for the implicit faith which the Parsis placed in what was written therein, that a few years ago, when the book used to be read before them, overpowered by consciousness of guilt, the punishment for which was so terrifically described, they, but especially the gentler sex, used to weep. It was a most affecting spectacle to witness the awakening conscience exhibiting itself in trickling tears.'

This popularity of the *Vision* is shown by the fact that, besides the original Pahlavi text, which exists in two or three considerably divergent recensions, translations into both Sanskrit and Gujurāṭi exist, besides several Persian versions, both in prose and in poetry. These poetical versions are quite modern and were composed respectively in A.D. 1530-31, 1532-33, and 1679.

In the very careful introductory essay prefixed to his edition, Hang comes to the conclusion that the author, whoever he may have been, must have

¹ p. 179.

² Similarly it is recorded that the early Christian missionaries in the Scandinavian countries represented to their converts hell as a place of intense cold; the idea of fire would have suggested comfort rather than suffering.

heaven or hell to the soul is felt, and in the *Purāṇas* Chitrakṛta appears as the recorder of the deeds of men and Yama as a judge who sends them to heaven or hell according to their deserts.¹ But Yama tends to sink from his rank, and to become merely the lord of one of the hells, and the prevailing view is that heaven is essentially the result of divine grace, whether or not evoked by effort on the part of the recipient of the boon. Similarly, while the fate of the dead in theory depends on their own deeds, in practice it is regarded as dependent also on the actions of their descendants. An epic legend tells how Agastya saw his ancestors hanging head downwards in a hole called hell, because of his failure to beget sons, and the utmost stress is laid throughout the literature on the necessity of the due performance of the funeral rites, and of the offerings, generically entitled *śrāddhas*, requisite to secure the welfare of the departed soul. These offerings not only serve to provide the spirit, disembodied in the process of creation, with a celestial body, but also avail to raise him from one stage of existence to another; the *nārāyaṇabali* is especially commended in many texts as a means of securing the advancement of the dead to the Vaikuṇṭha heaven. The closeness of the dead to the living is seen in the daily offerings of food which are made to them; they are also fed specially at every occasion of family rejoicing, and with special solemnity before a marriage—a clear trace of their abiding concern with the continuance of the race.

Practically new in the literature of this period is the recognition of the spirit of the dead as a ghost appearing on earth in close contact with man. The absence of such accounts in the earlier texts may reasonably be ascribed to the character of the Vedic literature, for the distinction between the recently dead and the ancient fathers in the *Sūtras*, and the whole nature of the ritual, suggest clearly that there was nothing strange in the idea of the presence of the dead in the vicinity of human dwellings. The regularity of such presence is emphasized in the Buddhist *Peta-vatthu*, which reveals ghosts entering into conversation with men, lurking about houses and at cross-roads (a favourite place of burial and the resort of spirits), as wandering about unhappy, clothed only in their own hair, tormented by heat which neither wind, water, nor shadow can alleviate, unable to find anything to drink even in the midst of the Ganges, which turns to blood as they seek to swallow its water. The influence of the doctrine of transmigration is, however, obvious, as the dead often declare that they are fated to die again in a brief period and then to go to one hell or other. This belief in ghosts is universal in the later literature: the *Divyāvadāna*² tells of a ghost city, the *Jātaka*³ of an island inhabited by female ghosts; and a famous scene in the *Mālatīmādhava* of Bhavabhūti describes a common theme, the presence of countless ghosts at the place of the burning of the dead. A more poetic use of the same idea is seen in the *putradarśana* scene in the *Mahābhārata*,⁴ where Vyāsa by his magic power summons up before the eyes of Dhṛtarāṣṭra and Gāndhārī the spirits of those who fought in the great battle. In modern tales stress is laid on untimely and violent death as a frequent source of the wandering of the restless spirit. Thus a legend in the late *Garuḍa Purāṇa* tells of a robber whom a tiger killed and who in consequence wandered about as a ghost until a crow dropped his bones in the Ganges, when the sanctifying power of its waters transferred his soul to heaven. The idea is doubtless primitive,

though not expressly recorded in the earlier texts, save in so far as it may be inferred from the notice in Baudhāyana¹ that the spirit of an embryo becomes a blood-sucker, and from the bitterness against the slayer of embryos which is recorded as early as the *Samhitās* of the *Yajurveda* and may be ascribed to the resentment felt against a person who lets loose on the world so uneasy a spirit.

In the Vedic period very little stress is laid on the dangerous side of the dead. The *Rigveda* indeed deprecates the anger of the ancestors for sin committed against them;² the fathers are entreated to defeat the enemy of their descendants; and reference is made in the *Atharvaveda*³ to fiends who creep in among the fathers, assuming the likeness of kinsmen, which may point to the spirits of the unfriendly dead. But, even if, as is possible, in the *raksasas* and *piśāchas* of the *Brahmanas* and the later *Samhitās* we may see spirits of the hostile dead converted into demons, it is at least plain that the consciousness of such an origin was not normally present in the Vedic period. The later literature freely recognizes friendly spirits of the dead, which give good advice to men, and regards the ancestors as able and willing to aid, but it also lays stress on the malevolent tendencies of hostile spirits, and is especially prone to attribute to their agency the workings of disease, which, by perhaps an earlier stage of thought, are directly made personal powers in the *Atharvaveda*.

In this prominence of the idea of the hostility of the dead it is possible to see the result of the gradual Hinduization of the Indo-Aryan religion. The belief in the sending of diseases by spirits of the dead is widely present among aboriginal tribes,⁴ but in itself it is too easily explainable as a natural development to be available as a proof of borrowing. Among the primitive tribes, apparently without Hindu influence, systems of belief as to the state of the dead have developed themselves which have often a somewhat striking similarity to those produced by Hinduism. The Khands have a god of judgment who dwells on a high rock surrounded by a black river, and the souls of the dead climb up the rock with much effort to await his decision. The good are accorded life in the sun, or are reborn in the tribe, the priests having the power to reveal in each case who is reincarnated in the newborn child, and the wicked are reborn as diseased and endure misfortune, or, if very wicked, suffer annihilation. The Oraons are less advanced, for they do not accept the belief in a life in heaven; unfortunate people survive death as unhappy ghosts; a man eaten by a tiger comes again to life as a tiger, but the ordinary man suffers annihilation. There are also traces of the belief that the spirit of the dead can pass directly into an animal—a belief which may have had a share in the development of the doctrine of transmigration.

LITERATURE.—For the Vedic period the most important works are J. Muir, *Original Sanskrit Texts*, v. 4, London, 1884; H. Zimmer, *Allindisches Leben*, Berlin, 1879; H. Oldenberg, *Die Religion des Veda*, do. 1894; W. Caland, *Allindischer Ahnencult*, Leyden, 1893, *Die altindischen Toten- und Bestattungsgebräuche*, Amsterdam, 1896; A. A. Macdonell, *Vedic Mythology* (= *GIAP* iii. 1a), Strassburg, 1897; A. Hillebrandt, *Vedische Mythologie*, 3 vols., Breslau, 1891-1892, *Vedische Opfer und Zauber* (= *GIAP* iii. 2), Strassburg, 1897; S. Lévi, *La Doctrine du sacrifice dans les Brahmanas*, Paris, 1893; A. M. Boyer, *JA* ix. xviii. [1901] 451-490; M. Bloomfield, *The Religion of the Veda*, New York and London, 1903; P. Deussen, *The Philosophy of the Upanishads*, Eng. tr., Edinburgh, 1906. For Buddhism see H. Oldenberg, *Buddhism*, Berlin, 1906; T. W. Rhys Davids, *Buddhism, its History and Literature*, New York and London, 1896; E. Windisch,

A. BERRIEDALE KEITH.

STATE OF THE DEAD (Iranian).—The Mazdean doctrine of the state of men's souls after death is exceedingly simple and remarkably consistent through the whole range of literature from the *Gāthas* to the most recent Pahlavi treatises. It is summed up in the belief in a heaven and a hell for the virtuous man and the sinner respectively, each (at least in the *Gāthas*) apparently eternal in duration.

1. **Heaven.**—The celestial abode is designated in the *Gāthas* by the beautiful and poetical name of Garō-demāna, 'house of song'¹ (i.e. of hymns of praise), the dwelling-place of Ahura Mazda and his holy ones. It is also designated as the 'house or kingdom of Vohu Manah, the kingdom of blessing.' In the Later Avesta it assumes the form Garōmāna, but also is styled Vahištā Anhuš, literally 'the best existence,' which has remained the ordinary term in subsequent epochs, down to the Modern Persian Bihīšt. In Pahlavi literature it takes the form Garōtmān. Another term which seems to indicate the heavenly abode is Anagra Raocā, 'the everlasting lights.' Bartholomae, however, surmises that of all these terms Garō-demāna, in its various forms, may signify a kind of inner heaven, a 'holy of holies,' in paradise itself.² Dhalla writes:

'In contrast to the single heaven referred to in the *Gāthas*, we meet with a fourfold division of heaven in the Avestan period. Garōmāna, or the Abode of Praise, remains the highest heaven, the realm of bliss that is reached by traversing the three lower heavens, called Humata, or Good Thought, Hukhta, or Good Words, and Hvāršta, or Good Deeds, as beatific abodes for the soul.'³

The same writer also considers that, whilst Anagra Raocā in the Later Avesta designates Garōmāna, the expression Vahištā Anhuš is a generic name for all four heavens. Söderblom, on the other hand, takes Vahišt as signifying the three inferior heavens, as opposed to the supreme Garōtmān, 'la félicité suprême auprès de Dieu,'⁴ which seems less likely. The fourfold conception of heaven persists unchanged through the Pahlavi and subsequent periods. So does the presentment of heaven as a place of ineffable bliss, in company with Ahura and his celestial court, and of brilliant, dazzling light.

2. **Hell.**—In accordance with the Iranian love of symmetry, the place of the wicked after death is in all details the exact opposite of the heavenly abode. The Gāthic name of the Inferno is Drūjō-demāna, 'house of the druj (or of the lie)'—the later Pahlavi Drūžōtmān, or again Drūji gereda, 'pit of the druj' (i.e. Angra Mainyuš). Similarly it is Achištā Anhuš, 'the worst existence'—in the Later Avesta *duz-ahū*. Dhalla also holds that there

are in the Later Avesta, by contrast to the one hell of the *Gāthas*, four abodes of the damned—Dushmata ('evil thought'), Dushukhta ('evil word'), Dushvaršta ('evil deed'), and lastly the fourth or lowest hell, which has no specific name of its own in the Avesta, but is known as *anaghra temah* ('endless darkness').¹

The miseries and tortures of the souls in hell are terrible indeed. Moulton sums them up in a striking passage.

'Hell is full of darkness, sad voices, stench, foul food, and cold. It would seem that the conception of it sprang from the privations of winter on the steppes during the migration southward, when the preciousness of the house-fire made Atar the very symbol of all that was best for man.² For the Iranian, hell and the demons were always in the north. The idea of darkness is the distinguishing feature of the House of the Lie. It is worked out in the later fancy which conceives the damned so close together that they seemed an indistinguishable mass; yet in the darkness each ever wails, "I am alone!" The symbolism of Fire was kept out of this eschatology for obvious reasons.'³

3. **Purgatory.**—Thus Mazdeism had its Paradiso and Inferno; had it also a Purgatorio? Several scholars hold that such a state is indicated in *Yasna* xxxiii. 1, by the verb now read by Bartholomae⁴ as *hememyāsaitē*, the whole sentence then reading:

'The Judge shall act most justly towards the wicked, the just, and him in whom the false and the right are commingled': ('bei dem sich [zu gleichen Teilen] mischen was falsch und was bei ihm recht ist').

Moulton⁵ seems to consider that this 'discovery' of Bartholomae is in some sort of opposition to the view on the Pahlavi *hamistakān*⁶ expounded by E. W. West, C. de Harlez, and other writers. The difference, however, is one of etymology merely. If the above view of *Ys.* xxxiii. 1 is right, then we shall have the 'middle state' recognized in the Avesta itself: if not, it must be looked upon as a later Pahlavi development. But in either case there does not seem to be the idea of a place of purgation for souls after death.

4. **Vision of Artā-i Virāf.**—As mediæval Christianity had its Dante who embodied the doctrine of the world beyond the grave in his immortal vision, so Sasanian Mazdeism had its famous prose legend of the somewhat similar vision, by an unknown writer, of the saintly Virāf, which very probably was based on much more ancient traditional material.

This short Pahlavi religious tractate known as the *Artā-i Virāf Nāmak*, 'Book of Artā-i Virāf,'⁷ has for centuries been a favourite work with all classes of the Parsi community. It was sometimes read before large assemblies, with the effect thus described by its learned editor, Dastur Hoshangji:

'It speaks volumes both for the effective style of the *Artā-i Virāf Nāmak* and for the implicit faith which the Parsis placed in what was written therein, that a few years ago, when the book used to be read before them, overpowered by consciousness of guilt, the punishment for which was so terrifically described, they, but especially the gentler sex, used to weep. It was a most affecting spectacle to witness the awakening conscience exhibiting itself in trickling tears.'

This popularity of the *Vīṣiōn* is shown by the fact that, besides the original Pahlavi text, which exists in two or three considerably divergent recensions, translations into both Sanskrit and Gujārātī exist, besides several Persian versions, both in prose and in poetry. These poetical versions are quite modern and were composed respectively in A.D. 1530-31, 1532-33, and 1679.

In the very careful introductory essay prefixed to his edition, Haug comes to the conclusion that the author, whoever he may have been, must have

¹ P. 179.

² Similarly it is recorded that the early Christian missionaries in the Scandinavian countries represented to their converts hell as a place of intense cold; the idea of fire would have suggested comfort rather than suffering.

lived after the time of the celebrated Zoroastrian theologian, Adarbād Māhraspand, the minister of Shāpūr II. (A.D. 309-379), but before the downfall of the Sasanian dynasty in the 7th cent., for the book undoubtedly belongs to Sasanian times, perhaps the 5th or 6th cent. A.D.

The general course of the *Artā-i Virāf Nāmāk*—the trance and vision of the Zoroastrian seer and his visit under the guidance of the spirits Srōsh and Ātaro, over the Chinvat Bridge, to the world beyond the tomb, first to the four heavens, thence by command of Aūharmazd through the horrors of the Inferno, finally back to the divine throne in Garōtmān—is too well known to need recapitulation here. It is, however, of interest to note that, whilst Dante is supposed to visit the world of spirits in his actual living body, so that it is noted by the spirits as a marvel that his body casts a shadow, Artā-i Virāf's soul leaves his body whilst in the trance induced by *mang*, and thus disembodied makes the journey through heaven and hell. Here we have a striking analogy with the legend of Er, the son of Armenius, the Pamphylian, in Plato's *Republic*,¹ whose soul similarly leaves his body on the funeral-pyre and goes forth to view the spirit-world, but eventually (like that of Artā-i Virāf) returns to his body still lying on the pyre.²

Both Artā-i Virāf and Dante have the guidance of two celestial beings in their wonderful journeys. In the case of Dante the poet Vergil, and afterwards Beatrice, accompany and direct him through the spirit-world. With Artā-i Virāf it is the archangel Srōsh (the Avestic Sraosha, the spirit of obedience, i.e. to the divine law) and the genius of fire, Ātaro, who together act as guides through the realms of heaven and hell. As they enter hell, Artā-i Virāf remarks:

'Srōsh the Pious and Ātaro the angel took hold of my hand and I went thence onwards unhurt. In that manner I beheld cold and heat, drought and stench, to such a degree as I never saw nor heard of in the world. And when I went further, I also saw the greedy jaws of Hell, like the most frightful pit, descending in a very narrow and fearful place; in darkness so gloomy that it is necessary to hold by the hand; and in such stench that every one into whose nostrils that air ascends, will struggle and stagger and fall; and on account of such close confinement no man's existence is endurable.'³

The narrative continues:

'I came to a place and I saw a great river which was gloomy as dreadful Hell; on which river were many souls and fravashis; and some of them were not able to cross, and some crossed only with great difficulty, and some crossed easily, and I asked thus, "What river is this? and who are these people who stand so distressed?" Srōsh the Pious and Ātaro the angel said: "This river is the many tears which men shed from the eyes, for the departed. They shed those tears unlawfully, and they swell this river. Those who are not able to cross over are those for whom, after their departure, much lamentation and weeping were made; and those (who cross) more easily, are those for whom less was made. Speak forth to the world thus: "When ye are in the world make no lamentation and weeping unlawfully, for so much harm and difficulty may come to the souls of your departed."'"⁴

The crossing of a river as the means of entrance into the spirit-world is, of course, a commonplace of literature. We find it in Homer and Vergil, from whom Dante has borrowed his four infernal rivers, Acheron, Styx, Phlegethon, and Cocytus. It is also a commonplace of Iranian eschatology, as in the Avestic description of the adventures of the soul after death, which have been borrowed wholesale in the *Qur'ān*.

It may be observed how very large a proportion of Artā-i Virāf's vision (no fewer than 83 out of the total 101 chapters) is devoted to the description of hell, whilst the description of heaven occupies only nine chapters. On the other hand, in the vision of heaven, as compared with that of hell, there is a certain orderly arrangement observable, whilst an entire want of order prevails in the long rôle of the various crimes and their punish-

ments in the infernal regions—literally, 'Ubi nullus ordo sed sempiternus horror inhabitat.'

It is a curious fact that all the sufferers in Artā-i Virāf's hell are anonymous, with the single exception of the lazy man, whose name seems to have been Davānos, and who is punished like Dives, the rich man in the gospel, solely because of his laziness, since, when 'he was in the world, he never did any good work.' Yet, whilst his whole body was being gnawed by *khrafstras*, his right foot alone was untouched, 'for that he once with this right foot cast a bunch of grass before a ploughing ox,' so that his solitary good deed went not unrewarded.

Of the many and very miscellaneous kinds of sin and of their terrible and often grotesque chastisements enough has been said in the art. SĪN (Iranian). But these punishments of the wicked in the *Artā-i Virāf Nāmāk* appear in no particular order, and, at least as regards hell, 'there is nowhere any system or plan perceptible.'¹

Perhaps the most striking feature in the Inferno of both Virāf and Dante is the position assigned to the evil spirit, the arch-enemy of God and the dominant ruler of hell. The climax of Dante's Inferno is the vast figure of Lucifer frozen in the lowest depths of nether hell at the apex of the inverted cone in which it is formed. In the *Artā-i Virāf Nāmāk* Ahriman (Angra Mainyuš or Ganrāk Minōi) is similarly found in the darkest hell, which apparently is fixed in the very centre of the earth. Here the evil spirit ridicules and mocks the unfortunate sinners. And, just as, after beholding the horrors of Lucifer, Vergil leads Dante at once out to the southern hemisphere and the serener atmosphere of Purgatory, so Srōsh and Ātaro take hold of Artā-i Virāf's hand at the same juncture and lead him forth 'from that dark, terrible, fearful place,' back to the eternal light of the presence of Aūharmazd—for it is a peculiarity of this *Vision* that it begins with the brief visit to the celestial court before the soul of the seer is led to the infernal regions.

The account of heaven is comparatively brief. Artā-i Virāf's three first heavens are those of the stars, the moon, and the sun, whilst the fourth and last is the all-glorious Garōtmān, wherein is the throne of Aūharmazd. Brilliant light and glory are the characteristics of the heavens of both the Persian and the Italian seers, and adorn the blessed souls who inhabit them. Both Dante and Artā-i Virāf behold in their respective paradises the soul of the first progenitor of the human race—Adam in the case of Dante, Gayōmard in the case of Artā-i Virāf.

But what about the question of a purgatory? Certainly, immediately after the passage of the great river described above, Virāf says:

'I came to a place and saw the souls of several people who remained in the same position. And I asked the victorious Srōsh the Pious and Ātaro the angel: "Who are they? and why remain they here?" Srōsh the Pious and Ātaro the angel said: "They call this place Hamistagān, and these souls remain in this place till the Resurrection; and they are the souls of those men whose good works and sins are equal, . . . for every one whose good works are three scruples more than his sins, goes to Heaven; they whose sin is in excess go to Hell; they in whom both are equal remain among these Hamistagān till the Resurrection. Their punishment is cold or heat from the revolution of the atmosphere, and they have no other adversity!"²

This doctrine of the Hamistagān is curiously like the Irish conception of Limbo in the 'Vision of Adamnan' (*Fis Adamnain*) as the place 'at the hither side of the lightless land for those whose good and evil have been equal.' Many writers, including J. J. Modi, see in the Hamistagān the analogue of the Christian Purgatory. This is, however, scarcely tenable. It is true that, as in

¹ Haug, *Artā-i Virāf Nāmāk*, Introductory Essays, p. lxi.

² vi.

¹ x. 13.

² x. 16.

³ xiii. 1-9.

⁴ xvi. 2-12.

the Christian Purgatory, the sufferings of these souls will eventually come to an end, but there is no idea of purgation by suffering, as in Dante's Purgatorio. The Pahlavi name is a plural of the adjective *hamistak*, meaning 'in equilibrium, or stationary,' and is no doubt derived from the idea of a balance in which the two scales are exactly balanced, and so stationary. These spirits, therefore, in the Iranian, the Irish, and the Italian visions, would seem more akin to those neutrals of whom Dante writes:

'Che visser senza infamia e senza lodo.'¹

Even if we accept Bartholomae's reading and translation of the Avestan term in Ys. xxxiii. 1, already referred to, the etymology of *hamistakān* (or *hamēstagan*, as sometimes written) remains obvious and certain.

We need not here enter into the question² as to the indebtedness of the Artā-i Virāf legend to older Hebrew Vision literature of the same kind. That the central idea of describing the secrets of the other world under the allegorical form of a journey undertaken by a living man, guided by supernatural beings through the realms beyond the tomb, and even no inconsiderable part of the details of the description, may have been borrowed by a Persian writer from some Jewish original is by no means unlikely, especially when we remember that most characteristic tendency of the Iranian mind towards the adaptation and assimilation of outside theories and ideas which has been so marked through the whole course of its history. Nevertheless W. Bousset writes:

'Es scheint mir der Beweis erbracht, dass wir in der eranischen Religion die Heimat jener bunten Phantasien und jener ekstatischen Mystik zu suchen haben.'³

5. Duration. — For the *Gāthas* there is little doubt that the duration of both heaven and hell was conceived as eternal, as shown by the phrases *yavoi vīspāi*, 'in omne saeculum,' *ameretāiti*, 'eternity,' *utayūtā*, 'perpetuity,' applied to both the blessed and the damned. Later theology, however, seems to have modified this teaching, at least as regards the infernal regions. As has been remarked in art. SALVATION (Iranian), the great flood of molten metal at the end of time and the final resurrection and regeneration (*tanū-i pasin*) is, according to some of the Pahlavi writers, to purify even hell and the wicked therein:

'Praise to Him, the merciful Lord, who . . . at the end shall deliver even the wicked from Hell and restore the whole Creation in purity.'⁴

L. C. CASARTELLI.

STATE OF THE DEAD (Muhammadan). — The *Qur'an* abounds in pictures of the life after death. There is, however, a certain monotony in them, for they mostly present the same ideas, frequently repeated. They consist of three factors — (1) resurrection, (2) judgment, (3) heaven and hell

— with occasional references to the state between death and the resurrection. Some of the passages reflect ideas which must have been current at the time:

'How will it be when the angels take their souls, smiting their faces and their backs?'¹

This implies a contemporary belief in the angels who visit man in the grave and beat the wicked.² Abundant descriptions of heaven and hell are found, used for warning to disbelievers and encouragement to believers. As in Christian eschatology, the condition of souls in the intermediate state between death and the resurrection was not made clear in the early writings. Later speculation busied itself with the problem. Some held that the spirits of the faithful were taken up through the seven heavens into the presence of God, and then returned to the grave for the examination by the two angels, Munkir and Nakir. Martyrs were regarded, not as remaining in the graves, but as living in the presence of God, where 'there is no fear for them, and they shall not be grieved.'³ The spirits of common believers stay near the graves, or, some hold, are in the lowest heaven with Adam. Infidels are beaten before and behind by the two examining angels, then crushed down into the earth and left to be bitten by great serpents. Their cries of pain may be heard by all, except men and *jinn*s.

Once the camel of Muhammad shied in passing a graveyard, and Muhammad said, 'Surely the infidels are punished in their graves, and, if I were not afraid you would leave off burying, verily I would call on God to let you hear what I now hear.'⁴

The infidel's own foul actions come to him as a devil with a hideous face, and taunt him,⁵ as his evil deeds pursue and taunt the sinner in Zoroastrian eschatology. On the basis of *Qur'an*, lxxxiii. 7-10, some say that the soul of the sinner awaits judgment in a pit in hell.

The general ideas of the resurrection are borrowed from Judaism and Christianity, with the addition of some details from Zoroastrianism. The resurrection will come at a time when evil is triumphant on the earth.

God will say to the angels, 'Bring out those that shall be sent to hell.' They will say, 'How many are they?', and God will say, 'Nine hundred and ninety-nine out of a thousand.'⁶

The body of the resurrection will be a body of flesh, regenerated from the *os sacrum*, from which man was created.⁷ The body will be created naked and uncircumcised, 'as at the first creation.' When Muhammad's wife, 'A'isha, objected that it was indecent, he replied, 'The business of the day will be too momentous to permit people looking at one another.'⁸ God will judge from great books each as long as one can see. But a bit of paper with the Muslim confession on it will outweigh all the evil deeds of a man's life.⁹ Muslims will ask Adam to intercede for them at the judgment, but he cannot, for he has sinned. Nor can Noah, Abraham, Moses, or Jesus, but Muhammad will do it. After the judgment men will pass over the bridge al-Aarāf. Muslims will go swiftly and easily, some in the twinkling of an eye, some like lightning, some like wind, some like birds, some like swift horses, some like camels. Of those who fall off, God will allow Muhammad to bring back all in whose heart there is any good. God will even bring into paradise a handful of men who have never done any good, and will purify them till they are pure as pearls.

Descriptions of the state of the good and of the evil in paradise and hell are almost entirely in

terms of the senses. The life in paradise is described in terms of luxury, pleasure, and rest—which would naturally appeal to the Arab of the desert.

Paradise is better than anything in the world. It is a garden in which are rivers of water, flowing springs, branching trees with all kinds of fruit. There shall the saints recline on couches, on green cushions, and on beautiful carpets, bedecked with bracelets of gold and with pearls, wearing green robes of silk and brocade. Fruits shall be within reach, and whatever they call for shall be served them. Around them shall go eternal youths, with goblets, ewers, and a cup of flowing wine. No headache shall they feel therefrom, nor shall their wits be dimmed. They shall be served by large-eyed damsels of modest glance. They shall see the angels reclining about the throne, praising their Lord.¹

In the traditions the same description is carried on. *Mishkat al-Masabih*, xxiii. 13, is devoted to a description of paradise.

It is made of gold and silver bricks, with musk for mortar; its gravel is pearls and rubies; its earth saffron. If a man from paradise were to appear and show the rings on his wrists, the splendour of them would hide the splendour of the sun. Everything is there which the senses can desire or which will delight the eye. A tree grows there under which one might ride for a year and come to no end. Every person will be pleased with his own place and not envy another. If a man wish to cultivate land, he may, and fruit will ripen and grow in a moment. No one will sleep there, for sleep is death's brother. All men and women are beautiful. The youth of men is renewed, and they enter paradise as beardless youths. In other places they are said to be in the prime of life at the age of thirty.

The *hūrīs*, the female companions of faithful men in paradise, are described in the *Qur'ān* as maidens, modest and beautiful, of equal age.²

Remembering the golden streets and gates of pearl in the book of Revelation, Christians have often asked if the sensuous descriptions of paradise in the *Qur'ān*, and still more in the traditions, were not to be understood as figurative expressions of spiritual ideas. Here and there a sect of Islām has so interpreted them. Mirza Ghulām Ahmād of Qadian, the leader of a sect of Indian Muslims, known as the Ahmadiyyah, argues³ against the material interpretation of heaven. There are, he says, no cows and bees in heaven to make milk and honey. The goods of heaven are secrets from the earth,⁴ so they cannot be material things. *Qur'ān*, ii. 23, 'they are provided with fruit,' has been misinterpreted. It means that they shall eat not fruits like those of the earth, but spiritual fruits.

'Heaven and hell, according to the Holy Quran, are images and representations of a man's own spiritual life in this world. They are not new material worlds which come from the outside. It is true that they shall be visible and palpable, call them material if you please, but they are only embodiments of the spiritual facts of this world. . . . Heaven and hell, according to Moslem belief, are the images of the actions which we perform here below.'⁵

This, however, has not been the general orthodox position of Islām. The literalness of interpretation in tradition is forcibly illustrated in *Mishkat al-Masabih*, xxiii. 13:

'Musselmen will be given strength and vigour in paradise to have connection with many women. It was said, "O messenger of God, will a man be able to connect himself with many women?" His Majesty said, "The powers of one hundred men will be given to one man."

There are, however, elements of spiritual appreciation, both in the *Qur'ān* and in the traditions. *Qur'ān*, xlvi. 16f., e.g., couples among the goods of paradise all kinds of fruit and the forgiveness of the Lord. *Mishkat al-Masabih*, xxiii. 14, is headed 'On Seeing God.'

Muhammād said, 'Men shall see God as one sees this moon.' They will see God in paradise, and will love the sight of Him better than anything else.' Then he repeated *Qur'ān*, x. 27: 'To those who do what is good, goodness and increase! nor shall blackness or abasement cover their faces! these are the fellows of Paradise, they shall dwell therein for aye.'

Al-Ghazālī said:

¹ Nothing of the delights of paradise can be compared to the

delight of meeting God; for the other bodily enjoyments of paradise dumb animals share with the believer, but this is reserved for him alone.¹

The suffering of the unbeliever, like the reward of the faithful, was conceived in material terms. The *Qur'ān* is rich in passages threatening tortures to the damned—'the companions of the fire,' as they are most often called.

They will live 'in hot blasts and boiling water and a shade of pitchy smoke.' They 'shall broil upon a burning fire, shall be given to drink from a boiling spring! no food shall they have save from the foul thorn, which shall not fatten nor avail against hunger.' They shall abide therein for ages. No cool thing shall they taste or drink. Nineteen angels are set over hell as its guardians. 'Whenever a troop of them [who disbelieve in their Lord] is thrown in, the keepers shall ask them, "Did not a warner come to you?" They shall say, "Yea, a warner came to us, and we called him a liar, and said, "God has not sent down aught; ye are but in great error." And they shall say, "Had we but listened or had sense, we had not been amongst the fellows of the blaze!" They will broil in the fire, and, "whenever their skins are well done," then other skins will be given them, "that they may taste the torment." Here in the hell of fire they will dwell for ever and ever.'²

The traditions amplify, sometimes to grotesqueness, the physical tortures of disbelievers. *Mishkat al-Masabih*, xx. 15, is devoted to descriptions of 'The Fire and its People.'

The fire of hell shall be seventy times as hot as the fire of the world. God will make the bodies of the infidels large, so that they may suffer more. They will be given food infinitely loathsome, of which they will eat and still be hungry. They will be bitten by serpents as large as two hundred camels, and by scorpions as large as mules, and the bites shall give pain for forty years.

That the pains of hell are eternal is a tenet of Islām. When it is said that, since all things fleshy are temporal, the bodies of the unfaithful must at last be destroyed, answer is made that God is all-powerful and can do what He will, or that they will be re-created, after they have been burned, that their tortures may proceed.

The ultimate assignment to paradise or hell is on the basis of belief or disbelief in Muhammad's mission. In general, ethical considerations are not regarded in the assignment of a man's destiny. One passage in the *Qur'ān* has been made the basis for the theory of a Muslim purgatory:

'There is not one of you that will not go down to it,—that is settled and decided by the Lord.'³

Some hold that this refers only to the passage of all souls over the bridge al-Aarāf; some that all must pass through hell, but that to believers it will be cool and pleasant; and some that this text warrants the belief in a purgatory for such Muslims as need to be purified from sin, unless they have died in battle.

Muslim theology has divided both heaven and hell into regions. The *Qur'ān*, like the Jewish traditions, speaks of seven heavens,⁴ but the abodes of the blest are reckoned as eight: Dārū-Qarār, 'the abode of rest,'⁵ Dārū-Salām, 'the abode of peace,'⁶ Jannatu'l-Huld, 'the garden of eternity,'⁷ Illiyyūn, 'the garden of the Most High,'⁸ Jannatu'l-Firdāus, 'the garden of Paradise,'⁹ Jannatu'l-Māwā, 'the garden of refuge,'¹⁰ Jannatu'n-Na'im, 'the garden of pleasure,'¹¹ Jannati 'Adin, 'the garden of Eden.'¹² These are doubtless synonymous terms in the *Qur'ān*, but tradition made them the names of different realms of bliss.

Likewise the different words used for hell have been taken to signify seven different realms of torture, as distributed among the adherents of the various religions, on the authority of a passage in the *Qur'ān*:¹³

'It has seven doors; at every door is there a separate party of them.'

Jahannam (Gehenna), the purgatorial fire, is for Muslims;¹ Lazai, the flaming fire, for Christians;² al-Hutamah, the raging fire, for Jews;³ Sa'ir, the blazing fire, for Sabæans;⁴ Saqar, the scorching fire, for the Magi;⁵ Al-Jahim, the fierce fire, for idolaters;⁶ Hāmiyeh, the abyss, for hypocrites.⁷ There is no evidence that such classification of either the regions of reward or those of punishment was in Muhammad's thought.

If the paradise of Islām is almost lacking in spiritual satisfaction, its hell is entirely without spiritual torment. The torture of an accusing conscience, the absence from the vision of God, the sting of remorse, are nowhere expressed. Physical torture is magnified and multiplied, but no word is uttered of that greater suffering which the sensitive soul may endure through its own self-condemnation.

LITERATURE.—In addition to that mentioned under ESCHATOLOGY, the great collection of traditions in *Mishkat al-Maṣḍih* deals with this subject in bk. xxiii. (Eng. tr. by A. N. Matthews, 2 vols., Calcutta, 1899-10); Al-Ghazālī's tractate on eschatology, *Ad-Douira al-Fakhrā*, tr. L. Gautier, *La Perle précieuse*, Geneva, 1878; M. Wolff, *Muhammedanische Eschatologie*, Leipzig, 1872, is a translation of a writing of recent date, author unknown; R. Leszynsky, *Muhammedanische Traditionen über das jüngste Gericht*, Berlin, 1909; E. Sell, *The Faith of Islām*, London, 1896; Stanley Lane-Poole, *Studies in a Mosque*, do. 1893; F. A. Klein, *Religion of Islām*, do. 1906.

IRVING F. WOOD.

STATE OF THE DEAD (Teutonic).—Our knowledge of early Teutonic ideas as to the state of the dead is entirely a matter of inference, as there are no extant sources from which direct information relating to that period can be obtained. For later times, coinciding in date with the introduction and establishment of Christianity in N. Europe, there is a considerable body of evidence, but mainly from one source—the early literature of Iceland. As this is not free from Christian and even classical influence, some care must be exercised in accepting the statements found there and in drawing conclusions from them; but there can be no doubt that with due precautions the evidence from this source is of the greatest value and that in the main it is of a very reliable character.

For the long pre-historic period which lies beyond these written records the only evidence of any kind is that furnished by the science of archaeology. The great advances which this has made in recent times have established one fact which is of much significance as an indication of early Teutonic beliefs regarding the dead. From the earliest stone age down to the later iron age there can be traced the practice of depositing with the dead of either sex, whether simply buried or previously burned, not only articles of clothing and personal adornment, but weapons, utensils and implements of various kinds, and even articles of food and drink. While to a certain extent this might be accidental or at least not significant, all analogy and probability point to the conclusion that the practice was usually deliberate and full of meaning, and was based on the view that the deceased person still had some interest in, or some use for, such articles as accompanied his or her body in its final resting-place. Whatever the exact circumstances of the life after death might be, its requirements were obviously supposed to have some analogy with those of the living person and to require similar provision to be made for them. It is possible that this view may have undergone considerable modification in later times, and that latterly the depositing of such articles in the grave was rather a lingering convention than the result of a real belief in their necessity or usefulness: conventional survivals of the practice

are in fact still widely existent in Teutonic as well as in other countries. From the Icelandic evidence, however, it appears most probable that on the whole the original belief which formed the basis of the custom remained in full vigour so long as the old religion survived. For those who held this belief the dead not only retained their personality, but had a definite abode in the grave in which they had been placed; in later times it is especially the grave-mound that figures as the actual home of the deceased, who is regarded as normally occupying it even at a time long after that in which he lived. As the dead had thus a fixed abode, it was natural that the surviving kinsfolk should regard it with respect, even for several generations, and that a certain cult of the dead should arise, which in special cases might develop into partial or complete worship. It is in this connexion that evidence on the subject first makes its appearance in written sources. Ecclesiastical regulations framed in Germany in the 8th and 9th centuries make reference to 'sacrificia mortuorum' (A.D. 742); 'sacrilegium ad sepulchra mortuorum,' and 'sacrilegium super defunctos, id est dadsisas' (c. 825), the meaning of the Old Saxon word *dadsisas* being doubtful. The prominence of the grave-mound as the place of burial is also shown by the enactment that the bodies of Christian Saxons are to be taken to the churchyard for interment, 'et non ad tumulos paganorum.' The same association of the mound with heathenism appears in phrases which survive quite late in Scandinavian documents (sometimes in forms which have become almost unintelligible, such as *frá heiðnum haugi*, 'from heathen mound,' as an expression for 'from ancient times.')

The bare suggestions conveyed by these brief phrases are quite in accordance with the details which can be gathered from the old Icelandic poems and sagas, in many of which there occur passages bearing directly upon the theme. In these records the grave-mound is as normally the abode of the stirring and conscious dead as the ordinary house is of the living person. There is practically no change except that the dweller in the mound (the *haugbúi*) no longer has his place among the living. Sometimes the mound is ancient and its occupant belongs to remote times—so remote that even his name has been forgotten—but he is still able to appear to the living and even to answer their inquiries as to his own identity.

So it was with King Ögvald of Rogaland in Norway, who gave answer as to the time at which he lived to one who was just setting out to settle in Iceland.¹ Another early king, Vafnar, appeared to a merchant who had told his story, while his ship lay beside the grave-mound, and rewarded him by instructions how to find treasure in the mound.²

In other tales the persons and incidents are still more legendary or unreal, as in those of Helgi and Sigrún, or of Hervör and Angantýr, in which the imagination of the poet has invested the belief with marvellous touches of pathos and terror. Such instances might have little value in themselves as evidence for any actual belief, but the practice of mound-burial remained in vogue so late in Iceland that various tales of the dead inhabitants have all the freshness of reality about them.

Thus *Landnámabók* tells of a certain Ásmund, one of the early settlers, who was laid in a ship with a thrall beside him. A woman who was passing the mound heard him recite a verse, in which he expressed his dislike at being burdened with such a companion; the mound was therefore opened and the thrall removed.³

The famous Gunnar of Hlíðarendi (killed in 930) was seen by moonlight in his open mound, in which four lights were also burning; he wore a joyous look and recited a verse about

³ *Landnámabók*, bk. II. ch. 6.

nimself in a voice which was audible at some distance off.¹ The poet Thorleif, who died about the same time, at a later date came out of his mound and helped a shepherd-lad to complete a verse in praise of himself; as the lad woke up from his vision, he saw the poet's back as he disappeared into the mound again.² Even a Christian like the colonist Asólf, who died early in the 10th cent., was still interested in the state of his grave and the resting-place of his bones a full century later.³

So active were some of the dead, and so effective in the doing of harm to the living, that strong measures had to be taken to reduce them to a quieter state. Others, again, were formidable only when an attempt was made to enter the mound and rob them of their treasures. Tales of the performance of this perilous task are sometimes told of historical personages, but are more characteristic of the fictitious type of saga, in which the *haugbúi* becomes a stock character and is the subject of some grim narratives. Of those who leave the quiet of the mound in order to trouble the living there are some notable instances even in the more historical sagas, and many examples from the traditional lore of later times. The extensive ghost-literature of Iceland, indeed, both ancient and modern, affords one of the strongest proofs of the persistence of this belief in the individual survival of the dead among their old surroundings. Nor was their range confined to the immediate neighbourhood of the burial-place; they were, especially in the night or twilight, but exceptionally even in broad daylight, able to revisit the homestead and enter the houses, from which they sometimes even drove away the living occupants. The supreme example of this is the story of the hauntings at Fróðá on Snæfellsness in the year 1001, where the aggressive dead had finally to be expelled by a regular process of legal ejectment.⁴

When other means failed, the approved remedy was to open the mound and remove the body to some more distant place and, in the last resort, to burn it. It is thus clear that in the later days of the old religion the burning of the body was destructive of the real personality of the dead; whether this was so in earlier times when cremation was usual is a question which cannot be answered.

The attachment of the dead to the old home is also shown by certain instances in which the living person gives instructions as to his own burial.

Hrapp in Laxárdal (dying about 940) gave orders that he was to be buried in a standing posture under the doorway of his hall, so that he might continue to keep a watchful eye upon his household and homestead. His manner of doing so was so little appreciated that in the end his body was removed and subsequently burned, the ashes being disposed of at sea.⁵ In a neighbouring district, at a slightly later date (983), Tungu-Odd requested his friends to take him up to Skáneyjarfell and bury him there, so that he might be able to look over all the neighbourhood; and his request was carried out.⁶

In place of the artificial grave-mound a natural hill or hillock was sometimes regarded as the abode to which members of a particular family retired on their departure from this life.

Thus the heathen kinsmen of an early Christian woman-settler in Iceland, Auðr or Úðr, had a religious respect for the hillocks on which she had raised crosses and performed her devotions; they believed that they died into the hillocks, and Thórð Gellir was led into them before he assumed the position of a chief.⁷ Another early settler, Thórólf, 'had so much reverence for the hill that stood on the ness, which he called Helgafell,' that he made it a place of sanctuary, 'and it was the belief of Thórólf and his kinsfolk that they all died into the hill.'⁸ On the evening before Thórólf's son Thorstein was drowned his shepherd saw the hill opened up towards the north; within it large fires were burning, there was sound of revelry and drinking, and he could hear that greetings were given to Thorstein and his companions, and that to the former was assigned the seat of honour over against his father.⁹

Other instances of the same belief are found in

Selthórir and his kinsmen, who died into Thórisberg, and Kráku-Hreiðar, who 'chose to die into Mælifell.'¹ The casual manner in which these are mentioned in the sources indicates that the idea was a familiar one which required no explanation or comment.

That the mound and its occupant were held in respect by the surviving relatives was natural and usual, and traces of this have survived to the present day in the Scandinavian countries. That such respect might also assume the character of actual worship of the dead is clearly indicated by the ecclesiastical prohibitions quoted above, though positive evidence for the practice is not common. Some of the early Swedish kings are recorded to have been honoured in this way. Grim Kamban, the first settler in the Færöes, 'was worshipped when dead on account of his popularity.'²

The scarcity of such instances may indicate that the practice was falling into disuse in the later centuries of heathenism, though it certainly survived in Germany at the close of the 10th cent. to such an extent that it was necessary for the Church to denounce the 'oblations, quæ in quibusdam locis ad sepulchra mortuorum fiunt.'³ There are even apparent survivals of sacrifice to the dead in almost modern times, but it is doubtful how far these are of real importance as evidence for any continuation of the old belief. In the older Scandinavian period there is reason for believing that the name of 'elf' (*álfr*) was one of the designations of the dead, and it is a natural inference from this that the ceremony known as *álfablot* was primarily intended either to honour or to propitiate the spirits of the departed. On the other hand, there is no evidence that the usual funeral feast had any such character, although the dead themselves might occasionally be present at it.

This is related to have happened among the other strange events at Fróðá, when the drowned Thóródd and his companions came into the hall in the evening in their wet clothes. The company were pleased at their appearance, 'for it was regarded as a truth that drowned men had a good reception from the goddess Rán, if they came to their own funeral feast.'⁴

Sometimes the appearance of the dead in company with each other was a token of coming death for others.

When Bárð in Eyjafirth (about 980) was leaving the house of his sister-in-law, his wife turned round to look after him and fell down in a faint. 'I saw dead men,' she explained, 'coming to meet Bárð, and he must be fey; we shall not meet again.'⁵ The death of the foster-brothers of Ólafsdal by each other's hand (about 1025) was preceded by the appearance, close to the farm of Garpsdal, of Thorgeir Hávarsson and nine other men who had fallen along with him. They were all blood-stained, and they walked past the farm until they came to a stream near it, where they disappeared.⁶

The fore-warnings thus given by the voluntary appearance of the dead might also be attained by a deliberate process of interrogating them; but for this end it was necessary to 'wake up' the sleeping inmate of the grave, who might naturally be loath to be disturbed. Specific instances of this practice, however, belong rather to the realm of legend, as when Odin wakes up the sibyl to tell him the fate of Balder. The waking-up might also be performed for other reasons, as when Svipdag seeks the aid of his mother Gróa or when Hervör goes to demand the sword Tyrfring from her father Angantýr. In the story of Heðinn and Högni the dead men who have fallen in the battle are waked up again by Hild each night to resume the conflict; this nightly strife continued for nearly a century and a half before it was ended by a follower of Ólaf Tryggvason in the closing years of the 10th century.⁷

From this shadowy and imperfect, though real and individual, existence there was one way by which the dead might escape—that of being born again. That the doctrine of rebirth was prevalent in older times is expressly stated by the unknown collector of the Edda poems.

'It was a belief in old times that persons were born again, but that is now called an old wife's delusion. Helgi and Sigrún are said to have been born again; he was then called Helgi, prince of the Haddings, and she Kára, daughter of Hálldan.'

In the mythical *Gautreks-saga* the berserks who wish to annoy Starkað call him a 'reborn giant.' In the historical period it was commonly believed that King Ólaf the Saint was a reincarnation of a remote ancestor, Ólaf of Geirstaðir, known as Geirstaðálfr.

Once, as the king rode past the grave-mound of this Ólaf, one of his followers ventured to say to him: 'Tell me, my lord, if you were buried here?' The king replied: 'My spirit never had two bodies, and has not now, nor will it have at the resurrection.' The retainer persisted: 'It has been said that when you came to this place before, you spoke thus: Here we were and here we walked.' The king flatly denied the assertion and rode away as quickly as possible.²

Even as late as the middle of the 13th cent. the belief in rebirth appears to have survived in Iceland.

A certain Thorgils, who at that time rose to distinction, was a source of great joy to the men of his district: 'It seemed to them that Kolbeinn was born again and come back to them, whom they had always longed for.'⁸

So long as the dead were regarded as intimately connected with the burial-place and the old homestead, it is obvious that any theory of a special place for the spirits of the departed was not urgently required. Such an idea, however, may actually have arisen at a very early period, and it is unnecessary to suppose that the two views would be felt to be mutually exclusive. At all periods when burning was the ordinary method of disposing of the dead, the idea must have been natural that body and spirit were separable, and that with the destruction of the body the spirit was free to go elsewhere. Even when simple burial was practised, such a separation was not unthinkable; the spirit might well have its usual abode apart from the body, though capable of returning to it at will.

In one of the Edda poems already cited Helgi is buried in a mound, but departs to Valhalla. One evening Sigrún's attendant comes to the mound 'with many mead'; he says that leave to return has been granted to him; Sigrún then enters the opened mound, and there is talk of intense pathos between them; but towards morning Helgi has to depart again, so as to be back at Valhalla before cockcrow. (Variations of the idea form the theme of many ghost-tales in different lands.)

Departure to another world after being consumed on the funeral pile comes out clearly in the story of Balder, whose horse was burned along with him, and who then rode off to the domain of the goddess Hel, and in that of Brynild, who is represented as driving to the same place in the chariot in which she was laid and consumed. According to Snorri, the institution of burning was ascribed to Odin himself :

'He said that each man would come to Valhall with such treasures as he had on the funeral-pile.'⁵ (A further point of the belief was that 'the higher the smoke rose into the air, the more exalted the person burned would be in heaven.')

The departure to another world, however, might equally well take place when the body was left unburned.

King Harald Hilditönn, who was laid in a mound along with valuable rings and weapons, was provided with both a car and a horse, so that he might either drive or ride to Valhall.⁷

That these legendary instances have some founda-

tion in actual custom is shown by the passage in *Gisla Saga* relating to events about 965.

In this, at the burial of Véstein, Thorgrim is made to say: 'It is the custom to bind hell-shoes on men, with which they shall go to Valhall, and I will do it for Véstein.' When he had done so, he said: 'I cannot bind hell-shoes, if these come loose.'

Such accounts, however, belong to the Viking age, for which there is clear evidence of a developed theory of another life, with assignment of definite places for different classes of men. The earliest of these abodes of the dead was no doubt the realm of the goddess Hel, a world of shades similar to the Hades of the Greeks, in which the departed spirits appear to have had only a negative kind of existence, devoid of any occupation or interest.² At a later period, however, those who found their way to this region were only those who died of sickness or old age. Those who were drowned belonged to the goddess Rán, and those who fell in battle were divided between Odin and Freyja. There are also indications that some were supposed to fall to the lot of Thor, and that Freyja was the receiver of all women. Of the various conceptions arising from these views that which received most elaboration, if the extant evidence is to be relied on, was the life of the warriors who had gone to Odin in Valhall, of which a full account is given by Snorri in the first part of the Edda.³ Whether any of the dead were supposed to remain loosely attached to earth itself, without having a definite place assigned to them, does not appear. There is no evidence that the ideas of the 'wild hunt' and similar companies of departed spirits, so prevalent in later tradition, go back to the early Teutonic period or reproduce any conceptions from that time.

It is only in Snorri's Edda (written about 1220), and in a few lines of the older poetry on which this is based, that any ethical idea appears in the allocation of the different abodes.

The highest god, All-father, 'created man and gave him a soul which shall live and never perish, even if the body decay to dust or be burned to ashes; and all men whose ways are right shall live and be with himself in the place called Gimlé; but wicked men go to Hel and thence into Níðhel, which is down in the ninth world.'⁴

"When the world itself has been consumed by fire, the spirits of men will still subsist and have various abodes, many of them good and many bad. 'Then it will be best to be in Gimlé in heaven, where there will be abundance of good drink for those who enjoy that in the hall called Brimír. . . . That is also a good hall which stands on Niðafells, made of red gold; its name is Sindri. In these halls shall good and righteous men live.'⁶

On the other hand, all murderers and perjurers find a place of torment in a great hall on 'Corse-strand', the doors of which face northwards. The walls of this are wattle with snakes, whose heads are turned inwards; these spout out venom which flows through the hall in streams, and in these streams the wicked are doomed to wade.⁸

It is doubtful how much of this is genuine and how much is due to ordinary mediæval conceptions of heaven and hell. In any case the ideas are far removed from the more primitive beliefs which were still current in Snorri's time, and which, however much they may have been elaborated by the story-teller and the poet, clearly have their roots in the old Teutonic times of which no record has been preserved.

scribed.¹ The Tibetan notions on the state into which the spirit or soul of a deceased person is supposed to pass after death are mainly of an animistic character, and derived from the aboriginal shamanist Bon cult (see art. TIBET), though venerated over more or less with the ritual of Indian Buddhism and 'celestial' Chinese cosmogony. The laity and most of the Lāmas believe that, at first at any rate, the spirits of all the dead tend to become malignant ghosts, which require propitiation by the surviving relatives, except in the case of a few great saints, like the Grand Lāmas, whose spirits are supposed to re-incarnate almost immediately. But, in the background, most Tibetans cherish the hope of attaining the western paradise of the blest, the everlasting solar paradise of 'the Buddha of Boundless Light' (Hod-dpag-med or Amitābha), the popular goal of Northern Buddhists generally, just as in Southern Buddhism, in Burma, Siam, and Ceylon, the popular goal is not a *nirvāna* of extinction, but Indra's paradise in the sky, whence, they are taught, Buddha Gautama descended to this world and which he frequently revisited. It is mainly with the object of gaining merit sufficient to reach this paradise that the Tibetans so assiduously tell their beads, mutter so incessantly the mystic *Om mani* formula, and ply their prayer-wheels, revolving the same printed sentence, which is believed to close the door of hell and be the passport to heaven. The idea of rebirth in human or other form is not a popular one; nearly all concentrate their hopes on reaching paradise. Even *nirvāna* is considered by most Lāmas to be not any extinction of existence, but a dreamy existence in a personal paradise outside the circle of rebirths and so infinitely remote that it is unknowable.

The prevalent belief that the spirit of the dead person becomes a malignant ghost at first is in practice generally assimilated to the Buddhist theory of hell, as a temporary purgatory of expiation for sin. The spirit is admonished by the priests, as soon after death as possible, to take the road pointed out to it leading to the tribunal of the Judge of the Dead, but it requires the assistance of the priests by masses at every stage throughout that journey to pilot it along. At the outset it is free for one or two weeks to wander about, and this is the period when it is likely to exercise a malignant influence on the survivors. The regions through which the soul is piloted by the priests are of the nature of outer hells beset by demons lying in wait for straying souls, and generally resemble those analogous regions through which the spirits of the deceased were supposed to pass as categorically described in the Egyptian *Book of the Dead* and reflected in Bunyan's *Pilgrim's Progress*. The masses prescribed by the priests of all sects of Lāmas for the protection of the soul of the deceased in this long journey are very elaborate, prolonged, and costly, and usually run the relatives into debt. The present writer has been told by Tibetan servants on more than one occasion that the priests had informed them that the masses already said and paid for had only helped the soul past such-and-such demons and regions, that it was now in such-and-such a distressful spot, and had such-and-such danger zones still to pass before reaching the judgment-seat, when the supreme effort of the priests would be necessary to procure 'rebirth' in paradise.

The hells offer the chief terror to the Tibetans, whom the priests have made familiar with the hideous tortures to be expected there by the harrowing scenes which they have painted in graphic gruesome detail on the walls of every temple, whilst the ubiquitous Wheel of Life fresco,

¹ See art. DEATH AND DISPOSAL OF THE DEAD (Tibetan).

which also depicts the hells and other spheres of orthodox Buddhist rebirth, displays in its upper compartment, in alluring contrast, the bliss and joys of paradise. A peculiarity of the Tibetan hells is the addition of a series of cold hells to the orthodox hells of the Buddhists.¹ It is easy to see how the idea of cold hells arose, on the extension of Buddhism from subtropical India to such totally different physical and ethnic conditions as exist in icy Tibet; the natives of the palæarctic region of Central Asia were accustomed to feel the bitter pain and misery of the arctic cold and to regard heat rather as a comfort and blessing. These cold hells are placed on the edge of the Buddhist universe in a subterranean region of darkness below its encircling wall (Chakravala). They are encircled by icy glacier mountains and have demon attendants of appalling aspect, as in the hot hells. They are eight in number, like the orthodox hot hells, and are thus described:

(1) *Ch'u-bur che'n-go* (Skr. Arbuda) = 'blistered or chapped.' The torture here is constant immersion of the naked body in icy glacier water, under which it becomes covered with chilblains (a torture which may be compared with the curse invented by a scribe in the reign of Athelstan for any one who should break the terms of his charters: 'May he be tortured by the bitter blasts of glaciers and the Pennine army of evil spirits').²

(2) *Ch'u-bur brol-wa* (Skr. Nirarbuda). The chilblains are rudely scarified by knives, producing open raw sores.

(3) *A-ch'u* (Skr. Aṭaṭa). 'Ach'u' and 'A-ṭa-ṭa' are explained as the exclamations of anguish beyond articulate expression, which resound through this hell.

(4) *Kyi-ud* (Skr. Hahava). A worse degree of cold in which the tongue is paralyzed, and the exclamation of 'Kyi-u' or 'Ha-ha' is alone possible.

(5) *So-lam-pa* (Skr. Ahaha). Here both jaws and teeth are spasmodically clenched through cold.

(6) *Ut-pal-lar gas-pa* (Skr. Utpala). Livid sores develop which become everted like the petals of the blue Utpal lotus-flowers.

(7) *Padma-lar gas-pa* (Skr. Padma). The sores become like the red lotus Padma flowers.

(8) *Padma-chen-po-lar gas-pa* (Skr. Puṇḍarika). Raw sores where the flesh falls away from the bones like the recurring petals of the great lotus, and which are continually pecked and gnawed by birds with iron beaks, as in Æschylus's Greek legend of *Prometheus Bound*.

The agonizing torments of these hells, so vividly pictured and described by the priests, no doubt act as a deterrent to evil-doers and have thus a certain ethical value, though this is largely discounted by the fear and loss of peace of mind inflicted on the surviving relatives by the harrowing stories of intermediate tortures requiring masses, invented by the self-interested rapacious priests.

The paradise of the blest, when once eventually reached, is considered to be everlasting, and thus is unlike Indra's heaven, the popular goal of Hindus and the Southern Buddhists, which, although more permanent than the earth, is finite, and its occupants subject inevitably to re-enter the cycle of ceaseless rebirths in a higher, but most often a lower, sphere of life, with, according to Buddhist teaching, its inveterate misery. The Tibetans thus look forward to a happier existence in the world beyond death than do the Hindus and Southern Buddhists.

STATIONS.—This word was used in Christian antiquity in more than one technical sense. We

¹ See art. STATE OF THE DEAD (Buddhist), COSMOGONY AND COSMOLOGY (Buddhist).

² Cited by D. W. Freshfield, in *Geog. Journal* [1891]. The cold hells figure in the N. European mythology as evidenced by this reference to them in the 10th cent. Anglo-Saxon tale 'Salomon and Saturn.' On the defeat of the rebel angels it said that 'for them, he [God] made Hell, a dwelling deadly cold, with Winter covered: Water he sent in and snake-dwellings, many a foul beast with horns of iron, bloody eagles and pale adders; thirst and hunger and fierce conflict, mighty terror, joylessness' (tr. J. M. Kemble, *Salomon and Saturn*, p. 173).

may first consider the word as used in the West in early times, the Latin *statio* being in question; and then 'stations of penitents,' and finally 'stations of the cross' will be dealt with.

1. Stations as fasts.—The first instance of this is in Hermas (early or middle 2nd cent. ?), who, writing at Rome in Greek, transliterates *statio* into *στατιον*. He says to the Shepherd, 'I am keeping a station' (*στατιωνα εχω*). The Shepherd asks, 'What is a station?' Hermas replies that it is a fast, and that he is fasting according to his custom.¹ From the language used we may gather that 'station' was not a universally known name; and that it is not used in Hermas for a fast on any fixed day. Later, at the end of the 2nd cent. and early in the 3rd, Tertullian gives the name 'stations' to the half-fasts (*semijejunia*) of Wednesdays and Fridays,² which ordinarily ended at 3 p.m., but which the Montanists prolonged till the evening.³ The 'Psychics' (Catholics) sometimes continued 'the station even over the sabbath (Saturday), a day never to be kept as a fast except at Pascha.'⁴ In these half-fasts the 'Psychics' sometimes lived on bread and water, and they treated them as of voluntary observance rather than as matters of injunction, as the Montanists did.⁵ The *de Jejuniis* was written after Tertullian became a Montanist. In another late work⁶ he uses the word *statio* more generally, of Daniel's fast (Dn 10²⁴): 'in a station of three weeks aruit victu,' i.e. he practised xerophagy, a much restricted diet. In *de Jejun.* 13 Tertullian calls fasts held before the meetings of councils 'stations.' In an earlier work, written before he became a Montanist,⁷ he speaks of the eucharist being celebrated on 'station days,' and of the scruples of some at communicating then, lest they should break their fast. He suggests (for the scrupulous) private reservation of the sacrament until the 'station' is over, but deprecates their absenting themselves from the eucharistic service: 'Will not thy station be more solemn if thou hast also stood (*steteris*) at the altar of God?' He goes on to explain that the word 'station' is derived from a military metaphor, 'for also we are God's soldiers' (*militia*; cf. 2 Co 10⁴, 1 Ti 1⁸, 2 Ti 4⁷). And this is doubtless the true origin of the name. In classical Latin *statio* is a military guard, and *stationarius* is a soldier on guard. Tertullian uses *stationes facere* ('to keep watch') both literally and figuratively of Christians on guard.⁸ In the 4th cent. Augustine uses *stationarius* figuratively,⁹ and Ambrose says that stations are encampments protecting us from the assaults of the devil; 'standing' in them, we repel the enemy.¹⁰

Tertullian uses *statio* also in other senses: as 'the resting place in believing' (*statio credendi*), a metaphor from a camp;¹¹ as a 'stage' of life (marriage as opposed to virginity);¹² and in a physiological sense, as the membrane round the heart (*statio sensuum* = *περικαρδιον*).¹³

It will be noticed that all the writers mentioned above were Westerns. Easterns, like the author of the *Didache*¹⁴ and Clement of Alexandria,¹⁵ speak of the Wednesday and Friday fasts, but do not use the word *statio*. An Eastern instance, however, of *statio* transliterated is the East Syrian (Nestorian) *istat'yūnā*, used in the service-books for 'a doctrinal hymn.'¹⁶

2. Stations in churches and sacred places.—The name *statio* is also used for a public service (usually at Rome the eucharist), held in a previously arranged church or sacred place for the whole community; frequently there was a procession to the place, and the station may have been so called because the procession stopped there, though it has also been held that the name came from these public services being held on 'stated' days, or (originally) on 'station days,' Wednesday and Friday.¹ The name was also given to the church or place where the service was held, or to the processions themselves.² This use of the word is later than that described in the preceding section. But Cyprian in the 3rd cent. describes how the messengers of Novatus burst in 'in statione,' demanding that their accusations should be publicly investigated by Cyprian and the people; and 'in statione' can hardly mean here 'on a station day,' but must signify 'in a public assembly.'³ Gregory of Nazianzus in the 4th cent. uses the cognate *ordos* of an assembly in church.⁴

In the interesting *Pilgrimage of 'Etheria'* ('*Silvia*'), probably of the end of the 4th cent., stations at the holy places in and near Jerusalem are described in some detail, but they have no technical designation. The thing, but not the name, is there. We may gather that the Western (Spanish?) authoress did not know the name, or she could hardly have avoided using it. The place and time of the next station are publicly given out by the archdeacon just as in the *Ordines Romani* (below).⁵

At Rome we find both the name and the thing. Pope Gregory the Great (A.D. 590-604) is said⁶ to have regulated the stations and to have fixed the churches in Rome where they should be held. The whole of the local Church took part in them, and hence in the *Ordo Romanus* of St. Amand, found in a 9th cent. MS, we read of a *statio catholica*.⁷ Stations are frequently mentioned in the *Ordo Romanus Primus* (c. A.D. 770; founded on a similar document of the 6th cent.) and in the succeeding *Ordines*.⁸ The eucharist was celebrated at the station church with much solemnity by the pope. If a diocesan bishop said a station mass in the absence of the pope, he did all as the pope would do; but, if a presbyter did so, then the 'Gloria in excelsis' was omitted, because it was said by a presbyter only 'in Pascha,' i.e. in Easter-tide.⁹ The archdeacon in the *Ord. Rom. Prim.* announces the next station,¹⁰ but in *St. Amand* the deacon.¹¹ We read of a 'stational chalice,'¹² apparently a large one, and 'stational crosses,'¹³ and a 'stational acolyte' (*unus ex acolythis stationarius*, or simply *stationarius*),¹⁴ who goes before the pope on foot in the procession, with the chrism, a napkin (*mappula*) being wrapped round the *ampulla*, or vessel holding the chrism. It was at such solemn stations that ordinations were held in Rome, on the Saturday of Ember weeks.¹⁵

The *Gregorian Sacramentary*¹⁶ gives masses for all the stations at the various churches in Rome.

3. Stations of penitents.—In the 4th cent., or possibly earlier, the penitential system was developed both in the East and in the West, but

it is only in the East that the organized 'stations of penitents' are found, and even there not universally. There are differing grades of penitents, called *βαθμολογία* or *βαθμολογούμενοι*, at the Council of Ancyra in N. Galatia (A.D. 314).¹ They were four in number: (a) 'mourners' (*στεντες, προσκλαυοντες*), who might not enter the church (hence *πρόσκλησις* for the name of the station); perhaps also called at Ancyra² 'storm-driven' (*χειμαζόμενοι*), which usually means 'demoniacs', as in the *Apostolic Constitutions*, viii. 12, 35, 38; (b) 'hearers' (*audientes, ακροώμενοι* [see below]), who stood within the church door or in the porch (hence *ἀκρόασις, ἀκρόασθαι*); (c) 'kneelers' (*substrati, υποκλιπτοντες*), who might enter the church, but not pass the ambo (hence *ὑπόπτωσις, ὑποπεσεῖν*); (d) 'bystanders' (*consistentes, συνιστάμενοι* or *συνεστῶτες*), who might be present at the eucharist, but might not communicate or make an offering (hence *σύστασις*). The first three grades were dismissed before the *missa fidelium* began. In the second and third canonical epistles of Basil, bishop of Cæsarea in Cappadocia,³ we find all four grades; thus a person in his first year would be 'expelled from prayer' and would 'weep at the church door' (=a), in his second he would be 'received to the sermon' (=b), in his third he would be 'admitted to penance' (=c; see below), in his fourth he would be allowed to 'stand with the people, while withheld from the oblation' (=d). In some cases⁴ a station might be omitted, the penitent going straight from the first to the third station; in can. 81 of Basil, as in can. 7 of Ancyra, the last station is apparently omitted. This fourth station is also called 'joining only in prayer' or 'being without offering,' as at Ancyra⁵ and Nicæa.⁶ The third station seems to have been the most important, and Basil⁷ calls it by the general name of 'penitence' (*μετάνοια*). The first mention of these four stations has been thought to occur in a passage of Gregory Thaumaturgus, bishop of Neocæsarea,⁸ where all four are named; but this is probably an addition by a later writer,⁹ and we cannot be certain of the existence of the four stations much before the 4th century. But they, or most of them, are mentioned at Ancyra,¹⁰ at Nicæa,¹¹ at Neocæsarea in Pontus (A.D. 314 or later).¹² At the last a 'kneeler' is called *γόνυ κλίνων*.¹³

On the other hand, we do not find these grades of penitents in the Church Orders of the 4th (or 5th) cent.; thus in the *Apostolic Constitutions* (c. A.D. 375) the penitents are mentioned as being dismissed at the eucharist after the catechumens, but they are all called 'hearers,'¹⁴ or, generally, 'those in penitence.'¹⁵ In this work, then, we have no trace of stations of penitents, though *σύστασις* is several times used in it in other senses. And the same thing is true of the other Church Orders. It is equally true of Western and 'African' councils, such as those of Elvira in Spain (c. A.D. 305), Arles in Gaul (A.D. 314), Carthage II. (A.D. 387 or 390), Hippo in Africa (A.D. 393), Toledo in Spain (A.D. 400), Orange in Gaul (A.D. 441), Arles II. (A.D. 443 or 452), and others; these mention penitents, but have no stations. This is the case also with the Gallican *Statuta ecclesie antiqua* ('Gallican Statutes'; c. A.D. 500). In Tertullian the catechumens are the 'hearers' (*audientes* or *auditores*).¹⁶

The name 'hearers,' whether used of penitents or of catechumens, comes from the fact that these classes heard the liturgical lessons (in some cases not the Gospel), though they were not allowed to be present at the more solemn part of the eucharist.

Even in the East the stations of penitents seem not to have been at all regularly organized. They are not mentioned in the *Apostolic Canons* (in their present form probably dating from c. A.D. 400), nor in the canons of Gangra in Paphlagonia (4th cent., date uncertain), or of Sardica, the modern Sofia in Bulgaria (A.D. 347; the genuineness of these canons is disputed), or of Antioch in *encænii* (A.D. 341). These canons mention penitence, but not the grades or stations. At Laodicea in Phrygia (c. A.D. 386) 'hearers' may mean all penitents;¹ no other station is mentioned. The canons of the ecumenical councils of Constantinople (A.D. 381), Ephesus (A.D. 431), and Chalcedon (A.D. 451) do not deal with penitence. In Chrysostom's Constantinople writings there is no mention of the dismissal of the stations of penitents,² possibly because the office of penitentiary presbyter in that city had lately been abolished (*i.e.* A.D. 391).³

In the Churches of the farther East the stations of penitents, if they existed, apparently soon died out.⁴ Jacob of Edessa, in his *Letter to Thomas the Presbyter*,⁵ describing the liturgy as known to him (he died A.D. 708), speaks of the catechumens as 'hearers' and describes their expulsion in the liturgy before that of the 'energumens' and the 'penitents,' but says that it was in fact quite obsolete in his day. In the canons (8th or 9th cent.) of uncertain origin, perhaps Syrian Jacobite, given by H. Denzinger,⁶ and in the Jacobite canons also given by him,⁷ of a later date, there is just a trace of 'mourners' in the fact that some penitents are not allowed to enter the church, but are ordered to remain outside 'weeping for their sins,' usually for a year, but in some cases for a much longer period; after that they are allowed to enter the church, but are restrained from communion for a longer or shorter period; the penalty ordinarily provided is fasting, on a restricted diet, but in one case⁸ a flogging, and in the latest set of canons a stated number of genuflexions and recitations of anthems (*sedré*). In the Nestorian *Sunkhadhus* (Book of Canon Law) there are no stations of penitents.

We must therefore conclude that stations of penitents were an Eastern, not a Western, organization, and that even in the East they were only partially recognized, and that but for a time. We find them, however, in the 'Trullan' (Constantinople) Council of A.D. 691 or 692.⁹ This is a quotation from Basil, and speaks of all four stations of penitents, but does not name them.

4. 'Stations of the cross.'—This is a name given in post-Reformation days to a series of sculptures or pictures set up in many churches in the West, showing various events in the Passion of our Lord, for the devotion of worshippers who cannot go to the sacred places of the Holy Land, and who go round these stations, praying at each. The stations are fourteen in number, and do not all represent events explicitly mentioned in the Gospels. The name is apparently derived from the idea of a station described above in § 2.

A. J. MACLEAN.

STEALING.—See CRIMES AND PUNISHMENTS.

STEDINGERS.—The crusade against the Stedingers was of the mixed political-religious type characteristic of all the later crusades. The Stedingers were a mixed race of herdsmen and fishermen who had colonized the lower Weser and the country north of Bremen. Disputes with the counts of Oldenburg from about 1187 were soon mixed up with questions of tithes. Some monks who urged the duty of payment were murdered, and a priest who had tricked a woman, by placing in her mouth a coin instead of the wafer, was slain by her husband. This led in 1206-07 to the attempt of Hartwig II., archbishop of Bremen († 3rd Nov. 1207), to reduce the Stedingers by force, but the first effort had little success. In 1229 a further attempt by Gerhard II. of Lippe, archbishop of Bremen, led on Christmas Day to the complete repulse of the crusades. Unfortunately the Stedingers, to celebrate their triumph, appointed mock popes, archbishops, and bishops, and this enabled the authorities to represent them as spiritual rebels. In 1230 the Stedingers were accordingly put under the ban at a synod in Bremen as the vilest of heretics, and on 3rd Feb. 1232 Gregory IX. ordered a crusade to be preached against them. They were described in the bull as heretics who worshipped demons, indulged in magic, and sometimes crucified priests. On 19th Jan. 1233 Gregory once more repeated his exhortations to the crusade in letters to the bishops of Westphalia.¹ An army was collected, but nothing was accomplished. As the crusaders melted away, Gregory, on 17th June 1233, ordered a new crusade.² He attributed past lack of success to the belief that the crusaders were not getting the same indulgences as those granted for the Holy Land. The bishops were ordered to make it clear that the indulgences were the same. The new crusade devastated the country; all the men captured were burned; but it was finally defeated, and its leader, Count Burchard of Oldenburg, was slain.

In 1234 a third crusade was preached by the Dominicans in Holland, Flanders, Westphalia, and the Rhinelands. On 27th May at Altenesch the Stedingers were broken up, chiefly by the force of Thierry, count of Cleves. To the memory of the 6000 Stedingers then slain a monument was dedicated on the field of battle on 27th May 1834. After the devastation of their land Gregory announced in Aug. 1236 that the rebellion was at an end, and that the survivors were to be reconciled to the Church.

LITERATURE.—The main authority is H. A. Schumacher, *Die Stedinger*, Bremen, 1805. There is a short abstract of this in H. C. Lea, *A Hist. of the Inquisition of the Middle Ages*, 3 vols., New York, 1887, iii. ch. iv. The primary sources will be found in the contemporary chronicles, especially Adam of Bremen, *Gesta Hammaburgensis Ecclesiae Pontificum*, ch. 203, Albert of Stade, *Chronicon* and *Chron. Erfordiens.*, all in Pertz, *MGH*; see also O. Raynaldus, *Annal. Eccles.*, ed. J. D. Mansi, Lucca, 1747-50, *sub ann.* But the primary sources are very confused in their accounts.

H. B. WORKMAN.

STIGMATA.—Stigmata is the name specially applied to marks on the body which have a religious reference. Herodotus³ relates, regarding a temple of Hercules in Egypt, that runaway slaves who took refuge in it were not liable to be re-captured if they had received on their bodies stigmata which signified their devotion to him. Such marks are alluded to by St. Paul in Gal 6¹, where he speaks of himself as bearing in his

body 'the stigmata of the Lord Jesus'; and Pontius (3rd cent.) refers to Christian 'confessors' whose foreheads were sealed with a (sacred) inscription.¹

1. From the 13th cent. (and perhaps earlier, although unrecorded) the word has been applied particularly to wounds resembling those of the crucified Jesus, and found on the person of a devout believer, especially after intent contemplation of our Lord's Passion. In over 100 cases one or more of the stigmata of the Cross—the wound on His forehead due to the crown of thorns, those on His hands and feet caused by the nails, and the wound in His side inflicted by the soldier's spear—are stated to have been reproduced in the persons of fervent Christians.² The earliest recorded and historically the most notable instance is that of St. Francis of Assisi, two years before his death; and in connexion with this reported stigmatization, chiefly, the question has been debated whether the alleged reproductions of Christ's stigmata really existed, and, if so, whether they were miraculously imparted, self-inflicted, or spontaneously formed as the outcome of abnormal yet not supernatural influence of soul over body.

2. The earliest detailed account of the stigmata of St. Francis is furnished by Thomas de Celano, whose first biography of the saint was composed, by order of Pope Gregory IX., at some date between 16th July 1228, when Francis was canonized (within two years after his death), and 25th Feb. 1229, when the biography received papal approval.³ Celano relates how, in the autumn of 1224, the saint retired, along with a few companions,⁴ for meditation and devotion to Mt. Verna, an isolated peak of the Apennines, over 4000 ft. in height. During their sojourn there the soul of Francis was filled with thoughts of our Lord's Passion. On one occasion, at the date of the Festival of the Elevation of the Holy Cross, 14th Sept.,⁵ he saw in a vision a Man of God like a seraph, with six wings, standing above him, and nailed to a cross, with hands extended and feet joined together. Two wings were raised above the head; two were outstretched for flying; two covered his body. After Francis had experienced a brief rapture, the vision vanished; but its significance was soon revealed.

¹ In his own hands and feet there began to appear marks of the nails, just as, shortly before, he had seen those on the Holy Man crucified. His hands and feet appeared transfixed in the middle with nails; the heads of the nails appearing on the inner side of the hands, and on the upper side of the feet, while the points (*acumina*) of the nails were on the other side. Those marks were round on the inside of the hands, but oblong on the outside; and a fleshy excrescence (*caruncula*) appeared, projecting from the rest of the flesh, as if the tops of the nails were bent back and pierced through. The right side was as if transfixed by a spear, a scar being formed over the wound. This right side often emitted blood; so that his tunic and under-garments were frequently besprinkled. Ah! how few, while the crucified servant of the Lord was alive, had the privilege of beholding the sacred wound of the side! But Elias⁶ was so fortunate as to be one who, while the saint lived, had the privilege of seeing both [blood and wound]. Happier still was Rufino who touched the precious wound. . . . For he [the saint] most anxiously concealed it from strangers; he concealed it most carefully even from his intimate friends; so that . . . of them . . . thereof. . . . After his death there remained on

¹ *Vita et passio S. Caeclii Cypriani*, ch. vii.

² See Imbert-Gourbeyre, *Les Stigmatistes*, 1873. He enumerates 125 cases of women and 20 of men who were alleged to have stigmata—80 of them prior to A.D. 1700. A few may be deducted as barely relevant.

³ Celano, *Vita prima*, proleg., and note in the Paris MS.

⁴ *Vita prima*; A.S. Oct. ii. 703 f. According to the *Fioretti* (14th cent., but believed to embody contemporary testimony), three of these were Leo, Masco, and Angelo.

⁵ So the *Fioretti*; Celano does not indicate the exact date.

⁶ Vicar-general of the order, and successor of St. Francis. He was not in sympathy, however, with Francis' rule of absolute poverty, and was eventually superseded and disgraced.

¹ A. Potthast, *Reg. Pont. Rom.*, Berlin, 1874-75, I. 778.

² *Ib.* I. 790.

³ *Ib.* 113.

him the appearance of the Passion; while he seemed as if he had been recently taken down from the Cross; having his hands and feet transfixed with nails, and his right side as if pierced with a spear. They beheld his flesh, which formerly had been dark, shining with exceeding brightness; they saw his face as it had been the face of an angel. . . . It was wonderful to see, in the middle of his hands and feet, not indeed the punctures of nails, but the nails themselves set in them with the black colour of fresh iron, and the right side reddened with blood. Brethren and sons ran to behold; weeping together they kissed the pious father's hands and feet, and also his right side.'

3. Several notable variations from this narrative are found in somewhat later records. (1) The writing attributed to 'Three Companions,' Leo, Angelo, and Rufino (in a part of it, however, which Sabatier¹ holds to be not of their authorship, yet very ancient) and also the biography of the saint composed by Bonaventura in 1260, represent as crucified not the seraph himself but a man borne by the seraph on his wings. (2) This narrative ascribed to the 'Three Companions' indicates that Francis could not prevent the stigmata from being manifest to his intimate friends;² and Bonaventura more emphatically declares that very many (*plurimi*) brethren saw the stigmata during the saint's life, including 'some cardinals owing to their intimacy with the holy man.'³ (3) Matthew Paris, writing some time before 1259, ignores any appearance of stigmata until fifteen days before Francis' death, represents blood as 'continually flowing' from hands and feet, and refers to the wound in the side being 'open wide.'⁴

4. Celano does not profess to have beheld the stigmata; and, as already stated, he expressly names only two persons who had seen any of them. The narrative attributed to the 'Three Companions' is still less definite as to witnesses. From other sources, however, we have strong confirmation of the main testimony that, at some time or other, stigmata were seen on the person of St. Francis.

(1) Leo, one of his companions on the Verna, after authenticating the saint's autograph benediction (preserved at Assisi), adds the words which may still be read at the foot of the little document:

'The blessed Francis, two years before his death, kept Lent on the Verna, from the Festival of the Assumption of the Holy Virgin to the Festival of St. Michael in September; and the hand of God was laid upon him *per visionem et allocutionem seraphym et impressionem stigmatum Christi in corpore suo*.'⁵

(2) In the *Speculum Perfectionis*, substantially composed before 1247 by Leo, assisted by other 'companions,' there is a brief but distinct reference to the stigmata.

'In sacro monte Alvernae tempore quo recepit stigmata Domini in corpore.'⁶

(3) On the day of Francis' death his vicar-general Elias announced the fact of the stigmata to members of the order in France as follows:

'Not long (*non diu*) before his death our brother and father appeared crucified, bearing in his body five wounds which are truly stigmata of Christ: for his hands and feet bore as if marks (*puncturas*) of nails forming scars, and showing the blackness of nails; while his side appeared pierced with a spear and often exuded blood.'⁷

(4) Salimbeni, in his *Chronica* (1282-87), testifies that Leo, who was present when the corpse of Francis was washed, told him that the saint looked precisely like a crucified man taken down from the Cross.¹

(5) In 1247, at an assembly of Franciscans in Genoa, Bonifacius, a member of the order, publicly and solemnly declared, in response to a question by John of Parma, general of the order:

'These sinful eyes beheld them [the stigmata]; these sinful hands touched them.'²

(6) In a bull of date 1237 Pope Gregory IX. (formerly Cardinal Ugolini), a personal friend of St. Francis, bears official testimony to the reality of the stigmata in hands, feet, and side, both during life and after death ('*specie stigmatum divinitus exhibit insignitus*').³

(7) Bonaventura, in his *Legenda S. Francisci* (A.D. 1260), repeats substantially, although, as we have seen, with some variations, Celano's record on the authority of personal friends of the saint.

5. Notwithstanding these testimonies, the unreality of the stigmata (unless fraudulently inflicted by Elias on the night of Francis' death) has been maintained in modern times by Hase,⁴ Renan, and others. This disbelief rests (1) on the alleged absence of direct testimony by any actual witness with the doubtful exception of Elias; but the statement of Leo in his *authentication* and the attested declaration of Bonifacius amount practically to such direct testimony; (2) on discrepancies as to details in the various primitive records—discrepancies, however, which do not affect the main points of the testimony; (3) on the admitted doubt or disbelief of the bishop of Olmütz and some other contemporaries, including certain Dominicans and secular clergy,⁵ but these had not all the evidence before them, and they were affected by *a priori* considerations, such as the impropriety of representing any one except Christ as possessing the stigmata of the Holy Passion; (4) on suspicions connected with the obsequies of the saint, whose body was hastily confined and entombed in the morning after the night of his death, while, on the occasion of its translation, the exact place of sepulture was concealed; but the hurried funeral (apart from the frequency of hasty burial in hot climates) was probably due to fear of relic-hunters tearing the body in pieces; and the subsequent concealment may have arisen from suspicion of the Perugians, who were believed to be anxious to possess the body; (5) on the absence of any reference to the stigmata in Gregory IX.'s bull of canonization. Gregory, however, as we have seen, testifies elsewhere to their reality.⁶

6. The testimonies adduced appear to prove, beyond reasonable doubt, that phenomena resembling the stigmata of Christ's Passion appeared in the person of St. Francis on Mt. Verna, and were also seen by numerous witnesses after his death. On the other hand, evidence that the stigmata were continuously on the saint's body during the two years between the Verna vision and his decease is inadequate and burdened with difficulty, while

¹ Quoted by Sabatier, *Life of St. Francis*, Eng. tr., p. 423.

² Eccleston, *De adventu Fratrum Minorum in Angliam*, Coll. xli. in J. S. Brewer's *Monumenta Franciscana*, Rolls ser. lv. i. p. 51. Eccleston composed this work between 1250 and 1272. Bonifacius probably refers to what he saw and did after St. Francis' death; for during the saint's life he would not have been allowed to touch the wound in the side.

³ AS, Oct. ii. 654. Bonaventura, indeed, in the preface to his *Life of St. Francis* (*Legenda Major*), states that at first Gregory doubted the reality of the stigmata; but the above testimony indicates that his doubts were dispelled after due investigation.

⁴ Franz von Assisi, pp. 142-202 (1856 ed.). Hase, however, eventually adopted another view (see below).

⁵ AS, Oct. ii. 654-658.

⁶ See Sabatier, *Life of St. Francis*, Eng. tr., p. 423; and Knox Little, *Life of St. Francis*, pp. 315-317; both writers reply in detail to Hase's arguments.

¹ *Life of St. Francis*, Eng. tr., London, 1894, pp. 376-378. The original record was completed in 1246; but the existing document bears evidence (Sabatier maintains) of mutilation, and the latter part is apparently a summary by a different writer of the later portion of Francis' life.

² AS, Oct. ii. 741.

³ AS, Oct. ii. 778. He specifies Pope Alexander IV. as having stated in his (Bonaventura's) hearing that he had seen the stigmata; but this pope in his bull *Benigna operatio* (A.D. 1255), while threatening with St. Peter's anger doubters of the miracle, rests his plea for the reality of the stigmata not on his own witness of them, but on the authority of his predecessor, Gregory IX. Bonaventura may have misunderstood Alexander.

⁴ *Historia Major*, pp. 339-342.

⁵ *Speculum Perfectionis*, ed. Sabatier, preface, p. lxxviii.

⁶ *Id.* p. 194; Knox Little, in *Eng. Hist. Rev.* xvii.

⁷ AS, Oct. ii. 669. Wadding, in his *Annales Minorum* (17th cent.), declares this letter to be a copy of an autograph preserved in a Belgian monastery (AS, Oct. ii. 643).

the minute details given by Celano and others on reported testimony receive scant corroboration from eye-witnesses. For (1) no one actually declares that he had seen the stigmata during that interval; (2) only two persons, Elias and Rufino, are expressly stated to have seen or touched any of the wounds during Francis' life; (3) Elias testifies only to the appearance (or re-appearance) of the stigmata 'not long' before the saint's death, without either asserting or denying earlier stigmatization;¹ (4) Celano, indeed, as we have seen, states that Francis revealed the secret of the stigmata to few or none ('raro aut nulli'); yet, even supposing, as Bonaventura declares, that Francis, after the Verna vision, wore sandals and gloves for concealment, the wounds in his hands, if they continued to exist, could not have escaped fairly frequent observation. Accordingly, Bonaventura, perceiving doubtless this impossibility, yet believing in the continued existence of the stigmata, contradicts Celano and writes that *plurimi* saw them. (5) But, if very many saw them, how account for wide-spread early doubts arising after the saint's death as to the reality of the wounds, before adequate testimony to their existence was furnished²—doubts which were regarded as of sufficient importance to occasion two papal bulls denouncing doubters in 1237? (6) Elias, with every motive to magnify the miracle, writes, not, like Celano, of 'excrescences of flesh' and of 'heads and points of nails,' but simply of hands and feet having 'as if the marks of nails' and 'showing the blackness of nails.'

How much of the earliest records can we safely regard as true? We may accept (1) the main point of the narratives of Celano and others as to the saint's vision of a crucified seraph or man, in so far as that record is confirmed by Leo (who was with him) in his authentication of Francis' benediction; (2) the statement, also confirmed by Leo in that authentication, as well as by the *Speculum*, that on this occasion certain stigmata of the Passion appeared on the saint's person; (3) the testimony of Elias, of Pope Gregory IX., and probably of Bonifacius, that at the saint's death, and therefore presumably 'not long' before it, the stigmata were also visible. On the other hand, the continuance of the stigmata over two years, and several details in the narratives of Celano and Bonaventura, must be set aside as legendary accretions, occasionally inconsistent with each other, and the outcome of mere reported testimony in which fancy is mingled with fact.

7. Of the facts thus accepted three explanations have been offered.

(1) The stigmata were 'divine manifestations'—'in the true sense of the word miraculous'—given by God to St. Francis, in order to 'bear witness to his special sanctity' and spiritual likeness to Christ, as well as to vindicate the truth of his teaching. This was the view of his personal followers and of the great majority of his contemporaries; it is still upheld by most Roman Catholics and by some representatives of Reformed Churches.³ This explanation harmonizes with the mediæval religious viewpoint and received general acceptance in mediæval Christendom. Yet the doubts of the contemporary bishop of Olmütz and others, grounded chiefly on dogmatic reasons, show

that even in that age, and even when allowance is made for the prejudice and jealousy of secular clergy and rival orders, there were some to whom the alleged imprinting of stigmata by divine action appeared unbecoming. Most modern Protestants and probably many devout Roman Catholics realize as almost grotesque an alleged attestation of special holiness through infliction of bodily wounds.

(2) Another explanation is that Francis, during his vision on Verna, while in a state of ecstasy, and without distinct consciousness, inflicted on himself the stigmata, being moved thereto by an ecstatic desire to be 'crucified with Christ' and to become 'conformable unto His death.' This explanation is rendered tenable by the rejection of the details about 'fleshy excrescences' and about heads and points of nails under the flesh, as being inadequately attested, and by the limitation of the stigmata to what Elias calls 'as if marks of nails' and 'scars in hands and feet,' along with 'a side which appeared as if pierced with a spear.'¹ One difficulty of accepting this view rests on the renewal of the stigmatization not long before Francis' death, when he may well have had a repetition of the vision, but when he may be assumed to have been too feeble for any considerable self-wounding such as would lead to a recognition of the stigmata of the Cross by his followers; and, even if we admit that enfeebled persons sometimes exert for a few moments in delirium præter-normal strength, could self-stigmatization, in such circumstances, have been effected by the saint without observation by others? The difficulty, however, of accounting, on this theory, for the later stigmata 'not long' before death would be removed, if we supposed (what Elias's real character, afterwards disclosed, renders conceivable) that Elias himself re-inflicted on the saint's corpse wound-marks which then no longer existed, but which Elias believed to have formerly existed in the living body for some time after the Verna vision. Francis died in the evening; Elias, as vicar-general, would be guardian of the body over night; and what is known of his ambition, worldliness, and intrigues, which eventually issued in his deposition, renders it not incredible that, for the great glory of the order, he should have conceived and carried out a scheme to relieve the former real stigmatization from such doubt as Francis' own habitual reticence had engendered.

(3) It is not necessary, however, to assume miraculous divine intervention, ecstatic self-infliction by the saint himself, or fraudulent production by another. The mutual influence of soul and body is a subject as yet only partially investigated. 'We have caught,' as Sabatier writes, 'but fleeting glimpses into the domain of mental pathology.'² The extraordinary is not to be identified with the miraculous; and we know enough not to be over-sceptical of the power of man's higher nature to impress itself, in certain cases, on the lower, and to cause the reproduction so far in the body of what is generated in the soul. The influence, e.g., of a mother's thoughts on the person of her unborn child is widely accepted; the wonders of hypnotism and mesmerism are well known; and in numerous instances a man's character is observed gradually to mould his face. Granted, moreover, that in the great majority of alleged cases of stigmatism there is either some ground for suspecting imposture or at least the lack of adequate evidence of reality,

¹ Sabatier, indeed, inclines (Eng. tr., p. 430) to accept the reading *nam diu* for *non diu*; but there is no ancient authority for what is apparently a conjectural emendation grounded on what it was thought that Elias ought to have written.

² 'Multi de his (stigmatibus) per orbem dubitabant' (Eccleston, loc. cit.).

² Eng. tr., p. 434.

there remain some well-attested instances in which the sentiments of a soul, filled with thoughts of Christ's Passion, have been reproduced in bodily manifestations analogous to those recorded in the case of St. Francis.

8. We must leave out of consideration the celebrated case of St. Catherine of Siena, who testified before notable witnesses that after Holy Communion she felt in her body the stigmata of the Crucifixion, including those of nails in the middle of her hands; for the reality of such bodily stigmata is manifestly disputable without impugning Catherine's sincerity. But the following authenticated stigmatizations, recorded in modern times, render credible other instances less adequately attested.

(1) The case of Maria von Moerl of the Tyrol, in whose hands, feet, and side stigmata began to appear in 1834, after Holy Communion or meditation on the Passion; she survived until 1868. J. J. von Görres, who relates her experience, states that stigmata on her person were seen by thousands of observers. He himself saw her repeatedly in her ordinary condition as well as in her ecstasies, and clearly discerned the stigmata. He testifies also that there was in her case 'no previous learning of a part; the whole proceeds naturally from her inward self; nothing forced or exaggerated can be observed in the representation.'¹

(2) Maria Dominica Lazzari of Capriana, about whom Dr. Leonard dei Cloche, director of the Civil and Military Hospital at Trent, testifies that he saw her repeatedly in a state of ecstasy in 1833-34. 'On the outside of her hands,' he declares, 'about the middle, rose a black spot, like the head of a thick nail, perfectly round. At the top of the right foot, about the centre, was a mark like those of the hands. Her mind appeared calm: her body was in a tremble. A wound in her side has been seen, only by stealth, by her mother and sisters. "I feel frightful pains," she said, "in every part of my body."'²

(3) Louise Lateau, of Bois d'Haine in Belgium, who bore an excellent character, was neither specially emotional nor exceptionally imaginative, was accustomed to hard work, and was one of the most helpful young women in her village. In 1868 she began to notice blood coming from her hands, feet, and side on Fridays after meditation on Christ's Passion. Dr. Ferdinand Lefebvre, Professor of Pathology in Louvain, devoted much attention to her case for six weeks, and took about 100 medical friends to examine the phenomena. She was put to various tests, to ascertain if the wounds were due to artificial causes. Thus Lefebvre called on a day when he had told her he would not come, and found her in an ecstasy, with blood newly exuded from her forehead and right hand. On another occasion, in the presence of two eminent physicians, he caused an artificial blister to be raised, similar to one which had appeared (so she declared) without her intervention. During her ecstasy the natural blister emitted blood, but the artificial one yielded none. The glove test was also applied. A leather glove, put on one hand, was tied and sealed at the wrist; when it was removed, on Good Friday, the blood flowed as before. It has been suggested that perforation with a needle may have taken place; but the hæmorrhage was preceded by the formation of a vesicle which became distended with serum, and spontaneously burst, after which blood flowed for several hours.³

Such cases appear to prove that stigmatization may result from extraordinary yet not supernatural intensification of that natural influence of soul over body which to some extent exists in all persons but is particularly potent in the case of intensely religious natures at times of special spiritual impression and ecstatic exaltation. This is substantially the view regarding the stigmata of St. Francis taken by Trench,⁴ Sabatier,⁵ and Doreau.⁶

H. COWAN.

STOICS.—The Stoics were the members of a philosophical school founded in Athens about 300 B.C., which in its developments became characteristic of the whole Hellenistic area and age. Rooted in the strong moral instincts of the Semites, it grew to embrace the scientific knowledge of the Greeks, and branched out in the logical and practical methods of Roman law and education. Its range in time extends over the three centuries before the Christian era and the first three centuries of that era; that is, it synchronizes with the history of the Roman Empire. Since that time its forces have been absorbed in the development of Christianity.

i. **Origin and history.**—The system was founded by Zeno, born at Citium in Cyprus in 336 B.C. His father was a merchant of purple, and as such a great traveller; the 'Socratic books' which he brought home from Athens were eagerly read by the young Zeno, and drew him to visit the Greek city. Whether Zeno himself was of Phœnician or of Greek descent concerns us little; that at Athens he was nicknamed 'the Phœnician' indicates that he brought with him to that city an atmosphere of Phœnician sentiment and morality. At Athens he attached himself to Crates of Thebes, then the representative of the Cynic school.¹ In Crates Zeno found the moral enthusiasm which seeks the good at however high a price, and which welcomes want and suffering as the discipline of individual character; but he also found a revolt against scientific knowledge and the ordered decencies of life from which he was soon eager to dissociate himself. He therefore became in turn a disciple of Stilpo the Megarian and Polemo the Academic. All these schools belonged to the Socratic succession; but, when Zeno turned his attention to the writings of Heraclitus (*q.v.*), he forged a link also with the Ionic philosophers.² About the year 300 B.C. he founded a school of his own, which (broadly considered) was based on the concretion of all these schools of thought, and the dogma of complete harmony (*ὁμολογία, convenientia*) in God, the universe, and man. Conversely, those of his followers in any period who failed to grasp his teaching in all its width are seen to fall back upon the more partial teaching of the constituent philosophies. The followers of Zeno were at first called Zenonians, but afterwards, from the 'picture porch' (*στοὰ ποικιλή*) where he delivered his lectures, Stoics. The first published work of Zeno was his *Πολιτεία*, or *Commonwealth*, written while he was still a member of the Cynic school. His picture of

a perfect state embraces the whole world, so that a man says, not 'I am a citizen of Athens,' but 'I am a citizen of the world.' The laws of this state must be prescribed by nature, not by convention. There must be no images or temples there, for these are unworthy of the deity; no sacrifices, because he is not to be appeased by gifts; no law-courts, for the citizens must not dispute; no statues, for the true adornment of a city is the virtue of its inhabitants; no gymnasia, for the youth must study virtue and not idle exercises. There must be no distinction of classes, for all must be wise men; no distinctive dress for the sexes, for their virtues and duties are the same; no delicate scruples as to the burning or burying of the dead, for souls, not bodies, are of importance. And in this state love must be master. Although the *Commonwealth* is, strictly speaking, a Cynic rather than a Stoic production, it represents the fundamental aims of the Stoic philosophy.

All the main doctrines of Stoicism are attributed to Zeno, but before describing these it may be well to give a short history of the chief teachers of the school, so that both deviations from Zeno's teaching and enrichments of it may be described under their proper headings.

Of the 'companions of Zeno' Persaeus of Citium pursued a political career, taking service with Antigonus Gonatas, king of Macedonia. Aratus of Soli was welcomed at the same court, and is known by his *Phaenomena*, an astronomical treatise translated by Cicero, largely used by Virgil in his *Georgics*, and containing the phrase 'for we are all his family' (τοὺ γὰρ καὶ γένος ἐσμέν) quoted by St. Paul.¹ Sphaerus introduced the new philosophy at Alexandria. Aristo of Chios fell back on Cynic views; and Dionysius of Heraclea 'deserted' to Cyrenaicism. Zeno's successor was Cleanthes of Assos (331-232 B.C.), whose *Hymn to Zeus* is not only the prototype of Hellenistic hymnology, but also a fairly complete summary of Stoic theory as applied to religious worship. Cleanthes (q.v.) is the theologian of the Stoic school, and gives a special emphasis to that part of its doctrine which is derived from Heraclitus, including the theories of the 'universal fire,' of the Logos (λόγος), and of tone (τόνος, *intento*). His hold upon the public seems to have been small, and it was reserved for his successor, Chrysippus (q.v.) of Soli (280-206 B.C.), to popularize the school and so become its second founder. His methods were illustration (for which the whole Greek poetry and especially the writings of Euripides were ransacked) and argument on the lines of the syllogism. His bias was towards the Academic element in

regard to its first so in those of his Tarsus, Diogenes of Seleucia (238-160 B.C.), and Antipater of Tarsus (200-129 B.C.). In the 2nd cent. B.C. the Stoic teachers began definitely to measure their principles by comparison and conflict with the rival schools of the Academy, now flourishing under the guidance of Carneades and of Epicurus.²

At the end of that century we find Stoicism translated into the environment of the Roman nobility by Panaetius (159-109 B.C.), Posidonius (135-51 B.C.), and Hecato, all men of position and literary attainment in the island of Rhodes. None of these are philosophical teachers in the strictest sense; they were to a large extent men of letters and science owning a partial allegiance to a particular school of thought (*secta*). In particular, their respect for the writings of Plato led them to accept various doctrines which in fact harmonized better with the teaching of the Academic school. To the resultant teaching the name of the 'middle Stoa' has since been given. This name represents not a distinct philosophical system, but a partial failure to grasp the fundamentals of the system, which paved the way to the 'eclecticism' dominant at Rome in the time of Cicero, in which incongruous elements taken from all the philosophies were combined in ever-varying dishes to meet the ephemeral tastes of the debating-room and the dining-hall.

The more systematic teaching of Stoicism revived in the 1st cent. of the empire at Rome under a series of popular teachers, such as Attalus, L. Annaeus Cornutus, Seneca, C. Musonius Rufus, Euphrates of Tyre, and Epictetus (q.v.). Drawn from the lower classes, these teachers have it as the lecture, the poem, the mental doctrines of the system are assumed, but not taught. This method postulates a previous training in principles, though in practice such training must often have been as defective as the theological knowledge of the average listener to a modern sermon. All these teachers, as well as Marcus Aurelius (q.v.) the emperor, whose writings are addressed to himself, afford valuable illustrations of Stoic doctrine without giving us much help as to its real essence. Their teaching is usually orthodox, and therefore

free from the vagaries of the 'middle Stoa'; but the more difficult theories tend to disappear, whilst the application to practice becomes all-important.

2. Teaching. — Reverting to the teaching of Zeno, we find that he took over the division of philosophy, generally accepted in his time, into the three sections of logic, physics, and ethics; but he held that these three were inseparable, since no one of them could be understood apart from the two others.

(a) *Logic*. — In logic Stoicism asserts the certainty of knowledge, as against the Academics, who deny this; and this assertion implies the existence of a 'criterion' (κρίτηριον) by which the true can be distinguished from the false. Since a final and absolute criterion of truth is undiscoverable, we shall not expect to find that Zeno discovered it; such a criterion is necessarily an ideal towards which only an approximation can be made. Zeno and his successors were catholic in their investigations into the theory of knowledge, and, though we find a general sketch of their doctrine given in Cicero's *Academica*, we can hardly present it as a consistent system. Knowledge is attained by reason; but, since reason may fail, the aim is to keep reason upright. Men disagree; some therefore assert what is true, others what only seems to be true. Taking the knowledge that comes through the senses as the simplest type, we distinguish first the 'sensation,' which may be described as a pulsation which passes from an 'object' through the sense-organ to the mind, or *vice versa*; as a result there is impressed upon the soul an 'imprint' (φαντασμα, *visum*). This imprint necessarily corresponds to the object if the intellect and the sense-organ are both healthy, the object really there, and the place and manner in accord; if these conditions are not fulfilled, the imprint corresponds to an imagined object only, i.e. to a 'phantasm.' The true imprint or mind-picture is distinguished from the false by its greater clearness (ἐνάρπεια, *perspicuitas*). To determine whether the requisite clearness exists is the function of the will, which gives or refuses its assent (συγκατάθεσις). If this assent is given weakly or hastily, we attain 'opinion,' and not 'truth.' If it is rightly given, the truth so ascertained should be fixed in the mind by a firm grasp (κατάληψις, *comprehensio*), and retained there by memory.

Single truths when remembered can be compared, contrasted, and so forth, and thus the objects which they represent are subjected to 'reason's work of comparison' (*collatio rationis*). From comparison the reason develops general notions, which therefore have no real existence in themselves, but only a sort of existence in our minds. Yet these general notions could not be so developed unless they already existed in the mind, at any rate in a potential form. The doctrine of the *tabula rasa* is often attributed to the Stoics, but appears rather to be opposed to their system. It is true that we may trace the growth of ideas from the outside to the soul, but equally we are entitled to regard the soul as possessing all the ideas first in a rudimentary shape; they are stimulated and clarified, but not created, by contact with experience. The rudimentary or 'inborn' ideas are part of the soul's inheritance from that universal reason of which the soul is a fragment. The reconciliation and development of this theory is a most difficult matter, and so it was found by students of Stoicism, and increasingly in the intellectual decadence of the early Christian centuries. The question 'What is the Stoic criterion?' was probably a standing puzzle, which might be answered by the terms 'reason,' 'will,' 'clearness,' 'sensation,' and so forth, according to the bias of the individual. The practical application

¹ Ac 17:23.

² See artt. ACADEMY, ACADEMICS, EPICUREAN.

of the Stoic logic is easier to define. Believing truth to be attainable, the Stoic was in principle dogmatic; finding error to be common, he was no less critical. Careful observation, deliberation, memory, and other agencies must all be trained so as to reduce error; and the final issue gives assurance only if it records an agreement between individual observations and general theories, and between individual judgment and the 'common sense' or universal judgment of the race.

The study of definitions, syllogisms, paradoxes, and the like was all included in the Stoic logic, which also embraced the whole field of etymology, grammar, dialectic, and rhetoric.

(b) *Physics*.—Under the heading of physics are included all the problems of metaphysics, physics in the modern sense, astronomy, religion, anthropology, and psychology; in fact, we might briefly say that physics includes all subjects except logic and ethics. More definitely, physics is the study (1) of the universe, (2) of man. As regards the universe, the Stoics start from the 'four elements' of earth, air, fire, and water, which have remained over in common thought as a debris from the Ionic philosophies. These four elements are re-grouped in two classes as 'mind' and 'matter,' 'active' and 'passive,' 'soul' and 'body,' the first constituent of each of these pairs being more or less closely associated with 'fire,' and a distinction being made between the elemental or 'creative' fire and the destructive fire of the domestic hearth. But, although these various dualisms have a place in the Stoic system, they are all subject to a higher monism, that of the one elemental stuff or 'body' referred to in the paradox 'Soul is body.'

The history of the universe starts with the elemental or all-pervasive fire, which is also the Deity and the 'First Cause.' This fire is in turn pervaded by the Logos, or ordering force, which from one point of view is single and divine, and from another is made up of countless 'seed-powers' (σπερματικοὶ λόγοι) which are the germs of future individual existences. The primal fire, by processes of successive thickening and corresponding dilution of strain (τόνος), converts itself into the four elements, and these in turn into the various orders of living things. Of these gods and men constitute the highest class, dominated by the reasoning soul (νοῦς), which has its home in the ruling part (ἡγεμονικόν). Among gods are counted the sun and heavenly bodies, which are beings possessed of will and motion from within. Below the reasoning class come animals, which possess soul (ψυχή), but not reason; they also possess something corresponding to the reasoning powers, emotions, and inclinations of reasoning beings. Plants possess growth-power (φύσις), which is in turn a kind of soul; and even inanimate objects have cohesion (ἔξις), though without growth. Since all these powers are fragments of divine force, we may speak of 'God in the stone.' Thus the whole universe is pervaded by deity in a graded scale; and God is related to the universe as soul to body. It is, however, a paradox to say that 'God is the universe,' and the Stoic creed corresponds very imperfectly to modern pantheism.¹

Body is combined with soul in its varying grades by the principle of pervasive mixture (κράσις δι' ὅλων). Nowhere is there an absolute line of demarcation, and, as all beings have proceeded from God, so they will all be absorbed in deity at the general conflagration (ἐκπύρωσις) with which the history of the universe ends. Then God becomes 'all in all,' and from Him commences a new era of development.

During each stage the universe is controlled by

the divine principle of order, which we may call the Divine Law or Destiny, but for which the most appropriate name is Providence. Providence is by its nature beneficent, chiefly in relation to reasoning beings; in this sense we may say that the whole universe is made for the good of man. The wickedness, suffering, and destruction everywhere seen in the world appear to contradict the belief in Providence, and the favourite subject of the Stoic sermon or essay is the surmounting of this contradiction.

Religion is the recognition by man of his relation to deity, and its essential features are not ceremony or sacrifice, but prayer, self-examination, and praise. Hence the early Stoics found themselves in conflict with conventional religion; later, and especially in Roman life, the Stoics reconciled themselves with it by the principles of interpretation and conformity. The work of Cornutus on the gods shows us this system in full play. Here the old gods of the Graeco-Roman mythology are interpreted as natural powers, and the legends concerning them are converted into parables conveying scientific truths. This method greatly aided the extension of Stoicism by making it a support of traditional customs and beliefs; at the same time its intensive power was weakened by the habit of compromise. In particular, the Stoics learnt to associate themselves with the practice of animal sacrifices just at the time when the general conscience was revolting against it as meaningless and cruel.

The most important chapter in the Stoic physics deals with the nature of man, who is the universe on a small scale, or a 'microcosm.' Each human soul is a fragment of the universal divine force, yet not completely sundered from its parent-stock. Thus, in the words of Aratus, 'we are all his family.' The soul is the ruling part (ἡγεμονικόν) of the man, and is possessed of reason; yet in its various parts or faculties it is spread throughout the whole man, and is found in all grades, even the lowest. Thus the 'five senses,' sight, hearing, smell, taste, and touch, are all functions of the soul, each working through its appropriate sense-organ, the eye, ear, nose, palate, and skin. These associate man with the outer world by way of knowledge; others, such as speech, motion (breathing, digestion), and procreation, by way of action. Thus human nature consists broadly in knowledge and action, and is guided by reason and will. The highest philosophy is to recognize that reason and will are ultimately one. Both are subject to disturbance, owing to the relaxation of the divine strain, or 'tone,' which gives men individuality and at the same time wilfulness or sin. The disturbances of the soul are diseased states (πάθη) or tempests (εὐνοίαι), but the discussion of them falls within the department of ethics.

The doctrine of the life of the soul after the death of the body was accepted in a general way, but without emphasis, by the Stoics; but in truth the Stoic system does not admit the existence of the body at all; for even the lowest parts of the body, the hair and the nails, possess φύσις, or vegetable growth. The embryo, according to the Stoics, is a vegetable; and apparently the Stoics vaguely conceived that at death the man was parted in two, the higher developments of soul finding their way to an ultimate reunion with the Deity, the lower sinking to vegetable and inorganic life and ultimately disappearing in the four elements ('earth to earth, ashes to ashes'). From either point of view the individuality is ultimately lost; and, as in the Roman period the hope of a future life was a passionate clinging to personality, the Stoic teachers meet this hope with an increasingly firm negation. In the earlier

periods the whole question is left in the region of myth and fancy, most characteristically represented by Virgil's pictures of purgatory and Elysium.

(c) *Ethics*.—Ethics is built upon physics: what man ought is derived from what man is. This transition includes a logical contradiction which is unsurmountable. In physics the whole universe appears as 'good'; yet this 'good' is without colour, for it is contrasted with no evil. On the other hand, in ethics men are sharply divided into the 'good' and the 'bad.' The Cynics avoided this contradiction by ignoring physics and declaring the ethical standard to be self-illuminating or 'intuitive'; but to such a solution the Stoics were determinedly opposed. The starting-point of their own theory is to be found in the gradations of soul, by which a hierarchy of rank is established among living beings. Virtue for man is to maintain his rank as son and equal of God; vice is to fall to the level of the animals or the plants.

That 'virtue is the supreme good,' and the 'wise man' alone happy; that external circumstances, such as health, wealth, and good name, do not (as the Academics say) contribute to happiness even one atom; that a short and a long life may equally be complete—these and the like are paradoxes which Stoicism draws from its Cynic root. Its special contribution to philosophy is the elaborate analysis by which virtue is given a definite meaning, which in turn can be applied to all circumstances in life so as to guide and support the individual in his choice. 'This rule of life was at first summed up in the phrase 'to live consistently,' later 'to live consistently with nature.' With each successive teacher the formula was developed, the principle being best maintained by the phrase of Chrysippus, 'to live according to scientific knowledge of the phenomena of nature, doing nothing which the Universal Law forbids, which is the Right Reason which pervades all things, and is the same as Zeus, the Lord of the ordering of this world.' On the other hand, the practical applications follow more quickly from the phrase of Diogenes of Babylon, 'to take a reasonable course in choosing or refusing things in accordance with nature.' Nearly all modern writers on Stoicism assert, with Zeller, that the Stoics deliberately softened their original teaching so as to accommodate it to the practical needs of their hearers. This is a misapprehension: the Stoics from the first were occupied in interpreting their rule in a practical sense, and such deviations as occur are due to the influence (largely unconscious) of Academic teaching on Chrysippus and his successors of the 'middle Stoa.' That hearers also unconsciously influence their teachers is true of all schools of thought.

The general ethical teaching of the Stoics is made most clear to us in Cicero's *de Finibus*. All animals, we learn, as soon as they are born, seek to maintain their life and their bodily wholeness; thus self-preservation is the first law of nature. Later they seek to propagate their race, and at the same time feel an affection for their offspring; this is the second law. Man, however, is from the first a social animal, and is possessed of a love of knowledge; hence social and intellectual ends are especially characteristic of the human race; such is the third law. From such a group of natural laws we select certain objects, such as health, well-being, long life, which are set before us as aims to be attained, whereas their opposites are to be avoided. These are the *προηγμένα* and *ἀνοπωρύμιστα* of the Stoic system, and its critics are never weary of ridiculing these un-Greek terms borrowed from the hierarchies of Eastern courts. In our words, these ends are respectively 'desirable' and 'undesirable'; but none of them is 'good' or 'evil,' nor can we reach good by adding together any number of things desirable ('Bonum non fit accessione'). How, then, do we know the good? When a man has practised the attainment of the desirable, when he has learnt to prefer the higher to the lower amongst these, when he has disciplined his members and attuned his thoughts until without hesitation or slip he always attains the best in the individual case—when (i.e.) by training and self-discipline he has become possessed of true wisdom—

then there will flash before his eyes at some one moment the vision of the good, never afterwards to be lost to his view. This is the moment of 'conversion.' In modern terms we might perhaps say that 'virtue is defined by the intuition of the moral expert, or man of good life.' Logically this definition may leave much to be desired; its practical and educational value is attested by experience.

All virtue is one, yet it has many forms, such as the four virtues of popular philosophy—courage, wisdom, justice, and temperance. The practical workings of these are expounded in Cicero's *de Officiis*, in accordance with the teachings of Pannetius and Hecato; and, as we might expect, this ever-popular treatise is very largely Academic in its details. Opposed to the virtues are the four vices—fear, discontent, greed, and elation. These follow from weakness or ignorance; fear, e.g., is derived from the error of seeing evils in the future when in truth only things undesirable are threatening. The later Stoics chiefly denounce anger as a vice. All the virtues and the vices are exhibited in social action, and the Stoic is before all things a man who lives in society, marries, and participates in the politics of his city: cloistered virtue ('vivere in umbra') is a form of cowardice.

The unbending gravity of the Stoic sage readily recommended itself as an ideal to the Roman nobility; but the later Stoics recognized the objection that the complete absence of the softer feelings implied an unattractive, if not repellent, character. Still rejecting all stormy states of the soul, they admitted that its surface should be like that of a sunny sea, not that of an ice-bound lake. Thus they came to find room for the 'good emotions,' now commonly called the 'affections.' These are identical in classification with the vices, but their play does not exceed the bounds of reason: 'caution' stops short of fear, and 'joy' of elation. Almost we admit that 'desipere in loco' may be virtuous.

The Stoic system of ethics thus developed was admirably suited for education, and is in fact the basis of all the traditional maxims which are to-day imparted to the young. Never does the Stoic teacher speak with a harsh voice, as his critics suggest, not knowing that rigid general principles must always be tempered in their practical application by consideration for person and place. If the soul of the 'wise man' is always tense, yet none knows better than the Stoic that 'relaxation' is needed by the young; if perfect action implies perfect knowledge, nevertheless it is quite practical to 'learn by doing.' Thus the youngest child may begin to 'get on,' i.e. to become a 'proficient,' and his well-wishers will not hurry him unduly to the stage of conversion. This practical application of Stoicism became, through Quintilian, the foundation of the modern theory of education.

3. *Practical influence*.—No system of philosophy, at any rate in the Western world, has borne fruit in practice to an extent comparable with that of Stoicism. Like all other great reforms, it was first ridiculed, then hated, and finally adopted. Ridicule of Stoicism is found in Cicero's speeches and in Horace, and through them is familiar to the modern literary world. Hatred of the system is most conspicuous in Lucretius.¹ Of its adoption Rhodes is the most typical example in the Greek-speaking world; but similar movements took place in all the great cities of Asia Minor and Egypt, and notably in Tarsus. In the West, Stoic principles are taken for granted in all Roman literature from the beginning of the Christian era. Of the greatest interest is perhaps the use of Stoicism by kings and governors. Among the successors to Alexander's empire many of the most eminent associated themselves with Stoic ministers. The Roman nobility adopted the system from Panaetius; the legislation of the Gracchi, the pure administration of men like Mucius Scaevola the *pontifex* and Rutilius Rufus, and the new spirit of Roman law embodied in the theories of the *ius gentium* and the *ius naturae* are all due to its influence. Under the early empire all good administrators were men imbued with Stoic principles; and it is not too

¹ See art. *Lucretius*, §§ 8 and 9.

of the Stoic logic is easier to define. Believing truth to be attainable, the Stoic was in principle dogmatic; finding error to be common, he was no less critical. Careful observation, deliberation, memory, and other agencies must all be trained so as to reduce error; and the final issue gives assurance only if it records an agreement between individual observations and general theories, and between individual judgment and the 'common sense' or universal judgment of the race.

The study of definitions, syllogisms, paradoxes, and the like was all included in the Stoic logic, which also embraced the whole field of etymology, grammar, dialectic, and rhetoric.

(b) *Physics*.—Under the heading of physics are included all the problems of metaphysics, physics in the modern sense, astronomy, religion, anthropology, and psychology; in fact, we might briefly say that physics includes all subjects except logic and ethics. More definitely, physics is the study (1) of the universe, (2) of man. As regards the universe, the Stoics start from the 'four elements' of earth, air, fire, and water, which have remained over in common thought as a debris from the Ionic philosophies. These four elements are re-grouped in two classes as 'mind' and 'matter,' 'active' and 'passive,' 'soul' and 'body,' the first constituent of each of these pairs being more or less closely associated with 'fire,' and a distinction being made between the elemental or 'creative' fire and the destructive fire of the domestic hearth. But, although these various dualisms have a place in the Stoic system, they are all subject to a higher monism, that of the one elemental stuff or 'body' referred to in the paradox 'Soul is body.'

The history of the universe starts with the elemental or all-pervasive fire, which is also the Deity and the 'First Cause.' This fire is in turn pervaded by the Logos, or ordering force, which from one point of view is single and divine, and from another is made up of countless 'seed-powers' (*σπερματικοὶ λόγοι*) which are the germs of future individual existences. The primal fire, by processes of successive thickening and corresponding dilution of strain (*τόνος*), converts itself into the four elements, and these in turn into the various orders of living things. Of these gods and men constitute the highest class, dominated by the reasoning soul (*νοῦς*), which has its home in the ruling part (*ἡγεμονικόν*). Among gods are counted the sun and heavenly bodies, which are beings possessed of will and motion from within. Below the reasoning class come animals, which possess soul (*ψυχή*), but not reason; they also possess something corresponding to the reasoning powers, emotions, and inclinations of reasoning beings. Plants possess growth-power (*φύσις*), which is in turn a kind of soul; and even inanimate objects have cohesion (*ἔξις*), though without growth. Since all these powers are fragments of divine force, we may speak of 'God in the stone.' Thus the whole universe is pervaded by deity in a graded scale; and God is related to the universe as soul to body. It is, however, a paradox to say that 'God is the universe,' and the Stoic creed corresponds very imperfectly to modern pantheism.¹

Body is combined with soul in its varying grades by the principle of pervasive mixture (*κράσις δι' ἅλων*). Nowhere is there an absolute line of demarcation, and, as all beings have proceeded from God, so they will all be absorbed in deity at the general conflagration (*ἐκπύρωσις*) with which the history of the universe ends. Then God becomes 'all in all,' and from Him commences a new era of development.

The later Stoics chiefly denounce anger as a vice. All the virtues and the vices are exhibited in social action, and the Stoic is before all things a man who lives in society, marries, and participates in the politics of his city: cloistered virtue ('vivere in umbra') is a form of cowardice.

The unbending gravity of the Stoic sage readily recommended itself as an ideal to the Roman nobility; but the later Stoics recognized the objection that the complete absence of the softer feelings implied an unattractive, if not repellent, character. Still rejecting all stormy states of the soul, they admitted that its surface should be like that of a sunny sea, not that of an ice-bound lake. Thus they came to find room for the 'good emotions,' now commonly called the 'affections.' These are identical in classification with the vices, but their play does not exceed the bounds of reason: 'caution' stops short of fear, and 'joy' of elation. Almost we admit that 'desipere in loco' may be virtuous.

The Stoic system of ethics thus developed was admirably suited for education, and is in fact the basis of all the traditional maxims which are to-day imparted to the young. Never does the Stoic teacher speak with a harsh voice, as his critics suggest, not knowing that rigid general principles must always be tempered in their practical application by consideration for person and place. If the soul of the 'wise man' is always tense, yet none knows better than the Stoic that 'relaxation' is needed by the young; if perfect action implies perfect knowledge, nevertheless it is quite practical to 'learn by doing.' Thus the youngest child may begin to 'get on,' i.e. to become a 'proficient,' and his well-wishers will not hurry him unduly to the stage of conversion. This practical application of Stoicism became, through Quintilian, the foundation of the modern theory of education.

3. *Practical influence*.—No system of philosophy, at any rate in the Western world, has borne fruit in practice to an extent comparable with that of Stoicism. Like all other great reforms, it was first ridiculed, then hated, and finally adopted. Ridicule of Stoicism is found in Cicero's speeches and in Horace, and through them is familiar to the modern literary world. Hatred of the system is most conspicuous in Lucretius.¹ Of its adoption Rhodes is the most typical example in the Greek-speaking world; but similar movements took place in all the great cities of Asia Minor and Egypt, and notably in Tarsus. In the West, Stoic principles are taken for granted in all Roman literature from the beginning of the Christian era. Of the greatest interest is perhaps the use of Stoicism by kings and governors. Among the successors to Alexander's empire many of the most eminent associated themselves with Stoic ministers. The Roman nobility adopted the system from Panaetius; the legislation of the Gracchi, the pure administration of men like Mucius Scaevola the *pontifex* and Rutilius Rufus, and the new spirit of Roman law embodied in the theories of the *ius gentium* and the *ius naturae* are all due to its influence. Under the early empire all good administrators were men imbued with Stoic principles; and it is not too

¹ See art. *LUCRETIUS*, §§ 8 and 9.

much to say that through Stoicism the Roman world-empire found itself a soul. The 'Stoic opposition' under Nero and his successors has become famous through the pages of Tacitus; but the passive resistance of such men as Thrasea has falsely suggested that Stoicism is in its essence individualistic and ethical. The examples of Seneca and Marcus Aurelius on the other side show its fuller development in social and political life.

4. Stoicism and Christianity. — Stoicism came early into contact with Christianity through the apostle Paul. The similarity in tone and content between parts of the Pauline epistles, the writings of Seneca, and the records of the teaching of Epictetus has long been familiar to students of Christian theology; the simple explanation is that Paul was brought up in Tarsus in a society permeated by Stoic thought.¹ Quite appropriately, he first appears in Christian history through his 'conversion,' in which he parted alike from Hebraism and from Stoicism. He realized that ethics can never be rooted in science, or the ideal in matter-of-fact; he therefore refused to give his allegiance to science or his admiration to the cosmos, and found himself in a higher region of 'spirit' in which 'faith' is the path-finder. The 'wise man' whom the Stoics could never find among their neighbours he recognized without hesitation in the Christ. But in the new religious belief the old foundations of the philosophy survive. Paul's use of the term 'body' is purely Stoic, and so are his whole analysis of 'bodies,' earthly, animal, celestial, and so forth, his analysis of human nature, and his conception of the functions of religion. His views of the divine birth of Jesus, and of His resurrection as the type of that of the Christian believer, are unintelligible except in terms of Stoicism.

Much controversy has arisen as to the origin of the terms 'the Word'² and 'the Holy Spirit' in Christian theology, and here we can only note that both terms were in familiar use in the Stoic school at the same epoch. They cannot, however, be claimed as distinctively Stoic. But the way of thinking according to which God is at the same time one and many belongs to the very core of Stoicism. Therefore, whilst the doctrine of the Trinity is somewhat dimly adumbrated by St. Paul, it has long ago been noted that its principle finds full expression in the earlier writings of Seneca: 'To whatever country we are banished, two things go with us, our part in the starry heavens above and the world around, our sole right in the moral in-

stincts of our own hearts. Such is the gift to us of the supreme Power which shaped the Universe. That Power we sometimes call the "all-ruling God," sometimes the "incorporeal Wisdom" which is the creator of mighty works, sometimes the "divine Spirit" which spreads through things great and small with duly strung tone . . .'.³ The quotation is not complete, nor is it suggested that Seneca's theology would have satisfied an inquisitor. But, on the other hand, it may be fearlessly maintained that the Christian cult of 'the Holy Spirit' and the ecclesiastical dogma of the Trinity grew great in a soil enriched by Stoic speculation and experience.

From the 3rd cent. onwards Stoicism was rapidly absorbed in Christianity. A youth nurtured in Stoic principles rebelled against the continuance of animal sacrifices, and submitted gladly to the authority of a 'wise man' visible in the flesh. But the Stoic converts brought with them their scientific methods and even their school text-books; the *de Officiis* and the *Discourses of Epictetus* became for all practical purposes Christian manuals. It is greatly to be desired that modern theologians should be equipped with a better knowledge of the philosophy which more than any other was a nursing-mother to the Church.

LITERATURE. — The literature of Stoicism is voluminous and superficial. The early Christian writers were suspicious of a system which still maintained some independent vigour, and was associated in their minds with conformity to pagan cults. In and since the Middle Ages the respect paid to Plato and Aristotle has hindered the due recognition of the Hellenistic philosophies. Thus editions of the works of Cicero, Seneca, Epictetus, and Marcus Aurelius have appeared in rapid succession from the hands of editors, translators, and commentators who do not even claim to have studied the philosophy which these writers expound. Only in the last half-century has a real appreciation of the subject established itself.

The standard authority is E. Zeller, *Stoics, Epicureans, and Sceptics*, new ed., tr. O. J. Reichel, London, 1892. A shorter but sounder treatment is found in a study on 'Stoicism and the Last of the Stoics' by G. H. Rendall, prefixed to his tr. of *Marcus Aurelius Antoninus to Himself* (London, 1898). W. L. Davidson, *The Stoic Creed*, Edinburgh, 1907, and R. D. Hicks, *Stoic and Epicurean*, London, 1910, give good general sketches. E. V. Arnold, *Roman Stoicism*, London, 1911, is fuller in detail than other English books, and contains a bibliography of works ancient and modern on the subject. Of the original sources the ed. of *The Fragments of Zeno and Cleanthes* by A. C. Pearson (London, 1891) and H. von Arnim, *Stoicorum veterum fragmenta*, 8 vols., Leipzig, 1903-05, in addition to the classical authors already referred to and the *Anthologium* of J. Stobaeus (O. Wachsmuth and O. Hense, 5 vols., Berlin, 1884-1912), are the first necessities for the student's equipment. Two treatises by A. Bonhöffer, *Epictet und die Stoa*, Stuttgart, 1890, and *Die Ethik des Stoikers Epictet*, do. 1894, give an admirable exposition of Stoicism: Epictetus, who would have been Epictetus, who would have been e knew his subject so well as this

STONES (Introductory and Primitive). — I. Veneration of boulders and standing stones. — As noted in art. STONE MONUMENTS, many of the menhirs in Europe and Asia Minor have probably been actually figures of deities. Rocks, boulders, and standing stones have been worshipped as gods or as inhabited by gods all over the world. Wherever men have been struck by the appearance or position of a rock or stone, they have regarded it with awe as uncanny, and in innumerable cases they have ultimately erected it into a divinity, brought offerings, and put up prayers before it. Instances need not be cited; they are found in every quarter of the globe. Among the natives of India the divinity frequently consists of, or is represented by, a group of comparatively small stones, which are usually painted red. Elsewhere, as among the Negroes of W. Africa, and occasionally in Europe by the pre-historic inhabitants, they have been roughly carved into a faint resemblance

to human shape.² Many such stones are of great size; but others are quite small, and then, like the Indian *śālagrāmas*, almost indistinguishable from amulets. A *śālagrāma* is a water-worn concretion containing ammonites and other fossil shells, found in Nepāl, in the upper course of the river Gandaki, a northern tributary of the Ganges. It is looked upon as sacred, and is usually identified with the god Viṣṇu. As such it is the object of a cult by its possessor. Probably its veneration antedates the Aryan occupation, and it has been adroitly adapted to the Hindu religion in a manner not unknown in other aggressive religions.³ Sometimes a tribe or clan claims to have issued from a rock: the Arab clan of Beni Saher ('sons of the rock') are said to have issued from a rock, still shown, in the land of

Moab.¹ Tales of petrification of men and animals, of supernatural beings or monsters, or even other objects, are everywhere current accounting for rocks and great stones of suggestive shape, appearance, or position. Such a rock on the side of Mount Sipylus, in Lydia, doubtless gave rise to the ancient legend of Niobe. The transformation is said to be caused by offences of various kinds against the higher powers, by curses, by the infringement of a tabu, by mere caprice on the part of some divine being, or even to be without any assignable cause.² In many cases probably the boulder was the object of worship which has been forgotten, and the tale is the method of accounting for the awe and fear in which it has been held. Many stones to which worship has been accorded are, there can be little doubt, aerolites.³ Such, e.g., is the famous Ka'bah at Mecca. Among the Romans the Hermæ—stones carved with the head and trunk of human form, and representing the god Mercury—were boundary stones. Originally they were rough, unshapen stones. Such stones are still the object of veneration in Annam.⁴ Their inviolability as boundary stones would naturally lead to more extended regard.

Another cause of reverence for rocks and stones has been a natural depression which has been interpreted as a footprint, or the impression of the hand, head, or knee of some supernatural personage—a god, saint, devil, or hero of old—or the hoof-prints of his horse. Such a mark is looked upon with awe, and, if attributed to a sacred person, usually becomes the object of devout observance, if not of an actual cult. Thus through the length and breadth of Europe the impress of the foot or of some other part of the body of the Virgin Mary or a saint is venerated, and various legends are told to account for it. So in India footprints of Vishnu and, where Buddhism reigns, footprints of Buddha are shown, many of which have been manipulated by art.⁵ Both in Europe and in the East there are numerous depressions in rock attributed to mythical personages who have probably been displaced by the existing religion from the sacred position which they held, while the depressions now credited to the personages of the existing religion are generally taken over from a religion that has passed away. These are well known and need not be referred to in detail. Elsewhere, however, such impressions have excited the imagination and religious fervour.

¹ On the hills near Kachindamoto, on the south-west arm of Lake Nyasa, there is said to be a big flat stone on which are the footprints of man and all the animals, which emerged from a hole in the stone.⁶ On Vancouver Island the Kwakiutl show the footmarks of an ancient hero of their traditions.⁷ According to the Lillooet, one of the ancient 'Transformers' stamped on a rock near a lake called Tsekalel, and left the impress as a tribal boundary.⁸ Similar marks on the Argentine shore of the Alta Paraná have been exploited by the Jesuit missionaries as the marks of the hands and feet of St. Thomas, the apostle of the Indies.⁹ As in other parts of the world, impressions are identified by native tradition in America as those of different members of heroes or their mythical foes; and in some cases the colouring of strata of the rocks is thus accounted for.¹⁰

Stones pierced by a hole are frequently sacred. Persons desirous of being rid of sins or sickness creep, or are passed, through them for that purpose:

Poas, *Indianische Sagen von der nord-pazifischen Küste Amerikas*, Berlin, 1895, pp. 202, 234; *Univ. California Pub.* x. [1914] 279; Dawson, *Proc. and Trans. Roy. Soc. Canada*, ix. [1901] p. 32 (of offprint); *RTP* xii. [1897] 357.

the Mên-an-Tol near Penzance is a well-known example. Stones with smaller holes are utilized, by passing the hands through, to take an oath or enter into a solemn engagement.

'The Plichtin' Stane o' Lairg,' in Sutherlandshire, was built into a wall connected with the old parish church. It was famous as a medium for the making of bargains and the pledging of faith on all sorts of occasions, including the plighting of troth between young men and maidens. But some years ago the old church was pulled down to make way for improvements, and the stone passed into private hands. It was ultimately given by the then owner to the Archaeological Museum at Toronto, where it is now exhibited.¹

To many boulders and artificially-placed stones the belief attaches that they move at certain times. It is a jocular remark at Llandrindod that a certain stone goes to the brook to drink every time it hears the cock crow. Similarly, it is said of the Longstone on Minchinhampton Common, Gloucestershire, that it runs round the field when it hears the clock strike twelve.² But such a saying is merely a serious belief in decay. A large stone called 'the De'il's Cradle,' in Clackmannanshire, is believed 'by the superstitious in the vicinity' to be raised from its place every Hallowe'en to serve as a swing for the potentate whose name it bears.³ In the Commune de Gardes in Charente, France, there is a block called 'the Mushroom,' which turns on Sunday at noon; the people of the neighbourhood have a certain veneration for it, and the old women are careful to protect themselves with the sign of the cross as they go by.⁴

Outside Europe there are similar beliefs. The 'moving stone,' which is believed by the natives of Borneo to be the waist-cloth of a hero called Simpurai, was hallowed by a ceremonial feast, as described by Bishop Chambers.⁵ The Bribri Indians of Costa Rica say of certain stones on the mountain of Nemoie shaped like jaguars that they become alive and true jaguars when they are approached. They are the subject of a tradition relating to the ancient history of the people.⁶ There is a boulder of reddish sandstone on the side of a steep hill on the north bank of the Marias river, in Montana, round which the soil is constantly worn away by wind and rain, and which consequently is moving slowly down the hill. The Blackfoot Indians believe it to be alive and make offerings to it.⁷

Rocking stones—boulders resting now only on a point of rock as a result of the disintegration of their supports—are capable of being moved. They are found in various places, the most famous being the Cornish Logan Stone. A legend frequently attaches to them; and sometimes, as at Vertolaye, in Auvergne, mothers take their children to the stone, that they may grow up healthy. At Pontivy such a stone is used by suspicious husbands for divination as to the virtue of their wives.⁸

A large number of erratic boulders and other single stones (sometimes heaps of stones) are attributed to supernatural beings who have thrown them in a contest, dropped them as they were being carried, generally with evil design, or emptied them from their shoes. In this way, too, rocks have been pierced or split, leaving a gaping chasm. These monuments of more than mortal power are not confined to the British Islands or even to Europe. They are found from the New Hebrides to the shores of the Arctic Ocean. And

'The Plichtin' Stane o' Lairg,' in Sutherlandshire, was built into a wall connected with the old parish church. It was famous as a medium for the making of bargains and the pledging of faith on all sorts of occasions, including the plighting of troth between young men and maidens. But some years ago the old church was pulled down to make way for improvements, and the stone passed into private hands. It was ultimately given by the then owner to the Archæological Museum at Toronto, where it is now exhibited.¹

To many boulders and artificially-placed stones the belief attaches that they move at certain times. It is a jocular remark at Llandrindod that a certain stone goes to the brook to drink every time it hears the cock crow. Similarly, it is said of the Long-stone on Minchinhampton Common, Gloucestershire, that it runs round the field when it hears the clock strike twelve.² But such a saying is merely a serious belief in decay. A large stone called 'the De'il's Cradle,' in Clackmannanshire, is believed 'by the superstitious in the vicinity' to be raised from its place every Hallowe'en to serve as a swing for the potentate whose name it bears.³ In the Commune de Gardes in Charente, France, there is a block called 'the Mushroom,' which turns on Sunday at noon; the people of the neighbourhood have a certain veneration for it, and the old women are careful to protect themselves with the sign of the cross as they go by.⁴

Outside Europe there are similar beliefs. The 'moving stone,' which is believed by the natives of Borneo to be the waist-cloth of a hero called Simpurai, was hallowed by a ceremonial feast, as described by Bishop Chambers.⁵ The Bribri Indians of Costa Rica say of certain stones on the mountain of Nemoie shaped like jaguars that they become alive and true jaguars when they are approached. They are the subject of a tradition relating to the ancient history of the people.⁶ There is a boulder of reddish sandstone on the side of a steep hill on the north bank of the Marias river, in Montana, round which the soil is constantly worn away by wind and rain, and which consequently is moving slowly down the hill. The Blackfoot Indians believe it to be alive and make offerings to it.⁷

Rocking stones—boulders resting now only on a point of rock as a result of the disintegration of their supports—are capable of being moved. They are found in various places, the most famous being the Cornish Logan Stone. A legend frequently attaches to them; and sometimes, as at Vertolaye, in Auvergne, mothers take their children to the stone, that they may grow up healthy. At Pontivy such a stone is used by suspicious husbands for divination as to the virtue of their wives.⁸

A large number of erratic boulders and other single stones (sometimes heaps of stones) are attributed to supernatural beings who have thrown them in a contest, dropped them as they were being carried, generally with evil design, or emptied them from their shoes. In this way, too, rocks have been pierced or split, leaving a gaping chasm. These monuments of more than mortal power are not confined to the British Islands or even to Europe. They are found from the New Hebrides to the shores of the Arctic Ocean. And

they are of a sufficiently commonplace type to need no specification.

Sometimes stones are believed to grow out of the earth like a plant, as in Annam,¹ or to bring forth other stones, as in Mid-Celebes.² Even where they are not believed themselves to grow, they are frequently held to have power to cause organic life to increase.

On Mota, one of the Banks' Islands, a large stone with a number of small ones lying beneath it, like a litter of pigs, was held capable of bringing pigs to any one who offered money upon it;³ in the Banks' Islands, indeed, no garden was planted without stones being buried in the ground to ensure a crop, and one shaped, as pieces of coral often are, like bread-fruit was of special virtue for ensuring a crop of bread-fruit.⁴

Finally, many of these rocks and stones are the objects, or at least the scenes, of magical or religious rites. Phallic rites at megalithic monuments have already been mentioned.⁵ These are not the only rites performed at sacred rocks and stones. The mere sacredness renders them tabu, so that, as Sébillot notes in France, many peasants even at the present day are unwilling to pass them alone after nightfall or even in full daylight, their gestures showing the respect and hereditary fear which they inspire.⁶ What is true of the French peasant is true of the folk everywhere, in Christian and pagan countries alike. Offerings of various kinds are made at such rocks and stones. The Mandans used to propitiate their oracular stone with knives, pipes, and cloth.⁷ The Raja of Durnān, who is the head of a sept of Panwārs, on succession, places upon a certain large stone for which they have a great reverence an offering of flowers, sweetmeats, and a few rupees.⁸ Among the Chams of Annam any one finding a block of stone near his residence, among other rites, washes it, puts a cup of alcohol upon it, and calls upon the spirits to drink and to eat betel. To possess such a stone is to be well and to increase the number of one's children.⁹ Near a certain Mordvin village lies an enormous stone, so sacred that at ordinary times no one dare approach it; but yearly, at a festival now identified with the Christian Trinity-day, a gathering is held there, a goose is sacrificed, and its head laid down beside the stone.¹⁰ In Madagascar stones thought to be inhabited by spirits or possessed of power are smeared with grease, and sacrifices of domestic fowls are offered to them; the blood and feathers and the feet and head of the victim are smeared on, and placed about, them.¹¹ A very common rite in the offering of sacrifice to any object of worship is to sprinkle or smear the blood upon it. In India and adjacent countries (even as far away as the New Hebrides) blood is imitated with red powder or other colouring matter, and the mere rubbing of a stone with red constitutes it a sacred idol.¹² Among the A-Kamba of E. Africa there is a sacred rock called Kabubooni, where people go regularly to pray to the ancestral spirits for increase of worldly goods.

A libation of mead is poured at the foot of the rock; a goat is killed, and its blood is allowed to run into the ground and mix with the mead.¹ The aborigines of the Canary Islands went in procession to certain sacred rocks in time of trouble, carrying libations of milk and butter; they danced round them, and from one of them warriors, it is said, threw themselves as expiatory sacrifices.²

Stones are set up, and ceremonies performed at both sacred rocks and stones, for various purposes. A very common object is to bring rain. The people of Hierro, in the Canary Islands, set free a pig at the rock with this object.³ The A-Kamba, in the ceremony just cited, prayed for rain, that being necessary for the prosperity of their flocks and herds, their chief wealth. In Sumatra the Menangkabau of the Padang highlands have a stone at Kota Gadang in the form of a cat reputed to give rain, to which intent it is smeared with the blood of a chicken, and rubbed and incensed to the accompaniment of a magical formula.⁴ To strike a stone much venerated by the Similkameen of British Columbia is sufficient to bring rain. About thirty years ago a Christian native made a bet with a heathen on the subject and struck the stone. The sky was then cloudless; but rain is said to have speedily gathered and poured down steadily for a week.⁵

In India a red painted stone is often set up to guard the fields.⁶ In Annam a great unhewn or roughly-hewn stone is erected at the entrance of a village to arrest malign influences and evil spirits which might come that way to injure the inhabitants.⁷ By every village on the island of Nias, at least on the east coast, a stone was erected, in order, it is said, that all the villagers should be of one mind. An offering was made at the erection of the stone, the stone was twisted round a little, and the priest addressed the people, warning them that, if any one would not follow the accepted customs, his neck should in like manner be twisted. Sacrifices were offered at the stone in case of adultery or theft. It was believed that to step over the stone was to lose the power of the limbs.⁸

The use of holed stones for the pledging of faith has already been mentioned. Such use is not confined to holed stones.

The stone at Shechem set up by Joshua as a witness to the Israelites' covenant is an example.⁹ One of several sacred stones at Ambohimanga, the former capital of Imerina, Madagascar, was called 'the stone of oaths.' People were wont to resort to it for the taking of solemn oaths.¹⁰ There is another stone at Ambohimanga, and a similar stone at Antananarivo, on which the monarch was required to stand at his installation, and where probably the oath of allegiance was taken.¹¹ The use of a special stone for this purpose is not unknown elsewhere: British readers will be reminded of the Coronation Stone in Westminster Abbey, previously at Scone and there used for the inauguration of the Scottish kings. The stone in such cases is probably sacred, and a portion of its sanctity is transmitted to the king thus ceremonially mounted upon it. The *Lia Fidi*, or 'stone of destiny,' at Tara, with which the Coronation Stone is claimed to be identical, was credited with divining power. 'It used,' we are told, 'to roar under the person who had the best right to obtain the sovereignty of Ireland at the time of the men of Ireland being in assembly at Tara to choose a king over them.'¹²

As might be anticipated, divination is often drawn from sacred rocks and stones. The rock already mentioned as venerated by the Mandans

was consulted on going to war. Those who consulted it approached it weeping and groaning. After smoking they retired to a distance for the night. 'The next day they take down on parchment what the stone shows. The painted parchment is carried to the village, where the old men interpret it.' It is said that new figures are seen on the stone from time to time. The Minnetarees also had a stone which was consulted in 'practically the same way.'¹ In Borneo, 'in an interior Lundu house,' were the sacred objects of the tribe. Among these were several stones which 'turn black if the tribe is to be beaten in war, and red if to be victorious: any one touching them would be sure to die; if lost, the tribe would be ruined.'²

Rocks and stones are held valid for other purposes. Sunshine is believed to be produced in Melanesia by smearing a standing stone with red earth or winding a round stone, called a sun-stone, with red braid and sticking it with owl's feathers to represent rays, muttering a spell the while and hanging it on a tree.³ Bontoc Igorot hunters hold a 'fire-feast for wild carabaos' at a certain rock, held to be a transformed spirit, with an incantation to the animals.⁴ Below Paimut, on the Yukon, is a large block of stone, said to have been dropped there by the Raven Father after making the earth. He left instructions to the people, whenever fish became scarce, to tie an inflated bladder to the stone and fling both into the river. The story goes that the instructions were obeyed once, with the most satisfactory results.⁵ In France standing stones and rocks are largely resorted to not only for phallic ceremonies, but also for the cure of various infantile and other disorders.⁶ It is only necessary to refer to the numerous and complicated ceremonies performed at and with stones and rocks in the course of the *intichiuma* rites of the Central Australian aborigines, the object of which was the multiplication of the totem.⁷ Simply to throw a stone on the top of a standing stone or rock, as on a rock in the Lutkoh River in the N.W. Frontier Province of India, is deemed auspicious;⁸ and no passer-by omits to add to a heap of stones, whatever may be the original significance of the pile. These customs are universal.

2. Stones as amulets.—Stones as amulets have been already incidentally treated in artt. CHARMS AND AMULETS. But there are certain uses of such stones which may be here illustrated. In Scotland it was a common belief that distempers in cattle were to be cured by giving the ailing animals to drink water in which *lengan* (stones used for divination) had been dipped. The most celebrated of these stones is the Lee Penny, which gave the hint to Sir Walter Scott for the plot of *The Talisman*. It is an heirloom in the family of the Laird of Lee, whose ancestor, Sir Simon Lockhart, it is said, brought it back from Palestine, where he obtained it as part of the ransom of a Saracen chief. It is a triangular stone of a dark red colour set in a silver coin, which has been pronounced to be a groat of Edward IV. In addition to its virtue in curing cattle, it was believed to be powerful against hydrophobia, as was claimed to have been proved upon Lady Baird of Sauchtonhall near

Edinburgh about 1707. It has often been described and its cures narrated. It has been more than once the subject of complaint to the presbytery, and it has been exhibited to the Society of Antiquaries of Scotland.¹ Stones called curing-stones, used in a similar way, are known also in Ireland. To many of them a traditional history attaches, connecting them with the supernatural.² Other curing-stones are also found, the most noted of which are those of St. Fillan, pieces of quartz preserved in a niche in the wall of the mill of Killin, Perthshire. These are said to be 'socket-stones in which the spindle of the upper millstone used to work before the introduction of the improved machinery.' M. Martin, in the *Description of the Western Islands of Scotland* (London, 1673), mentions a globe of stone of the size of a goose's egg, on the island of Arran, used to remove stitches from the sides of sick patients. The natives also swore decisive oaths upon it; and it was believed that, if it was cast in front of an enemy, he would lose courage and run away.³ Curing-stones are known in many parts of the world. Many of them are pre-historic arrow-heads, called 'thunderbolts.' To this kind of stone must also be reckoned concretions like the bezoar-stone, ultimately of animal origin. They are used not only like the Lee Penny, but in various other ways.⁴ In France and Belgium statues of saints, or stones looked upon as such, are rubbed with the body, or scraped and the resulting powder swallowed in water, for diseases, and especially by women for the cure of barrenness.⁵ In the Fiji islands, where leprosy is not uncommon, there are stones, regarded with much awe as the shrines of ancestral spirits, which inflict the disease, and others which cause abdominal tumours and abdominal dropsy, but none, it seems, which are the means of healing.⁶

A curious use of what may perhaps be regarded as a kind of amulet is found in Ireland. Cup-markings in boulders and in rude stone monuments are well known and are by no means confined to these islands or to Europe. In Ireland such hollows in a stone or rock are called *bullans*—a term also applied to the stone or rock itself. Their origin and purpose are to-day as much as ever the subject of puzzle and controversy. Many Irish examples have a small stone deposited in the basin. Such stones and similar ones lying on old altars of ruined churches, or on stones held to be altars, are regarded as endowed with extraordinary power. From their use they are often termed 'cursing-stones.' On the shore of Upper Lough Macnean, near the ancient ruined parish church of Killinagh, stands a *bullán* stone containing ten cavities, each of them filled with a stone of suitable size. The *bullán* is called St. Brigid's stone or altar. When any of the neighbours has a grudge against another and wishes him harm, he goes to the altar and there curses him, at the same time turning the stones deposited in the cavities.⁷ So, among other places, at Croagh-Patrick, a mountain

in County Mayo and a place of pilgrimage, it is a custom that any of the pilgrims who have a quarrel with their neighbours will take up a certain flag from the sacred well on the mountain and turn it upside down in the name of St. Columkill, after which they return home and fast for fifteen days, taking nothing but bread and water once in twenty-four hours. The object of this is to honour the saint and induce him to put to death the person or persons against whom they have a grudge. If unsuccessful, they return to the well, there perform a 'station' backwards, and turn the flag upside down again.

'If stormy weather happen, either in spring or harvest, the whole country will say that it was because Columkill's stone was turned, and they will even watch in harvest to prevent the people from turning it.'

Pebbles are also carried home from another 'station' called 'Patrick's bed,' to prevent barrenness and to banish rats and mice.¹ On Caher Island, off the coast of Connaught, is a small church on the altar of which lies a stone called *Leac na naomh* ('flag of the saints'). It is said to be used to 'elicit the truth.' Any one on the west coast of the mainland or on the islands who is wronged, after praying and fasting at home, sails over to the Caher and turns the *Leac*. The weather then immediately becomes unfavourable, storms occur, and boats are often sunk, until the person who has turned the stone is vindicated.²

In Scotland, on the island of Fladda in Argyllshire, is a church dedicated to St. Columba. It has an altar at the west end, and on it a round blue stone which is always moist. Fishermen detained on the island by contrary winds used to wash this stone with water in the hope of procuring a favourable breeze.³ On the island of Tiree in the Inner Hebrides is a stone almost buried in the ground. It is called *Clach na stoirrn* ('the storm stone'). If taken out of the earth, cleaned, and set upright, it will cause a storm to arise.⁴ The Roman geographer Mela tells of a stone or rock at the oracle of Ammon, in Cyrenaica, having similar powers. It was sacred to the south wind, and, whenever it was touched by the hand of man, a raging wind arose and drove the sands along like the waves of the sea.⁵ In the Fiji islands there are stones which, if touched, cause a strong wind and a rising of the sea, more or less violent according to the force used against the stone.⁶

3. Crystals.—Among stones, crystals, commonly of quartz but also of other minerals, have everywhere attracted the attention of mankind. The use of crystals in what is known as scrying or crystal-gazing has been dealt with in art. CRYSTAL-GAZING. Scrying has been generally practised by both savages and people of the higher civilization⁷ for the purposes of divination. But this is probably a special application of minerals already sacred, arising from their shape, lustre, refractions of light, transparency, and other striking properties, which have first caused them to be appropriated as amulets or revered. From pre-historic times in Europe they have been valued. In Anglo-Saxon graves in England balls and other pieces of rock-crystal, and in Frankish graves in Germany pieces of rock-crystal and milk-quartz, have been found. Balls of crystal have also been discovered

in early graves in France, in Germany at Alzay, near Mainz, in Denmark near Aarslev in Fyen (the two last in women's graves), in a sepulchre at Mycenæ in Greece, and also at Rome. They were probably amulets, and certainly highly prized.¹ And the folk-tales of glass-mountains seem to be a distant echo of the uncanny properties attributed to crystals. Balls of rock-crystal mounted in silver are said to be not uncommon in Japan; but we have no information as to their use. Pieces of rock-crystal brought from a distant part of the island have been found in a pre-historic kitchen-midden in the south-west of the island of Trinidad.² There is scarcely a village in Yucatan without a quartz-crystal or other translucent stone called a *zaxtun*, which is used for scrying by a diviner. It is first sanctified by burning before it gum-copal as an incense and by reciting certain magical formulas in an archaic dialect.³ Numerous quartz-crystals have been found in the ruins at Casa Grande and elsewhere in Arizona, and in fetish-bags buried with the dead in various parts of the Pueblo country. The legends of the Pima and Pueblo traditions show that these crystals were employed in medical practice. The still living tribes of Arizona, particularly the Hopi, make use in their rites of a variety of stones, among which are 'rock-crystals, botryoidal stones employed in treating disease or by sun priests in rain ceremonies.'⁴ The use of quartz-crystals in the Tusayan rites has been described by J. W. Fewkes,⁵ and that of 'a crystal supposed to have been brought from the undermost world,' in the Zuñi rites, by Mrs. M. C. Stevenson.⁶ A piece of rock-crystal was among the sacred objects seen by Charlevoix in a mausoleum of the chiefs of the now extinct Natchez of Louisiana.⁷ Enormous crystals, sacred stones, endowed with power to kill or to protect, are mentioned in the traditions of the Luiseños of S. California; and rock-crystals are called 'the raven's arrows' and are regarded with superstitious fear, as is natural when they are connected with a bird so much feared.⁸ Among the tribes of the North-West candidates for initiation into certain secret societies of the Nootka and of the Kwakiutl are supposed to be initiated by having a magical piece of quartz inserted into their bodies by supernatural beings, which has the effect of killing them. To restore the candidate to life the stone must be removed by shamans.⁹ A piece of rock-crystal is mentioned in the legends of the Kwakiutl as given to or thrown at the hero by a supernatural being, and as conferring the power of flying.¹⁰ And the neighbouring Catloltq tell of a double-headed snake that struck a hunter with a spear so that he fell as dead, afterwards giving him a transparent stone and leading his soul through all lands while his body lay where it fell until the soul returned.¹¹ So in S. America, among the Koberua on the borders of Colombia and Brazil, in order to initiate a novice as a medicine-man, or *piaye*, an older *piaye* is said to fetch from a lofty mountain certain *dupa*, or magical white stones, which are voided by the great vulture. These stones he enchants 'through the novice's nose into his head; and there they eat up the whole brain and the eyes. Brain and eyes become and remain

dupa.¹ It is not expressly said that these stones are crystals. It is certain, however, that crystals play a large part in the magical practice of the tribes of the northern part of S. America. They are part of the stock-in-trade of the *piaye*; they are inserted in the calabash which forms his rattle; they are employed for charming, bewitching, or cursing others. Macusis and Wapisianas are described by R. Schomburgk as 'cutting each other's legs as a remedy for over-fatigue,' with a piece of rock-crystal, an instrument to which they ascribed particular virtue.² A more recent traveller describes the Andoke (also on the borders of Colombia and Brazil) as placing great faith in magical stones. When treating a patient, they lay stones on him.

'The medicine-man gazes on them abstractedly till a degree of self-induced trance is established. He will then break out into a frenzy, stamp, shout and brandish his rattle.' They 'are also used for magical rubbing.' The only ones which the traveller succeeded in seeing 'are of quartz, somewhat roughly made flat discs, worn smooth by continual use.'³

The Carib medicine-man is believed to send them into the body of any one whom he desires to render sick, and, if called on for aid, to eject them afterwards.⁴

In all parts of Australia the same virtues are ascribed to quartz-crystals and other shining stones. In New South Wales none of the medicine-man's possessions is more revered than quartz-crystals; they are held to possess marvellous powers.⁵ They are sucked from the bodies of the sick, presumably first sent there by magical power.⁶ They are used for rain-making.⁷ In Queensland they are believed to be falling stars and are treasured by the natives with mysterious secrecy and used for incantation.⁸ North and south, east and west, in the Australian continent quartz and rock-crystals are used for magical purposes; they are an essential part of the medicine-man's outfit, and they are buried with him.⁹ They are made use of in the puberty ceremonies.¹⁰ In Central Australia, and probably elsewhere, it is believed that at the initiation of a medicine-man the spirits implant in the body of the candidate a supply of these stones, upon which he is subsequently able to draw for the purposes of his craft.¹¹ Finally, in New South Wales, among the tribes of which the nearest approach to a belief in a divinity is found, these crystals are distinctly connected with Daramulun, Baiame, or whatever the chief personage of their mythology may be called. He it is who gives the crystals; and his own body in his camp on a high mountain or in the heavens, where he now presides, is itself partly a great crystal.¹²

Among the Melanesians of New Guinea pieces of quartz, both crystalline and vein-quartz, are used in sorcery for the purpose especially of causing death to an enemy; and they are part of a

sorcerer's outfit. Quartz pebbles are considered of deadly potency.¹ A tale reported from a Fijian source relates the gift by a supernatural being of a crystal which showed anything he wished to one who looked into it. The person to whom it had been given learned remedies for disease in this way and practised them with success; but he was eventually imprisoned when the Government heard of it.² The Dusuns of British N. Borneo carry quartz-crystals as amulets.³ Among the Sea Dayaks of Sarawak every medicine-man possesses a piece of quartz-crystal, which, when called in to attend a sick man, he consults to ascertain where the escaped soul of the patient has hidden (screaming), so that he may fetch it back. But he does not appear to make any further use of it in his ceremonies.⁴ Some at least of the S. African Bantu value a piece of crystallized feldspar and wear it round the neck as an amulet. They believe it to be brought down in the lightning and to be found when a flash strikes the earth.⁵ A celebrated rain-doctor in Mashonaland owed his power to a small white stone, probably a piece of feldspar or quartz.⁶ In Portuguese E. Africa the medicine-man uses hot pieces of quartz-crystal to heat the drink in the poison ordeal, doubtless because of their supposed magical effect.⁷

4. Stone money.—One of the most curious applications of stone is the use of large solid disks, or wheels of it, as money, or a medium of exchange, on the island of Yap, or Uap, a westerly outlier of the Caroline group in Micronesia.

These wheels consist of limestone or arragonite quarried and shaped in Babelthuap, one of the Pelew Islands, 400 miles to the southward. They vary in diameter from one foot to twelve feet, and each of them has in the centre a hole for the insertion of a pole sufficiently large and strong to bear the weight and facilitate transportation. They are known as *fei*. The limestone of which they are composed, to be of the highest value, must be fine, white, and of close grain. It is described as 'somewhat like quartz, but not so translucent, nor of so fine a grain.' They are cut as nearly circular as primitive resources permit. The hole in the centre is roughly about one-sixth of the total diameter. From their size and weight they are frequently not capable of being stored in the native houses; and, since they are not easily stolen, they are (perhaps more often than not) kept outside. Thus, as one traveller says, 'they are more for show and ornament than for use.' The houses of the richer men, and the *faifu*, or *pabat*, the men's house where the men live and hold their councils and assemblies, in every village have their fronts adorned with *fei* that testify to the wealth of the inmates. The value depends not only on the size, but also on the quality of the material.

It need not be said that the islanders have also other currency, of smaller value but more portable, consisting of pearl-shells and sacred mats (called *umbul*) of banana fibre.⁸

LITERATURE.—This is mostly found in ethnographical works, as indicated in the foregoing pages. It may, however, be useful to refer to the classified list of rude stone monuments, in S. Reinach, *Cultes, mythes, et religions*, Paris, 1905-12, iii. 364. Lord Avebury, *Origin of Civilization*, London, 1889, pp. 307-316, gives a general account of stone-worship. A useful general account of the monuments themselves by J. W. Fewkes is given in *Great Stone Monuments in History and Geography* ('Smithsonian Misc. Collections,' vol. lxi. no. 6), Washington, 1913; a similar account of the rude stone monuments of India by W. Crooke, in *Proc. Cotteswold Field Club*, xv. [1905] 117 ff. See also, for those in the Nilgiri Hills, W. H. R. Rivers, *The Todas*, London, 1906, p. 433 ff. An account of stone cults in the Graco-Turkish area is given by F. W. Hasluck in *BSA* xxi. [1914-15]. E. SIDNEY HARTLAND.

magic and religion in all countries, and it is one of the most persistent. In the case of meteoric stones, which fall from the sky, veneration may well seem natural; but it is not confined to such. Stones of unusual colour or shape have frequently attracted veneration; and this has even been extended in modern Greece and Asia Minor to wrought stones from temples, or even marbles bearing inscriptions.

We may trace three stages in stone-worship in Greece. In the first the stone, in virtue of something strange about it—its colour, its shape, or some curious fact in regard to its appearance or history—is worshipped as a fetish. In the second it is regarded as the chosen seat of some divine power, some god or hero. In the third it is venerated in connexion with some interesting event in mythic history.

(1) In the pre-historic age of Greece stone pillars seem to have been objects of veneration. Several were discovered by Arthur Evans in the great pre-historic palace at Cnossus in Crete. They were usually dedicated, so to speak, by cutting on them the sacred sign of the double-axe, the symbol of the Cretan deity afterwards called Zeus. To this age must also belong, in the main, what we have called the first stage in the worship of stones, whether natural or rudely cut into conical shape. Such fetishism no doubt survived into the classical period on many sites, though, as is natural, the historians and poets of Greece make little mention of it; and later writers, such as Pausanias and Plutarch, are apt to interpret it through the medium of myth. Theophrastus, however, in the 4th cent. B.C., gives us, as a mark of the superstitious man (*δεισιδαίμων*), that he will pour oil on the already oily stones which stand at the cross-ways, and not pass on until he has prostrated himself and worshipped.¹ This rubbing or anointing with oil or with fat seems to have been the chief element of the ritual in regard to sacred stones.

Somewhat more elaborate was the cultus of a stone among the Ænians of Thessaly. They made sacrifices to it, and placed on it the fat of the victims.² This is an extreme case; and the people told a mythical story to account for the custom.

Greek necklaces are extant in which wrought flints or small meteoric stones are enclosed in gold-work; and it has been supposed, with great probability, that they were regarded as bringing luck. We may perhaps have here the origin of the use of precious stones in jewellery.

(2) The second stage, in which a stone is regarded as the chosen seat and representative of a deity, was exemplified in many places in Asia Minor and Greece. One of the most noted of these primitive symbols occurs on the coins of Paphos in Cyprus. The place of honour in the temple of Aphrodite in that city was held by a conical stone, which stood for an image of the goddess. Similar conical stones may be found on the coins of Apollonia in Illyria and many other places. When Pausanias visited Greece, he found in many places, in the open air, stones which were called by the names of the deities.

At Phara in Achaia, he writes, 'in the market-place there stand about thirty squared stones: these the people of Phara revere, giving to each stone the name of a god.'³ 'In the olden time,' he adds, 'all the Greeks worshipped unwrought stones instead of images.'⁴

Many such stones, unwrought or rudely shaped, held their place in sacred shrines at a later time. In the old gymnasium at Megara⁵ was a stone in the form of a small pyramid, which was called Apollo Carinus. A mere stone stood for Herakles

at Hyettus; and in some of the most important temples of Greece stones retained their place of honour. Eros at Thespiea was represented by an unwrought stone,⁶ and the Graces at Orchomenus by stones which fell from the sky. In later Greece we have relics of the worship of the deities in such primitive forms in the representation of Apollo in the streets by mere columns and the frequent placing of the heads of Hermes and Dionysus on square pillars called 'Hermes.'

Coins of the Roman age enable us to trace step by step the process by which these sacred stones were gradually transformed into the human image.⁷ At Emesa in Syria the temple image was a mere conical stone, like the omphalos preserved at Delphi; at Perga in Pamphylia the head of a deity emerges from the top of a pyramidal stone; at Ephesus the figure of the goddess Artemis, 'the image which fell from heaven,' has articulate head and feet; but the body is not much more than a cone. At Samos, Aphrodisias, and Euromus we find on the coins primitive figures, articulate above, but ending below in a mere shapeless trunk. And, though such images, in the 5th and 4th centuries, were often removed to make way for the noble productions of the Greek chisel, they often returned to their place of honour some time before the Christian era.

(3) The third stage was reached when stones were no longer regarded as the dwelling-places of deities, but were held sacred in virtue of some mythological story connected with them; e.g., a stone at Troezen, in Argolis, was said to have been the scene of the purification of Orestes after the murder of his mother. Another at Gytheium was the seat, sitting on which he had recovered from his madness.⁸ Curiously, this stone was locally called Zeus Cappotas, or 'the Reliever,' whence it is clear that the story about Orestes is a later and rationalizing tale. Close to the altar of Apollo at Thebes was a stone, called 'the Chastener' (*σωφρονιστήρ*), which Athene had hurled at Herakles when he was mad, and attempting to slay his father Amphitryon.⁹ Probably in all these cases the stone had been held sacred from early times, and the story was an invention of a later age.

The most noted sacred stone in Greece was the conical stone at Delphi, often figured on coins and vases as covered with woollen fillets. No doubt in early times it was held in honour as intrinsically sacred. But in later times the story told in regard to it was that it was the stone which Cronus had been induced to swallow in the place of the infant Zeus, whom his father wanted to make away with. This barbarous story was softened or superseded by the poets. Pindar attributes the sanctity of the stone to the belief that it was the exact centre of the earth, the *γῆς ὀμφαλός*.⁵ Zeus, it was said, had let fly two eagles from the two ends of the earth, and they had met at Delphi. This statement, of course, from the scientific point of view has no basis. But the whole process of thought in regard to the stone, first magical, then mythological, and then pseudo-scientific, is very interesting and instructive. It is curious that close connexion between a stone and an oracle is found elsewhere. The chief oracle of the Mandan Indians of America was situated at a great stone, whither deputations resorted to seek divine guidance.⁶

Though the evidence is scanty, we cannot doubt that in Italy a similar range of ideas prevailed. Lucian⁷ mentions a Roman, named Rutilianus, who furnishes a parallel to the superstitious man of Theophrastus. He was a gentleman and an official; but, whenever he saw a sacred stone anointed with oil or adorned with garlands, he would straightway fall on his knees, or, standing by it, utter prayers for various boons.

Two stones which were probably originally

fetishes play an important part in Roman history. In 204 B.C., during the war with Hannibal, the Romans, on the advice of the Sibylline books, imported from Pessinus in Asia Minor the stone which was there regarded as the dwelling-place of the mother-goddess Cybele. And Cybele brought with her to Rome an Oriental cultus and a train of priests. Again, in the 3rd cent. A.D., the emperor Elagabalus introduced at Rome the veneration of the sacred stone at Emesa which was regarded as the seat of the Oriental sun-god, and which appears in a chariot on the coins of the emperor.

Until the end of paganism there was in places apart from stir and progress a cult of stones. Arnobius, e.g., who wrote in Africa about A.D. 300, says,¹ in regard to his pagan life, that, when he saw a sacred stone, he adored it, as if some virtue dwelt in it. And in fact such superstitions have not yet disappeared. In the *Annual of the British School at Athens* for 1914-16 F. W. Hasluck gives an account of the stones still held sacred in Greece and Turkey. Some of these may have kept their place from remote antiquity; but in some cases they are architectural fragments, or even marbles bearing inscriptions, which must have come to honour in comparatively recent times. The veneration of stones, in modern as in ancient times, is a matter not so much of date as of seclusion from the paths of education and progress. In Turkey, at the present day, the people often break up inscribed marbles in the hope of finding gold inside them; and, as this hope can scarcely be based on experience, it may well be a relic of the early veneration of stones.

STONES (Indian).—1. Stages in stone-worship.—The worship of stones is widely spread throughout India, and assumes numerous and varied forms. In the first place, a distinction must be drawn between the pre-animistic and the animistic conception of sanctity in the stone. In the former the stone is regarded as sacred or tabu because it is vaguely conceived to possess some innate power which causes fear or reverence; in the latter the stone is believed to be the abode of some spirit. But in many cases it is not easy to separate these two forms of sanctity with any approach to precision.

¹All the various functions of these stones, prophetic, kathartic, prophylactic, etc., are only various manifestations of its [the aerolitic stone's] supernatural power. In primitive days a sacred stone is a god of all work.²

(a) *The pre-animistic stage.*—Here the stone is feared or revered mainly because its appearance is queer or uncanny, or because the circumstances of its discovery or erection suggest some tragical occurrence which continues to invest the place with a sense of awe or terror.

Thus, throughout India, we find 'the worship of a stone oddly shaped, of a jutting piece of rock, a huge boulder lying alone in the plain, a circle of stones, a peculiar mark on the hill-side or a hummock atop, an ancient carved pillar, a milestone unexpectedly set up where none was before, with strange hieroglyphics, a telegraph post, fossils with their shell marks; in fact, any object of the kind that catches attention as being out of the common way.'³

As instances of this class of belief, some curious fossils found near a Muhammadan shrine at Girar in the Wārdha district are supposed to be stock-in-trade of two Banjāra traders who mocked the saint, and their wares were turned into stone.⁴ Some stones may be simply commemorative or used for some magical purpose.

⁴ R. V. Russell, *Wārdha Gazetteer*, Allahabad, 1903, i. 27 f.

Among the Bhils, after a birth, the mother smears a spot outside her hut with cowdung marked with lines of turmeric. In the midst of the figure thus made she places five stones, corresponding to the number of days which have elapsed since the birth, and, laying round them pieces of coco-kernel, she sprinkles them with turmeric, millet, red powder, and spirits—possibly a magical charm to bring good luck on the child.¹ The Kurumbas, a forest tribe of S. India, place an ordinary stone in a cave; it is not a *liṅga*, and they call it Hiriadeva, 'great god.'²

Or, again, the appearance or position of a stone suggests a tragedy.

Such is the *baghaut*, or 'tiger cairn,' a pile of stones erected on the spot where a man has been killed by a tiger, to which every passer-by adds a stone.³ Another case is that of Dāntan Deo, 'the deity with the teeth,' embodied in a projecting rock, which bears a rude resemblance to a hideous grinning skull, with enormous teeth.⁴ In many instances curiously formed natural monoliths are supposed to represent a bride and bridegroom with their escort, as in the case of Dūlhā Deo.⁵ In Bombay curiously cleft rocks or crags at Matherān and in the Poona district commemorate a similar tragedy, caused by the opening of the hill-side which engulfed the party.⁶ In the Vizagapatam district some stones near a river pool represent a Banjāra (q.v.) and his pack bullock, turned into stone by the curse of the king of the fishes for killing and eating one of the sacred fish.⁷ In the Hīmalāya a holy *ṣaṅg* came to a mountain to worship and accomplished his pilgrimage. But he incurred the displeasure of the god by returning to ask some favour, and was turned into a rock, which now appears white at sunrise, red at midday, and green at sunset.⁸

Aerolites or meteoric stones, often found in India,⁹ fall into the same class, it being 'probably easier, even for the naïve imagination of early men, to conceive of a stiff log-like idol descending thence than of a seated divinity shot from the sky, throne and all.'¹⁰ In India some of these stones are worshipped as *liṅgas*; one in Bengal is called Adbhūtnātha, 'the miraculous god.'¹¹

A famous stone, hung from an iron chain in the tomb of Mahmūd at Bijāpur, was said to be a meteorite brought from Arabia, and was believed to protect the building from lightning; it has now been proved to be a piece of nephrite or jade.¹²

(b) *The animistic stage.*—In some of the instances already given we approach the animistic stage, where the stone is conceived to be the abode of a spirit. In the instances which follow this belief is clear.

In Burma some sects of the Karen tribe keep in their houses stones to which they make offerings of blood; as a member of the tribe explained, 'If they do not give it blood to eat, it will eat them.'

Some of these stones are supposed to give good crops of rice, others to be the embodiment of benevolent spirits, which, however, sometimes turn out to be malevolent; others are supposed to kill persons whom their owners dislike.¹³ At a later stage these vague spirits become identified with special gods and receive definite names.

In the Deccan, at the full moon of Sept.-Oct., each Kunbi collects in his field six stones which he assumes to represent the five Pāṇḍava heroes of the *Mahābhārata* and their mother Kuntī; he smears them with lime and spots of red paint, breaks a coconut before them, and offers food.¹⁴ The Shānārs, palm-tree tappers of Mysore, worship a male and a female deity, which, on holy days, are represented by two rude stones, taken up for the occasion; during the rite they are placed in a shed, but afterwards they are thrown away and neglected.¹⁵

In a temple of Durgā at Manipur a rough black stone, apparently quite unworked, represents the goddess.¹ In Bengal, at the close of the festival which commemorates the end of the menstrual period of Mother Earth, a stone representing the goddess is placed erect on the ground; the top is painted with vermilion; it is purified by bathing, and decked with flowers, and offerings of milk and fruits are made to it.² The image of Asāpūrā Mātā, 'she who fulfils desires,' at Madh in Cutch, is a red-painted rock, about 6 ft. high and 6 ft. broad at the base, narrowing to a point at the top, with some vague resemblance to the human form. People walk round it, and the chief annually sacrifices seven male buffaloes before it.³ In Gujarāt many of the gods of the forest tribes are represented by stones. Vaitāl Dev, a hill-god, is a stone about 4 ft. high; Simādiā Dev, a red-coloured stone under a sacred tree, is worshipped at marriages.⁴ In the Central Provinces, Bhairāsāsar, the buffalo-god, is a stone placed in every field, sometimes one or two for the whole village. It is worshipped when a cow runs dry or the milk goes bad. Mūthiyā Deo, the divine watchman, is a stone smeared with vermilion at the meeting of the village cross-roads.⁵ Gaṭhoiyā, 'lord of the crossing' (ghāt), is a round stone placed on a platform near fords, and Khedāpati or Khermātā, 'deity of the village site-mound' (kherā), is a stone worshipped at sowing-time and harvest.⁶ In Kolhapur the local god, Jotibā, and his consort, Yamāi, dwell in rough stones.⁷ All over N. India the collective gods of the hamlet are represented by a pile of stones of the most heterogeneous kind—water-worn pebbles, flint hammers, fragments of carved stone from ancient buildings, and the like—all arranged under the sacred tree of the hamlet.⁸

2. Stones used in orthodox Hindu worship.—Many stones are used in worship by Brāhmins and other high castes. Among the Hindus generally particular respect is paid to stones which appear spontaneously and bear no marks of human work. They are known as *svayambhu*, 'self-existent,' chiselling being regarded as disturbing and offensive to the indwelling spirit. Many of the most famous *lingas* and other holy stones are of this kind.⁹

The *śālagrāma*, a black ammonite, found in the Nepāl river Gaṇḍakī, from its curious interstices and other markings, is regarded as the abode of Viṣṇu.¹⁰ Bairāgis (q.v.) are specially careful about the *śālagrāma*; they will not eat without worshipping it, and, when so doing, they cover their heads with a piece of cloth upon which the name of Rāma is inscribed.¹¹ Smārta Brāhmins in S. India use five stones in their domestic worship—the *śālagrāma*, representing Viṣṇu; the *vāṇa-linga*, a white stone, Śiva; a piece of red jasper, Gaṇeṣa; a bit of metallic ore, Pārvatī, or a *linga-yoni*, Śiva-Pārvatī; a piece of pebble or crystal, the sun.¹²

3. Worship of special stones.—Worship of certain stones is specially important: the boundary-stone, the 'navel' or village-stone, the death- and memorial-stone, the bride-stone, and the grindstone.

(a) *The boundary-stone.*—The best examples of this come from S. India. H. Whitehead¹³ connects this cult with the totem sacrifice, the totem animal being slain that its blood may be shed and may thus secure the presence of the totem deity at a particular spot, which then becomes tabu. To prevent violation, the place is marked by a simple heap of stones, or by an upright stone-pillar, which would perhaps be sprinkled with the blood.

The boundary-stone, in India and elsewhere, marks the division between the cultivated area and the waste, a margin of separation between the sacred and the profane, within which the sacred processes of domestic life and husbandry might go on, undisturbed by dangers—human, spiritual, or what not—coming from the profane world

beyond.¹ Throughout India the boundary-stone and its cults ensure the protection of the hamlet from foreign (and therefore hostile) spirits. Some tribes worship a god of boundaries, like Sūndi Pennu of the Kandhs; others practise propitiation of foreign spirits at the boundary (*simānta pūjana*), when the party of the bridegroom arrives to fetch the bride.² In the Central Provinces there is a tree or stone worshipped as Miroī Deo, god of boundaries, to whom, in times of sickness, worship is done by hanging small flags on his shrine and by offering goats; in the Betul district, at the Dasahrā festival, the *bhūmkā*, or medicine-man, installs Dongar Deo, god of hills, on the boundary; he is believed to avert calamities for the coming year.³ In Trichinopoly, at the propitiation of the boundary-goddess, the priest carries a pot full of boiled rice and the blood of a sacrificed lamb to the boundary-stone, walks round the stone three times, and at the third circuit smashes the pot on a second smaller stone at the foot of the boundary-stone.⁴ In Mysore these stones are often adopted into the cults of the higher gods, by carving on them Śaiva or Vaiṣṇava symbols.⁵ In Gujarāt Khetrpāl, 'tract-guardian,' the boundary-god, is represented by a stone on which is carved the figure of a horse.⁶ In S. India such stones are held in great respect, are worshipped at the festivals of the village-goddesses, and may be known by their shortness and the oily incrustation caused by constant anointing; in Vizagapatam, when cholera appears, sacrifice is made at the stone, and crows' or peacocks' feathers are hung across the paths, or a broom is suspended to brush away all evil influences.⁷

(b) *Village-stones.*—In S. India such stones are known as 'navel'-stones. With these we may compare the omphalos (q.v.), or 'navel,' at Delphi, for which there are numerous parallels in many parts of the world.⁸

In the middle of the threshold of nearly all the gateways of ruined forts in the Bellary district there is a roughly cylindrical or conical stone, known as the 'navel' or 'middle' stone (*hoddu-rāyi*), planted there when the fort was built, and marking its limits. Before sowing, the village oxen are worshipped and driven past the stone to the sound of music; a mock combat follows between the owners of the cattle, each trying to drive his beast first through the gateway, and omens are taken from the colours of the animals: if a white ox wins, white crops, like cotton or white millet, will prosper in the coming year; if red, those with red grains, like red millet, will thrive.⁹ In Mysore this cattle-stone is a rough slab, about 4 ft. high and 3 ft. broad, set upon a stone platform about 1½ ft. broad. When cattle suffer from sore feet, the owner pours curds over the stone for their recovery; charms against the evil eye and other dangers are engraved on stones, called 'amulet-stones' (*yantra-kallu*), which are often erected at the entrances of villages.¹⁰

In other parts of the country village-stones, embodying the luck of the community, are erected. The Garos erect sacrificial stones at the entrance of any large village. They are rough, unhewn stones, set up in the ground without any attempt at regularity, and seldom more than 3 ft. high. They are regarded with much reverence, and may never be removed. When a village site is changed, the stone remains, and the villagers return to the old stone for the annual ceremony. When the time of sacrifice arrives, the stones are decked with crowns made of bamboos, and sacrificial emblems are placed near them. Swords are brought out and planted, point upwards, in the hollow ends of a row of short bamboos. The priest slays the victim, and smears its blood on the stones. In some cases each stone appears to represent a particular guardian-spirit, and is given a name accordingly.¹ Among the Lushais, when the season for the jungle clearance (*jhūm*) begins, the Chiru clan kill a dog at a stone placed east of the village; as soon as it grows dark, men and women drink and dance round the stone.² The Paharyās of Chotā Nagpur sacrifice to their guardian stones and anoint them with red lead and oil.³

The worship of such stones is closely associated with the cult of sacred trees. The Skr. word *chaitya* (q.v.) means 'a funeral pile or grave, a monument or tombstone,' and also 'a sacred tree,' like the fig, 'growing in or near a village and held in veneration by the villagers, a place of sacrifice or religious worship, an altar.'⁴ In some villages in S. India 'the deity is represented simply by a stone pillar standing in a field, or on a stone platform under a tree, or in a small enclosure surrounded by a stone wall.'⁵ The Kurumbas worship a block of stone under a tree, by the name Gurun-ātha, 'lord teacher.'⁶ In Mysore serpent-stones are set up on a platform facing the rising sun, under trees, one of which is invariably a sacred fig, which represents a female, and the other a margosa, a male.⁷ Among the Garos near the stones erected by the tribe to commemorate a tragic death either a *mandal-tree* (*Erythrina suberosa*) or an *Euphorbia cactus* is planted.⁸ The shrine of the village-deities in N. India always consists of a pile of stones collected under a sacred tree, usually a species of fig.

(c) *Death- and memorial-stones*.—In many cases the stone is designed to form a home for the spirits of the dead or to serve as a memorial of them.

In W. India the 'life-stone' (*jīv-khādā*) is used in the funeral rites. The Bhois of Bombay keep the stone with which, at the cremation, the water-jar is broken by the chief mourner in the house for the ten days of mourning. On the tenth day the chief mourner goes to the river with the 'life-stone,' offers grain and a copper coin to it or to the spirit immanent in it, and bathes it thrice. Then the Brāhman priest, muttering spells and prayers, flings the stone into the water, thus finally disposing of the spirit.⁹ Among the Chodhrās, on the fourth day after a death, a spirit medium, accompanied by the friends of the dead man, sits in the *devāsthān*, a plot of ground set apart near each village for the spirits of their forefathers, in order that they may not wander through want of shelter and company. He kills a fowl, letting some of the blood fall upon the 'life-stone.' Then he offers grain and butter, paints the stone red, consecrates it to the spirit of the dead man, and in some cases covers it with a quaintly ornamented dome of clay. Near the stone the friends set a small clay cow or she-buffalo for a woman, and a horse for a man.¹⁰

By an extension of the belief that the spirit immediately after death takes refuge for a time in the 'death-stone,' and may be disposed of if the survivors fling it into water, it is believed that the spirit may be embodied in a memorial-stone, raised on or near the grave, before which offerings are placed to propitiate the ghost.

The most typical case of such memorial-stones is found among the Khāsīs.¹ The same custom prevails among other tribes on the frontier of Assam. Among the Lushais a big upright stone is erected in the centre of the memorial-platform, and on it 'various figures are roughly outlined, representing the deceased and sometimes his wives and children, and the various animals that he has killed.'² Among the Old Kukis the stone is erected in anticipation of death or at the funeral, and the corpse of a village officer is carried, from left to right, round his memorial-stone.³ Among the Nāgas the custom of erecting such stones is closely connected with ancestor-worship. A man will erect a stone in the name of his father, from whom he believes he will receive help, should need arise. Hence the preservation of the stone is associated with the luck of the family, and a man erects a stone if he desires to found a family.⁴ The Mikirs erect on the grave of a great man a tall upright stone, with a broad stone supported on short uprights; on the latter offerings for the spirit are placed.⁵

Among the Mündās of Bengal, at the death of a leading man, a great stone is dragged by several men to the burial-ground. Some wealthy men prepare the stone in anticipation of death. Near the stone a deep hole is dug for the reception of the cinerary urn. These massive gravestones mark all ancient villages.⁶

In W. India similar stones are erected by the forest tribes. The Nāiks of Gujarāt, a year after a death, with the help of a holy man (*bhagat*), bring a stone from a river-bed and set it up as a memorial. The *bhagat* or a member of the family smears the stone with red lead, kills a hen, and sprinkles its blood on the stone. The Mātā, the Mother-goddess, possesses the *bhagat*, who trembles all over, and says to the spirit of the dead man: 'See that you do not disturb this family!' After the rite the hen is roasted and eaten by the family. A similar offering is made annually at the Holi, or spring fire-festival.⁷ The Dhils, after a death, employ a mason to carve on a stone a figure of the deceased on horseback. The stone is washed, daubed with red powder, and taken to the village *devāsthān*, where a goat is killed, its blood sprinkled on the stone, and the flesh cooked and eaten with as much spirits as the party can afford to buy.⁸ In almost every part of Kāñbhāwār, near the entry to villages, are stones like tombstones, known as *pāliya*, or 'guardians,' erected in memory of Chārāns (q.v.), men and women who killed themselves to prevent the capture of the village cattle or to recover them from the predatory Kāñhis. The name of the Chārān, the date, and the object of the memorial are inscribed on the stone, while a rude sculpture shows the men on horseback killing themselves with sword or spear, and the women pressing daggers into their throats.⁹

In other parts of Bombay 'battle-stones' are found, carved on the top with a funeral urn, and an attendant on each side holding a fly-whisk. Below are panels representing battle-scenes and worship of the *līnga*. These stones are known as the 'seven heroes,' and are much dreaded because their spirits are believed to scour the country at night.¹⁰ Similar memorials of old border fighting are found in Rājputānā, and they easily develop into the ornamental *chhatra*, or cenotaph, which is erected to the memory of distinguished men.¹¹ In the same class are the *sati* shrines, memorials of faithful wives who died with their lords.¹² In S. India these are known as *māstikal* (*mahā-sati-kal*, 'holy woman's stone'); they generally bear carvings of a pointed pillar or post, from which projects a woman's bent arm, holding a lime-fruit, which the *sati* always carried when going to her death.¹³

(d) *The bride-stone*.—During the marriage ceremony the bride is made to stand on a stone, which is in some places held sacred. According to the Vedic ritual, 'the rice, which had been put into a basket, is then taken up, and the stone is placed before the bride, who treads upon it with the point

of her right foot, while the groom recites the prayer: "Ascend this stone; be firm like this stone; distress my foes, and be not subservient to my enemies."¹

On the same principle, at initiation, a Brāhman boy is made to stand with his right foot on a stone, while the words are repeated: "Tread on this stone; like a stone be firm."² In the modern practice, at a Brāhman wedding, a stone (*aśman*) is kept near the marriage fire, and, at each turn, as the bride followed by the groom draws near the stone, she stops and stands on it until the priest finishes reciting a hymn.³ The same custom is found among the forest tribes. At a Muāsī wedding seven little heaps of rice and turmeric are arranged on a curry-stone. At each turn, as the pair go round, the groom causes the bride to kick away one of the heaps, thus dispersing ill-luck; among the Mūṇḍās the bride stands on a curry-stone placed on a plough-shaft, supported on sheaves of grass and corn, emblems of fertility; among the Orāons the bridegroom stands on a curry-stone behind the bride and with his toes treads on her heels.⁴

(c) *The grindstone*.—This is used in birth and marriage rites as a symbol of fertility.

Among the Kunbis of Kolābā, when a child is born, the grandmother or some elderly woman of the house places a grindstone in the lying-in room, and on it sets a small image of the tribal goddess made of rice-flour. She sprinkles red powder on the image, burns frankincense before it, offers fruit and flowers, and, wrapping the child in a cloth, presents it before the goddess, praying that she will accept the offerings, and be kind to the child.⁵ The Rāmōshis (*q.v.*) of Poona worship a grindstone on the fifth day after a birth.⁶ The Govardhan Brāhmins, on the fifth day after a birth, place four stalks of millet on a grindstone, and keep a lamp burning all night to scare evil spirits.⁷ At a Kunbī wedding a piece of cloth is steeped in turmeric, which scares evil spirits, and a root of tamārind, a holy tree, is placed on the cloth tied to the neck of the grindstone.⁸

4. *Stones possessing magical powers*.—Magical powers are attributed to many kinds of stones.

(a) *Holed stones*.—In many Indian dolmens there is a hole in the front slab. Many theories have been advanced—that it allows exit for the spirit of the dead man; that it permits offerings being passed into the inner chamber; that it allows an arm or other injured limb to be passed within the chamber, which possesses curative powers.⁹ All holed stones possess magical powers, possibly because they afford entrance to a spirit which thus occupies the stone.¹⁰ In the same class are the cup- and ring-markings found on many stones in India and elsewhere.¹¹ The meaning of these markings is obscure. In India a resemblance has been traced between them and the hemispherical depressions on village platforms, into which milk and Ganges water are poured to propitiate the malevolent dead.¹²

The custom of creeping through the orifice of, or under, a sacred stone, as a mode of purification or as a test of purity, is common in India. At Dabhoī in Baroda, near a Musalmān tomb of some celebrity, there is an upright slab with a circular orifice, which discriminates between thieves and honest men. The stoutest man, unjustly charged with theft, can creep through it with ease, while the thinnest culprit will stick.¹ A stone with similar magical qualities is found at Bhaunagar, and is known as the 'window of Truth and Falsehood.'² At Śātrunajāya there is a holed stone, the hole being called Muktdwārā, 'door of bliss,' through which any one who can creep is sure of beatitude.³ People creep through the hole in the Śrīgundī stone at Malabar Point, in order to get rid of the ghost of men murdered by them. Śivaji performed this rite, probably to get rid of the clinging ghost of Afzul Khān, and Rahgunāthrao Peshwa to escape that of his murdered nephew, Nārāyanrao.⁴

(c) *Swearing on sacred stones*.—The common custom of swearing upon a sacred stone may be partly based on the belief that the strength and stability of the stone lend confirmation to the oath.⁵

The Tangkhul Nāgas of Manipur have in their village heaps of peculiarly-shaped stones on which they take oaths.⁶ The Garos swear on a meteorite,⁷ the oath sworn being: 'May Gōéra (the god of lightning) kill me with one of these if I have told a lie!'; they also swear by the *śālagrāma* ammonite.⁸ At Tirumala, in the N. Arcot district, the keys of the temple jewel-chest used to be placed on a stone, which was believed to guard the temple by moving round it at night; one night it killed a man who was accidentally locked in; people now take oaths before it, the witness, after bathing, moving round the stone in his wet clothing, touching the stone, and swearing.⁹ At the shrine of a saint in Champāran, Bengal, there was once an inscribed stone by means of which thieves could be detected and stolen property recovered; Mahārājā Jang Bahādūr is said to have carried it off to Nepāl.¹⁰

(d) *Stones which give strength and cure diseases*.—Some stones are believed to possess magical powers of giving strength and of curing disease.

In Manipur there is a 'war-stone,' which gives strength to warriors; heads taken in a raid were shown to it; no woman may look on the stone lest she destroy its powers.¹¹ In some of their hamlets the Kotas set up curiously carved stones believed to possess healing powers, if the member affected be rubbed against them.¹² In Bengal, during a cholera epidemic, a woman found a white, glittering stone in a tank. She took it home, and that night an old woman appeared to her in a dream and taught her how to expel the disease by worshipping the stone. She carried out the instructions, and the stone is now worshipped under the name of Didi Thakrūn.¹³ In Central India stones known as Motī Mātā, 'pearl mother,' and Lālbāi Phūlbāi, 'dear flower lady,' are worshipped during epidemics of cholera. The *barūwā*, or village medicine-man,

slays a goat, the head of which, with lemons, copper coins, eggs, flowers, etc., is placed in a potsherd and offered to the stone; a small toy cart is placed near the stone, in which it is believed that the dreaded spirit may be induced to leave the place and take the disease with her.¹ The Burmese believe that a cabalistic figure engraved on a stone will make it float, and such a stone, if buried in a man's flesh, saves him from drowning. Certain stones, said to be found in the heads of birds, in trees, and in animals, are prized as amulets. They keep off sword-thrusts and evil spirits. When placed on a child's face or put into any one's blood, they introduce a spirit; the person so possessed falls into a trance, and may be questioned as to the doings of other evil spirits in the neighbourhood.² With such curative and magical stones may be compared the snake-stone and the jewel said to be found in the head of a snake.³

5. Pre-historic stones.—The pre-historic stone monuments of India include megalithic graves, known as dolmens and cistvaens, cairns, and standing monoliths.

An attempt has been made by G. Elliot Smith to assign the impulse for the erection of these monuments in Europe, Asia, and Africa to a single race starting from Egypt.⁴ This view, as far as Europe is concerned, has not met with general acceptance.⁵ In the case of India, it is difficult to attribute these monuments to a single race entering by the land route, because such monuments are rarely found in the Panjāb or along the routes which the so-called Aryans and other invaders from Central Asia followed. It seems more reasonable to suppose that the dolmen has for its antetype the hut, of which models, to provide for the repose of the spirit and for the supply of its food, were and are often erected.⁶ If such monuments in certain areas assume the megalithic form, it is because stones suitable for the purpose are procurable there. So far as our present knowledge extends, the dolmens and other megalithic monuments of the Deccan and S. India appear to belong to the early Iron Age. Some of the three-sided open dolmens may have been used as ossuaries, like those of the Khāsis (*q.v.*). One difficulty in assigning a date to these erections is that they continue to be set up by some of the present tribes. Thus the Todas erect funeral-stones, at which buffaloes are slain at funerals; others mark the spot where the corpse is laid, or a mound is raised for the same purpose. But at present no sanctity is attributed to them, and there are no definite signs of veneration or worship.⁷

Among the Wās of Upper Burma are seen collections of boulders with pointed stones in the centre. In one village there is a large flat stone propped up on several others in dolmen fashion. These may have been graves, but they are now said to be the abode of the house-spirit—one belief not necessarily excluding the other.⁸ The cairn is usually surrounded by a circle of monoliths, like the Vetāla circles in the Deccan. Here the circle encloses a stone, the god's house, the stones in the circle being called his watchmen. It has usually been assumed that such central stones or tumuli, surrounded by a circle of monoliths, passed into

Buddhism in the form of the *stūpa* (*q.v.*), with its elaborately carved railing; but V. A. Smith derives the domical *stūpa*, not from a tumulus, but from the curved roof of bamboos built over a primitive circular hut-shrine constructed of perishable materials.¹

Cairns of mockery.—A curious variety of cairn in Balūchistān is that known as the cairn of mockery or reproach.

'The stones of reproach in the Bugti country . . . tell of some tribesman's black deed, incest may be, or flight from the field, or foul murder. Of these cairns there is no mistaking the meaning, for they are generally topped by a stone as black as the deed itself. And their size alone is enough to suggest that the larger cairns dotted about Baluchistan are memorials of some famous battle-field. In the Brāhūi country, . . . If a man is a miser, his neighbours vent their spleen by piling up a cairn against him; if a man flees from battle, a cairn will commemorate his cowardice; if a man brings down a fine head, there will be a cairn where he stood and another where the beast fell; if a man dies heirless, a cairn will be raised to his pitiful memory. Every little thing seems to prompt the Brāhūi to pile one stone upon another. . . . If dry cairns lie on the beaten track, they grow in height week by week; each passer-by will add his stone to the pile.'²

6. Flint implements.—Flint implements or celts, of both the Palaeolithic and Neolithic types, are found in abundance in many parts of India.

Some hesitation has been expressed in accepting the fact that quartzite implements from the Indian laterite beds belong to the Palaeolithic age; but it is now established that not only do the river-drift implements of W. Europe and those from the Indian laterite display the same general technique, but, what is of more importance, they evidently belong to the same geological horizon in both countries.³

According to Bruce Foote, 'the geological evidence afforded by the formations in which the chipped stone implements of Palaeolithic type are found indicates—especially in the sections in Western India—that a great gap, historically speaking, exists between the date of deposition of such formations and of the beds in which, or on which, the earliest traces of neolithic man are met with. The geological evidence in Southern India, though less strikingly clear, points in the same direction.'⁴

No such break occurs between the Neolithic and the Iron Age. In fact, even at the present day, some tribes use implements made of stone. The Andamanese never made celts, but they use a quartz flake chipped off, never worked, for shaving and tattooing; these are now often replaced by flakes of glass obtained from the European settlements, and they still employ various stones for sundry domestic purposes.⁵ Many of the jungle tribes still use, or have only recently abandoned, stone implements. The Keriya of Chotā Nāgpur, up to the advent of the Hindus, from whom they obtained iron, used axes and grubbers of stone.⁶ The Kādū of Mysore use bits of broken glass for razors.⁷ In Bengal the umbilical cord is severed with a sharp-edged piece of bamboo or an oyster shell—an interesting survival of the time when metals were unknown.⁸ Strabo⁹ states that the Ichthiophagi of Baluchistān possessed no iron.¹⁰

At the present day it is generally believed that celts are thunderbolts (*κεραύρια*).¹¹ Some Madras tribes believe them to be the thunderbolts of Viṣṇu.¹² The Khyens of Assam, when a tree is

struck by lightning, search for the thunderbolt, and any likely stone is accepted as such, made over to the priest, held sacred, and sacrifice is made before it as to something sent from heaven.¹ V. Ball tells of a man finding a stone in a part of his field which had been struck by lightning during the preceding night.² The Malāyālis of S. India place in their shrines celts and other stone implements; they do not understand what they are and reverence them accordingly; outside one of their villages was found a small stone shrine, capped with a stone slab, whereon were stacked several Neolithic celts, supposed to be thunderbolts sent from heaven.³ Similar implements are often found at shrines in N. India.⁴ The Nāgas believe that Neolithic celts found in their country fell from heaven, and the Shāns of Burma say that such stones fall in their country and are of three kinds—one like brass found only by lucky people, others which are living, and some which are dead and have lost their virtues.⁵ Some of the wild tribes of Burma take oaths by drinking water in which a stone hatchet or celt (which they believe to be a thunderbolt) has been immersed, calling on the spirit immanent in the weapon to punish the man who commits perjury.⁶ In Sikkim great faith is placed in the magical power of celts, or 'thunder-stones,' as they are called. The stone is washed with soap in a little warm water, and women are made to drink the water in order to ease the pains of delivery.⁷

LITERATURE.—There appears to be no comprehensive monograph on the sacred stones of India. References to some of the scattered literature are given in the article. For the Indian pre-historic stone monuments see W. C. Borlase, *The Dolmens of Ireland*, London, 1897, iii. 750 ff.; Meadows Taylor, 'Descriptions of the Cairns, Cromlechs, Kistvaens and other Celtic, Druidical or Scythian Monuments in the Dekhan,' *Trans. Royal Irish Academy*, xxiv. [1865] 329 ff.; J. W. Brecks, *An Account of the Primitive Tribes and Monuments of the Nilagiris*, London, 1873; W. Francis, *Gazetteer of the Nilgiris*, Madras, 1908, i. 94 ff.; J. Fergusson, *Rude Stone Monuments in all Countries, their Age and Uses*, London, 1872, p. 452 ff. Numerous papers on the subject will be found in *JAI*, vols. ii., vi., xiii., xvi. For the Khāsi monuments see P. R. T. Gardon, *The Khāsis*, London, 1907, p. 144 ff.

W. CROOKE.

STONES (Semitic).—1. Ritual use of stone implements and stones.—During the Stone Age religion developed among all the peoples of the world. In attempting to establish and perpetuate friendly relations with the gods and spirits, definite rituals were evolved, and the instruments employed in these rituals were naturally made of stone. Such is the conservatism of religious practice and of practices bordering on the religious, such as initiations, that stone implements and stones were used in these ceremonies long after the tools employed in everyday life were made of metal. Circumcision among the Semites began far back in the Stone Age, but as late as the Exodus from Egypt and the conquest of Palestine—a time on the borderland of the Iron Age—flint knives were still used in circumcision.

Zipporah is said to have circumcised the son of Moses with a flint (Ex 4²⁵), and Joshua is said to have made flint knives on purpose to circumcise the Hebrews just before he undertook the conquest of Western Palestine (Jos 5^{2f.}). Similarly, in an Egyptian tomb of the time of Teti,⁸ the founder of the VIth dynasty about 2575 B.C., where we see the operation of circumcision being performed on two young men, the knife in the hand of the left-hand operator is clearly a flint; it is cone-shaped, with a sharp edge. The right-hand operator holds a square knife, which, so far as the form is concerned, might be of metal, but which Müller⁹ thinks is a flint that has been shaped, and this is altogether probable.

Closely connected with the ceremonial use of stones is their magical use.

In certain ancient Babylonian incantations a clay image of a witch was made, in the midst of which a stone from the mountain was put;¹ in another a stone was bound on to the son of a man.² In a fragmentary tablet which contains part of a ritual of a soothsayer directions are given for stringing a variety of precious stones, among which was lapis-lazuli, and hanging them on the neck.³

2. Sacred stones.—The ritual use of stones is connected with the fact that in many parts of the world certain stones have been considered sacred. The tradition that celts are 'thunder stones,' or stones that have fallen from heaven, probably arose from the fact that aerolites are found all over the world and, as stones that have fallen from heaven, are considered sacred.

Such a stone existed at ancient Ephesus, and is mentioned in Ac 19³⁵. It is probable that the 'black stone' in the Ka'bah at Mecca is of this nature, and it has been conjectured that the Ark of Jahweh, carried from place to place by the Israelites in the wilderness, originally contained such a stone.⁴

Large stones and rocks, whether crags or boulders, have been considered sacred by the Semites.

Gideon offered food to an angel upon a rock, and the rock served as an altar (Jg 6²⁰). Manohad did the same thing at Zorah, and the rock is definitely called an altar (131^{9f.}).

Such sacred rocks, regarded as holy and serving as altars, have been found in various parts of Palestine. They are often over sacred caves.

One was discovered by Schumacher at Tell-el-Mutesellim,⁵ another by Macalister at Gezer,⁶ while under the dome of the Mosque of 'Umar in Jerusalem such a rock is still guarded as sacred by Muhammadans.⁷ Those at Mutesellim and Gezer bore cup-marks, and all three show channels leading to openings through which sacrificial blood could flow to the sacred cave beneath. That at Gezer probably was over the sanctuary of the cave-dwelling people. On the rock at Jerusalem the Hebrews offered their sacrifices down to the destruction of the Temple by Titus.

In imitation of these natural rocks, or because of their influence, altars, and in one instance an entire high place, were hewn out of the solid rock. This was the case at Petra,⁸ where the high place was of Nabataean origin and probably does not greatly antedate the Christian era.

In Arabia a sacred rock became a god. The god al-Fals was a red projection of a somewhat human shape in the midst of the mountain Aga.⁹ Indeed it is not too much to say that all over Palestine and Arabia sacred stones were abundant. In the Hauran saints are still believed to bless certain stones so that they have the power of healing. Vows are made, not to the stones, but to the saints.¹⁰

3. Heaps of stones.—In the trans-Jordanic part of Palestine heaps of stones, or cairns, were old in OT times. They were probably constructed by Neolithic men, and Hebrew tradition accounted for them as best it could.

Such a heap mentioned in Gn 31^{48ff.} was believed to have been erected in patriarchal times as a witness of the agreement between Laban and Jacob. There is another such heap half-way up Mount Nebo, and another on its summit, where tradition has it that Moses died.¹¹

¹¹ For a picture of the last-mentioned see G. A. Barton, *A Year's Wandering in Bible Lands*, Philadelphia, 1904, opposite p. 143.

In Palestine and Arabia the *fellahin* accumulate heaps of stones at the point on a road where one first catches sight of a holy place or an important town. Each traveller casts his stone on one of the heaps, and the action is considered meritorious.

4. Monoliths.—The Semitic monoliths, or *maṣṣebhah*, are treated in a separate art. *MAṢṢEBHĀH*, and those at the high places of Petra, Gezer, Taanach, Tell es-Safi, etc., are described in the art. HIGH PLACE. Such monoliths survive in places east of the Jordan and retain their sacred character in the estimation of the modern peasant.

At Ezra in the Hauran there are two pillars which, it is said, a bastard cannot pass.¹ At a village in the Druse mountains there are upright stones between which bridal couples must walk.² At Karyaten, the last outpost on the way to Palmyra, there is a prostrate pillar that is regarded as sacred to a certain saint. Near it is a mud hut about the size of a bee-hive, in which vessels containing oil to be burned are placed by those who pay vows to the saint.³

Sometimes stones are worshipped which have acquired sanctity during the historical period.

Thus near El-Merkez, in the Hauran, in front of a Muslim place of prayer is a rock 7 ft. high and about 4 ft. wide, called the Rock of Job. It is regarded as the dwelling-place of a waif. It is part of a monument of Ramses II. and bears a representation of his head and an inscription in hieroglyphs.⁴

According to Tacitus, one of those pillars stood in the temple of Astarte at Paphos in Cyprus. It was regarded as the statue of the goddess.⁵ Similar pillars were employed as religious symbols in ancient Arabia, where they were called *anṣab* (sing. *naṣb*).⁶ At Yeha and Aksum in Abyssinia monoliths of this character were connected with the ancient Semitic cult.⁷ They were taller than the average of those found in Palestine, and had fire-hearths, or altar-hearths, at their bases. Perhaps it was such a pillar that Mesha, king of Moab in the 9th cent. B.C., calls an *ariel*, or fire-hearth.⁸

Pillars of this character stood before every Phœnician and Punic shrine. They are frequently pictured on the votive offerings which have been recovered in considerable numbers from those countries.⁹ The tops of them are often carved into a pyramidal shape, suggesting the top of a phallus.

Egyptian obelisks were developed from such pillars. In tombs of the IVth dynasty obelisks 3 ft. in height have been found. That found in a Vth dynasty temple was about the height of some of those monoliths. It differed from them only in having its sides cut down to a square and the top shaped into the form of a pyramid.¹⁰ In the time of the XIIth dynasty the main shaft was greatly elongated, thus making the obelisk with which travellers are familiar.¹¹

made of large undressed stone blocks first attracted the attention of the learned, in the 17th and 18th centuries, it was assumed that they were of 'Celtic,' or 'Druidic,' origin—an assumption which still remains enshrined in current terminology. Even in scientific writings several types are denoted by names derived from Celtic languages. This Celtic attribution is, however, certainly erroneous; such monuments are found in parts of the world where no Celts ever existed; and even in the Celtic regions of Europe they are to be attributed to races who preceded the Celts. The term 'megalithic,' to denote these structures, was formally adopted at the meeting of the Congress of Anthropology and Prehistoric Archaeology in 1867. The monuments may be classified into two main divisions, which may be called non-constructional and constructional respectively. The first of these contains stones set on end, singly or in groups, not showing any greater architectural skill than is needed to erect a heavy monolith. The second contains all monuments in which heavy stones are built one over the other: these often indicate the possession of no small ingenuity on the part of the builders. In each of these divisions may be grouped three classes of monument: the non-constructional are *meini hirion*, or standing stones, alignments, and circles; the constructional are trilithons, dolmens, and cistvaens. There are several subordinate types in each class, some of which are noticed below.

2. General description of the different kinds of monuments.—(a) *Standing stones* (Welsh and Breton *maen hir*, *mean hir* [Anglicized 'menhir'], 'long stone,' plur. *meini hirion*; Irish *galldán*; sometimes, but now comparatively rarely, called by the Breton name *peulvan* [*peul-van*, 'stone figure']).—A standing stone is an undressed block of stone set up on end—the simplest form of stone monument. The height ranges from 2 or 3 ft. up to nearly 70, the height of an enormous menhir at Locmariaquer, Brittany (now fallen). The shape also is very various, some being quite irregular blocks, some being needles, with round, square, rectangular, or trapezoidal transverse section, others being flat slabs on edge, occasionally with the breadth nearly as great as the height. To some extent this depends on the nature of the stone available in the neighbourhood; but it is not the least remarkable fact about rude stone monuments that the builders often went far afield for the stones which they used, so that the monument belongs to a different formation from the country around it.

This is the case with the Locmariaquer menhir, which, though it weighs nearly 350 tons, must have been dragged a considerable distance before being set up. The blue stones at Stonehenge are likewise foreign to the district.¹ While in the prehistoric period of which we are speaking a menhir is essentially a rude undressed pillar, the tradition persists in the shapely form of Egyptian obelisks, or the column-like Pompey's Pillar; or else in masonry imitations of monolithic pillars like Trajan's Column at Rome or the Nelson Memorial in Trafalgar Square.

(b) *Alignments*.—These consist of standing stones arranged in straight lines. They may be of any number, from a single line of two stones up to the magnitude of the extraordinary monument at Carnac, Brittany. Here there are three groups of alignments, respectively 11, 10, and 13 in number, and containing when complete 1120 stones.

(c) *Circles*.—These consist of standing stones arranged in one or more rings, circular or oval. Single rings are by far the commonest, though double rings, more or less concentric, are also found, as at Avebury in Wiltshire. There is almost invariably an additional stone, either inside or (far more commonly) outside the circumference of the circle.

¹ In such cases it is sometimes possible that the stones were ice-borne erratics, and actually found on the site.

The 'Friar's Heel' at Stonehenge, and 'Long Meg' in the group known as 'Long Meg and her Daughters' near Penrith, are good examples. Ship-shaped enclosures (*skeppsätningar*) are found in Scandinavia; the remarkable Deerpark monument in Co. Sligo, Ireland, may also be developed from the plan of a ship.

(d) *Trilithons*.—In these monuments two stones on end support a third, laid horizontally across their tops, after the fashion of the jambs and lintel of a doorway. Trilithons are rare as independent monuments; more frequently they enter into the composition of elaborate monuments, as at Stonehenge, and at the Deerpark in Co. Sligo. It is worth passing notice that the famous trilithons (so-called) of Tripoli are merely oil-presses of Roman date.

(e) *Dolmens*.—In a dolmen three or more stones on end support one or more large slabs (called the 'cap-stones') lying horizontally upon their tops, after the manner of a table. From this analogy the monument derives its name (Breton *taol-méan*, 'stone table').¹ The name *cromlech* (Breton *kroumlec'h*, 'stone curve') is to be avoided, because it is not accurately descriptive, and, moreover, the word is more correctly used in French works to denote a quite different class of monuments, namely stone circles. This word is said to appear first in literature, in the Welsh Bible of Bishop Morgan (1588) at Is 2^d, to translate 'caverns.'

There are two principal varieties of dolmens: (1) dolmens proper, and (2) *allées couvertes*. In the dolmen proper the supporting stones are arranged more or less in a square, broad-oval, or circle, the two axes being approximately of the same length. In the *allée couverte* the supporting stones stand in two rows, parallel or slightly inclined to one another, and the enclosed space is roofed with a succession of slabs laid across them. The length of this class of monument is, therefore, much greater than the breadth. The rows are usually parallel, but Ireland has a number of examples of wedge-shaped *allées couvertes* in which the two lines expand from one end. In many cases, especially in dolmens with very heavy cap-stones, the supporting stones are absent from one side, so that the cap-stone rests partly upon the ground. A dolmen so constructed is sometimes called a *demi-dolmen*. A composite form is sometimes seen in which the cap-stone is partly supported, not on the ground but on a subordinate cap-stone. A good example of this not very common type exists at Trefignath near Holyhead, N. Wales.

(f) *Cistvaens* (Welsh *cist-faen*, 'stone coffin') are practically dolmens built of roughly squared slabs rather than of blocks of stone, fitting more closely together, so that the chamber within is much less open than in the ordinary dolmen. They are of a smaller size than the average dolmen.

A word may here be said of 'rocking stones,' which held a prominent place in the speculations of the pioneer archaeologists. These are boulders so poised on a narrow part of their surface that a light pressure—even a child's hand—can make them oscillate, though a great force would be needed to dislodge them. In the early days of pre-historic research these were supposed to be 'Druidic oracles.' But it is now recognized that rocking stones are the accidental results of geological processes—ice transportation, denudation, and the like—and are of no archaeological significance. It is by no means wildly improbable that stones so strangely balanced may have been used for the purpose suggested, but it is quite undemonstrable.

Many monuments combine the characteristics of several types.

Thus, to mention but a very few familiar examples, (i.) the great circle at Callernish, in the island of Lewis, has a large menhir at the centre, and is crossed by a single alignment running east and west, and by a double alignment running north and south. (ii.) Near Ronachan, Cantire, is an alignment of three stones ending in a dolmen. (iii.) Stonehenge, when complete, seems to have consisted of (1) an earthen mound enclosing an area about 300 ft. in diameter; (2) a circle of about 20 standing stones with a lintel across each pair, forming a continuous architrave, about 100 ft. in diameter; (3) the outer circle of 'blue stones' about 6 ft. high; (4) a series of five trilithons ranging in height from 16 to 21 ft., arranged in a horseshoe; (5) the inner circle of 'blue stones'; (6) the so-called 'altar-stone,' a recumbent block in the middle, about 16 ft. long; (7) an avenue running from the earthen ring to the north-east, with (8) the 'Friar's Heel,' a single stone standing at the end. The beautiful photographs of Stonehenge taken from

a balloon¹ give an admirable idea of its plan and present appearance. (iv.) On the Meayll Hill, Isle of Man, is a circle of cists.

3. *Method of erection*.—The enormous weight of some of the stones used in these structures is one of the most surprising facts about them.

At Mount Browne near Carlow is a dolmen with a cap-stone weighing about 100 tons. This is exceptional—it is indeed the heaviest stone in a dolmen in Europe. But cap-stones of 40–70 tons are not uncommon; and to erect many of the single standing stones must have been a most formidable task. The stones were probably transported on rollers from their original sites, by the united labour of many men with or without the help of animals (cf. the Egyptian representations of the transportation of colossi). The standing stones, as well as the supporting stones of dolmens, were, most likely, erected by being run up sloping earth banks and tilted over the edge into the sockets prepared for them. In some excavations made at Furness, near Naas, Co. Kildare, a layer of made earth was found, overlying the natural soil,² round the foot of a great standing stone. This has been explained as the spread-out material of the inclined plane up which the stone had been rolled, to drop it into position. The same method was probably employed, when the upright stones of dolmens had been fixed in position, to raise the cap-stone to its place.³

However the difficulties of construction may have been overcome, the existence of these enormous monuments implies a considerable degree of social organization on the part of their builders. The co-operation of great numbers of men was necessary to transport and to deal with the blocks, and some compelling power must have existed to secure such co-operation—whether the external pressure of a despotic chief or medicine-man, or the more subtle influence of loyalty to common tribal interests. And in many cases there must have been the controlling power of a single mind superintending the work—an architect, with skill to assure himself that the supporting stones were properly spaced, and sufficiently firm to bear the weight of the cap-stone.

4. *Purpose*.—Rude stone monuments are either memorial or religious in their purpose; but these two explanations are supplementary, not mutually exclusive. For a memorial of a deceased chieftain is a shrine in honour of his ghost, and thus *ipso facto* acquires a religious significance.

The fact that interments have frequently been found at the foot of standing stones (as was the case at Furness, mentioned above) shows that such are often gravestones. Even down to the comparatively late date when writing was used by the Celtic-speaking inhabitants of Gaul, Britain, and Ireland this form of memorial was used; for undressed pillar-stones exist bearing inscriptions in Roman or Ogham letters, but otherwise not differing from the rude monuments of the pre-Celtic peoples. How far the chieftain's life was supposed to pass into the standing stone erected above his grave we cannot say. Such a transference of soul was certainly regarded as taking place in the case of a tree planted on the grave; and there is a curious idea still current among the Irish peasantry that stones, like trees, are capable of growth.⁴ Thus it is by no means impossible that the connexion between the stone and the spirit of the buried chieftain was much closer than a mere relation of corpse and memorial, and that the stone was really a tangible recipient of honours offered to the departed.

But it is more than likely that many of the menhirs were actually figures of deities. Cæsar describes the Gauls as worshipping 'Mercury,' of whom they had many *simulacra*.⁵ There are,

¹ *Archæologia*, vol. ix. pt. ii. [1907], plates 69, 70.

² *Proceedings Royal Irish Academy*, vol. xxx. sect. C [1912–18] p. 351 ff.

³ See King Frederic VII.'s paper, 'Sur la Construction des salles dites des Géants,' in *Mémoires de la soc. royale des Antiquaires du Nord*, Copenhagen, 1850–60, p. 1.

⁴ The present writer has been shown, by a not un intelligent farmer, a peculiar mark in the side of a pillar-stone which was explained as being due to the pressure of another stone while the first block was growing.

⁵ *De Bell. Gall.* vi. 17.

¹ In strict grammar the form with initial *d* should not be used except after the Breton definite article. *Taol* (also spelt *töl*) is not a native Celtic word, but a loan-word from Latin *tabula*.

actually, no images of gods in Gaul dating before the Roman period, if we except a few very rude representations of a female divinity.¹ The probability is that Caesar was the spectator of rites round a menhir, which he took for a phallus, and, with the phallic associations of the Hermes figures in his mind, concluded that he was the spectator of a worship of Mercury. This probability is increased by an important passage in the 7th cent. life of St. Samson, bishop of Dol. Samson was a missionary from Britain, and, coming to Dol, was witness of a 'bacchic' adoration of a 'simulacrum abominabile,' which he proceeded to consecrate by cutting upon it the sign of the cross.² St. Patrick found at Magh Slecht, probably somewhere on the borders of counties Cavan and Leitrim in Ireland, the 'king-idol of Ireland,' whose name is variously given as Cromm Cruaich or Cenn Cruaich, with twelve attendant gods surrounding it; evidently a stone circle, with the additional stone above described, is intended. The saint destroyed it. The accounts of this monument and the adoration paid to it are obscure, thanks to the drastic editing that the surviving fragments of Irish literature have undergone at the hands of the monastic scribes to whom we owe their preservation; but it is not difficult to see evidence of human sacrifices and ceremonial mutilations in the expressions used.³ Another idol of stone, called Cermand Cestach, is referred to in a gloss in the *Martyrology of Oengus*.⁴ This stood close by the Cathedral of Clogher, Co. Tyrone, and was in some way consulted as an oracle. A stone alleged to be the idol in question stands on the place indicated, but its identity with the ancient stone is doubtful. A passage in one of the 'Brehon Law Tracts'⁵ referring to the boundaries between adjacent properties enumerates among other forms of landmark 'a stone of adoration.' This indicates another use for rude stone monuments; but landmarks have at all times been under the protection of tutelary deities, so even here we cannot get away from a fundamental religious association in the monument. Slight traces of the conception of rude stone monuments as being, virtually, statues or embodiments of supernatural beings (gods or ghosts), survive in modern tradition—as in the name *fear breagach*, 'false man,' sometimes given to them, both in Ireland and in the Scottish Highlands; in alleged resemblances to human figures, which the local people sometimes point out, but which it requires the eye of faith on the part of a stranger to perceive; and in the crosses often cut or erected upon them, both in Ireland and in France, as though to drive the paganism out of them. On the other hand, the menhir of Kernuz, Finisterre, has had a figure of Mercury and some other figures sculptured upon it in Roman times.⁶ In the neighbourhood of Confolens the dolmen of Saint-Germain-sur-Vienne has been turned into a chapel, by substituting moulded Gothic pillars for the supporting stones; and at Arrichinaga in Spain there is an example of a dolmen being turned into a baldacchino over the altar of a church. These remarkable cases of the Christianization of rude stone monuments will be found illustrated in Fergusson's work.⁷

The figure of Cromm Cruaich is said to have been of gold, or ornamented with gold. No stand-

ing stones bearing such ornaments are known—which is not to be wondered at. But a number are in existence which are ornamented with cups, spirals, or concentric circles; and generally it is a prominent stone of a group that is so decorated. 'Long Meg,' in the Penrith group, is a good example.¹

A fine series of standing stones near Kilmartin, Argyllshire, shows a suggestive grouping: a tall slab ornamented with cups and rings on its western face, with a small enclosure immediately in front of it that has all the appearance of a sacrificial hearth, while two stones side by side some distance to the east, and a similar pair some distance to the west, appear to be the terminal gateways of an avenue (possibly once marked out with palisades) having the ornamented stone in the middle. The cups and rings are most probably religious (solar) emblems.² A very similar group near Dingle, Co. Kerry, is known locally by the suggestive name 'the Gates of Glory.'³

Alignments are very probably avenues for ceremonial processions, but these are perhaps the most difficult of all rude stone monuments to explain. An alignment of two stones generally marks the head and foot of a grave. Circles likewise probably represent some form of procession or dance: the circle of sub-gods, exercising their evolutions around or in front of the chief god, may well be represented by these monuments. Traditional practices, such as the paying of 'rounds,' appear to indicate that some kind of circling procession was an important part of ancient ritual; such half-humorous survivals as the convention of passing wine sun-wise are reminiscences of the same order of observances. The tradition often preserved that stone circles are petrified men, who were turned into stone as a punishment for dancing improperly, or on the Sabbath, no doubt echoes dimly the original intention of the builders.

At Hollywood, Co. Wicklow, is a fine circle on a field known by the suggestive name of Aughgraney (*achadh gréine*, 'the field of the sun'); the circle is explained as the profane dancers, the outside stone as the piper. So in France stone circles are popularly called *les danses*, *la ronde des fées*, *le bal des dames*; in Germany *Steintanz*; and Geoffrey of Monmouth speaks of Stonehenge as *Chorea Gigantum*.

A circular enclosure is frequently marked out around a dolmen or a barrow by means of blocks of stone or stone pillars. Good examples are to be seen in Ireland at the *Leac na bhfian* (now called the 'kissing stone') at Carrowmore in Co. Sligo,⁴ and at New Grange. In Denmark enclosures of this kind sometimes are square or rectangular. In such cases the circle is meant primarily to mark the enclosure sacred to the dead, either to protect it from trespass or to prevent the ghost from wandering at large among the living. Sometimes a stone circle has been found embedded in a tumulus, perhaps because the earth mound was raised higher than had been the original intention of the builders. Earthen mounds, however, often take the place of the stone ring in such cases.

The Semites were among the most assiduous raisers of 'pillars' in the ancient world, and perhaps it is among them that the subject can be most fully and instructively studied.⁵ The erection of large stones as memorials is frequently referred to in the OT—more frequently as memorials of events than of individuals. But in many such cases the explanation is clearly traditional, associated with megalithic monuments of which the true origin had been forgotten.

Such was the stone circle which gave its name to Gilgal by the Jordan, explained as a memorial of the crossing of the Israelites (Jos 4⁵) and obscurely referred to in Jg 3¹⁹ ('the graven images' in RVm). The 'pillar' over Rachel's grave was explained as a memorial of the dead (Gn 35²²); such seem

even to have been erected during the lifetime of the owner, as in the case of Absalom (2 S 18¹⁸), and a Phœnician inscription of one Abd-Asar in Cyprus, who says יצאנו לבנה 'I erected a *massebhâh* [over my grave] in my lifetime.'¹ The 'stone of Bohan' (Jos 16⁶) seems to be some kind of landmark.

But it is as sacred stones—signs, representations, or habitations of deity—that pillars are of the most conspicuous importance among the Semites. A pillar, *בִּצְנָה*, of stone (or several pillars) was an essential part of a Canaanite high place (*g.v.*), and in the pre-Deuteronomic system an essential instrument of the Jahweh-worship of the Hebrews.

Jacob erected a pillar at Beth-el (Gn 28¹⁸); and, even so late as Isaiah, in an ideal picture of the extension of the cult of Jahweh over foreign countries, we read of an altar 'with a pillar at the border thereof' (10¹³). On the other hand, Hosea (10¹⁶) disapproves of the pillar-cultus, doubtless on account of the abuses that were inseparable from it, though it is straining the sense of 3⁴ to consider that he regards pillars as prohibited. At last in the Deuteronomic legislation (Dt 16²²) the erection of a pillar, as a thing hateful to Jahweh, is forbidden. A pillar was erected by Ahab in Samaria (2 K 3²) to the Tyrian Baal.

The alignment discovered at Gezer has enabled us to form a concrete picture of these groups of sacred stones.

Dolmens and the other constructional monuments are more specifically connected with burial than with religion, though no doubt these also were centres of funeral rites; and the emblems sometimes carved upon them (especially in Brittany and in Scandinavia) indicate at least a secondary religious purpose attaching to them.

Some dolmens were covered by earth, and thus became chambered tumuli, with or without an *allée couverte* leading to the central chamber. But it may be taken as certain that many of the dolmens that now stand free of earth were always intended to be so. An earth mound resists natural destructive causes to a surprising degree, and a human destroyer would not be likely to spare the stone structure at the centre if for any reason he took the trouble of disposing of the earth. It is impossible to explain what has happened to the earth if we are to suppose that dolmens were always covered in. Moreover, in many cases (as in the fine dolmen at Legananny,² Co. Down) the supporting stones are so far apart that they would not hold back the earth from running in under the cap-stone and filling the chamber which the stones were presumably intended to make. In several cases the dolmen is erected on the summit of a tumulus; here it must be considered as a mark or monument erected over the grave underneath. This must also be true of the numerous large dolmens, in which the chamber is too open to conceal a funeral deposit. Not improbably many dolmens are cenotaphs, erected to commemorate a warrior whose body could not be found, and whose ghost accordingly it was specially important to propitiate. Both in Bavaria and in Ireland excavation has shown that some of the most carefully built tumuli are cenotaphs.

Another use for standing stones is in ratifying contracts. The 'holed' stones—standing stones with a perforation through them—must have been especially used for this purpose, if we may trust the evidence of traditional customs existing till quite recently. At Stennis, *e.g.*, the most binding contract was that between two persons who clasped hands through a hole in one of the stones.

Herodotus tells us that 'the Arabians observe pledges as religiously as any people: and they make them as follows. When any wish to plight their faith, a third person standing between them makes a cut with a sharp stone in the palm of the hand, near the longest fingers, of the two contracting parties and then taking from the cloak of each a wool-flock, he smears seven stones lying between them with the blood, and doing so he calls upon Dionysus and Urania.'³

Holes are found in the stones of some dolmens, especially in India, but they are not uncommon

nearer home, as in Cornwall, Brittany, etc. Probably the holes in dolmens are intended to allow egress to the ghost, or else for the deposit of offerings at the tomb.

Salomon Reinach, in an interesting article entitled 'Les Monuments de pierre brute dans le langage et les croyances populaires,'¹ has collected a number of names applied to stone monuments, which appear to enshrine vague recollections of their former purpose. Such names as *pierres du soleil*, *Sonnensteine*, suggest sun-worship; *pierre du serment*, *du feu*, *de la valse*, refer to oath-taking, fire ceremonials, or religious dances. *Pierres du sabbat* speaks of the Christianization of a district, after which the pagan monument would seem to the converts a resort of demons. Of a different order are names like 'Long Meg and her Daughters,' 'the Maidens of Lanyon,' *pierre de la justice*, which refer to family or assembly groups. Other names refer to ancient gods or fabulous beings, like 'Wayland Smith's cave' in Berkshire, or the numerous French structures called after the giant Gargantua. Others are called after dwarfs, sorcerers, mothers (=the groups of Gaulish and Germanic deities called *matres*), the devil; such heroes as King Arthur in England and Diarmait (with his lover Gráinne) in Ireland; the Druids; and historical persons like Cæsar, or certain saints. Other names such as 'Druids' altars,' and the like, are local attempts made to explain them. In many cases rude stone monuments are the subject of superstitious practices which have evidently a long ancestry behind them, designed to secure offspring, to cure diseases, to bring down curses on an enemy, to ratify contracts, etc. To others manifestations of life, talking, bowing at the Angelus, returning to their place if removed, etc., are ascribed. These will all be found analyzed in Reinach's paper. The conclusion at which he arrives is that the folk-lore of rude stone monuments is entirely pagan, and that, even when the Virgin, saints, the devil, and other conceptions due to Christian teaching are associated with them, these are merely secondary and have been substituted for beings of the earlier faiths.

5. Geographical distribution.—The geographical distribution of rude stone monuments extends, in the continental mass of the Old World, from the extreme west of Europe to the extreme east of Asia, and from Scandinavia to Central Africa; but the area over which they are found is not continuous. In spite of centuries of destruction, rude stone monuments of every type abound in the British and Irish Islands, and some of the most remarkable structures in Europe are found there.

In Ireland nearly 1000 dolmens have been recorded. In France they are also common—some 4000 dolmens are recorded as existing there. The peninsula of Brittany is especially rich in rude stone monuments of all kinds. The peninsula of Spain and Portugal contains some magnificent examples of dolmens, but circles seem to be less common there than in the other countries named above. In contrast to this comparative wealth in Spain rude stone structures are practically unknown in Italy (except at Otranto, in the 'heel' of the peninsula) and in Greece (except in one example in the north-east of the Morea). In Northern and Central Europe they occur in Belgium, Holland (in the province of Drenthe), and in Oldenburg, Brunswick, Mecklenburg—*i.e.* in the northern plain of Germany. They are common in Denmark and the Danish Islands, and also in S. Sweden. In Central Europe they are rare: a dolmen is reported at Chamblandes, Canton de Vaud.² The Islands of the Mediterranean—the Balearic Islands, Corsica, Sardinia, Malta, and Gozo—possess many structures of this kind, in remarkable contrast to the barrenness of the adjacent mainland. They are found in S. Russia, in the Caucasus, and also in Bulgaria. Crossing to Africa, we find dolmens and circles abundant in the countries north of the Sahara, bordering on the Mediterranean. South of the Sahara no dolmens exist, but circles have been found in Gambia, and groups of standing stones in Nigeria and the Sudan. In Asia Palgrave describes a circle which he has seen in Arabia, and Doughty describes an alignment of stones; Western Palestine has yielded a few dolmens, but Eastern Palestine has large numbers. There is then a gap till we come to India, parts of which (especially the west coast) abound with dolmens and circles. In China they appear to be absent; but dolmens are frequent in Korea and Japan.³

This wide area, and the many gaps which it presents, make it impossible to accept the view that the rude stone monuments, wherever found, are to be assigned to a single race of dolmen-builders, and are to be taken as monuments of their wanderings. Given the large deposit of time on which we can draw, the theory that the trade and intercourse of the Stone and early Bronze Ages carried the knowledge of new religions and new arts from one people to another makes much less demand on our powers of credulity than that of one all-

pervading race, which manipulated and worshipped large blocks of stone, permeating the local races native to the different countries where these monuments are found, and existing side by side with them. Indeed, the theory of independent origin among different people and in different places is not more incredible. The present author is bound to admit, in spite of the many writings sustaining a contrary thesis, that he can see no difficulty in supposing that the spirals decorating a Maori chieftain's face and the spirals in the chamber at New Grange have had ancestries totally independent of each other, both being directly derived from natural forms (vine-tendrils or the like) observed independently in the geographical areas to which they severally belong. Nor can he see any difficulty in supposing that people in Peshawar and people in Spain should have hit independently on the same solution of the problem of how to bury their dead out of their sight, and how to commemorate and honour them.

6. Chronology.—The dolmens of Japan have to be treated separately in considering the chronology of rude stone monuments. These are comparatively late, being in many cases recognized as the tombs of emperors of known date. Gowland, the leading authority on the subject, dates the Japanese dolmens from 200 B.C. to A.D. 500 or 600. Certain Russian monuments built of large stones, being furnished with grave-goods of the late Bronze or early Iron Ages, are also comparatively recent. Apart from these groups, however, the origin of these monuments must be put back to a period of very considerable antiquity.

The date of such monuments as these can be determined (a) from objects to which a date can be assigned found in association with them, and (b) from ornamentation sculptured upon them. Much time and ingenuity has been wasted in endeavouring to solve the chronological problems by astronomical calculation, but too many arbitrary assumptions have to be made, and the results obtained carry no conviction.

Speaking generally, we may say (i.) that a single standing stone may belong to any age, from the Stone Age to the period of early Christianity, and that, unless datable objects be found in close connexion with any individual example, or unless it bears some datable inscription or ornament, it is impossible to say when it was erected; (ii.) that dolmens, on the whole, belong to the period of transition from the Stone to the Bronze Age; (iii.) that, to judge from the ornament sculptured on some examples, stone circles belong, on the whole, to the beginning of the Bronze Age, though some may belong to the end of the Stone Age. That stone implements were exclusively found in the excavation of Stonehenge does not vitiate this result; for stone implements would naturally be used instead of the comparatively soft and valuable bronze for such rough and coarse work as the quarrying and trimming of blocks of stone.

STONING.—See **CRIMES AND PUNISHMENTS** (Jewish), **ADULTERY** (Jewish), (Muslim).

STORM, STORM-GODS.—1. **Introduction.**—The gods of cataclysms naturally held the first rank in the 'magic-religions' of the earliest types of human society. Some of them gradually became connected with the gods of abysses and especially with those of the earth and its depths. Others went to swell the army of the demons of darkness and of evil. The gods of hurricanes and tempests followed the same process, though more slowly.

They are the manifest product of naturism and personification; speculations on the composition and structure of the sky¹ deny them any rôle in the upper world; it is only by accident that they are sometimes connected with the activity, but not the personality, of the sky-god. By the same reasoning primitive man (or at any rate present-day uncivilized man) did not place the storm-gods on the physical plane inhabited by the gods of the air,² although sometimes, as the result of time and the confusion of myths, the maleficent storm-gods seem to become intermingled with the hierarchies of the air-gods. The general principle is that the storm-gods are personalities essentially distinct from the air-gods and having no logical connexion with them.

One of the clearest results of this is the frequent opposition between the air-gods, regarded as the regular and, on the whole, beneficent rulers of such-and-such a quarter of the atmosphere, and the storm-gods, naturally assimilated to maleficent principles. Another feature that separates the storm-gods from the air-gods is still more remarkable. As is shown in art. **AIR AND GODS OF THE AIR**, the air-gods usually dwell in the aerial regions. The search for the principle of causality, the observation of the relation of cause and effect, and, lastly, animism have on the contrary almost everywhere connected the storm-gods with the terrestrial plane, solid or liquid. Sometimes they are localized, and have as their habitat the summit or the peak of some high mountain, from which they are supposed to dart forth to cause their ravages; sometimes they are imagined as hidden in a grotto or cavern, or as wandering through the labyrinths of valleys and ravines, or ready to leap from the neck of a mountain or a pass or to spring from a precipice; or, again, they are the formidable gods of the desert who hide in great whirlwinds of sand, advancing in columns. Among peoples inhabiting the shores of large lakes or inland seas or the sea-coast the storm-gods seldom dwell at the bottom of those deep waters; they practically always leap from a cape, a point, or an isolated rock, to accomplish their work of destruction. At other times they come from a mysterious island, an islet remarkable for its strange shape, or a sea-grotto feared by fishermen; sometimes (more rarely) they are known to have their palace at the bottom of one of those gulfs, bays, or lagoons that are subject to sudden crashes of tempest. Their attack, both by sea and by land, is swift and unexpected; the poetry of Chaldeo-Assyrian cosmogony describing their tumultuous outbursts calls them 'wild horses born in the mountain.'

2. **Diffusion.**—In what regions do we find those gods? From the naturist point of view this question becomes theoretically a question of meteorological geography and practically a question of making an abstract of the evidence of ethnological geography. In Asia we find storm-gods in the labyrinths of passes of the Tibetan group, the formidable solitudes of the high summits of the Himalayas, the frozen tracks of the

desert of Gobi; in Africa, in the mountainous group of the Cameroons, those of Ruwenzori and Kilima-njaro, the headlands of Lake Victoria-Nyanza and Lake Tanganyika, and the desert wastes of the Kalahari; in America, in the great passes and summits of the Andes, the islands of Lake Titicaca, and the volcanic peaks or the sierras of Mexico. Maritime regions also have their series of storm-gods: in the first rank naturally come the desolate countries of polar tempests, the ice-peaks of the 'gods of terror' in Greenland, those of the Eskimo regions, the frozen Arctic Ocean and Lapland with their 'tempest spirits,' and the Atlantic coast of Europe; in Africa it is mainly the more exposed west coasts; in the vast expanses of the Pacific two favourite regions are prominent at the two extremities: in the north between Japan and the Siberian coast, and particularly at the southern extremity of America towards Patagonia, Tierra del Fuego, and the Magellan Strait; in the Indian Ocean, and wherever typhoon holds sway, we find islands, gulfs, and rocks marking the sites of the kingdoms of the storm-gods; lastly, in the southern seas (Polynesia and Micronesia) cosmogonic mythology confirms the presumptions of geography by describing the eternal struggle of the gods of order, the allies of man, with the turbulent and destructive storm-gods.

Of course the parallelism between geography and mythology is not constant nowadays. Civilization first of all consigned a large number of the early storm-gods to the realm of allegory or dissolved them in syncretism. Then they passed away along with the oldest established polytheism, with which the advance of human speculation had connected them. Such was the case with the Chaldean storm-god, the Egyptian Set, the sons of the Mediterranean Æolus, and the pre-historic storm-god who to the first sailors of our races personified the north wind (Boreas), the tramontane wind, and the tempest wind of the west Brittany coast. Traces of them recur in stories and throughout the deformations of classical folklore and mythology, and clearly enough to prove the correctness of the theoretically presupposed connexion between physical geography and religion; clearly enough too to show the connexion between their scattered traits and those of the storm-gods of the savage races of the present day, and to convince us that the work, characteristics, nature, and rôle of the storm-gods were uniformly identical in the first ages of all the religious groups.

The result is that the area of the diffusion of the storm-gods is entirely different from that of the air-gods. Not only is there nothing resembling the universality of the presence of the sky-god, but there are even complete religious zones from which the storm-god is absent.

3. **Rôle.**—The material characteristics and effects of the storm had the logical consequence of forcing the storm-gods into the army of evil, wherever men had arrived at the stage of disengaging the rudiments of dualistic classification from the apparently chaotic collision of the forces and beings of nature. Myth afterwards attempted to vindicate this classification. And, since by reason of their accidental character the harmful activities of the storm-gods fitted them only for a subordinate rôle in the great struggle, some of the myths aimed at explaining the times and circumstances of their appearances; and thus we see them figuring in the cosmogonic cycle. Since cosmogony is the putting in order and the 'stabilization' of the evil or incoherent energies of chaos, the rôle of the storm-gods, who are always the agents of confusion and destruction, necessarily places them among the conquered powers (e.g., in Chaldæa). It is true that the dualistic struggle

¹ See art. **SKY, SKY-GODS.**

² See art. **AIR AND GODS OF THE AIR.**

persists in the majority of dualisms in order to explain the constant reappearance of evil, but in these also the storm-gods are always conquered in the end. They often call to their aid legions of malevolent phantoms and evil spirits who wander by night on the surface of the earth (e.g., China, Korea). But this very alliance results in their gradually losing their personality and becoming merged in the huge army of secondary spirits in the service of the great maleficent deities.

Such were in primitive times the seven sons of Bel, the Chaldean chiefs of the Annunaki, or Annunas, of the earth (here again we see the storm-gods connected with the terrestrial plane). They had 'grown up in the depth of the abyss'; they were 'the squall of wind which runs swiftly,' and the severest one of them was 'the frightful whirlwind which smashes everything.'

Thus their human cult is very much reduced: they have neither sanctuaries nor priests; but here and there they have persons affiliated with them who control them by magical power and who can make them come and let loose their evil forces (e.g., in Polynesia).

4. **Cult.**—The nearest approach to a cult of the storm-gods is among certain fishing peoples (in the Pacific—e.g., Saghalien Island, etc.), who use propitiatory means to conciliate them when setting out on an expedition. But, though the Ainus may invoke or flatter Shi-Asha by offerings, the opposite process, viz. protection by the aid of a more powerful good spirit, seems to be the more frequent proceeding. The ancient Chaldean poems say of them: 'they listen neither to prayer nor to supplication.'

In exceptional cases the storm-deity may not have a uniformly wicked character. Besides the very dangerous spirits of the icebergs and the scourges which they let loose by hurricanes, the Eskimos attribute to Arnaknagsak (or Sedna), mother of the tempests, an old woman who lives at the bottom of the sea, the power of procuring food for them. Cases of this kind (of which there are about half-a-score well authenticated) proceed as a rule from local observation of the consequences of a great storm, which are sometimes helpful to man. The Bretons of Ile de Sein attributed a beneficent character to the tempests of the south-west, because they brought shipwrecks to the coast.

In exceptional cases also the storm-god seems to be connected with the army of the sky-god. Thus among the Andamans the tempest is the result of the will of the famous Puluga. Such a fact tends to imply the evil character of the sky-god, and consequently is of great theoretical importance. On examination it appears that the confusion is caused by the presence in the tempests of those regions of a great number of meteorological phenomena, such as lightning, thunder, etc., whose management belongs by definition to the supreme god or the sky-god. In such cases the storm-loses its personality; it becomes a manifestation of the sky-god and is interpreted as a punishment or revenge of the offended sky-god.

The same kind of mixture by confusion of myths or linking of exterior characteristics explains why certain peoples, such as those of Guiana or of Brazil (e.g., the Botocudos) connect the storm-gods with the stellar deities or with the moon.

5. **Representations.**—The fetishistic representations of the storm-gods have so far received little study. Nevertheless they exist in large numbers in all the religious groups that have storm-gods and mainly in the groups in which fishing is the chief means of subsistence. These fetishes are inspired by the usual principles—supposed affinities, allusions to mythical episodes, attraction or repulsion (the same reasoning as for fetishes of diseases), amalgams of magical substances, etc. Some good specimens may be mentioned among the Ainus, and among the races of Polynesia, Micronesia, New Guinea (e.g., in the Gazelle Peninsula), Vuatam Island, etc. Representations of an idolatrous but aniconic type have been studied still less. As is the rule in naturism, they are inspired at the outset either by the external appearance of the covering of the storm-god or by the usual principles of symbolico-magic (effect for cause, part for whole, etc.). The appearance of a tornado, of a water-spout, of the storm-clouds, of a whirlpool, of lightning, of typhoons, and the kinds of death and destruction caused by the storm-gods, have suggested a large number of abridged and distorted

forms and secret magical forms. Nevertheless our ignorance of their real meanings and the reticence of the uncivilized render ethnological inquiry on this point very difficult.

When we pass to iconic reproductions, we find here also that the maleficent and dangerous character served as starting-point. The plastic expression by man of their material physiognomy offers at once a very great variety of material representation and extreme monotony of theoretical conception: fantastic ugliness (as terrifying as possible) has everywhere been used to express their wickedness, their fury, and the fear which they inspire. Naturally each local art borrowed from its special demonography and from local material elements its ugliest and most bizarre traits. Ethnographic collections show types borrowed from Polynesian religions, from the coast of W. Africa, and from pre-Columbian America (the last especially in drawn and painted forms). The classical East has left us the distorted images of the south-west wind. Two details are common to all: (1) the use of composite traits, like the figures of nightmares—hideous mixtures of heads, members, and different parts of the body of the most repugnant and terrible animals; and (2) the almost complete absence of symbolic allusion to a mythical episode or a cosmogonic rôle of first rank. The Annunaki, sons of Bel, might have composite bodies of lions, serpents, or hideous animals, half-reptiles, and half-birds; but they were never anything but subordinates. It is purely literary licence when the poet calls them 'destroyers of the sky.'

6. **Conclusion.**—The evolution towards dualism has given only imperfect results. Nowhere has the storm-god succeeded in taking first rank in the army of evil, and the reason seems to be that such a place presupposes a continuous activity and a constant presence. The chthonian gods and the gods of darkness have made various storm-gods their subordinates, but not their equals. Where there has been organization of the original naturistic dualism, they have fallen to the rank of simple evil spirits or inferior demons. Among peoples who have attained to the redaction of stories of a properly mythological kind they are based on a number of episodes of a rather subordinate character—of which the religions of classical India and of Greece give us some satisfactory examples (cf. above). The purely allegorical and poetical myth marks the last visible shadow of their gradually disappearing traits.

LITERATURE.—There seems to be no monograph on the subject. Some of the classical literature will be found in the art. AIR AND GODS OF THE AIR. For literature on primitive races see art. on the various peoples and their religions.

GEORGE FOUCART.

STRANGERS.—I. PRIMITIVE USAGE IN REGARD TO THE FOREIGNER OR STRANGER.—I. A survey of the evidence shows us that, among the peoples which occupy the lowest place in the scale of culture, the population lives scattered in small groups of the nature of families.¹ Among the Negritos of the Philippines the family group consists of from 30 to 40 persons,² in the case of the Yahgan of Cape Horn from two to five families are found in a single wigwam,³ while, among the Central Australian tribes, members of the local group wander in small parties of one or two families over the land which they own.⁴ These

¹ See W J McGee, 'The Siouan Indians,' in *15 REEF* (1897), p. 200; and the instances in P. J. Hamilton-Grierson, *The Silent Trade: a Contribution to the Early Hist. of Human Intercourse*, Edinburgh, 1893, p. 6 and note 9.

² A. Schadenberg, 'Ueber die Negritos der Philippinen,' *ZH* xii. (1880) 137.

³ T. Bridges, ap. E. Westermarck, *The Hist. of Human Marriage*, London, 1891, p. 44.

⁴ Spencer-Gillens, p. 16.

family groups are, in general, subdivisions of a larger unity. Thus the Negritos recognize the subsistence of social ties between a few families;¹ the Yahgan recognize clans which comprise many smaller divisions;² and the tribe of Central Australia is 'an entity . . . divided into a number of lesser groups. . . . These again are divided and subdivided until we reach the smallest group consisting of a few families or even only a single family.'³ Further, as E. M. Curr⁴ observes, every tribe has constant, and for the most part friendly, relations with other tribes.

At times these family groups join forces for the purposes of war or the chase; and at times they exchange visits, and, in some cases at all events, meet for the performance of ceremonies. As a general rule, however, such gatherings are occasional only and of short duration. They break up as soon as the purpose which brought them together is served; and of course they cannot outlast the food supply of the place at which they meet.

While, then, it is plain that the social feelings of the savage reach beyond the family groups to which he belongs, it is difficult or, rather, impossible to make a general statement as to the extent of their range. Bishop Stirling⁵ says of the Yahgan that, beyond the family circle, the relation of man to man is doubtful, if not hostile. On the other hand, Spencer and Gillen⁶ declare that permanent enmity between any two of the tribes with whom they are acquainted is a thing unknown. In short, the range of the social feelings is widely different in different cases. In some they reach beyond the clan or even the tribe; in others they hardly cross the limits of the family group. The statement of Spencer and Gillen as to the relations of the associated tribes of Central Australia suggests that these tribes have advanced no little way from the simplest stages of social life,⁷ and that the Yahgan conception of the world beyond the family group (or little aggregate of family groups) as a hostile world may be taken as representing the 'primitive' conception.

In many instances this conception is held most strongly by that portion of a community which has no personal knowledge of the strangers whom it hates and fears.

Thus the Californian tribes which live at a distance from one another are in perpetual enmity;⁸ and the Seri of Sonora, who never see their neighbours except on the frontier or in foray, kill them as a tribal duty, whenever opportunity offers.⁹ Before the British settlement of the Andamans there existed extreme jealousy and distrust between adjacent tribes, and even between scattered communities of the same tribe; and it was often the case that tribes fifteen or twenty miles apart had no knowledge of one another.¹⁰ So, too, those of the Yahgan who have never met with the Ona hate and fear them, while those who are their neighbours intermarry with them, with the result that both Yahgan and Ona learn one another's language and are, to some extent at all events, influenced by one another's manners and modes of life. In the same way the Yahgan dread the Alacaluf, believing them to be possessed of supernatural powers, until they have actually seen them, and have become familiar with their appearance.¹¹

2. Whatever may be the proximate causes, whatever may be the precise degree of his fear and hatred, the fact remains that as a general rule the savage fears and hates the stranger, and looks upon him, certainly as an enemy, and, it may be, as a being brutish, monstrous, or devilish.

The Orang-Out of Borneo, when they meet with strangers, turn their backs on them and squat on the ground, hiding their faces; and they explain this behaviour by saying that the sight of strangers makes them dizzy and affects their eyes like the sunlight.¹

There are many instances of a people calling itself by a name which signifies nothing more than 'the men,' and thus distinguishing itself from the rest of mankind, whom it regards as belonging to a lower order of being. The designation 'Hos'—a branch of the Kols—means 'men' as contrasted with brutes;² and the Narrinyeri take great pride in their name, which means 'belonging to men.' 'We are men,' they say, while they call other natives 'wild black fellows.'³

Examples of like import are supplied by the Ohingpaw, known as Kakhien by the Burmese, the Tepecanos of Mexico, the Kurnai, the Wilmbaio, the Bakoba, the Yahgan, and the Arawaks and Caribs of Guiana, the Chiriguano, the Chippewas, the Wintun, and other Californian tribes.⁴

3. The Tupi of Brazil call all men not of their race or speech 'Tapuya,' 'strangers' or 'enemies'⁵—a practice which Burton compares with the case of the 'Hebrew Goyi (Gentile), the Hindu Mlechchha (mixed or impure breed), the Greek *βάρβαρος*, the Latin Barbarus, and the Chinese Fan Kwei (foreign devil).'⁶ Several of the Californian tribes are called 'Yuki.' The word in the Wintun language means 'stranger,' and secondarily 'bad Indian,' 'thief,' and is applied in the same way as the Greek *βάρβαρος*.⁷ In the language of the Pomo 'Chumaia' means 'stranger,' 'enemy,' and is used by them in speaking of their neighbours who are really Yuki.⁸ The Chippewas, too, employ the word signifying 'stranger' in the sense of 'enemy';⁹ and it may be noted, as showing the position which the stranger and the outcast occupied in early times, that a series of words which meant originally 'stranger,' 'outcast,' 'alien,' have come to mean 'miserable' or 'unfortunate.'¹⁰

4. In the Western Islands of Torres Straits it was regarded as meritorious to kill foreigners either in fair fight or by treachery, and honour and glory were attached to the bringing home of the skulls of the natives of other islands, slain in battle.¹¹

J. J. Atkinson tells us that he had three servants, natives of New Caledonia, who had been with him for five years. Two of them belonged to one tribe, and the third, a boy, belonged to another. These tribes were neighbours. Atkinson gave the three a holiday, and landed them at the village of the two natives, with the result that the boy was killed and eaten by them the same night.¹²

The stranger in the Nissan Islands is regarded as an enemy, and is, if possible, killed and eaten.¹ We have a like account of the inhabitants of Mabuiag,² of the Massim of New Guinea,³ and of the Battas. In the last case the inhabitants of the villages, which are cut off from one another by high grass and primeval forest, practise a system of mutual exclusion. To be a stranger is to be an enemy; and a native who enters the district of his neighbours runs the chance of being eaten.⁴ So, too, Strabo⁵ says of the Scythians on the Euxine that they sacrificed strangers, devoured their flesh, and used their skulls as drinking-cups. Among the Nagas every tribe, almost every village, is at war with its neighbours; and he who leaves the territory of his tribe does so at the peril of his life.⁶ The Wazaramo do not allow strangers to camp within their villages; and among the Wanyamwezi it is impossible for single individuals to move from one district to another. They are sure to be plundered, if not murdered.⁷ The Bakete and Bakuba refuse all friendly advances by peoples in their vicinity, and the stranger who enters their territory is treated as an enemy.⁸ The Akka look upon strangers as fair prey;⁹ the Kabyles regard all who live beyond their frontiers as enemies;¹⁰ and the Bakwiri villages are fences for protection, as they are continually at enmity with one another.¹¹ Schweinfurth¹² makes the general observation that in Africa there is an utter want of wholesome intercourse between race and race. For any member of a tribe which speaks one dialect to cross the border of a tribe which speaks another is to court destruction; and the effect of difference of language in intensifying the mutual discords between petty tribes has been remarked by A. von Humboldt¹³ in the case of the American tribes between the equator and the eighth degree of north latitude. The Arab who meets an unknown wanderer in the desert acts in accordance with the saying, 'The stranger is for the wolf';¹⁴ and it is a consequence of this desert law, which identifies the stranger with the enemy, that the *jinn* are regarded as hostile, as gods without worshippers, dwelling in haunts and not in sanctuaries.¹⁵

A stranger may not approach a Khond village,¹⁶ unless invited; and, in speaking of Angamiland, G. Watt¹⁷ says that it is no unusual state of affairs to find *khel* A of one village at war with *khel* B of another, while not at war with *khel* C of its own village. The *khels* are often completely separated by great walls, the people on either side living within a few yards of each other, yet having no dealings whatever.¹⁸ Lyon tells us of two towns separated only by a wall. The inhabitants of the one town are

at constant war with those of the other. They seldom see and are perfect strangers to one another.¹

It is to be observed that in some countries the stranger, if he be of high repute for sanctity, may run the danger of being slain so that the blessing of his perpetual presence may rest on the land. Thus the Afghan Hazarehs kill and bury in their own country any foreigner who performs a miracle or shows any sign of divine favour;² and similar statements are made regarding the Wa³ and the inhabitants of Yunnan.⁴

5. Among the Kabyles the foreigner is prohibited from performing any act which assures to him property or influence.⁵ The Mairs will not tolerate the residence of any stranger among them;⁶ and a similar policy was pursued by the tribes of which P. von Martius⁷ speaks, and, at one time, by the Masai.⁸ So too in Dahomey an alien may not establish himself in the country without the king's permission;⁹ and J. H. van Linschoten¹⁰ states that a similar regulation prevailed in China.¹¹ In the height of their prestige the Masai punished with death by beating any one of their people who returned after having gone to live with foreigners;¹² and the Wachaga formerly inflicted the death penalty on any woman of the tribe who married a stranger.¹³ Among the Khonds marriage with a stranger adopted into the tribe is forbidden;¹⁴ and, according to Ibn Batuta,¹⁵ the women of Zebid will marry the stranger, but will not quit their country. Even in the burial of the dead the same conception prevailed. Thus the Choctaws thought it irreligious to bury their kinsman alongside of a stranger, much more to inter him in the tomb of an enemy.¹⁶

6. The stranger is regarded as a being without rights; for he is outside of the sphere within which alone they are recognized and enforced. This view prevails among many peoples.¹⁷

It is held, e.g., by the Wakapomo,¹⁸ the Wanyamwezi,¹⁹ the Barea and Kundma,²⁰ the Bogos,²¹ the Pelew Islanders,²² and certain Papuan tribes—the Yabim on the north coast of New Guinea, and the Tami Islanders.²³

Except in so far as modified by treaty, by special protection, or by the institution of hospitality, the same conception ruled among the nations of classical antiquity.

bellum est.¹ 'No Greek,' says Cunningham, 'was ever at home in another Greek city than his own; he was liable to be sold in a city in which he had no rights and no status.'² In early Rome the citizen was regarded as the sole possessor of rights, the privileges conferred in later times on the *peregrinus* by the *jus gentium* being, in the main, a result of peaceful intercourse between the republic and the nations, introduced by an advancing commerce. Under the later emperors the merchant belonging to an independent country was subjected to numerous disabilities; and, on the breaking up of the empire, the old conception of the stranger's position immediately revived.³ In the Middle Ages the foreigner was regarded as incapable of holding land; he was subjected to many disadvantages in matters of law and legal procedure; he was not permitted, or was permitted only upon making a payment (*gabella emigrationis*), to leave the country with the wealth which he had accumulated; on his death his property fell in whole or in part to the supreme authority; and it was confiscated on his banishment.⁴ 'Peregrinum qui patronum non habebat vendebant Saxones.'⁵

It is worthy of remark by way of contrast that, in Babylonia, resident aliens became citizens and were under no disabilities.⁶

Again, the position of the alien was injuriously affected by the view, very generally held, that the family, the group, the community, or the district to which a criminal or a debtor belonged—his fellow-countryman or his fellow-townsmen—was liable in the penalty which he had incurred or the obligation by which he was bound.⁷ There are even cases in which a stranger is treated as bound to pay for what another stranger, with whom he is wholly unconnected, has taken without payment;⁸ and in one case (Kunáma) the host whose guest is slain may slay the slayer's guest.⁹

7. The view that the stranger has no rights finds, among the Yabim, its most forcible expression in its application to shipwrecked persons.¹⁰

According to Herodotus,¹¹ the Tauri sacrificed all such unfortunates to the Virgin. They were plundered in New Zealand;¹² and, in Borneo, both wrecks and their crews belong to the district where the disaster occurs.¹³ It was the custom at Malabar that everything obtained from a wreck fell to the fisc. Calicut formed the sole exception to this rule, which seems to have prevailed on all the Indian coasts.¹⁴ The Fijians used to kill and eat even those of their own race who were cast ashore;¹⁵ and, according to Wilkes,¹⁶ they were accounted as an offering to the gods and sacrificed. Another authority, however, states that they were spared, because the gods would be angry if the gift which they had sent was rejected.¹⁷ The Yaghan kill castaways;¹⁸ and du Cange sums up the practice of the Middle Ages thus: 'Neque dumtaxat naves ipsae fractae et naufragum passae, resque in his contentae dominorum erant: sed et homines ipsi, qui in eis vehebantur: adeo ut et per vim caperentur, et persoluto pretio a captivitate liberari cogentur.'¹⁹

D'Arvilleux¹ gives a similar account of the Arabs. A very different mode of treatment is found among the western islanders of Torres Straits, who adopt the stranger as a brother and give him a garden.²

The distinction between the position of a stranger and that of a fellow-tribesman is illustrated by the fact that among many peoples the thief is regarded as an offender only when he steals from a compatriot or fellow-tribesman or villager;³ and that the goods of a foreign merchant become on his death the property of the king of the country in which he has died.⁴ It was the custom, however, in India as well as in the Sudan not to interfere with the property of deceased strangers, but to hand it over to the persons entitled to it;⁵ and, according to Tavernier,⁶ a similar practice prevailed in Persia.

8. The position of the outlaw throws light upon that of the stranger.⁷

9. Another indication of the primitive view is to be found in the symbolic acts which are the necessary preliminaries to the stranger's reception—acts by which he makes clear that his intentions are friendly, or from which he ascertains that those whom he is approaching are well-disposed towards him.

Thus it is a common sign of friendliness to advance displaying green boughs,⁸ or holding out grass, as among the Masai,⁹ or waving white cloth.¹⁰ Near Cape Hinchinbroke some of the natives stood up with their arms stretched out like a cross,¹¹ or held up a stick with the large feathers or wing of a bird tied to it,¹² or a leathern frock on the end of a pole,¹³ or offered a white cock.¹⁴ Among the Shoshones the stranger paints the women's cheeks with vermilion in token of peace;¹⁵ and the red shield hoisted on the mast of a ship, or hung over the walls of a town, or swung over his head by a herald, was a sign of peace among the Scandinavians.¹⁶ In New Guinea and the adjacent islands the natives broke their spears on their own heads to show their pacific intentions,¹⁷ or dipped their hands in water and sprinkled it over their heads.¹⁸ The last-mentioned practice

seems to be general among the Papuans.¹ It is found in Ceram² and at Ternate;³ and a somewhat similar usage among the Wakikju has been described by von Hühnel.⁴ The Bushmen, to show their friendliness, lay down their arms and sandals while still at a distance,⁵ or wave a jackal's tail attached to the end of a stick,⁶ while the inhabitants of the island called 'Gente Hermosa' hold resinous sticks burning like torches for the same purpose, perhaps with the view of disenchanting the strangers, rather than with that of showing their friendliness.⁷ An old Eskimo of the Isle of St. Lawrence held up a variety of articles, and then, extending his arms, rubbed and patted his breast—the usual Eskimo indication of friendship.⁸ Thus savages, by displaying goods which they are ready to barter, show that they have come to trade;⁹ and Livingstone says: 'The usual way of approaching an unknown people is to call out in a cheerful tone "Malonda," "Things for sale, or do you want to sell anything?"'¹⁰

In many places the rule is established that an approaching stranger must in some way give notice of his presence—e.g., by sounding a trumpet,¹¹ by shouting or blowing a horn,¹² by coughing twice,¹³ by uttering the cry peculiar to his tribe,¹⁴ or by making a series of smokes.¹⁵

'If,' says an ancient law of the Javanese, 'any person enter a village at an improper hour, and is twice challenged without making any reply, he shall be considered a thief. A person skulking behind a door or fence, and refusing to answer, shall also be considered as a thief.'¹⁶

Sometimes an attempt is made to ascertain the real mind of the stranger by means of divination. Among the A-nyanja medicine is given to a goat or fowl for this purpose, and its death is regarded as of evil omen.¹⁷ Dalton¹⁸ speaks of a similar practice as existing among the Pádam.

10. The Ashango host smears himself with red as a mark of friendliness, and it is a favourable sign if he asks the stranger to do likewise.¹⁹ The Ovambo welcome him by smearing his face and breast with butter,²⁰ while in New Guinea it is of good omen if the host presents betel-nut to the new-comer with the thick end towards him.²¹ It is not improbable that the elaborate forms of salutation in use among many peoples²² served originally

to declare the intention of persons meeting for the first time.¹

'The Tibu,' e.g., 'is always distrustful; hence meeting a fellow-countryman in the desert, he is careful not to draw near without due precaution. At sight of each other both generally stop suddenly; then crouching and drawing the litham over the lower part of the face in Tuareg fashion, they grasp the inseparable spear in their right and . . . bill-hook in their

Doughty³ tells us of the Arabs that, when a stranger enters the tent, his hosts 'observe an honourable silence, asking no untimely questions, (such is school and nurture of the desert) until he have eaten and drunken somewhat at the least, and by "the bread and salt" there is peace established between them, for a time.'⁴ There are traces of a similar etiquette in the Homeric poems;⁵ and it is found among the Omahas⁶ and some of the Athapascan tribes of Alaska.⁷

With this form of politeness we may compare the solemn silence with which the Tupi⁸ and the Caribs⁹ receive the stranger on his first arrival. This abstinence from speech with him may, it is thought, originate in their fear of him as not, it may be, inherently tabu, but as belonging to strange gods, as bringing with him strange supernatural influences.¹⁰ Besides, it may be that the stranger is not a human being, but a spirit. Hence one must make some sound each time one draws in one's breath or be smitten with dumbness.¹¹ Among the N. American Indians it is a common notion that 'strangers, particularly white strangers, are oft-times accompanied by evil spirits. Of these they have great dread as creating and delighting in mischief.'¹² The Naga, when entering or leaving a strange village, and especially when leaving after having enjoyed its hospitality, strikes his ears, forehead, and stomach with a sprig of wild indigo, which he then places in his kilt, in order to avert any evil consequences of his temerity;¹³ and for the same reason the giver of hospitality is exposed to danger.¹⁴ The Bakairi believe that evil, sickness, and death come from the sorceries of strangers beyond their borders;¹⁵ and similar views prevail among the Melangkaps of Borneo¹⁶ and some of the Australian aborigines.¹⁷ In mid-Borneo the stranger's presence at religious rites is feared, and is regarded as dangerous to

young children.¹ In the eyes of the natives of India he is specially dangerous in relation to food;² and among some of the jungle tribes charmed circles are drawn to keep off 'spirits belonging to another settlement, which, being strangers, are presumably hostile.'³

If the stranger be thus possessed, he must be disenchanting.⁴

Among the Thonga tribes he must submit to a purifying ceremony;⁵ and in Benin he was compelled to wash his feet before entering the country.⁶ 'One of the duties of the medicine chief is to exorcise these spirits,'⁷ and, when ambassadors visit the Tatars, 'they and their gifts must pass between two fires to be purified, lest peradventure they have practised some witchcraft, or have brought some poison or other mischief with them.'⁸

It seems not unlikely that to present the stranger with a lighted cigar,⁹ or with a bowl of liquor,¹⁰ or with betel-nut,¹¹ or to offer him the firstfruits of the soil, and, on his accepting them, to entertain him with feast, dance, and song,¹² or to receive him with a sacrifice,¹³ is to perform a symbolic act of which, in some cases at least, the original significance has been forgotten—to remove the tabu from him and admit him for a time within the circle of the group.¹⁴

In this practice is, we believe, to be found the explanation of two very curious modes of reception. When a stranger visits a Tupi camp, he goes to the hut of his chosen host and sits down without speaking. By and by the women come to him and weep over him, and commend him, and he, too, must weep. In the end the master of the hut addresses him, provides him with food, and slings a hammock for him; and he distributes small presents.¹⁵ This weeping welcome has been observed in New Zealand,¹⁶ Queensland,¹⁷ Tahiti,¹⁸ Uliteta,¹⁹ in the Penrhyn Islands,²⁰ New Caledonia,²¹ the Andaman Islands,²² and among the Ainu of Yezo.²³ In the last three cases it appears that it is indulged in only at meetings of relatives, and to such the explanation offered by E. B. Tylor²⁴ (that it signifies grief for those who have died in the interval of separation) or that of H. Ling Roth²⁵ (that it is 'joy weeping') may apply. But neither explanation meets the case where the unknown stranger is wept over on his arrival.²⁶ In speaking of the natives of the island of Macassar, J. G. F. Riedel²⁷ says that men and women weep immediately on meeting.²⁸

Another curious form is found among the Central Eskimo. The stranger is welcomed with a feast; and, as he slowly approaches, one of his hosts gives him a severe blow and awaits a blow in return, and an exchange of blows continues until one of the combatants yields.¹ At one time a similar custom prevailed in Greenland.² The explanation of this practice is apparently to be found in the account by Hall³ of a similar ceremony in use among the Eskimo of Cumberland Inlet. There the combat is between the stranger and the sorcerer. After having exchanged blows, they kiss one another, and the stranger is hospitably received by all. The practice, in short, is a rite of aggregation.⁴ Mariner⁵ informs us that at Tonga visitors or persons who have been long absent may be challenged 'by any one, or every one of the island, so that in the end they are pretty certain of getting a thorough beating'; and we may note in this connexion the statement of St. John,⁶ that the Koreans 'have no salutation except buffeting each other.'

In some cases the savage offers his blood to his own gods in order to gain their protection—a proceeding which has not infrequently been mistaken for a token of friendship;⁷ or he takes the stranger to a temple and prays that any evil which the latter may have brought with him may be averted;⁸ or, as among some of the nomadic Arabs of Morocco, he presents the stranger with drink, which, should the latter misbehave himself, 'would cause his knees to swell so that he could not escape. In other words, he has drunk a conditional curse.'⁹

11. Further, it is plain that the supernatural influences which accompany the stranger will be especially potent in his own country.

In some parts of Australia natives, in approaching a strange encampment, 'carry lighted bark or burning sticks in their hands, for the purpose, they say, of cleansing and purifying the air';¹⁰ and Frazer¹¹ suggests that the fire borne at the head of the army in ancient Greece and among the Ovambo of S.W. Africa 'may have been intended to dissipate the evil influences, whether magical or spiritual, with which the air of the enemy's country might be conceived to teem.' In the country of the Bratana Lohan had his home; and they 'believed that he watched over them, and that he caused their country to be deadly to strangers. It was therefore to him that they attributed the taboo which protected them against the visits of other tribes.'¹²

The danger of trespassing upon tabued ground was, accordingly, very serious; and the dread of incurring it was formerly so powerful among the New Zealanders that, on going to a strange land, they performed certain ceremonies 'to make it *noa*, lest, perchance, it might have been previously *tapu*.'¹³ In some cases the stranger seeks to render himself acceptable to the divine guardians of the place through which he must pass by throwing down on a heap a stone, a rag, a stick, or some grass;¹⁴ and in this connexion we may mention the belief, current among the Bechuans, that a stranger can ensure a friendly reception by spitting on a stone and adding it to a heap on the road.¹⁵

It is 'at the boundary of two districts, or where some dangerous tract of country commences,'¹ that the savage is most likely to regard any natural object which is strange or unusual as connected in some way with mysterious influences fraught with peril to himself. Nor is the reason far to seek; for the borderland is from its very nature the home of the mysterious and awe-inspiring. The line of division is marked sometimes by natural objects and sometimes artificially. These natural objects, such as mountains, rivers, forests, or jungles, are associated by the savage with demons or spirits or powers stronger than man and potent to work him good or evil;² and he regards with similar feelings the great tracts of waste lands which in many instances serve as boundary.

The Mangwangwana kings, e.g., deliberately surrounded their country 'with an enormous starvation area, by ruthlessly destroying villages and whole races around them. The foodless belt was a greater protection to them than the great wall of China to the Chinese Emperors.'³ J. B. Tavernier⁴ attributes a similar policy to one of the Persian kings; and Caesar says of the German tribes: 'Civitatibus maxima laus est, quam latissimas circum se vastatis finibus solitudines habere.'⁵ The Romans sometimes adopted this method of protection, and in Karolingian times the Spanish border was similarly secured.⁶

In other cases the boundary was marked by upright stones,⁷ which, in Old Germany, e.g., were not infrequently the gravestones of heroes.⁸ In some parts of ancient Ireland pillar-stones were worshipped; and 'a stone of worship' is said by the Brehon laws to be one of the objects used for marking the limits of lands.⁹ Hommel¹⁰ observes that, 'in South Arabic inscriptions, *wathan* signifies "boundary pillar," and at the same time "statue of god," "idol,"'¹¹ Grimm tells us that ordeals, especially ordeals by battle, generally took place in the border-land which lay between two districts. This spot—often a meadow or an island—was chosen because it was a holy place, sacred to powers whose presence ensured fair play to both combatants.¹² Sometimes the boundary is formally placed under the protection of the supernatural. P. B. du Chaillu gives an instructive account of the means taken to secure the Otando country against a plague of smallpox:

'To protect the village from the wizards who might enter it from the neighbouring villages . . . the doctor, accompanied by the whole of the people, went to the paths leading to Mayolo from other villages and planted sticks at intervals across them, connecting the sticks by strong woody creepers and hanging on the ropes leaves from the core of the crown of palm trees. It is recognized law among these people that no stranger can come within these lines.'¹³

So too Ellis¹⁴ tells us that it was thought impossible for a hostile force to make its way into Elmina if the body of a human victim who had been sacrificed were cut up and distributed round the outskirts of the town so as to enclose it.¹⁵ Among the aborigines of E. Brazil the *pajés* assist in laying down the tribal boundaries, by celebrating magical rites, and in some cases by hanging 'pieces of medicine' to the objects which mark the dividing-line.¹⁶

II. EXCEPTIONS TO, AND MODIFICATIONS OF, PRIMITIVE USAGE.—12. The evidence which we have adduced makes it sufficiently clear that the limits of the primitive group constitute for its members the limits not only of their rights and duties, but also of the only life possible for them. Beyond those limits lies an unknown world peopled by hostile beings and pervaded by malevolent influences, and, therefore, of deadly danger to the stranger who crosses its boundary. Thus the phrase '*homo homini lupus*' is apt to express the relation which normally subsists between group and alien group. Still, it is, as we shall see, susceptible of modifications in more ways than one. The stranger may be admitted to the membership of the group—e.g., by adoption—or he may be so connected with it by marriage, friendship, or some such tie that he may, in virtue of that connexion, be permitted to share, to some extent at all events, in the rights of its members. Or he may remain outside of the group unconnected with it by any such tie, and yet be treated, in certain circumstances and subject to certain limitations, as a friend or, it may be, as a neutral.

A. Where the stranger is admitted to the membership of the group or is so connected with it by marriage, etc., that he is permitted to share in the rights of its members.—(a) *Persons who have 'made brothers.'*—See art. BROTHERHOOD (Artificial).

(b) *Captive and other persons adopted into the group.*—13. We find in the treatment of prisoners of war an example of the gradual mitigation of the rigour of primitive usage. In the earliest times the victor slaughtered not only the adult males, but the women and children of the vanquished. In some instances the slaughter of prisoners is due to the belief that, as worshippers of vanquished gods, they are an especially acceptable sacrifice to the gods of the victors.¹ A step in advance is taken when the victor, having grasped the fact that a living slave is worth more than a dead enemy, spares the conquered warrior.² When the Namaquas discovered that Damara prisoners made useful drudges, they ceased to kill them.³ In New Zealand captives and their children were enslaved; and remnants of scattered tribes submitted to servitude in order to secure protection.⁴ Among the tribes of Sierra Leone prisoners taken before the rice-crop were spared to cultivate the ground, while those taken afterwards were generally killed.⁵ In the Marquesas prisoners are not always killed; they are sometimes adopted by chiefs and become members of the tribes or families which receive them. So close is this connexion that instances are cited in which an adopted captive has followed the chief who adopted him in a hostile expedition against the tribe of his birth.⁶ A somewhat similar account is given by Rochas⁷ of the natives of New Caledonia; and among the N. American Indians the custom of adopting prisoners of war to fill the places of dead persons is extensively practised. The adopted person becomes brother or sister, son or daughter, according to the position which the deceased occupied;⁸ and, if he be assumed into the place of the head of the family, he exercises in regard to the dead man's wife and children the rights of husband and father.⁹

It has been observed that, 'if prisoners thus admitted into families behave well, they have everything they want. But if they run away and are taken, their lives are in danger. . . . Even the nations to whom the runaways belong will not receive them, but treat them as ungrateful beings; they therefore turn out vagrants and infest the woods.'¹ Edwin James² adds that such persons become so identified with their adoptive nation that they regard the application to themselves of their name of origin as an insult.

(c) *Persons marrying into the group.*—14. In many cases a tribe ceases to regard or treat a stranger as an enemy if he has married into it. In Kreis Kita and among the Wachambala a stranger can enter into a family by marriage; and the practice has been observed among the Xarayes.³ But intermarriage does not always produce peace,⁴ for, in some instances, intertribal fights continue, and after the battle the women of the combatants visit each other and condole on the loss of their common relatives.⁵ In the Marquesas a man who has married a woman of a neighbouring tribe may pass to and fro between it and his own tribe in time of war without fear of molestation.⁶ In the Washington Islands men and women of different tribes betrothed on the conclusion of a peace are spared in time of war;⁷ and among the tribes of the Naga hills a native who has married a girl of another village and resides with her there is regarded as a neutral, and may safely go from her village to his own even during hostilities.⁸ A similar account is given of the Asaba people of the Niger.⁹ In Somaliland *abbans* are selected from men whose daughters are married to members of the tribe to be visited;¹⁰ and within the borders of Sintang only those foreigners may exercise the calling of merchants who are married to women of the country.¹¹

(d) *Persons introduced by a member of the group, mutual friend, etc.*—15. In many instances a friendly reception may be procured by means of an introduction. Among the Andaman Islanders a stranger may not enter a district without express permission, unless accompanied by a native of it. If he visit a camp for the first time, he will be welcomed if introduced by a mutual friend.¹² So, too, the Kurnai did not molest the Brajerak families which came into their country, because they regarded as brothers the Brabolung who had brought them in.¹³ Again, Kolben¹⁴ tells us that a traveller's best course among the Hottentots was to take a native with him. Then he was safe and was hospitably entertained. The same is true of the Western Eskimo;¹⁵ Leo Africanus¹⁶ says that in some parts of Morocco the stranger must have the escort of some saint or woman of the country; and among the Indians of the Goajira Peninsula

women are so much respected that a stranger protected by them may travel in perfect security.¹ The women of Konoma were occasionally hired as escort;² and the women of the Bhils protect the stranger against the cruelty or licence of the men.³ Herman Melville⁴ states that, although the hostilities between the tribes preclude any intercourse, yet a man who has formed a friendship with a member of a hostile tribe may, subject to certain restrictions, venture with impunity into its territory. 'The individual so protected is said to be "taboo," and his person, to a certain extent, is held as sacred.' In Fiji the stranger must be accompanied by a recognized herald or by a man specially appointed by a chief who is on friendly terms with the tribe to be visited;⁵ and in the principalities of Ghazi-Kumuk and Kaidek he will be seized and sold unless he has a native with him or letters of recommendation to a prince, or knows or can name the prefect of the mosque whither he is bound.⁶ In some cases the traveller depends on his engaging servants who assume the office of protectors;⁷ and sometimes the host gives his staff⁸ or his spear⁹ to his guest as a passport, or makes certain marks upon him with white chalk, which serve the same purpose.¹⁰ The gifts exchanged by kings and princes were used as tokens accrediting the persons who possessed them.¹¹ The *σμβολον* of the Greeks, the *tessera hospitalis* of the Romans, and the *chirs aelychoth* of the Carthaginians were similarly employed;¹² and we may perhaps compare with these practices that of the heathen Northmen, who frequently marked themselves with the cross in order more easily to enter into business relations with Christians.¹³ Robertson Smith¹⁴ mentions the case of an Arab patron, who stamped his client with his camel-brand; and the Narrinyeri *kalduke*¹⁵ may be referred to in this connexion.

(e) *Persons connected by class and totem.*—16. The totem bond was very strong in some tribes.

Fison and Howitt say of tribes bound together by the great class divisions of Eaglehawk and Crow: 'It mattered not from how distant localities two men might be, their speech might be unintelligible to each other, their status of family and their customs might have marked variance, yet the common bond of class and "totem" was a brotherhood which they would not fail to acknowledge.'¹⁶ In parts of New Guinea and in the western islands of Torres Straits 'a stranger from hostile tribes can visit in safety villages where the clan of his *nurumara* is strong, and visitors from other tribes are fed and lodged by the members of the *nurumara* to which they severally belong.'¹⁷

And it was a fixed rule in battle that no man should attack or slay another bearing the same totemic crest as himself.¹ Seligmann observes,² however, that among some tribes totemism exerted no influence in the battle-field.³ This branch of the subject receives elaborate treatment in Frazer's *Totemism and Exogamy*.

B. Where the stranger is not admitted to the membership of the group, and is not connected with it by marriage, etc., and yet is treated, in certain circumstances and subject to certain limitations, as a friend or neutral.—(a) *The trader*.—See artt. *Gifts* (Primitive and Savage), *MARKET*, §§ 3, 8.

(b) *The guest protégé*.—17. Even the rudest savages are accustomed to pay visits to and receive them from their friends; and these visits are made the occasion of sports, dances, carousals, and distributions of gifts. The visitors are not merely entertained; they are secured, for the time being, against robbery and violence. And, when the need of holding intercourse of some sort with strangers arises, the hospitality exercised within the group supplies the form of the new relation, much as the earliest modes of trading with strangers seem to have been adaptations of the exchange of gifts in use among friends.⁴ That the good treatment of the stranger was an innovation on the previous practice is shown by the fact that one word is in several languages used to express the conception of 'enemy' and that of 'guest.'⁵

18. It need hardly be said that the measure of the hospitality accorded differs widely among different peoples.⁶

19. Among many peoples the stranger is admitted during his stay to the marital privileges of his host, while in some cases the host's daughter, sister, or servant is offered.⁷ To the desire to induce the stranger to bring his wares to market Heeren⁸ ascribes certain Lydian and Babylonian regulations regarding the relations of foreigners with the women of the country; and we may assign to a like origin such customs as the temporary marriages of Central Asia and similar usages there and elsewhere.⁹

20. Buildings for the accommodation of wayfarers were provided by the nations of northern and classical antiquity;¹⁰ and numerous instances of a like care are found among savage and barbarous peoples in cases where the burden of hospitality falls upon the king or the community.¹¹

In ancient Ireland guest-houses or hospices were attached to the religious houses, and there were public hostels throughout the country, which disappeared, however, after the Anglo-Norman invasion.¹² The Incas built houses for travellers along

the royal roads. But it is to be noted that the only travellers were those who bore the commands of the king or his officials.¹

21. Frequently a parting gift to the guest²—it may be in the form of food for his journey³—or by the guest,⁴ or an exchange of gifts,⁵ accompanies or completes the exercise of hospitality.⁶

Among the Southern Slavs the guest is, in some districts, escorted to the limits of his host's possessions.⁷ The practice is found in many other parts of the world—e.g., in Circassia,⁸ among the Moors,⁹ in Egypt,¹⁰ in Fiji,¹¹ and in the old North.¹²

22. In many instances the hospitable reception of the stranger is subject to certain restrictions—a fact which shows that, at all events in the early forms of the institution, the guest becomes a friend, and ceases to be an enemy, only for a limited time. Among the Arabs the peace established between the stranger and his hosts lasts for 'two nights and the day in the midst, whilst their food is in him';¹³ and a similar period was the term of the guest's stay in old Germany¹⁴ and among the Moors of Brakna on the Senegal.¹⁵ In ancient Ireland the term was three days and three nights.¹⁶ The Southern Slavs declare that 'a guest and a fish smell on the third day'; and the Anglo-Saxon saying ran, 'Two nights a guest, the third night one of the household,' i.e. a slave.¹⁷ In New Zealand well-disposed strangers are hospitably treated during their stay, which, however, is not to be prolonged beyond the time required for the dispatch of their business.¹⁸ In the Marquesas visitors who attend the festivals of hostile tribes leave on the evening of the third day, which seems to mark the limit of the security granted to them;¹⁹ among the Wachambala the stranger receives food for a day, and, if he stays longer, must purchase his supplies, unless he has a protector.²⁰ In many cases hospitality and protection last only so long as the stranger resides with his host.

Thus, it is said of the Arab that 'he robs his enemies, his friends, and his neighbours, provided that they are not actually in his own tent, where their property is sacred.'²¹ A similar account is given of the Fiji Islanders,²² the Namaquas,²³ the Khonds²⁴ and Afghans,²⁵ the Kurds,²⁶ and the inhabitants of Ghazi-Kumuk and Kaidek.²⁷ '... and asks for protection, he hosts, until he returns to ... expires.'²⁸ Among the Eskimo of Greenland the enemy was sheltered;²⁹ and in the old North not even the murderer of a

¹² Joyce, i. 330-333, ii. 171.

brother could be turned away.¹ In Selangor a guest must stay three nights in the house, his departure on the first or second night being called 'insulting the night.' To avert the evil consequence of such an act, fumigation is resorted to.²

23. Among the tribes near Port Moresby the stranger stays with his specially good friend (*vasila*), no matter what his own group of descent may be;³ the Kabyle stranger goes to a friend, or, if he has none in the village, to the *amin*, who provides for him according to his quality;⁴ and, among the Wachambala, there is in every village an official who sees that a stranger receives food and lodging.⁵ A like arrangement is found among the Ghliljies⁶ and some of the Thonga tribes;⁷ and in ancient Ireland a public hospitaller attended to the wants of the stranger.⁸

24. Among many peoples the stranger consults his safety best by choosing a protector. Among the Barea and Kunáma he must select a host, and, in the case of the latter people, if he leaves his host's house, he must be accompanied by a native.⁹ The foreign settler in the country of the Bogos must take a protector from the Schmagilli, a class of nobles or, rather, freemen; and he and his descendants continue to be the dependents of the person chosen. The foreign merchant may, however, change his patron.¹⁰ Among the Beni-Amer he must take a temporary guardian.¹¹

Burton tells us that 'the Abban or protector of the Somali country is the Mogasa of the Gallas, the Akh of El Hejaz, the Ghafir of the Sinaitic Peninsula, and the Rabia of Eastern Arabia. . . . The Abban acts at once as broker, escort, agent, and interpreter, and the institution may be considered the earliest form of transit dues. In all cases he receives a certain percentage, his food and lodging are provided at the expense of his employer, and he not infrequently exacts small presents for his kindred. In return he is bound to arrange all differences, and even to fight the battle of his client against his fellow-countrymen. Should the Abban be slain his tribe is bound to take up the cause and to make good the losses of their protégé. . . . According to the laws of the country, the Abban is the master of the life and property of his client.'¹²

25. Ibn Batuta¹³ informs us that at Magadoxo, when a vessel arrived, some of the young people of the place went on board, each bearing a covered dish containing food. This one of them presented to a merchant of the ship, crying, 'This is my guest'; and all the others acted in the same manner. The merchant left the vessel only to go to his host's house, unless he had visited the city often before, in which case he went where he pleased. The host sold for the merchant what he had brought with him, and made his bargains for him. A similar custom prevailed in the Maldives,¹⁴ at Mindanao,¹⁵ at Raiatea,¹⁶ and at Rurutu;¹⁷ and the Bachapin *maat* of the Klaarwater Hottentot not only supplies him with food and lodging, but assists him in making his purchases, and even collects articles to be ready for him on his next visit. When, on the other hand, the Bachapin visits his Hottentot *maat's* village, he lives there

at free quarters.¹ In the time of Ibn Batuta² there existed among the Turkomans associations of bachelors, who made it their business to entertain strangers, whether merchants or merely travellers; and among the Eskimo of the Mackenzie river the stranger, by choosing a native as a protector, established with him a sort of relationship and a community of rights and duties.³ According to Seligmann,⁴ when a ship's crew arrives at the Papuan Gulf, each man chooses a friend; and the friends decorate each other with the personal ornaments which they have brought to barter.⁵

26. In Circassia there are fraternities the members of which are bound to defend and assist one another; and the stranger who has a member for his *konak*, or host, has a claim for protection and hospitality not upon him only, but upon all the members of his fraternity.⁶ A similar account is given of the Turkomans,⁷ while among the Ossetes the host is responsible for his guest's safety, even though he be an enemy.⁸ Among the Pottawatomie, however, the laws of hospitality do not shield the enemy;⁹ and among the Akikuyu they protect neither host nor guest.¹⁰

Every Kabyle village is a little isolated world. Were it not for the *anaya*, each would be at constant warfare with its neighbours. This institution secures a protection which is personal to the protégé, and the efficacy of which is measured by the influence and power of the protector.¹¹ The *anaya* may be accorded by an individual, a *sof*, a village, or a tribe. Breach of it is punished with death and confiscation;¹² and a Kabyle cannot refuse to grant it, even to a stranger, if he be in immediate danger.¹³

27. In many cases the most efficacious protection is that of the king of the country or chief of the village visited. Among the Battas the fugitive who trusts himself voluntarily to a petty rajah is absolutely safe.¹⁴ In the country of the Kimbunda the king is the exclusive protector of strangers; and, while an injury to a guest is thought to draw down the wrath of the gods, his good treatment is due to the fact that the monarch, by using him well, is really serving his own interests.¹⁵ It has been remarked that 'a chief is rather envied his good fortune in first securing foreigners in his town.'¹⁶ In New Zealand a foreigner (*pakeha*) might obtain a chief's protection on the understanding that he gave him large presents for small, bought from him at the highest price, and kept him in tobacco.¹⁷ Sometimes this protection was conferred in the form of a tabu.¹⁸ When the stranger becomes the protégé of a ruler whose power is absolute, he may not as a general rule leave the country without the royal permission, or engage in trade with subject persons without the royal knowledge and approval. The king, in short, monopolizes commerce.¹⁹ The blackmail which is

the price of the protection of many African potentates is not, in the opinion of Burton,¹ unjust. It forms the custom-dues of the government, and takes the place of the fees expected by the *abban*.² Until it is paid, the road is shut.³ On payment of a similar impost the Tuareg nobles protect those who pass through their territories.⁴

The *προξενία* of the Greeks and the consulship of the Middle Ages supplied the stranger's need of a protector,⁵ and were indeed offshoots of the institution of hospitality.⁶

28. The *ἀνὴρ ξειροδόκος* commanded the respect and approval of the Homeric world;⁷ and he is regarded with those feelings by many savage and barbarous peoples. 'Among the Arabs there is no better report of a man's life than to be called in his country *karīm*, a liberal soul; so nothing more hateful than the lean niggard's name, *bakhīl*.⁸ Among the Ahts,⁹ the tribes south of the Yukon river,¹⁰ and the Western Eskimo¹¹ reputation and rank are acquired by the exercise of liberality.¹² Among the Kukis a curious incentive to hospitality and bravery is found. 'All the enemies' that the tribesman 'has killed will be in attendance on him as slaves' in the next world, 'and the animals of all kinds he has eaten with his friends will live again as his farm-stock.'¹³

29. Some peoples treat the refusal of hospitality as a punishable offence.¹⁴ Grimm¹⁵ quotes a provision of the *Lex Burgundia* to the effect that 'quicumque hospitii venienti tectum aut focum negaverit, trium solidorum inlacione mulctetur'; and Bastian¹⁶ tells us that, if a Slav refuses to receive a stranger, he is deprived of his property and his house is burnt down. Francis Fleming¹⁷ observes that, if a Kafir rejects a request for hospitality, the headman of his kraal is fined in cattle, a portion of the fine being made over to the person aggrieved.

30. In the country of the Kimbunda an injury to a guest is thought to draw down the wrath of the gods;¹⁸ and a similar view was held by the old Germans. They regarded it as a duty incumbent upon all to treat his person as sacred, and to lodge and maintain him.¹⁹ In modern Arabia a protected stranger is called a *dakhīl*; in old Arabia he was called a *jār*. The relation was sometimes temporary, sometimes permanent, sometimes hereditary. The protection might be against a particular enemy, or against enemies in general. In some

cases it was constituted by a solemn engagement at a sanctuary, and held good until renounced at the same place. Thus the god himself became the protector of the stranger's cause.¹

According to the Hebrew lawgivers, the stranger had a sacred right to protection. He was regarded as poor and helpless, and was classed with the widow and the orphan as one not to be oppressed or afflicted; and, in this connexion, the law made no difference between native and foreigner.² In the world of the Homeric poems the normal relation of state to state was one of war. The stranger had no rights; and yet the degree of civilization to which a people had attained was estimated largely on a consideration of its attitude towards him. He was, as were the beggar and the suppliant, regarded as holy, and he enjoyed the special protection of Zeus *ξείριος*. Moreover, the king must guard his guest against those of his subjects who would attack him, and must permit him to depart without let or hindrance. In some cases the relation between host and guest was hereditary.³ The position of the stranger upon Italian soil seems to have been very similar. To slay the guest was to offend the gods of hospitality.⁴ Mommsen⁵ lays special emphasis on the legal nature of the compact of friendship. It rested, just as other consensual contracts rested, on the declared will of the parties, and it was recorded in duplicate on tablets—*tesserae hospitales*.⁶ Where it was entered into by private persons, the guest had a claim for maintenance and protection only on his host. It could be formed only between different communities or between members of different communities—a characteristic which also marked the relation of patron and client.

According to the Talmud and the Qur'an, the exercise of hospitality is a religious duty;⁷ and a similar view seems to have prevailed in ancient Egypt.⁸ Among the Damaras a withering curse falls upon those who refuse to share their food with the stranger;⁹ and a somewhat similar conception was held by the Masai.¹⁰ But, according to Merker,¹¹ Masai hospitality was limited to Masai.

(c) *The fugitive and the suppliant*.—31. The practice of hospitality creates and fosters a disposition to be hospitable; and the protection enjoyed by the fugitive and the suppliant seems to be a natural extension of that accorded to the trader. In many instances where individual districts are united by no common bond the fugitive from one village flees to another, where he is maintained and protected;¹² and in some cases the privilege is granted by a chief from selfish motives—*e.g.*, to increase his following.¹³ The security afforded may be limited to a fixed period. See art. ASYLUM.

(d) *The envoy*.—32. The duties of an envoy can frequently be performed only in a border-land; and in such cases the sanctity of his privilege is, in part at least, to be attributed to the sacred characteristics of the spot.¹⁴ But the office and the privilege attached to it originate in the elementary needs of savage societies; and here, as in so many other instances, religion invests with its form and supports with its sanctions the institution which those needs have created. The envoy is regarded as inviolable in the Marquesas¹⁵ and

brother could be turned away.¹ In Selangor a guest must stay three nights in the house, his departure on the first or second night being called 'insulting the night.' To avert the evil consequence of such an act, fumigation is resorted to.²

23. Among the tribes near Port Moresby the stranger stays with his specially good friend (*vasila*), no matter what his own group of descent may be;³ the Kabyle stranger goes to a friend, or, if he has none in the village, to the *amin*, who provides for him according to his quality;⁴ and, among the Wachambala, there is in every village an official who sees that a stranger receives food and lodging.⁵ A like arrangement is found among the Ghlujies⁶ and some of the Thonga tribes;⁷ and in ancient Ireland a public hospitaller attended to the wants of the stranger.⁸

24. Among many peoples the stranger consults his safety best by choosing a protector. Among the Barea and Kunáma he must select a host, and, in the case of the latter people, if he leaves his host's house, he must be accompanied by a native.⁹ The foreign settler in the country of the Bogos must take a protector from the Schmagilli, a class of nobles or, rather, freemen; and he and his descendants continue to be the dependents of the person chosen. The foreign merchant may, however, change his patron.¹⁰ Among the Beni-Amer he must take a temporary guardian.¹¹

Burton tells us that 'the Abban or protector of the Somali country is the Mogasa of the Gallas, the Akh of El Hejaz, the Ghafr of the Sinaitic Peninsula, and the Rabia of Eastern Arabia. . . . The Abban acts at once as broker, escort, agent, and interpreter, and the institution may be considered the earliest form of transit dues. In all cases he receives a certain percentage, his food and lodging are provided at the expense of his employer, and he not infrequently exacts small presents for his kindred. In return he is bound to arrange all differences, and even to fight the battle of his client against his fellow-countrymen. Should the Abban be slain his tribe is bound to take up the cause and to make good the losses of their protégé. . . . According to the laws of the country, the Abban is the master of the life and property of his client.'¹²

25. Ibn Batuta¹³ informs us that at Magadoxo, when a vessel arrived, some of the young people of the place went on board, each bearing a covered dish containing food. This one of them presented to a merchant of the ship, crying, 'This is my guest'; and all the others acted in the same manner. The merchant left the vessel only to go to his host's house, unless he had visited the city often before, in which case he went where he pleased. The host sold for the merchant what he had brought with him, and made his bargains for him. A similar custom prevailed in the Maldives,¹⁴ at Mindanao,¹⁵ at Raiatea,¹⁶ and at Rurutu;¹⁷ and the Bachapin *maat* of the Klaarwater Hottentot not only supplies him with food and lodging, but assists him in making his purchases, and even collects articles to be ready for him on his next visit. When, on the other hand, the Bachapin visits his Hottentot *maat's* village, he lives there

at free quarters.¹ In the time of Ibn Batuta² there existed among the Turkomans associations of bachelors, who made it their business to entertain strangers, whether merchants or merely travellers; and among the Eskimo of the Mackenzie river the stranger, by choosing a native as a protector, established with him a sort of relationship and a community of rights and duties.³ According to Seligmann,⁴ when a ship's crew arrives at the Papuan Gulf, each man chooses a friend; and the friends decorate each other with the personal ornaments which they have brought to barter.⁵

26. In Circassia there are fraternities the members of which are bound to defend and assist one another; and the stranger who has a member for his *konak*, or host, has a claim for protection and hospitality not upon him only, but upon all the members of his fraternity.⁶ A similar account is given of the Turkomans,⁷ while among the Ossetes the host is responsible for his guest's safety, even though he be an enemy.⁸ Among the Pottawatomie, however, the laws of hospitality do not shield the enemy;⁹ and among the Akikuyu they protect neither host nor guest.¹⁰

Every Kabyle village is a little isolated world. Were it not for the *anaya*, each would be at constant warfare with its neighbours. This institution secures a protection which is personal to the protégé, and the efficacy of which is measured by the influence and power of the protector.¹¹ The *anaya* may be accorded by an individual, a *sof*, a village, or a tribe. Breach of it is punished with death and confiscation;¹² and a Kabyle cannot refuse to grant it, even to a stranger, if he be in immediate danger.¹³

27. In many cases the most efficacious protection is that of the king of the country or chief of the village visited. Among the Battas the fugitive who trusts himself voluntarily to a petty rajah is absolutely safe.¹⁴ In the country of the Kimbunda the king is the exclusive protector of strangers; and, while an injury to a guest is thought to draw down the wrath of the gods, his good treatment is due to the fact that the monarch, by using him well, is really serving his own interests.¹⁵ It has been remarked that 'a chief is rather envied his good fortune in first securing foreigners in his town.'¹⁶ In New Zealand a foreigner (*pakeha*) might obtain a chief's protection on the understanding that he gave him large presents for small, bought from him at the highest price, and kept him in tobacco.¹⁷ Sometimes this protection was conferred in the form of a tabu.¹⁸ When the stranger becomes the protégé of a ruler whose power is absolute, he may not as a general rule leave the country without the royal permission, or engage in trade with subject persons without the royal knowledge and approval. Moreover, the king must guard his guest against those of his subjects who would attack him, and must permit him to depart without let or hindrance. In some cases the relation between host and guest was hereditary.³ The position of the stranger upon Italian soil seems to have been very similar. To slay the guest was to offend the gods of hospitality.⁴ Mommsen⁵ lays special emphasis on the legal nature of the compact of friendship. It rested, just as other consensual contracts rested, on the declared will of the parties, and it was recorded in duplicate on tablets—*testerae hospitales*.⁶ Where it was entered into by private persons, the guest had a claim for maintenance and protection only on his host. It could be formed only between different communities or between members of different communities—a characteristic which also marked the relation of patron and client.

According to the Talmud and the Qur'ān, the exercise of hospitality is a religious duty;⁷ and a similar view seems to have prevailed in ancient Egypt.⁸ Among the Damaras a withering curse falls upon those who refuse to share their food with the stranger;⁹ and a somewhat similar conception was held by the Masai.¹⁰ But, according to Merker,¹¹ Masai hospitality was limited to Masai.

(c) *The fugitive and the suppliant*.—31. The practice of hospitality creates and fosters a disposition to be hospitable; and the protection enjoyed by the fugitive and the suppliant seems to be a natural extension of that accorded to the trader. In many instances where individual districts are united by no common bond the fugitive from one village flees to another, where he is maintained and protected;¹² and in some cases the privilege is granted by a chief from selfish motives—e.g., to increase his following.¹³ The security afforded may be limited to a fixed period. See art. ASYLUM.

(d) *The envoy*.—32. The duties of an envoy can frequently be performed only in a border-land; and in such cases the sanctity of his privilege is, in part at least, to be attributed to the sacred characteristics of the spot.¹⁴ But the office and the privilege attached to it originate in the elementary needs of savage societies; and here, as in so many other instances, religion invests with its form and supports with its sanctions the institution which those needs have created. The envoy is regarded as inviolable in the Marquesas¹⁵ and

among the Basutos;¹ and with all the Ewe-speaking tribes it is an unheard-of crime to molest an ambassador bearing the stick of office.² A like account is given of the ancient Irish,³ of the Bushmen,⁴ and of tribes in Guinea,⁵ in Central Australia,⁶ in New South Wales,⁷ in Polynesia,⁸ and in New Zealand; but, in the last instance, only if the envoy be related to the tribe to which he is sent.⁹ Among the Bontoc Igorot of Luzon the life of the war messenger is secure, a near relative of the people challenged being, if possible, selected for the office.¹⁰ Among the Brazilian aborigines foreign messengers are sometimes subjected to ill-treatment;¹¹ and authorities differ as to the practice of the N. American Indians in former times.¹² In New Caledonia a chief who wishes to sue for peace sends a woman with a man who has friends in the enemy's tribe to carry his proposals. They are safe, while other persons would be killed and eaten.¹³ The Dieri send women as ambassadors or messengers.¹⁴

Among the Baris 'women are allowed to visit their relations in distant villages, and it is a recognised rule . . . that they should never be molested in any way. Thus, they are often able to act as ambassadors and peace-makers between contending tribes.'¹⁵ The envoy was regarded as inviolable in Mexico and at Tezcuco;¹⁶ and it is said of Muhammad that he spared the lives of certain persons on the ground that they were ambassadors and therefore privileged.¹⁷ The messenger was sometimes accredited by a gift.¹⁸

(e) *Women, holy men, and other privileged persons.*—33. We have seen that in many instances women act as envoys to hostile tribes¹⁹ without fear of molestation. It is not always easy to say whether they enjoy this privilege in virtue of the office with which they are entrusted, of the occupation in which they are employed, or of the sex to which they belong. Female captives are spared in many cases in which all the male captives are put to death;²⁰ and in some countries a traveller escorted by a woman²¹ and an outcast who takes refuge with a woman²² are treated as inviolable. In the last two cases, at all events, it seems as if it were the mysterious sanctity attributed universally by uncultured man to woman-kind that operates as a protective agency.²³

In New Zealand women were permitted to go from camp to camp during war;²⁴ and the same is told of the Baris by Mounteney-Jephson,²⁵ of the natives of Engano by Bastian,²⁶ of the Nāga tribes of Manipur,²⁷ and of the Angami and Kachin Nāgas by Dalton.²⁸ In the last case the statement holds true only of the tribe's intestine wars. When these same tribesmen are fighting with alien tribes, they spare neither age nor sex.

Among the Mandingoes there are four trades or professions, which rank in the following order: orators, minstrels, shoemakers, and blacksmiths. Their members can travel through the country unmolested, even in time of war; and strangers of African blood are safe under their protection.¹ A like inviolability and protective power are possessed by the Purrah men of the Timanee country,² and were possessed, according to Herodotus,³ by the Argippæans; and certain tribesmen in Rājputana and Gujarāt, who are bards by profession, serve as the guardians of travellers in a country infested with robbers.⁴ In the western islands of Torres Straits there were persons, to whom the name *paudagarka*, 'man of peace,' was applied, who were exempt from war and its consequences.⁵ Among the Brazilian aborigines the property of the *pajés* is spared in time of war;⁶ and, according to Bastian,⁷ the hereditary priest of Christian Swanetia enjoys a like privilege. In Oromó wars merchants and priests are not molested;⁸ and in Java the Badui are regarded as a sacred race, whose villages none may enter.⁹ In some parts of Australia small parties of natives whose object is to procure red earth for colouring purposes are permitted to pass unharmed by the tribes through whose country their way lies.¹⁰

(f) *Frequenters of festivals and holy places.*—

34. We have referred to the security enjoyed by the stranger during the celebration of festivals.¹¹ In the Marquesas, during certain festivities, of which the occasion is unexplained, hostile tribes come to share the pleasures of those with whom they fought yesterday and may fight to-morrow, and they are protected by a tabu, which, it seems, expires on the evening of the third day.¹² During the *nanga* rites at Viti Levu initiates belonging to hostile tribes may attend them in safety, provided that they reach the *nanga* unobserved.¹³ In Australia hostile tribes meet in peace during the performance of certain initiation ceremonies;¹⁴ and it is said of the Kisti and Ingush, once Christians, now Muslims, that they observe a feast at Easter at which the bitterest enemies refrain from violence.¹⁵ During the fishing festival on the Barwan river the tribes occupy a common camping-ground, the neutrality of which is strictly preserved;¹⁶ and Bastian¹⁷ tells us that the temple of Cozumel in Yucatan was visited yearly by pilgrims, who passed thither through hostile territories without fear of molestation.

Among the Tuaregs¹⁸ and in various parts of India¹⁹ travellers encamping near such holy places as the shrines of saints are safe from spoliation.

W. R. Smith²⁰ observes that, in certain tracts of sacred land in upland Arabia, hostile tribes meet and drive their flocks together in peace, whereas on any other ground they would fly at one another's throats; and Catlin²¹ says of Red Pipe Stone

Quarry, whither the tribes resorted to procure the red stone for the manufacture of their pipes, that it was a neutral ground 'to which the Indians came unarmed under the fear of the vengeance of the Great Spirit.'

III. *GENERAL OBSERVATIONS.*—35. We have seen that, to the savage, the world which lies beyond the community to which he belongs—i.e. beyond his group and the groups associated with it on terms which are friendly rather than hostile—is a world strange and mysterious, peopled by beings whom he hates and fears as his deadly foes. He thinks of them as belonging to an order other than his own, as less or, it may be, as more than human; and he looks upon them as absolutely rightless; for the sphere of rights is continuous with the sphere within which he himself lives. As regards himself, life is possible for him only within the little circle of his community; with it he and his fellows must stand or fall; and, accordingly, its preservation is of vital importance to him and them. It would seem, then, that to secure the common safety must be the aim of each and all. And yet it is not to be supposed that the individual member has that aim consciously in view as the principle of his action. What he has in view is his own interest—in this case his own safety. But that can be secured only if the community be safe; and, accordingly, in seeking to serve his own interest, he contributes, although unconsciously, to the realization of the common aim. Custom makes obligatory the teachings of the group's experience. It compels performance of those actions which have been found to serve it, and abstention from those which have been found to disserve it. Custom, be it observed, not merely imposes a rule upon the individual from without, but provides an inward principle, which he accepts without reflexion, and upon which he acts as matter of course. It points out the way which all must take; and those to whom it speaks take that way, without question, as the only way possible. Thus custom is at once legal and moral; and it is also religious in the sense that any breach of it, whatever the specific character of that breach may be, will be punished with evils such as are associated with the mysterious and supernatural—disease, disaster, and death. Law, morality, and religion have not as yet secured separate domains. They co-exist undifferentiated as elements of custom, which forms, indeed, rather the atmosphere than the rule of life.¹

36. Now, the safety of the community is menaced by the very existence of the stranger; and accordingly it is a duty imposed by custom on each of its members to hunt him down and put him to death, whenever opportunity offers. Still, many instances are to be found, even among the rudest peoples, in which the rigour of the early rule has been relaxed. The victors, e.g., do not always seek to exterminate their opponents. Sometimes they marry the women, and sometimes they adopt the children, and even spare the adult males whom they have captured to serve as slaves, or, it may be, to be admitted to a full share in the rights and privileges which they themselves enjoy. Nor are the benefits of adoption confined to the captive. They are, in many cases, extended to the suppliant, the fugitive, and the stranger. Further, the group not infrequently admits to its membership the man who marries into it and the man who 'makes brothers' with some one of its members. In all these cases the stranger, by being incorporated into the group, acquires, to some extent at all events, the rights of a member. Again, there are instances in which the man who marries a woman of an alien group may pass to and fro between it and his own group, even in time of war, without fear of molestation. Here

¹ Hamilton-Grierson, pp. 331, 34.

the privilege exists by reason not of incorporation, but of a personal bond. Sometimes the brotherhood which springs from community of class and totem asserts itself in the case of men whose groups are in open hostility. Here the member of a group is member of a larger unity to which his enemy also belongs. There is still another class of cases in which the stranger remains outside of the group, and yet is treated by its members as a being possessed of rights. The envoy, e.g., is in general regarded as inviolable, even when he is a stranger to those to whom he bears his message. In some countries the women of groups engaged in war with one another may pass in safety from group to group; and priests, wizards, doctors, holy men, the members of certain classes and societies, persons engaged in certain religious and social observances, traders, and guests are treated as entitled to a like privilege. This privilege is not always strictly personal; sometimes, as in the case of *asyla* and places devoted to trade, it is attached to a certain spot, and sometimes it is effective only at a certain time, such as a market-day or day of festival.

37. To what cause, then, are we to attribute these modifications of the early rule—the rule that the stranger must die in the interests of the community? The answer seems to be plain. The rule is modified because experience has taught the community that its interests are better served by sparing and protecting than by killing him. The captive is allowed to live as soon as the captor discovers that a living slave is more useful than a dead enemy. The trader is maintained and protected as soon as those who wish to deal with him find that, in order to secure his presence, they must provide for the safety of his property and person.

It is, of course, an individual who initiates the change. Some one has an interest to serve, and, in order to serve it, he makes an experiment. If it turns out successful, it will be imitated by all who think that a like result would be beneficial to themselves. And, if experience shows that the practice thus formed is generally advantageous to the members of the community, it will gradually be adopted as a general practice, which, approved by public opinion, will, in its turn, become obligatory upon all, as part and parcel of the common custom.

38. In the early days of the change the old custom remains unaltered and unimpaired, except in so far as its operation is suspended in the common interest. In other words, the stranger is still regarded and treated as an enemy, except in a limited class of cases in which, in order to serve that interest, he is protected. The members of the community are, so far as it proscribes him, prohibited from extending to him their sympathy and generosity. It may be that some of them entertain such feelings towards him; but they may not act upon them, and they accept that prohibition as the rule of their conduct—a rule which, as befits a rule of custom, is at once legal, moral, and religious. In so far, however, as he is protected by the community, its members serve it best who give practical expression to such feelings in their dealings with him. And here again religion, law, and morality work, as it were, into one another's hands; for the command that the stranger shall be well treated is addressed to those who are disposed to treat him well. At the same time, it is to be observed that custom emphasizes now the religious, now the legal, now the moral, obligation which it imposes on its subjects, and thus initiates a process which results in the substitution of rules of law, morality, and religion for its own single rule.

39. Further, when custom gives free rein to kindly feeling, that kindness reaches not only the stranger who is, in some sense or to some effect, useful to the community, but also the useless stranger—the beggar, the weakling, and the wanderer. Here morality takes possession of a field in the occupation of which law may or may not come to share. And, even if law be absent, morality may find itself supported by religion; for often the gods, who are the guardians of custom, take into their keeping those who have no claim to legal protection. As the stranger's position improves, his face becomes more familiar, his presence more welcome; and the better he is known and understood, the stronger grows the conviction that the restrictions, local, temporal, and personal, which hamper intercourse with him must be removed. Gradually the old order yields to the new, the duration of the movement and the character of its result being more or less determined by the disposition and circumstances of those who take part in it; and the stranger is at length secured, not by way of special privilege, nor by means of special institution, but by the public recognition that he is in himself the subject of rights.¹

LITERATURE.—This is indicated in the footnotes.

P. J. HAMILTON-GRIERSON.

STRIKES.—A strike is a sudden and collective act of a body of workmen who decide to cease work on account of a dispute with their employers respecting wages or some matter affecting their employment. The men—to use their own expression—‘down tools’ and refrain from work until the cause of their complaint is adjusted. The act is one of social or economic warfare. A strike is a conflict between capital and labour, joint agents in the production of wealth. A lock-out is a corresponding act on the part of the employer, who refuses on the ground of some dispute to allow his employees to continue work. Strikes are much the more frequent; they generally involve a large number of workmen and may reduce an industry to stagnation for a considerable period, thereby causing both inconvenience and loss to the public.

A strike may be local, *i.e.* limited to one mine, mill, or district; or it may extend over a considerable area and affect the convenience and well-being of a large community, as in the case of a railway strike. Trade unions (*q.v.*), the organizations of men in the same industry, are frequent promoters or agencies of strikes.

This interruption of modern industry is one outcome of the large system of production which has grown up during the last century as a result of mechanical invention and the application of the forces of nature (steam power, electricity, etc.) on an enormous scale, the consequence being a vast aggregation of capital and labour in individual industries. These two agents in the production of wealth have thus been brought into very intimate and dependent relation, and have become joint sharers in the result of their co-partnership under the heads of wages and profits. This sharing of the joint earnings in the product gives rise to disputes, as do also the conditions under which the industries are carried on. These conflicts often precipitate strikes, causing the sudden suspension of industry.

Trade unions, the recognized organizations of workmen, perform various functions: they act as benefit societies for mutual help as well as combinations for collective bargaining as to rates of pay, hours of labour, and regulations touching the industry and its relations to other industries. The employees claim a right to a voice in the detailed methods of the industry to which they

devote their lives and skill, corresponding to the rights of the owners, who have contributed their capital, business direction, and knowledge. Large production with its manifold benefits is thus made dependent upon the two factors—capital supplied by one group of agents and labour contributed by another. These factors in turn are dependent for their reward upon the product or service which they render to society; and they are in a certain degree opposed to one another in the division of the economic results of their combined action. The latter fact is the chief source of the conflicts which so often culminate in strikes. Strikes are not necessarily either immoral or illegal: they are ultimate appeals to force for a decision in cases of conflict where milder methods have failed; their ethical character depends upon the justice of the claims advanced and the manner in which the struggle is carried on.

In the early days of machine industry and large production, and before the economic relations of labour and capital on a large scale were understood, these disputes were often violent and accompanied by injurious acts. Strikes were then regarded as illegal and criminal, and were repressed by Conspiracy Laws and Acts for the protection of property. Since 1875 trade unions have been accepted as lawful institutions, and a large amount of legislation has been enacted concerning the relations of capital and labour—*e.g.*, the fixing of minimum wages in trades, the hours of labour, conditions affecting the safety and health of workmen, etc. With the vast growth of industry and the extension of the franchise trade unions have become powerful and have enlarged their field of action. They often exercise a kind of monopoly to prevent non-unionists from being employed in the same mine or factory; and they impose regulations on piece work, and create fine lines of demarcation between different classes of work, as, *e.g.*, between carpenters and joiners, bricklayers and masons. These rules tend to multiply the number of separate trades, and it is doubtful whether these refined subdivisions and classifications of labour are a benefit to society, whilst they have often led to disputes ending in strikes.

The effects of strikes upon the community are wholly injurious: they check supplies, raise prices, create inconvenience, and impede other dependent industries. Negotiation is the rational method for adjustment of differences, as it is generally practised in business affairs which involve competition; but strong feeling, ignorance, and the intervention of agitators all militate against negotiation. Both employers and employed need to realize that they are equally partners in production and mutually dependent. Since the product or service rendered must reward both classes, wisdom would dictate that their joint enterprise would succeed best when friction is reduced to a minimum. To this end economic knowledge of the principles of production and distribution is very necessary, while mutual confidence is also a desideratum. Opposed to these are the forces of ignorance, distrust, and selfishness, that lead to conflicts wasteful and destructive, which are an injury to both parties, while they also impose loss and inconvenience upon the community at large. Mutual confidence and a desire for equitable distribution is the object to be secured, and without conflict, *i.e.* by means of fair bargaining. In some trades standing committees of representatives of labour and capital have been established which meet at regular intervals to discuss difficulties; this method has been found very successful in avoiding friction and arriving at a common understanding.

In the early period of capitalistic production

¹ See Hamilton-Grierson, §§ 25, 52, 56-61.

strikes were very frequent owing to the ignorance and mutual distrust of employers and men. On the one side dictatorial methods, on the other measures for limiting production, hindrances to the use of machinery, and obstruction to improvements led to frequent suspensions of industry. Most of the large industries have at some period suffered from these modes of social warfare; the mining industries, the great railways, the building and textile trades, engineering, shipping, and even agriculture in which the organization of labour would seem almost impossible, have all suffered from strikes. In some cases the trade of the locality has been ruined; in all it has incurred waste, and great loss has fallen upon consumers through consequent scarcity and high prices.

Education, and more especially moral and economic instruction, is the most effective remedy for improving the relations between capital and labour, by teaching their mutual dependence and the importance of their joint efficiency. In recent years many trade union leaders have proved themselves wise administrators and have displayed much ability in the conduct of their unions; many have been elected to parliament, and some have filled high office, where they have demonstrated their capacity for legislation and have rendered valuable service as officials and even ministers. The position and public influence thus attained by these men effectually dispose of the charge of prejudice against labour, and prove that the interests of labour will be adequately secured as far as legislation can effect that object.

Many schemes for cementing the interests and activities of employers and employed have been devised with the object of avoiding the miseries of strikes. All such measures recognize and rest upon the principle of co-partnership between capital and labour and their joint interest in the productiveness of their industry.

Arbitration was an early method devised to terminate quarrels already begun, by calling in a competent judge or expert who should decide, after evidence and investigation, upon the merits of the case. This method succeeded in some instances where the arbitrators were men of large experience, sound judgment, and a reputation for sympathy with labour. In many cases, however, their decision was rejected when it was found to be unfavourable to the men. The utility of this method led in 1896 to the appointment of a Public Arbitrator, whose function was to investigate and offer mediation in cases where his intervention was accepted. Special qualities, however, are necessary for such a post, and the method cannot be regarded as a universal remedy. It suffers from the fact that it is applied only as an antidote, after the rupture has taken place and bitter feelings have been evoked. What is required is a means of prevention rather than a remedy.

Boards of Conciliation have also been devised with the object of avoiding strikes by smoothing over differences and removing causes of complaint. Representatives of employers and workmen meeting at regular intervals may constitute a Board of Conciliation and succeed in preventing conflict. Such methods conduce to mutual understanding and harmony; they lead to concessions and tend to consideration by making each side acquainted with the other's difficulties. Sometimes a sliding scale of wages has been adopted, but occasionally the union has rejected the scale when it has led to a fall in wages. That conciliation, however, cannot be a universal remedy is proved by the number and magnitude of strikes since first the system was adopted.

Profit-sharing and *co-partnership* are other schemes for securing the joint interest and friendly

co-operation of capital and labour. They give a definite interest to the worker in the result of the enterprise; in effect he becomes a shareholder and a participator in the annual profit. This method has succeeded in special cases in maintaining good relations, but its scope and application are limited, and it is apt to fail in a year of no profits. Trade unions do not regard the system with favour, nor are employers generally willing to adopt it.

The South Metropolitan Gas Company is a well-known and remarkable instance of the success of this method. During many years its annual statement has shown a good division of profits, and it has maintained good relations between the company and the employees. This result was due mainly to the wise and sympathetic guidance of the manager, Sir George Livesey. About 120 such undertakings are reported as existing in the United Kingdom; these are due in a large degree to the sympathetic influence of individuals.

Defects in human nature—distrust, self-love, greed, idleness, and ignorance—are all antagonistic to economic peace and concord. But, if a whole nation can be captured by the passion of greed and lust for power to dominate the world, can we expect that groups of men engaged in industry will cease to succumb to motives of selfishness? When a higher morality has brought mankind to a nobler plane of justice and sympathy, universal peace may not be unattainable, and strikes, like other modes of warfare, may then disappear.

During the last two years the problem has been materially affected by the action of the Unions of the Coal Miners and the Railway-men, which have been captured by socialistic leaders and have adopted the projects of Nationalizing the Mines and the Railways in the interests of the 'workers.' So far the attempt has failed to do more than materially raise wages, and increase the cost of coal and railway traffic. Socialism and Syndicalism cannot be discussed under the title of this article. One can only point out that success would mean plundering the shareholders and consumers, and would threaten ruin to industry and the country.

G. ARMITAGE-SMITH.

STRUGGLE FOR EXISTENCE.—This is a technical phrase used by Darwin to describe what occurs in Nature when living creatures respond by novel or intensified endeavours and reactions to the pressure of envying difficulties and limitations. The concept is wider and subtler than is suggested by the words taken literally.

'I should premise,' said Darwin, 'that I use this term in a large and metaphorical sense including dependence of one being on another, and including (which is more important) not only the life of the individual, but success in leaving progeny.'¹

The struggle for existence is a fundamental idea in biology, but it is not so easily grasped as is usually supposed.

'Nothing is easier,' Darwin said, 'than to admit in words the truth of the universal struggle for life, or more difficult—at least I have found it so—than constantly to bear this conclusion in mind. Yet unless it be thoroughly engrained in the mind, the whole economy of nature, with every fact on distribution, rarity, abundance, extinction, and variation, will be dimly seen or quite misunderstood.'²

The central idea is that of a clash between the endeavours of living creatures on the one hand and environmental difficulties on the other.

I. Reasons for the struggle for existence.—The three chief difficulties that beset organisms are those involved in the tendency to over-population, in the nutritive dependence of one creature upon another, and in the changefulness—especially the

¹ *Origin of Species*, p. 50.

² *Ib.* p. 49.

irregular changefulness—of the environment. To these must be added the fact that it is in the very nature of organisms—of the typical majority, if not of all—to be aggressive or insurgent, ever seeking fuller self-expression and further mastery of their surroundings. This leads to 'struggle' in the widest sense.

2. Modes of the struggle for existence.—The struggle for existence is often spoken of as if it were confined to intraspecific competition.

Thus Weismann writes: 'The "struggle for existence," which Darwin regarded as taking the place of the human breeder in free nature, is not a direct struggle between carnivores and their prey, but is the assumed competition for survival between individuals of the same species, of which, on an average, only those survive to reproduce which have the greatest power of resistance, whilst the others, less favourably constituted, perish early.'¹

But this restricted view is not Darwin's. 'Two canine animals, in a time of dearth, may be truly said to struggle with each other which shall get food and live. But a plant on the edge of a desert is said to struggle for life against the drought, though more properly it should be said to be dependent on the moisture. A plant which annually produces a thousand seeds, of which only one on an average comes to maturity, may be more truly said to struggle with the plants of the same and other kinds which already clothe the ground.'²

Similarly, he goes on to say that several seedling mistletoes may struggle with each other on the branch, while the mistletoe in its relation to birds may be said to struggle with other fruit-bearing plants. 'In these several senses, which pass into each other, I use for convenience's sake the general term of Struggle for Existence.'³

The fact is that the struggle takes place (a) between fellow-organisms of the same kith and kin, but (b) also between foes of entirely different natures, and (c) between living creatures and their inanimate surroundings. Furthermore, it may be for food, for foothold, for luxuries, for mates, and for the sake of the young. The essential idea is 'answering back' to envioning limitations and difficulties; and in an outlook on animate Nature it is of real importance to be clear that the struggle for existence need not be directly competitive, need not be sanguinary, need not lead to elimination there and then, and that it may often be accurately described as an endeavour after well-being. It is very inaccurate to picture animate Nature as, in Huxley's phrase, 'a dismal cockpit.'

3. The breadth of the concept.—In face of difficulties and limitations one kind of organism may intensify competition, another may exhibit an elaboration of parental care, another may experiment in mutual aid, another may take to some form of parasitism, and another may change its habitat. These are some of the many 'answers back' which living creatures make to envioning difficulties and limitations, and all are to be included in the concept of the struggle for existence. Instead of making an opposition between 'struggle for self' and 'struggle for others,' or between 'mutual struggle' and 'mutual aid,' it is scientifically clearer to recognize that the concept of struggle, as Darwin used it, includes all the fresh reactions and responses which individual organisms make in face of difficulties. As Spencer, Kessler, Geddes, Drummond, Kropotkin, Cresson, and others have shown, survival is often the reward of those organisms that give the best send-off to their offspring, or that vary most in the direction of self-subordination, or that experiment most successfully in sociality. But the important point is to get away from the nightmare idea that the struggle for existence is necessarily an internecine competition between kin at the margin of subsistence. Of this mode of the struggle there are not on record more than a few good illustrations; in any case, as Darwin emphasized, it is far from being the only mode.

As a technical term, 'the struggle for existence'

¹ *Darwin and Modern Science*, ed. A. C. Seward, Cambridge, 1909, p. 20.

² *Origin of Species*, p. 50.

³ *Ib.*

is not applicable when organisms faced by difficulties and limitations do not 'answer back' to these. Thus it is not obviously applicable to such a case as that of the myriads of open-sea animals engulfed in the baleen whale's huge mouth; it is not obviously applicable to such a case as that of the grass on which the cattle browse. It is essential to the concept that there be an individual 'answer back.' Similarly, it may be argued that, when an adaptive response comes to be part of the constitution of a species, when all the members of a species are so hereditarily endowed that they meet a familiar difficulty with effectiveness, and with equal effectiveness, then the swirl of the struggle for existence has passed from that particular point to some other. These capacities of effective response have been wrought out in the course of ages of struggle; they are now engrained in the constitution of the species; they have, so to speak, passed beyond the scope of struggle, except in so far as their continued exercise is necessary for their continued efficiency. But it is very interesting to consider these securely established ways, for thus we realize how large a proportion of the energy and time at the disposal of living creatures is spent in activities which make not for self-increase, self-stability, or self-preservation, but for the welfare of the family, the kin, and the species. Survival has doubtless been in many cases the reward of the individualistic competitor—a fox, let us say—but not less frequently of those with a capacity for self-forgetfulness and other-regarding activities. An otter is a solitary predatory carnivore, but the preoccupation of the mother with the nurture and education of the cubs is surely a very important factor in the survival of the species. It may be said that neither naturalists nor philosophers have as yet adequately realized the extent to which there is throughout animate Nature a subordination of the individual to the species.¹

4. Results of the struggle for existence.—The outcome of the struggle for existence varies with its conditions.

(a) When the 'answer back' which organisms give is uniformly ineffective, the result will be an indiscriminate reduction of numbers. This will doubtless relieve the pressure of population, but it will not directly make for progress. A diagrammatic illustration may be seen when great crowds of lemmings, whose numbers have outrun the means of subsistence, obey the instinct to pass on, and swim out to sea, where they are drowned.

(b) The 'answer back' which organisms give may be uniformly effective, as when large numbers succeed in finding a new habitat or in discovering a new mode of life. For animals, as for man, the exploration of new territory has been a frequently recurrent result of the struggle for existence, and one of the most important. It is very instructive also to notice how species nearly related keep out of one another's way by exploiting slightly different levels of the same crowded area. This is vividly illustrated on the seashore. This kind of outcome will not have any direct effect on the constitution of the race, but it may possibly be important in stimulating germinal and habitable variability. It should be noted that, when organisms survive difficulties in a struggle in virtue of individually acquired and non-heritable somatic modifications, or in virtue of individual and non-heritable plasticity of endeavour, there will not be any direct constitutional effect on the race.

(c) The result which has most evolutionary interest is discriminate elimination, where the sifting depends on the possession or non-possession of certain heritable variations. When different

¹ See Kropotkin, *Mutual Aid*; and Cresson, *L'Espèce et son serviteur*.

members of the species 'answer back' in virtue of hereditary endowment with varied degrees of effectiveness, the struggle for existence will tend to bring about the elimination of the relatively less fit, and a variety may actually supplant the parent species. This does not necessarily mean internecine competition between the members of the species, for, when a microbe, e.g., attacks a family, the resistive capacity of the survivors is not gained at the expense of the other members, nor does it hasten their elimination.¹

It is often said that what the discriminative modes of struggle actually effect is elimination, rather than selection. This is true, but too much must not be made of it. What actually happens in natural selection is a change in the centre of gravity of variation by the removal or handicapping of the less adaptive variants, but the elimination of X is correlated with the survival of Y. Darwin showed his wonted shrewdness in giving to *The Origin of Species* by means of *Natural Selection* the alternative title *The Preservation of Favoured Races in the Struggle for Life*. The important point is to realize that the struggle for existence may result in a process of natural selection without there being any rapid killing off of the less fit. If the relatively less fit have a more difficult life and do not live so long as the relatively more fit, if they have smaller and less vigorous families, if the parents are harassed so that they cannot give their offspring the best available nurture, and so on, the process will, in the long run, work out to the same result as if the less fit had come to a rapid violent end. Another consideration, of great importance but rarely appreciated, is that the struggle for existence seems to the expert naturalist to operate in reference to an intricate web of life, or system of inter-relations, which has been gradually wrought out in increasing complexity. Steps of organismal progress become in some measure embodied in extra-organismal linkages, in a *systema Naturæ* which has been increasingly elaborated through the ages; and this is part of the explanation of the progressiveness of evolution. There has been an evolution of the environment—of the struggle, of the selection—as well as of the organisms. The sieve evolves as well as the material sifted.

5. General.—(a) It is a basal fact in the scheme of organic evolution that one type of organism depends on another for sustenance. On the whole, the lower feed the higher, though the tables are sometimes turned. The living material passes from one incarnation to another; and, while we may not be scientifically warranted in saying that the myriads of prolific crustaceans in the sea are there in order that fishes may be fed, the fact is that the existence and persistence of the teeming multitudes of small fry has made the great race of fishes possible. And the great multitude of fishes has made the livelihood of much higher organisms, such as ospreys, possible. This nutritive dependence of organism upon organism is one of the factors necessitating a struggle for existence; and there seems no good reason why in its general aspects it should grate on æsthetic or ethical susceptibilities. The tendency which many not very highly individuated organisms have to prolific multiplication sometimes leads to grim results, as when a sow has more offspring than she can feed, or when a marsupial mother has more offspring than her pouch has teats for, or when, as in the egg-capsules of some whelks, there is necessitated cannibalism in the cradle; but, in general, there is nothing incongruent with the rationality of animate Nature in the fact that, with heavy odds against life, there

should be provision for a safe margin. It is very instructive to notice how reproductivity is economized, along many different lines, in proportion to the advance in instinctive or intelligent control of circumstances, or in effectiveness of parental care and nurture. It is true that the callous changefulness of the physical environment causes much misery among living creatures, but a much larger fact is the remarkable fitness of our earth to be a home of life.¹ Moreover, while the physical environment is often tyrannous in its changefulness, its importance as a stimulus to effort and possibly to variation must be borne in mind. Furthermore, against the callousness of the physical environment must be set the plasticity with which the animate environment adjusts itself in linkages or inter-relations to register, or organize, or systematize organismal advances in evolution. This is one of the largest facts of natural history, and must form part of the perspective of our picture of the struggle for existence.

(b) The currency of half-understood biological ideas has often proved mischievous. Thus a vindication of internecine competition and of warfare among men is sometimes sought in an appeal to the fact that there is universal struggle for existence in animate Nature. Can we improve upon Nature's régime? it is asked—as if man had not been doing this (with clouded success, it may be admitted) since civilization began. In repelling this sophism, the following points may be noted. (1) The struggle for existence, as Darwin insisted, includes much more than internecine competition among nearly related kin. It includes many non-competitive forms of an endeavour after well-being. (2) Some non-competitive modes of struggle—e.g., elaborations of mutual aid and improvements in co-operation—seem to have been factors in great steps of progress in Nature, and well deserve man's imitation, which indeed, consciously or unconsciously, they have always had. (3) The sifting that goes on in the struggle for existence does not in itself make for more than the survival of those relatively fittest to given conditions. This can be no criterion of human conduct, unless the given conditions include the highest values. To take a particular case, there is not in biological analogy any warrant for supposing that the result of war must needs be a survival of the fittest in any desirable sense. (4) There are many interesting analogies between animal and human societies, but the differences are greater than the resemblances, and there is apt to be fallacy in arguing from the former to the latter. This is made particularly clear in Chalmers Mitchell's *Evolution and the War*. (5) If, as the facts suggest, there has been in the realm of organisms an evolution not only of organisms but of modes of selection, this will hold *a fortiori* for mankind, where the gradual displacement of natural selection by rational and social selection, though fraught with great dangers, opens up great possibilities of amelioration. (6) Finally, it must be borne in mind that in mankind it is not enough to refer to biological criteria, for, while these are fundamental, social criteria are supreme. Thus, to look at the question of war from another point of view, a war which is, biologically regarded, a reversion to the crudest mode of the struggle for existence may be, socially regarded, an expression and discipline of many and high virtues in combatants and non-combatants alike.

LITERATURE.—Charles Darwin, *The Origin of Species*, London, 1859, 61872; Alfred Russel Wallace, *Darwinism*, do. 1889; T. H. Huxley, 'The Struggle for Existence in Human Society,' in *Collected Essays*, do. 1893-94, ix. 185 ff.; P. Geddes and J. Arthur Thomson, *Evolution*, do. 1911; J. Arthur

irregular changefulness—of the environment. To these must be added the fact that it is in the very nature of organisms—of the typical majority, if not of all—to be aggressive or insurgent, ever seeking fuller self-expression and further mastery of their surroundings. This leads to 'struggle' in the widest sense.

2. Modes of the struggle for existence.—The struggle for existence is often spoken of as if it were confined to intraspecific competition.

Thus Weismann writes: 'The "struggle for existence," which Darwin regarded as taking the place of the human breeder in free nature, is not a direct struggle between carnivores and their prey, but is the assumed competition for survival between individuals of the same species, of which, on an average, only those survive to reproduce which have the greatest power of resistance, whilst the others, less favourably constituted, perish early.'¹

But this restricted view is not Darwin's. 'Two canine animals, in a time of dearth, may be truly said to struggle with each other which shall get food and live. But a plant on the edge of a desert is said to struggle for life against the drought, though more properly it should be said to be dependent on the moisture. A plant which annually produces a thousand seeds, of which only one on an average comes to maturity, may be more truly said to struggle with the plants of the same and other kinds which already clothe the ground.'²

Similarly, he goes on to say that several seedling mistletoes may struggle with each other on the branch, while the mistletoe in its relation to birds may be said to struggle with other fruit-bearing plants. 'In these several senses, which pass into each other, I use for convenience' sake the general term of Struggle for Existence.'³

The fact is that the struggle takes place (a) between fellow-organisms of the same kind and kin, but (b) also between foes of entirely different natures, and (c) between living creatures and their inanimate surroundings. Furthermore, it may be for food, for foothold, for luxuries, for mates, and for the sake of the young. The essential idea is 'answering back' to environing limitations and difficulties; and in an outlook on animate Nature it is of real importance to be clear that the struggle for existence need not be directly competitive, need not be sanguinary, need not lead to elimination there and then, and that it may often be accurately described as an endeavour after well-being. It is very inaccurate to picture animate Nature as, in Huxley's phrase, 'a dismal cockpit.'

3. The breadth of the concept.—In face of difficulties and limitations one kind of organism may intensify competition, another may exhibit an elaboration of parental care, another may experiment in mutual aid, another may take to some form of parasitism, and another may change its habitat. These are some of the many 'answers back' which living creatures make to environing difficulties and limitations, and all are to be included in the concept of the struggle for existence. Instead of making an opposition between 'struggle for self' and 'struggle for others,' or between 'mutual struggle' and 'mutual aid,' it is scientifically clearer to recognize that the concept of struggle, as Darwin used it, includes all the fresh reactions and responses which individual organisms make in face of difficulties. As Spencer, Kessler, Geddes, Drummond, Kropotkin, Cresson, and others have shown, survival is often the reward of those organisms that give the best send-off to their offspring, or that vary most in the direction of self-subordination, or that experiment most successfully in sociality. But the important point is to get away from the nightmare idea that the struggle for existence is necessarily an internecine competition between kin at the margin of subsistence. Of this mode of the struggle there are not on record more than a few good illustrations; in any case, as Darwin emphasized, it is far from being the only mode.

As a technical term, 'the struggle for existence'

³ *Id.*

is not applicable when organisms faced by difficulties and limitations do not 'answer back' to these. Thus it is not obviously applicable to such a case as that of the myriads of open-sea animals engulfed in the baleen whale's huge mouth; it is not obviously applicable to such a case as that of the grass on which the cattle browse. It is essential to the concept that there be an individual 'answer back.' Similarly, it may be argued that, when an adaptive response comes to be part of the constitution of a species, when all the members of a species are so hereditarily endowed that they meet a familiar difficulty with effectiveness, and with equal effectiveness, then the swirl of the struggle for existence has passed from that particular point to some other. These capacities of effective response have been wrought out in the course of ages of struggle; they are now engrained in the constitution of the species; they have, so to speak, passed beyond the scope of struggle, except in so far as their continued exercise is necessary for their continued efficiency. But it is very interesting to consider these securely established ways, for thus we realize how large a proportion of the energy and time at the disposal of living creatures is spent in activities which make not for self-increase, self-stability, or self-preservation, but for the welfare of the family, the kin, and the species. Survival has doubtless been in many cases the reward of the individualistic competitor—a fox, let us say—but not less frequently of those with a capacity for self-forgetfulness and other-regarding activities. An otter is a solitary predatory carnivore, but the preoccupation of the mother with the nurture and education of the cubs is surely a very important factor in the survival of the species. It may be said that neither naturalists nor philosophers have as yet adequately realized the extent to which there is throughout animate Nature a subordination of the individual to the species.¹

4. Results of the struggle for existence.—The outcome of the struggle for existence varies with its conditions.

(a) When the 'answer back' which organisms give is uniformly ineffective, the result will be an indiscriminate reduction of numbers. This will doubtless relieve the pressure of population, but it will not directly make for progress. A diagrammatic illustration may be seen when great crowds of lemmings, whose numbers have outrun the means of subsistence, obey the instinct to pass on, and swim out to sea, where they are drowned.

(b) The 'answer back' which organisms give may be uniformly effective, as when large numbers succeed in finding a new habitat or in discovering a new mode of life. For animals, as for man, the exploration of new territory has been a frequently recurrent result of the struggle for existence, and one of the most important. It is very instructive also to notice how species nearly related keep out of one another's way by exploiting slightly different levels of the same crowded area. This is vividly illustrated on the seashore. This kind of outcome will not have any direct effect on the constitution of the race, but it may possibly be important in stimulating germinal and habitable variability. It should be noted that, when organisms survive difficulties in a struggle in virtue of individually acquired and non-hereditary somatic modifications, or in virtue of individual and non-hereditary plasticity of endeavour, there will not be any direct constitutional effect on the race.

(c) The result which has most evolutionary interest is discriminate elimination, where the sifting depends on the possession or non-possession of certain heritable variations. When different

¹ See Kropotkin, *Mutual Aid*; and Cresson, *L'Espèce et son territoire*.

members of the species 'answer back' in virtue of hereditary endowment with varied degrees of effectiveness, the struggle for existence will tend to bring about the elimination of the relatively less fit, and a variety may actually supplant the parent species. This does not necessarily mean internecine competition between the members of the species, for, when a microbe, *e.g.*, attacks a family, the resistive capacity of the survivors is not gained at the expense of the other members, nor does it hasten their elimination.¹

It is often said that what the discriminative modes of struggle actually effect is elimination, rather than selection. This is true, but too much must not be made of it. What actually happens in natural selection is a change in the centre of gravity of variation by the removal or handicapping of the less adaptive variants, but the elimination of X is correlated with the survival of Y. Darwin showed his wonted shrewdness in giving to *The Origin of Species* by means of *Natural Selection* the alternative title *The Preservation of Favoured Races in the Struggle for Life*. The important point is to realize that the struggle for existence may result in a process of natural selection without there being any rapid killing off of the less fit. If the relatively less fit have a more difficult life and do not live so long as the relatively more fit, if they have smaller and less vigorous families, if the parents are harassed so that they cannot give their offspring the best available nurture, and so on, the process will, in the long run, work out to the same result as if the less fit had come to a rapid violent end. Another consideration, of great importance but rarely appreciated, is that the struggle for existence seems to the expert naturalist to operate in reference to an intricate web of life, or system of inter-relations, which has been gradually wrought out in increasing complexity. Steps of organismal progress become in some measure embodied in extra-organismal linkages, in a *systema Naturæ* which has been increasingly elaborated through the ages; and this is part of the explanation of the progressiveness of evolution. There has been an evolution of the environment—of the struggle, of the selection—as well as of the organisms. The sieve evolves as well as the material sifted.

5. General.—(a) It is a basal fact in the scheme of organic evolution that one type of organism depends on another for sustenance. On the whole, the lower feed the higher, though the tables are sometimes turned. The living material passes from one incarnation to another; and, while we may not be scientifically warranted in saying that the myriads of prolific crustaceans in the sea are there in order that fishes may be fed, the fact is that the existence and persistence of the teeming multitudes of small fry has made the great race of fishes possible. And the great multitude of fishes has made the livelihood of much higher organisms, such as ospreys, possible. This nutritive dependence of organism upon organism is one of the factors necessitating a struggle for existence; and there seems no good reason why in its general aspects it should grate on æsthetic or ethical susceptibilities. The tendency which many not very highly individuated organisms have to prolific multiplication sometimes leads to grim results, as when a sow has more offspring than she can feed, or when a marsupial mother has more offspring than her pouch has teats for, or when, as in the egg-capsules of some whelks, there is necessitated cannibalism in the cradle; but, in general, there is nothing incongruent with the rationality of animate Nature in the fact that, with heavy odds against life, there

should be provision for a safe margin. It is very instructive to notice how reproductivity is economized, along many different lines, in proportion to the advance in instinctive or intelligent control of circumstances, or in effectiveness of parental care and nurture. It is true that the callous changefulness of the physical environment causes much misery among living creatures, but a much larger fact is the remarkable fitness of our earth to be a home of life.¹ Moreover, while the physical environment is often tyrannous in its changefulness, its importance as a stimulus to effort and possibly to variation must be borne in mind. Furthermore, against the callousness of the physical environment must be set the plasticity with which the animate environment adjusts itself in linkages or inter-relations to register, or organize, or systematize organismal advances in evolution. This is one of the largest facts of natural history, and must form part of the perspective of our picture of the struggle for existence.

(b) The currency of half-understood biological ideas has often proved mischievous. Thus a vindication of internecine competition and of warfare among men is sometimes sought in an appeal to the fact that there is universal struggle for existence in animate Nature. Can we improve upon Nature's régime? it is asked—as if man had not been doing this (with clouded success, it may be admitted) since civilization began. In repelling this sophism, the following points may be noted. (1) The struggle for existence, as Darwin insisted, includes much more than internecine competition among nearly related kin. It includes many non-competitive forms of an endeavour after well-being. (2) Some non-competitive modes of struggle—*e.g.*, elaborations of mutual aid and improvements in co-operation—seem to have been factors in great steps of progress in Nature, and well deserve man's imitation, which indeed, consciously or unconsciously, they have always had. (3) The sifting that goes on in the struggle for existence does not in itself make for more than the survival of those relatively fittest to given conditions. This can be no criterion of human conduct, unless the given conditions include the highest values. To take a particular case, there is not in biological analogy any warrant for supposing that the result of war must needs be a survival of the fittest in any desirable sense. (4) There are many interesting analogies between animal and human societies, but the differences are greater than the resemblances, and there is apt to be fallacy in arguing from the former to the latter. This is made particularly clear in Chalmers Mitchell's *Evolution and the War*. STUDENT CHRISTIAN MOVEMENT.—

1. Origin, aim, and extent.—The Student Christian Movement is world-wide in scope and carries on work in some 2500 universities and colleges in forty lands. In 1920 the World's Student Christian Federation celebrated its 25th birthday. It federates national movements in the United States of America, Canada, Great Britain and Ireland, France, Italy, Switzerland, Germany, Holland, Russia, Scandinavia, S. Africa, China, India, Japan, and Australasia. Pioneer work, which will issue in further national movements, is in progress in S. America, Austria, Hungary, and the Balkans. Its membership, somewhat reduced by the war, is 176,000 students.

The Movement came into being as the result of several converging streams of influence. The beginnings in Great Britain may be traced to the evangelical revival of the middle of last century. Meetings held in Cambridge at the time of the Mission of Moody and Sankey in 1873, though not conducted by them, gave an impetus to already existing work there, and led to the formation of Christian Unions in Cambridge and Oxford. In 1877 an annual conference was instituted, attended by delegates from these two universities and from Edinburgh, Glasgow, Durham, and Dublin. The volunteering of the 'Cambridge Seven' for missionary work in China, followed by the visits to various colleges and universities of Stanley Smith and C. T. Studd in 1884 resulted among other things in the remarkable work carried on for ten years in Edinburgh under the leadership of Henry Drummond. To his influence, and to that of the student deputations from Edinburgh which visited other colleges, the Student Christian Movement both in America and in Great Britain is largely indebted. Meantime a similar movement was making progress in America, which took shape in 1886 in the Student Volunteer Missionary Union. Visits paid to this country by J. N. Forman and R. P. Wilder, two of the founders of that Union, led to the inauguration at a conference in Edinburgh in April 1892 of a similar Union for Great Britain. It is at this date that the Movement in an organized form may be said to begin.

These Unions were composed of men who had formed the purpose of becoming foreign missionaries, and the first aim of the founders was to appeal to the universities for volunteers for the mission field. Planted at first as a mustard-seed in some American Colleges, the Student Volunteer Missionary Union has grown to marvellous dimensions, and up to the year 1919 there were 9000 missionaries in the field whose names had been enrolled as Student Volunteers. The movement, therefore, from its origin has had as its horizon nothing less than the whole world.

It is impossible in a short article to trace the course of the Movement's growth throughout the world. The character and development of the national movements naturally vary in accordance with the differences characteristic of, say, America and Europe, East and West, Roman Catholic and Reformed countries. But there is enough in common to justify the taking of one national movement as illustrative of the rest. This article is therefore based on the writers' knowledge of the British Student Movement.

2. Development and methods.—The pioneers of the movement in 1892 were concerned to win men and women in the British colleges for service abroad. This simple beginning has led to a complex development. The search for volunteer missionaries revealed the religious needs of both men and women students in every kind of college.

In the older universities Christianity was found to be institutionally represented. But even there, and still more in the newer universities, in national training colleges, in technical, medical, and other schools, great numbers of students were found to lie outside the embrace of organized Christianity. There are no 'enchancements of the Middle Ages' in the great majority of modern British colleges. They represent a growth of education which has been independent of the Churches. It fell therefore to the pioneers of the movement not only to appeal for 'student volunteers' from the colleges, but to cultivate in the colleges some oases of Christian life and conviction in their religious deserts. The S.V.M.U. thus gave rise to the General College Department, which is a federation of local Student Christian Unions. In 1892 only 20 colleges had religious organizations. In 1919 there were 126 Christian Unions in British colleges, with a total membership of about 6000 students. The missionary aim of the S.V.M.U. led not only to the formation of Christian Unions in secular colleges, but also to the creation of a Theological College Department, in which are associated 63 theological colleges, representative of all the Christian bodies other than Roman Catholic. This extension represented the desire to bring home to men preparing for the ministry both the missionary call of the hour and the religious needs and aspirations of their contemporaries about to enter other professions.

The College Christian Unions are self-governing. They are grouped in six intercollegiate Unions in Wales, Ireland, Scotland, North and South of England, and London, each with a representative Council. In Ireland, Scotland, and Wales especially the work has developed along characteristically national lines. The affairs of the Student Christian Movement as a whole are controlled by a General Committee elected annually and composed almost entirely of students still in college. This Committee employs, in 1920, thirty college men and women as Secretaries, most of them recent graduates, who act as links between the colleges, and help to bring to bear upon local problems the experience of the whole Movement. Methods of work vary with the college, but in nearly all there are lectures on the Bible, various aspects of Christian belief, the missionary enterprise and social questions, small groups of eight or a dozen meeting weekly for discussion of books published by the Movement for the purpose, prayer meetings and series of addresses designed to present the appeal of Christ to the entire body of students. These methods are supplemented by small Conferences in various parts of the college field for the more thorough study of the Bible, or missions or social problems under the guidance of experts. The Summer Conferences (held latterly at Swanwick, Derbyshire) are attended by students from all parts of the country. One of the most important departments of the Movement's work in recent years has been due to the presence in the colleges of increasing numbers (over 2000 in 1920) of students from other countries. It seeks to do all in its power to secure a friendly welcome for these men and women, whose presence provides a unique opportunity for the promotion of mutual understanding and international goodwill. Special secretaries have been set apart for this purpose. Several of these groups of foreign students have formed Christian Unions of their own. The Student Movement House in London provides premises for a Club which includes among its thousands members students of thirty-three nationalities.

The growth of the movement has therefore been in extension. It cuts a section through the length

and breadth of the British adult education. It has also been in intension. The pursuit of the original and relatively simple missionary aim has laid bare a complexity of religious need and opportunity. The movement began with a certain evangelical *naïveté*. It was based on 'Bible Christian' assumptions and was not at first sensitive to the intellectual difficulties of students or to the relationship between foreign missionary enterprise and the reproach of the gospel constituted by social conditions at home. But with very great rapidity the movement was led to face the facts. It has set itself sympathetically to foster the quest of the younger generation after a fresh understanding of the gospel. It has boldly spread among students the positive and constructive results of Biblical study. At the same time it has recognized fully that the gospel has not only to be carried to the heathen but also to be applied to the Christianization of society everywhere. It has been foremost in the consciousness that the focus of Christianity according to the mind of the Master is something more than individual salvation. In other words, it has embraced the gospel of the Kingdom of God. This is of especial significance when the comprehensive character of the student field is taken into account. Every profession has its postulants in the colleges. The movement therefore has been stimulated to think out how Christianity applies to the life and work of men and women in every kind of secular profession. This complex development of the movement's activities is represented in the growth and character of its literature. Beginning with comparatively simple missionary and Biblical propaganda, it has expanded into something fairly representative of the relationship of Christ to the thought and life of the times.

At the same time the central and single loyalty of the founders of the movement has been continued: it is loyalty to Jesus Christ. Students have grown undoubtedly in an unwillingness merely to accept traditional beliefs about Him. The movement is now less possessed than formerly of a fixed and agreed message about Him. It is more of a quest after 'the truth as it is in Jesus.' But it has advanced in the conviction that the master-key to all the interwoven problems of the world lies with Him. It has therefore grown in a deepened and intensified loyalty to Him.

3. Doctrinal position and relation to the Churches.—For its faith and doctrinal position the movement has come to depend (in a way which what has been said will render intelligible) less upon any independent formulation of its own than upon the faith of the adult Churches. The movement after all is not a Church; it is the adolescent department of the Churches; it is the means of collecting and formulating to the elder Christian world the hopes, needs, and difficulties of the coming generation. It is also the channel through which the forces of the Christian Church may reach the student class, otherwise largely inaccessible. For teachers, writers, speakers, secretaries, it draws freely upon the ranks of organized Christianity. It has held consistently to the task of reinforcing the adult Church with the vigorous faith and service of the student whom it has helped to belief in Christ and to devotion to His cause.

Thus related to the Churches, the movement has been brought face to face with the problem of Christian unity. Yet its interest in the problem is not direct; it is incidental to the main work of winning students for Christ and His service. None the less the movement is doing formative work for the cause of Christian unity. It is not content with negotiations, but seeks to make to converge on the needs of students all the resources of

the divided Body of Christ. The movement (and notably its conferences) is the meeting-place, under conditions of mutual need and adolescent candour, of men and women representative of the full width of Christian division. No one is asked to leave behind his denominational loyalty, but all bring it with them and make it their contribution to the common stock. Thus the movement, and notably its Theological College Department, has become the means of exchange of view and mutual understanding between representatives of Christian traditions as widely separated as the Friends on the one hand and Roman Catholicism on the other.

Such in outline is the British Student Christian Movement. Its significant features, missionary, social, intellectual, and ecclesiastical, deserve illustration and amplification from movements in other countries. There is no doubt, *e.g.*, that on the continent of Europe there is a far greater degree of alienation of the student class from organized Christianity than in Great Britain. Movements of intellectual and moral revolt have gone deeper. In fact, the World's Student Christian Federation by its touch with students is concerned with a whole world of deep spiritual, moral, and political unrest. Again, the movement in other lands has come to be quite clearly of opinion that, wherever liaison and co-operation with Catholic Christianity is feasible, it is the right policy, so that the streams of new life may be helped to flow down and purify the old channels. There are many Orthodox, Copt, Gregorian, and some Roman Catholic, students within the Federation. Everywhere the movement asks of students but two questions: whether they see in Jesus Christ the hope of the world; whether they will join with others in making Him King in their hearts and over the whole of life. To that common task it invites all to bring the treasures of their ecclesiastical inheritances wherewith to enrich the Student Christian fellowship.

It remains to add that the war but heightened the value and potentiality of the movement in all lands. The Student Federation held together despite all the ruptures of war, and on a general view has not lost ground despite all the losses of the war. In many parts of Europe, notably in the Balkans, Austria, Hungary, and Poland, movements of emancipation consequent on the war expose a deep need and opportunity for Student Movement enterprise. In some countries no doubt the movement is small and struggling, and faced by desperate difficulties. But everywhere, nevertheless, the true light already shineth. It is the light of Christ, in whom this movement trusts. He has greatly blessed it. The future, therefore, is bright with the hope of His using it afresh in His purposes of healing and reconciliation for the world.

HUGH MARTIN.

STUNDISM.—See SECTS (Russian).

STŪPA.—*Stūpa* (Sanskrit), a Buddhist monument or mausoleum, generally called 'tope' (from Pali *thūpa*) in India and adjacent countries, means 'mound' or 'tumulus,' and the term *chaitya* (*q.v.*) had originally the same meaning, though it afterwards came to denote any memorial or sacred spot or sanctuary of any shape, whereas *stūpas* were always built in the shape of towers, surmounted by a cupola and one or more *chattra* ('parasols'). King Aśoka, the Buddhist Constantine (3rd cent. B.C.), is said to have erected, within the space of three years, 84,000 *stūpas* in different parts of India, to preserve the remains of Buddha.¹

¹ There must have been *stūpas* long before the time of Aśoka, since he declared, in an inscription discovered by Führer in the Tarai, near the Nepālese village of Nigliwa, that he increased or enlarged for the second time the *stūpa* of the Buddha Koṇāka-māna, a mythical predecessor of the historical Buddha, and since the ruined Piprāwā *stūpa* contains an inscription which is decidedly prior to the period of Aśoka.

Funeral tumuli are spread over the whole continent of Asia and Europe, and it may be taken for granted that the worship of *stūpas*, or mausoleums of distinguished personages, was handed down to the adherents of Buddha from a remote period. Thus the excavation, in 1905, of the curious earthen mounds north of the village of Lauriya, in the Bettiah subdivision, has revealed the interesting fact that these ancient conical structures contain deposits of bones as well as gold leaves and other ornaments. Aśoka erected one of his pillars near these old monuments, which had probably formed an object of worship long before his epoch, and may have contained the remains of royal persons. When dying, Buddha is said to have declared that, besides himself and his disciples, a monarch and a *pratyekabuddha* (q.v.) were worthy to be dignified with the erection of a *stūpa*. Nor were *stūpas* entirely confined to Buddhists in the historical period of India. There is a story of the Buddhist king Kaniska having by mistake paid homage to a heretical *stūpa*. *Stūpas* are mentioned in the sacred writings of the Jain sect, and an ancient Jain inscription discovered at Mathurā records the consecration of one or two statues at a certain ancient *stūpa*. A Brāhmanical hermitage, represented on the sculptures of Sāncī and Amarāvati, shows the figure of a *stūpa*. All the *stūpas* actually discovered, however, seem to be of Buddhist origin, and we know for certain that it was an established usage of the Buddhist Church to raise memorials called *stūpas* on the ashes or relics of its teachers, and in those places which were hallowed by some remarkable event in the history of Buddha or of his followers. This accounts for the fact that *stūpas* are found not only in India itself, but also in all other countries where Buddhism is or has been in the ascendant.

1. *Stūpas* discovered outside of India.—Of these the ruins of a *stūpa* at Anurādhapura (Ceylon), supposed to date from 161 B.C. to A.D. 137 or earlier, are perhaps the most ancient. The celebrated Javanese monument of Boro-Budur, in the central part of Java, which belongs to the 7th-9th cent. A.D., consists of eight terraces and contains no fewer than 73 *stūpas*, with sitting statues of Buddha. The temples of Ayuthia, the ruined ancient capital of Siam, exhibit a curious mixture of the *stūpa* style with other Indian elements. Other independent varieties of the *stūpa* have been developed in Burma, Nepāl, and Tibet. The Chinese *stūpas*, built since the 1st cent. A.D., have no cupola, but from seven to thirteen *chattras*. The dowager empress Hon of China is said to have built a *stūpa* of nine storeys, 900 ft. high, crowned by a mast of 100 ft. carrying 50 golden disks. In Ladakh Simpson discovered the reproduction of a *stūpa* with thirteen *chattras*. In Afghanistan some 60 *stūpas* were examined by Masson. They are remarkable for the fragments of one or two bones, evidently relics, which they generally contain in a small apartment in their centre, and to protect which they appear to have been erected. A certain *stūpa* near Kuchar in E. Turkestan was opened in 1889 by some natives of the place looking for treasure. What they actually found was not treasure, but a heap of very ancient Sanskrit MSS, which were afterwards deciphered by R. Hoernle in *The Bower Manuscript* (Calcutta, 1893 ff.). In the same country Stein discovered, in 1900, an enormous *stūpa*, situated in a rectangular courtyard, the walls of which were decorated with reliefs of the 4th century A.D.

2. Indian *stūpas*.—The rise and development of *stūpa* architecture may, however, best be studied in India, where it originated, especially in the ancient sculptural and pictorial representa-

tions of *stūpas*. A very ancient type of *stūpa*, which consists of a simple round tumulus surrounded by a balustrade, has been preserved in an old Sāncī sculpture. According to Rhys Davids, the first step in the development of the original cairn or mound into a *stūpa* consisted in building it more carefully than usual, with stones, and in covering the outside with fine *chunam* plaster to give a marble-like surface. The next step was to build the cairn of concentric layers of the huge bricks in use at the time and to surround the whole with a wooden railing. There can be no doubt that the railings and *toranas* (gates) were originally made of wood, like the wooden gates so common in the court-yards of Chinese and Japanese temples, which seem to have been derived from the Indian *toranas*, though the only preserved specimens of the latter—e.g., the beautifully ornamented gate of the Sāncī tope—are made of stone. The *stūpa* itself was early placed on a circular terrace or plinth. A parasol (*chattrā*) was added on the top, the sign of high station in the East. Between it and the cupola there was a quadrangular structure, fitly called the neck (*gala*) of the *stūpa*. Many *stūpas* contained quite a series of parasols, diminishing in diameter as they approached the top of the building. The height of the parasols was at least one-third of the whole height of the edifice (said to have been 632 ft. in the case of the famous sanctuary of Peshawār, as seen by a Chinese traveller). The miniature *stūpas*, which were used as objects of worship, containing small fragments of sacred texts, called *dharma-sarira*, or religious relics, are only a few centimetres in height.

A Buddhist Sanskrit work, the *Divyāvadāna*, contains a description of the mode in which an elaborate *stūpa* was gradually erected by a rich Indian merchant. He began by having four staircases built on the four sides of the future *stūpa*. Then he built successively the three terraces or plinths which were to be reached from the staircases. They were surmounted by the dome or cupola, called 'egg' (*anda*), in which there was a hole for the pillar or flagstaff carrying the whole series of parasols (*chattrāvalī*). The cupola was crowned by a pavilion, or kiosk (*harmśā*), serving as a base for the pillar, which, rising from the dome, passed through the pavilion. A rain-water pot (*varśa-sthāna*) is also mentioned, in which precious stones were deposited.

The *stūpas* of India may be conveniently divided into two classes, according as they were built as *dāgabas* (from Skr. *dhātugarbha*, 'receptacle for relics'), for the purpose of enshrining some sacred relic, or as memorials of some remarkable event in the life of a Buddha or other saint. A specimen of the latter kind is the famous *stūpa* of Sārnāth (q.v.), near Benares, situated in the Deer Park (*mṛgavana*), where Buddha took up his residence, with his five disciples, when commencing his mission as a teacher. The building now consists of a stone base 93 ft. in diameter, surmounted by a tower in brick-work, rising to a height of 110 ft. above the surrounding ruins, and 128 ft. above the plain. In his excavations Cunningham found, at the depth of 10½ ft. from the summit, a large stone inscribed with the Buddhist creed, but no relic.

Near Nagarnhāra, in the Kabul valley, there were two *stūpas* intended to perpetuate the memory of the celebrated meeting of the future Buddha with his mythical predecessor, Dipaṅkara. Many other such memorial *stūpas*, which have now disappeared, were seen and described by the devout Chinese Buddhist pilgrims who visited India between A.D. 400 and 800.

The *stūpas* of Bhilsa (q.v.), in Central India, the most extensive group of topes in India, include the great memorial tope at Sāncī, supposed to have been built or commenced by King Aśoka (3rd cent. B.C.), a massive structure of brick and stones, 42 ft. high, rising on a stone plinth and surrounded by a stone railing containing four beautifully

ornamented gates. *Stūpa* II. of Sānchi, on the other hand, is a relic shrine containing the remains of two contemporaries of King Aśoka, and *stūpa* III. has supplied two relic caskets bearing the names of two distinguished pupils of Buddha.

The great tope of Mānikyāla in the Panjāb, in its lowest deposit, which was discovered just below the centre, contains a brass cylindrical casket, with an old inscription and several coins of very ancient date. This tope is a hemisphere 127 ft. in diameter, the total height of the dome, as it now stands, being 92 feet. Four broad flights of steps facing the cardinal points lead to the top of the terrace for the use of pilgrims. In the Sonāla tope, near Mānikyāla, Cunningham discovered a crystal box containing the relic, which was a very small piece of bone wrapped in gold-leaf, along with a small silver coin, a copper ring, 24 small beads of pearl, turquoise, garnet, and quartz. These, with the gold-leaf wrappers, make up the seven *ratnas*, or jewels, which usually accompanied the relic deposits of the old Buddhists, and which are still placed in the *chortens* (q.v.) of the Buddhists of Tibet.

Near the ancient town of Sopārā, in the Thāna District of the Bombay Presidency, Indrajī in 1881 opened a large dome-topped mound, the ruins of a brick Buddhist *stūpa*. In the centre of the dome, a little below the level of its base, he found a large circular stone coffer in which stood an egg-shaped copper casket surrounded by a circle of eight small seated copper images of Buddha, well-proportioned and gracefully formed. In the copper casket were enclosed, one within the other, four caskets, of silver, of stone, of crystal, and of gold. Between the silver casket and the copper casket were gold flowers of seven varieties, and a small image of Buddha, sitting cross-legged on a lotus, also 13 precious stones of seven kinds, apparently taking the place of the seven jewels, and 31 other drilled stones of various shapes, intended apparently as a necklace presented to the relics. Among the stones was a well-preserved unworn silver coin, with a legend referring to King Yajña Sātākarni (2nd cent. A.D.?). The gold cup was found to contain 13 tiny pieces of earthenware; they were probably believed to be fragments of Buddha's begging bowl, which was held in great reverence by Buddhists. The idea of the builders of the *stūpa* seems to have been to enclose the relics in seven envelopes, each more valuable than the one below, the clay and brick of the mound being reckoned as the least valuable of all.

In the *stūpa* of Bhaṭṭiprolu in the Kistna District, Madras Presidency, several relic caskets were found by Rea in 1891, with interesting inscriptions, in ancient characters (of the 3rd cent. B.C. or so), declaring two of the caskets to be intended for relics of Buddha.

In the extreme north of India, near the Nepālese frontier, in the neighbourhood of the site of Kapilavastu (q.v.), Buddha's birthplace, W. C. Peppé, a landholder, excavated in Jan. 1898 the brick *stūpa* of Piprāvā. In its interior chamber he found a stone coffer containing several other vessels in which were preserved pieces of bone, quite recognizable as such. Round the rim of the lid of one steatite vase runs an inscription in ancient characters of the Maurya type, but without long vowels. This is the oldest inscription hitherto discovered in India, since it must belong to the 4th, or perhaps the 5th, century B.C. According to the interpretation given by Fleet, the record declares that 'this is a deposit of relics of the brethren of Buddha, together with their little sisters and with their children and wives,' and it commemorates the enshrining of relics of Buddha's kinsmen and of their families, probably after they

had been massacred by the king of Kosala, as the Buddhist tradition has it. The vessels were found to contain, besides the bones, a vast number of various small ornaments and objects of art—e.g., two small human figures in gold-leaf, jewels and articles made from them, coral and crystal beads, a coil of fine silver wire, a lion stamped on gold-leaf, an elephant, two birds of cornelian and metal, gold- and silver-leaf stars, etc. These were, according to Fleet's plausible conjecture, apparently the trinkets and household treasures of the women and the playthings of the children, entombed together with their bones by some unknown pious friend of the slaughtered people.¹

3. Artistic value.—From an artistic point of view, the sculptures contained in the stone railings and huge gates of some *stūpas* are particularly interesting and important. Thus the sculptures of the eastern gate of the great Sānchi *stūpa* abound in life-like representations of the principal scenes of the romantic history of Buddha, of *stūpas* and their worshippers, of sacred trees and lotus-flowers, of elephants, camels, lions, and peacocks, of deities, kings, female dancers, etc. The style of these sculptures exhibits a strong Persian influence, notably in the bell-shaped capitals of pillars. The same style is visible in the splendid railings of Bhārhut (q.v.), the only remains of the great Bhārhut *stūpa*, which was situated about midway between Sānchi and Bodh Gayā, the place of Buddha's enlightenment, which is likewise marked by the remains of some interesting railings dating from the Aśoka period. The Bhārhut sculptures, now mostly in the Calcutta Indian Museum, belong to the same period as the Sānchi sculptures (c. 200 B.C.), and are particularly valuable for the old inscriptions explaining their meaning. The highly finished reliefs of the Amarāvati (q.v.) *stūpa*, on the other hand, which are now to be seen in London, are to some extent an offshoot of Gandhāra art, the Greek or Græco-Buddhist art of N.W. India having extended its influence as far southward as the course of the Kistna. The railings of Amarāvati, judging from the inscriptions, seem to belong to the end of the 2nd century B.C. The best preserved *stūpas* are those which form the innermost part of numerous cave temples in W. India. There is an open space round them for circumambulation, but there is nothing remarkable about them from an artistic point of view.

4. Worship of *stūpas*.—*Stūpas* were worshipped, not only by circumambulating them, with the right side turned towards the *stūpa*, but also by placing on them flowers, incense, cloth, parasols, flags, great banners, and ornaments, by offering them coins, by washing them with milk, etc. This worship has survived to the present day in Buddhist countries—e.g., in Burma, where on festival occasions a thousand candles are burnt day after day before the great *stūpa* of Shwe-Dagon at Rangoon, which is devoutly believed to contain eight hairs of Buddha. The miniature *stūpas* of the Buddhists were manufactured in great numbers for devotional purposes and worshipped in the houses of the laymen. Buddhist monks used to make them with their own hands. Large *stūpas* were found in every Buddhist convent, and the sanctity attributed to them appears from the reply said to have been given by the then Buddhist community to King Puṣyamitra, the persecutor of Buddhism, when he asked which of their sanctuaries they would rather have destroyed, the *stūpas* or the monasteries, and they answered: 'The monasteries.' The relics recently dug out from some of the Indian *stūpas* have become an object of veneration to the Buddhists of other countries. When the splinters of Buddha's bowl

¹ See, however, art. KAPILAVASTU, vol. vii. p. 601b.

had been excavated from the Sopārā stūpa, the Buddhist high-priest of Ceylon petitioned Government that a small portion of the bowl of the world-honoured Gautama might be given to him to deposit in the monastery of Adam's Peak—a petition which, we need hardly say, was readily granted. The relics contained in the Piprāvā stūpa were offered by the Indian Government to the king of Siam, who sent an envoy to India to receive the relics, and agreed to distribute portions of them among the Buddhists of Burma and Ceylon.

5. Who built the stūpas?—It may be confidently asserted that kings and princes were not the only builders of stūpas. The renowned King Harṣa (7th cent. A.D.) is reported to have erected several thousand stūpas, each about 100 ft. high, along the banks of the sacred Ganges. Merchants and traders, on the other hand, prevail among the donors referred to in the Sānchī and other inscriptions, and it seems that this class was the chief stronghold of Buddhism.

STYX.—The name clearly signifies, in respect of its derivation, the 'horror' or 'abomination.'¹ Homer describes the Thessalian Titaeresius,² which flows into the Peneus but does not mix with it, as an affluent of the Styx, to which it owes its magical properties; for Styx is the most potent sanction of an oath, seeing that it was by the inviolable waters of the Styx that the immortals themselves swore.³ The circumstances and consequences of the oath are detailed by Hesiod.⁴ Zeus dispatches Iris to convey the magic water in a golden pitcher, and the defaulter is excluded from the Olympian community, and remains in a breathless trance for a period of nine years until the great cycle is complete. It may be said that the gods swear by Styx so as to invoke death, and that they issue a challenge involving the loss of their divinity in case of failure to fulfil the oath. But it was natural to ascribe to the gods a sanction which men themselves regarded as supremely holy. Thus even in the absence of direct evidence we should be ready to infer that the practice of swearing by Styx was current upon earth as well as in heaven. However, the fact is proved by the testimony of history. When Cleomenes in exile from Sparta tried to persuade the Arcadians to join him and march against his countrymen, he was eager to induce the chieftains to go with him to Nonacris and swear by the waters of the Styx that they would follow wherever he might lead.⁵ The custom is explained by the belief in the deadly nature of the Arcadian spring, a draught of which was supposed to be instantly fatal.⁶ Thus to invoke the waters of the magic stream, believing that they would kill the man who forswore himself, constituted an

ordeal¹ like the drinking of bull's blood or the lifting of red-hot bars; and Styx is accordingly described as she who guards the right.² Generally, Stygian waters have a magic power either for harm or for weal. The Telchines sprinkled the fields of the island of Rhodes with Stygian water in order to make them unfruitful.³ On the other hand, the vulnerability of Achilles' heel was said to be due to the fact that Thetis held him by the heel when she bathed him in the waters of the Styx to confer immortality upon him.⁴ T. Bergk⁵ quotes an Arcadian legend that whosoever drank of the waters of the Styx on a particular day of the year secured thereby immortality.

The name seems to have been appropriated generically to rivers which by the weirdness of their surroundings or the character of their waters were believed to possess a magic virtue. Besides the places already named, we read of a Styx in Egypt, in Arabia, in Ephesus, in Eubœa, and elsewhere. Hence it is not surprising that poetic imagination should have conceived of Styx as the chief river of the under world⁶ and the source of Cocytus.⁷ But the development of the idea that the Styx was a barrier shutting off the infernal regions which it encircled in a ninefold sinuosity,⁸ and the fable of Charon in whose boat every shade must cross the river, are known to us from post-Homeric sources. The mythological connexions of Styx, as described in the *Theogony*, are of minor interest. She appears as daughter of Oceanus, spouse of Pallas, and mother of Zelos, Nike, Kratos, and Bia,⁹ with whose support she assisted Zeus in his war with the Titans.¹⁰

A. C. PEARSON.

SUBCONSCIOUSNESS.—The question of the nature and existence of subconsciousness may be said to have begun with Leibniz, although it was much later before the term itself came into use. Locke, in attacking the Cartesian view that the mind thinks always, or is always conscious, had said that, since thinking is an operation, like motion in bodies, it must be intermittent; further, that we cannot think without being sensible of it, any more than we can be happy or miserable without being aware of it; and to say that we may be conscious at the moment of thinking, but forget it immediately, is to make a pure assumption; such fleeting impressions, 'characters drawn on dust, that the first breath of wind effaces,' would be of no value to the soul if they existed.¹¹ Leibniz's reply was that, as visible bodies and movements really depend on, and are made possible by, invisible or imperceptible bodies and movements, so there are numberless minute perceptions, not sufficiently distinct to be noticed or remembered, which yet can be inferred from their effects. Not only is there at any moment a multitude of impressions being made on the senses, only a very few of which can capture our attention, but also there is something remaining in the mind from every one of our past thoughts, none of which can ever be wholly effaced. In deep sleep, in a faint, perhaps even in death, when the unity of consciousness is broken, the mind splits up into an infinite number of minute confused sensations; perhaps this is also the natural condition of the waking mind of animals. Many of our actions, however impulsive and unmotivated in appearance—habits, customs, passions—are determined by the pressure of these minute unobserved sensations. It is in-

teresting that the three features introduced by Leibniz—the unnoticed impressions of the moment, the traces representing past thoughts, the continuity and unity of the mind—have remained throughout the main elements in the problem of subconscientness. It was on these 'petites perceptions' that Leibniz based his doctrine of the 'pre-established harmony' between soul and body, his law of continuity, his identity of indiscernibles;¹ his theory also of the summation of stimuli, the continued activity of the soul through the deepest sleep, the theory that sensations and perceptions are really sums of an infinite number of minute or infinitesimal sensations, etc. Kant followed Leibniz, connecting the idea of subconscientness (1) with the differences of degree in the clearness and distinctness of ideas; (2) with the notion of a chart or field of conscientness, some parts of which are brightly, but much the greater part dimly, illumined; (3) with forgetfulness or dissociation, as in his argument that there can be no sleep without dreams, that those who suppose there is have only forgotten their dreams.

In the discussion between Sir William Hamilton, W. B. Carpenter, and J. S. Mill, etc., as to the existence of *unconscious* mental modifications the question turned mainly upon what are now called *subconscious* ideas. Hamilton pointed out that Locke's assumption that conscientness and the recollection of conscientness are convertible is disproved by somnambulism and by many dreams, which can only be inferred, from actions carried out, to have taken place.² We are never suddenly awakened from a deep sleep without finding ourselves in the middle of a dream; the probability therefore is that we are always dreaming, or being conscient, in sleep, and that we forget these dreams because of the contrast and confusion between the two worlds of sleep and waking. It is as if the brightness of the real and sensory world dimmed the colours of the Imaginary world. He accepts the conclusions of T. S. Jouffroy³ that it is the body only that sleeps, the mind being constantly awake; that during sleep, while the senses, being bodily organs, are torpid on the whole, one or more of them may continue to send imperfect impressions through to the mind; that the mind, being awake, estimates the importance of these, and may, if it so decides, wake the body; a slight movement of the patient may wake the sick-nurse when the much greater sound of a passing wagon fails to do so; many persons can awake at a fixed hour, etc. Similar activities of the mind and similar modifications exist in waking life alongside of the fully conscient ideas. Hamilton details three degrees of these: (1) Our acquired habits of mind, the language or languages, the sciences we may have learned, and the like; they must have some sort of existence in the mind when they are not being actually put into operation. (2) There are systems and habits of which the mind is unconscious in its ordinary state, but which are revealed 'in certain extraordinary exaltations of the powers,'⁴ such as madness, fever, etc. 'The evidence on this point shows that the mind frequently contains whole systems of knowledge, which, though in our normal state they have faded into absolute oblivion, may, in certain abnormal states, as madness, febrile delirium, somnambulism, catalepsy, etc., flash out into luminous conscientness, and even throw into the shade of unconsciousness those other systems by which they had, for a long period, been eclipsed and even extinguished.'⁵ (3) The third group is those 'mental activities and passivities, of which we are unconscious, but which manifest their existence by effects of which we are conscient'⁶—the unconscious, or subconscious, as it would now be called, out of which the conscient is built up.

Hamilton's examples are partly those of Leibniz—perception through the senses, as the green of a distant forest is made up of the green of the separate trees and even leaves, which are not separately visible;⁸ partly new instances, as the mediate association of ideas, where one idea suggests another through some hidden link, which may only afterwards and by special effort, if at all, be brought to full conscientness;⁹ again, our acquired dexterities and habits, where, according to Hamilton, the mind exercises volition and so

far a control over the whole series of acts (in speaking or writing, e.g.), but has no conscientness or deliberate volition in regard to each separate movement in the series. Yet the detailed movements must be somehow in the mind, before they are carried into execution. He proposes therefore to regard all such phenomena as implying 'latent modifications,' 'unconscious activities' of the mind.¹ J. S. Mill, in his *Examination of Sir William Hamilton's Philosophy*,² discusses the 'unconscious mental modifications' and points out that the acquired knowledge and skill, when not in use, are simply *capabilities*, not actions or passions at all, whether 'latent' or other:

'I have the power to walk across the room, though I am sitting on my chair; but we should hardly call this power a latent act of walking.'³

The second class of cases referred to by Hamilton, unconscious powers revealing themselves in abnormal circumstances, are not latent states of mind, but latent memory—'capabilities of being affected, not actual affections.' The really test case is therefore the third—present and actual mental modifications of which we are unaware—the elements of perception, etc. It is a pure assumption that, when an object is perceived, and therefore affects the mind, its parts as parts must also affect the mind:

'It is a supposition consistent with what we know of nature, that a certain quantity of a cause may be a necessary condition to the production of any of the effect.'⁴

With regard to the mediate associations and acts of dexterity, Mill rejects Hamilton's test of memory—that what we do not remember cannot have been in our conscientness at all; an evanescent conscientness may be followed by an evanescent memory; if the conscientness is too fleeting to fix the attention, *a fortiori* the remembrance of it must be so also.⁵ In turning over the pages of a book which we are rapidly reading, we must form a conscient purpose to turn each page, but, 'the purpose having been instantly fulfilled, the attention was arrested in the process for too short a time to leave a more than momentary remembrance of it.'⁶ The interest of the sensations or ideas is momentary; there is nothing to associate any one of them particularly with our permanent interests, and so they lapse immediately from the mind. On the other hand, Mill agrees with Hamilton that there are unconscious modifications, but they are of the nerves, not of the mind.

A wound is unnoticed in the heat of battle: 'The supposition which seems most probable is, that the nerves of the particular part were affected as they would have been by the same cause in any other circumstances, but that, the nervous centres being intensely occupied with other impressions, the affection of the local nerves did not reach them, and no sensation was excited.'⁷

So with mediate association: 'The chain of causation being continued only physically, by one organic state of the nerves succeeding another so rapidly that the state of mental conscientness appropriate to each is not produced.'⁸ So in perception generally, and in feelings or emotions, where we appear to have a complex resultant of a multitude of simple impressions and feelings:

'The elementary feelings may then be said to be latently present, or to be present but not in conscientness. The truth, however, is that the feelings themselves are not present, consciously or latently, but that the nervous modifications which are their usual antecedents have been present, while the consequents have been frustrated, and another consequent has been produced instead.'⁹

This is W. B. Carpenter's well-known principle of 'unconscious cerebration'¹⁰—mental changes, of the results of which we subsequently become conscient, going on 'below the plane' of conscientness,

during deep sleep, or when the attention is wholly absorbed by other trains of thought; e.g., we are trying to recollect something, a name or the like, and fail; later, when we are doing something quite different, the name may come suddenly into our mind, in O. W. Holmes's picturesque phrase, 'delivered like a prepaid parcel, laid at the door of consciousness like a foundling in a basket.'¹ The suggestion is that we voluntarily, or at least through our conscious efforts, set going certain processes in the brain, which continue while our consciousness is otherwise occupied, work out the result by themselves, and send it up into consciousness. Carpenter gives numerous instances of how the automatic motor apparatus, in speaking, writing, drawing, and many other forms, reveals thoughts, memories, new ideas, which are so strange to the individual that he cannot accept them as his own; in particular, many of the phenomena of spiritualism may be so explained—table-turning, planchette-writing, and other means of tapping the buried experiences and imaginings of the self. Mediate association he also explains by the 'doctrine of resultants,' and our complex perceptions in the same way as Mill. In rapid reading, calculating, etc., the individual letters or numbers are not separately noted, although in learning to read and to calculate it must have been so.

¹ An impression made by it [the individual number] upon the cerebrum, which does not produce any conscious recognition of its numerical value, comes to be adequate for the evolution of the result.'²

The development of thoughts, plans, inventions, compositions, in the mind of genius, and in ordinary mortals, both normally and also in abnormal, excited, absorbed states; the influence of moral character upon action, of intellectual character and experience upon decisions; the influence of prejudice, past experiences and associations, forgotten so far as the individual sources are concerned—all these are instances of the unconscious or rather the subconscious in mind, which Carpenter interprets in this physiological way. Practically the same explanation is adopted by G. H. Lewes in *Problems of Life and Mind*.³ Meantime G. T. Fechner's *Elemente der Psychophysik*⁴ brought about a return to Leibniz's views upon the nature of consciousness; consciousness in its kind and degree depends upon the 'psychophysical activity.'

² Essentially it is just the same principle that man's psychophysical activity must exceed a certain intensity, in order that any consciousness or waking shall take place, and that during waking life every special determination of this activity, whether excited by a stimulus or arising spontaneously, and which is capable of giving a special determination of consciousness, must exceed a certain intensity, in order really to be conscious.'⁵

He introduced the analogy of a wave, or curve, its height at any point indicating the intensity or other quantitative value of the impression represented at the corresponding point on the base. The height of the wave as a whole must somewhere exceed a given limit, in order that there shall be any consciousness; this is the main threshold, corresponding to the main or total wave. This wave in its turn is the resultant of an 'under wave,' and of a number of 'over waves,' each of which again has its threshold. Even those ideas of which the wave-crests are 'under-threshold' or 'subliminal' may contribute to the raising of the total wave over the threshold.

Thus 'every perception of things that we know vividly, a house, a person, draws through association a mass of other ideas with it, which remain in the unconscious, and yet, un-

conscious as they are, constitute for us the meaning of the house, of the person, which otherwise would count merely as a spot of colour for the eye.'¹

All the systems and ideas in the mind of the individual are connected, or continuous, subliminally, while above the threshold they may be discrete, separate, whether simultaneously or successively; in the same way there is continuity between the minds of all living organisms, although the consciousness of one may normally have no touch with that of another. Different psychophysical conditions may raise or lower the general threshold, in the one case breaking up the continuous into discrete life (as in the splitting of personality), in the other case combining discrete individuals into a higher unity (as perhaps in the tribal consciousness or again in the unity of consciousness from the right and left halves of the human brain, or from the segments of radiate animals, etc.). It is also an important part of Fechner's theory that the intensity of consciousness varies with the amount of continuity or discontinuity; when the soul is split into two or more, the intensity of the consciousness in each is proportionately reduced.² In the case of the smaller or over-waves the same principle holds; they correspond to the variations of attention and discrimination in the individual's consciousness. The more widely the attention is spread or diffused, the less the intensity of each idea; the more concentrated or limited, the higher the intensity of the thoughts that are its object.³ It is really the dissociation that explains the low intensity of subconscious states—not *vice versa*. Harald Höffding pointed out that in many of the instances given by Carpenter and others 'not conscious' means 'not self-conscious.'⁴ We do not reflect upon such ideas sufficiently for their relation to the self or Ego to be brought out. On the other hand, it is impossible not to accept the law of continuity for the psychical as in the physical world, or to regard even the unconscious in mind as simply a lower degree, a 'continuation backwards of the series of degrees of consciousness.'⁵

William James⁶ ridicules the notion of unconscious mental states as a 'sovereign means for believing what one likes in psychology, and of turning what might become a science into a tumbling-ground for whimsies.' In his detailed analysis and criticism of the supposed proofs he rests partly (1) on rapid and therefore easily forgotten consciousness, partly (2) on split-off consciousness, (3) on brain-tract stimulation without consciousness.

¹ There are all kinds of short-cuts in the brain; and processes not aroused strongly enough to give any "idea" distinct enough to be a premise may, nevertheless, help to determine just that resultant process of whose psychic accompaniment the said idea would be a premise, if the idea existed at all.'⁷

This would account for the supposed unconscious inferences in perception—e.g., recognizing persons by their voices, where the determining fact may be the quality of the overtones in the voice, of which the percipient has no conscious knowledge. Learning and skill James regards as predispositions—not ideas, but particular collocations of molecules in certain tracts of the brain.⁸ So instincts are mechanical actions of the nervous system; our rapid judgments of size, distance, etc., are simply cerebral associations, mechanisms either inborn or acquired by habit.⁹ But the main criticism is (4) that the theory springs from a confusion between having an idea at a given moment and knowing about the idea afterwards—between a state of

mind as a subjective fact and the objective thing it knows.¹ A given idea must be fully conscious, or it does not exist at all; something else is there which may be a substitute for the given idea, may take its place, but is not it. This may be a brain-process, or it may be another idea. The same idea is not sometimes less, sometimes more, clear and distinct; even obscure feelings are exactly as they are felt to be; attention or introspection does not alter elements that are already present; it may cause them to be replaced by others. The difference is that some ideas cognize the same object more fully, completely, adequately, than other ideas which refer to the same objects; but the latter are not in themselves vague or indistinct ideas. These are purely relative notions, relative to the way in which ideas represent objects. In the chapter on 'The Stream of Thought,' however, James seems to adopt the theory of the subconscious in a thorough-going form.²

The stream of thought is in very large degree constituted by feelings of tendency, the 'free water of consciousness,' in which 'every definite image is steeped and dyed.' With each such image there 'goes the sense of its relations, near and remote, the dying echo of whence it came to us, the dawning sense of whither it is to lead. The significance, the value, of the image, is all in this halo or penumbra that surrounds and escorts it,—or rather that is fused into one with it.'³

Differences in the shade of meaning with which the same common word may be used, lapses of speech or writing, etc., illustrate the existence of the 'psychic overtone, suffusion, or fringe.'⁴ The fringe is caused by the stirring of faint brain processes, or rather it represents their influence upon our minds; but, as James protests,⁵ this does not mean that the fringe is a kind of psychic material by which sensations are made to cohere; it is simply 'part of the object cognized,—substantive qualities and things appearing to the mind in a fringe of relations.' It is especially in reference to meanings that he makes use of this conception; as on p. 281, or again on p. 472:

'The sense of our meaning is an entirely peculiar element of the thought. It is one of those evanescent and "transitive" facts of mind which introspection cannot turn round upon, and isolate and hold up for examination. . . . In the (somewhat clumsy) terminology I have used, it pertains to the "fringe" of the subjective state, and is a "feeling of tendency," whose neural counterpart is undoubtedly a lot of dawning and dying processes too faint and complex to be traced.'

Thus 'subconsciousness,' like 'unconsciousness,' has come to mean a variety of different things to different psychologists; the simplest standpoint is that of Sully or Ward, that there are degrees in consciousness, and that the subconscious represents the lower degrees, short of unconsciousness.

'There are degrees of consciousness. In addition to the region of our distinct consciousness, there is a vast region of the subconscious or faintly conscious. This domain consists of all those psychical elements, which enter into and colour the conscious state of the time, but which are not discriminated or distinguished. . . . With this wide obscure region of the subconscious, there stands contrasted the narrow luminous region of the clearly conscious.'⁶ In the theory of attention, Sully adds, we are confronted with the fact 'that psychical phenomena present themselves in unequal degrees of definiteness or distinctness, or, to express the fact otherwise, that they may be more or less prominently present in consciousness, or may take up more or less of the conscious attitude. . . . At any moment we may become aware of the presence of such vague elements as bodily sensations, half-developed recollections, obscure and indefinite feelings. This dim twilight region may be marked off as that of the sub-conscious.'⁷

Two assumptions are made in these statements, which may be questioned: (1) that there are degrees of consciousness, and (2) that what we are conscious of is psychical—sensations, recollections, feelings. The existence of degrees of consciousness is also pressed in his most recent work by James Ward.⁸

Since there is, above the threshold of consciousness, a gradual rise in the intensity of impressions, as attention is directed to them, we can hardly suppose that before this point 'their intensity changed instantly from zero to a finite quantity.' Rather 'there was an ultra-liminal or sub-liminal phase where too it only changed continuously. The latter alternative constitutes the hypothesis of subconsciousness.'¹ He adds that the hypothesis of subconsciousness is in the main nothing but 'the application to the facts of presentation of the law of continuity. Its introduction into psychology was in fact due to Leibniz, who first formulated that law.'²

But ideas as well as impressions rise and fall in consciousness; those ideas which are not for the moment in the mind, or not fully presented, cannot be said to be wholly outside of the mind, or non-existent; they are not mere possibilities; there is always a tendency towards their realization—i.e. a psychical disposition, which other dispositions, or actualities of thought, may hinder or may assist. To the range of this second form of sub-consciousness, that of mental dispositions or tendencies, there are no assignable limits.³

A third meaning of subconsciousness is the split-off consciousness, which may be illustrated by H. Bergson. Conscious states, as he has pointed out, have two quite distinct aspects, and much of the difficulty of such questions as that of subconsciousness arises from the confusion between them.

'Our perceptions, sensations, emotions and ideas occur under two aspects: the one clear and precise, but impersonal; the other confused, ever-changing, and inexpressible.'⁴ 'Sensations . . . seem to me to be objects as soon as I isolate and name them, and in the human soul there are only processes.'⁵ 'States of consciousness (i.e. processes), even when successive, permeate one another, and in the simplest of them the whole soul can be reflected.'⁶ 'It is only an inaccurate psychology, misled by language, which will show us the soul determined by sympathy, aversion, or hate as though by so many forces pressing upon it. These feelings, provided they go deep enough, each make up the whole soul, since the whole content of the soul is reflected in each of them.'⁷

But not every impression is incorporated into this mass of conscious states; the suggestions of hypnotism, the impulses of hereditary vice, the unfinished notions of a false education, tend to form secondary, parasitic selves, which continually encroach upon the main self, and restrict its freedom.⁸ This is a different interpretation of subconsciousness; the secondary selves are sub-conscious to the main self, which may, however, at any time assert its strength.

'At the very minute when the act [suggested by the parasitic self] is going to be performed, something may revolt against it. It is the deep-seated self rushing to the surface. It is the outer crust bursting, suddenly giving way to an irresistible thrust.'⁹

So for Bergson the continuity of the past is guaranteed for the present self. Subconsciousness may refer either to the healthy and normal way in which the essential and valuable is picked out from the wealth of possible impressions and ideas which constitute the self; or again it may refer to the abnormal and unhealthy functioning, against the self, or at least independently of the self, on the part of groups and masses of the ideas of the past; or finally it may refer to the supernormal way in which thoughts, inspirations of genius, moral ideals, are elaborated in the subconscious workshop, throwing up into consciousness only their finished products. It is in the last two senses that the word is most frequently used in modern pathology and occultism. See art. UNCONSCIOUSNESS.

J. LEWIS MCINTYRE.

SUBJECTIVISM and SUBJECTIVITY.
—These are terms generally used to denote that type of philosophical and theological thought which makes the thinking and feeling subject the chief factor in experience. Though the terms are often regarded as interchangeable, they should be, and generally are, distinguished, subjectivism being confined to the various forms of philosophical theory, and subjectivity to the theological. For our present purpose it will be convenient to maintain this distinction.

Subjectivism may therefore be further defined as (1) that form of pure subjective idealism which would limit the mind to the consciousness of its own states and deny the possibility of objective knowledge of things in themselves; (2) that philosophical theory which lays chief stress on the function of the subjective factor in constituting experience, and asserts the subjective origin of forms of perception; (3) that type of ethical theory which finds in feeling, and especially in the feeling of happiness, the chief aim of morality.

1. **Philosophical.**—On the philosophical side subjectivism, or mentalism, as it is called by some modern writers, has a long and interesting history. It has been a powerful factor in every form of idealism. Idealistic systems indeed may be said to have varied mainly in the extent to which they have allowed prominence to the subjective element in knowledge. In modern philosophy Descartes's 'Cogito ergo sum' is the starting-point, but it is not until Berkeley that we find subjectivism carried to its logical conclusion. His position is that all knowledge is relative to the subject or perceiving mind, and therefore that the world of objects is no more than an inference from those subjective experiences which are the only immediate sources of knowledge. Though Berkeley's theory is crudely stated and one-sided, it marked a real advance in speculation and made the old forms of dogmatic dualism impossible. Its author was certainly not consistent, and, when he found that his formula '*esse=percipi*' did not cover the facts, he assumed the existence of a divine mind, or a number of minds like our own, to be the vehicles of ideas. Another type of subjective idealism is found in J. G. Fichte, whose epistemological point of departure is described as an absolute Ego—not to be identified with any individual subject—which sets up a non-Ego over against it. This so-called solipsism (*q.v.*), however, Fichte does not logically carry through, for he is compelled to find certain realities in the world of the non-Ego in order to give to the moral will some reasonable end or aim. A further development of subjectivism is seen in Leibniz's doctrine of self-determining monads, by which he sought to combat the prevalent materialism which would make thoughts the objects of sense-experience. Leibniz asserted the priority of spirit and maintained the rights of the thinking subject as over against the substance of Spinoza or the atoms of the empiricists. At the same time he admitted the necessity to thought of certain sense-given material. It was left to Kant to find a way out of these paradoxes and contradictions by a more searching critical process.—He laid the foundation

of all future idealism by carrying out a 'Copernican revolution' in the relations between mind and the universe, or subject and object.

'Suppose we try now,' he says, 'whether better success may not attend us in the problems of metaphysics if we assume objects to be under a necessity of adapting themselves to the nature of our cognition.'¹

On this basis Kant proceeds to establish the place of the mind and its synthetic activity in the forming of experience, with a success which is now universally acknowledged. He argued that 'perception without conception is blind, conception without perception is empty.' At the same time he vindicated the place of the object in such a way as to show that the categories of the understanding are not valid for objects apart from experience. While it is true that 'understanding makes nature,' it makes it out of given material, viz. the phenomena or data of sensibility. His vindication of the subjective factor in knowledge underlies all the various forms of modern idealism, though they differ widely in the importance which they assign to it. While the priority of mind in the epistemological process is now generally conceded, the balance between subjective and objective must be maintained. It is recognized that they go together and that they represent an antithesis which is of quite gradual growth. Psychology points to a close parallelism in the origin and growth of the consciousness of the internal and external worlds, of the Ego and the non-Ego. Neither can exist without the other, and to exalt the one over the other is to give a one-sided presentation of the facts.

2. **Ethical.**—In ethics subjectivism is that form of moral philosophy which finds the end of moral action in a subjective state or feeling. This feeling is generally described as one of happiness, and conduct which tends to arouse and foster it is regarded as good, while conduct which defeats it or produces the opposite—pain—is bad. In the history of ethics subjectivism appears either as hedonism or as eudæmonism (*qq.v.*). As the former it lays chief stress on feelings of sensual gratification as the end to be sought, while the latter interprets feeling in the more intellectual, or even spiritual, sense as contentment or happiness resulting in well-being. In the former, too, the happiness of the individual is the chief end in view, but in eudæmonism it is generally the greatest happiness of the greatest number that is sought. Pure hedonism is practically confined to the Cyrenaics of the ancient world. They argued that the good of man consists in the sentient pleasure of the moment, and therefore to seek as much enjoyment as possible is the best and wisest course. Aristippus, *e.g.*, held the extreme subjectivist position that we know nothing of things save the impression they make on our senses. From this it was an easy inference that pleasure, or the 'smooth motion' of sense, is the only cognizable good, and that the part of wisdom is calmly and resolutely to pursue it.

Epicurus accepts this position in so far as he recognizes that pleasure is the chief good of man and pain the chief evil, but he is very far from confining pleasure to the gratification of the bodily senses. He regards the pleasures of the mind as more important, and more worth striving after, than those of the body, as they involve memory and anticipation as well as immediate enjoyment. The happiness at which he aims is thus a finer and more lasting thing than mere vulgar sensualism, though it is still dependent on sensation. It is this wider interpretation of happiness that underlies all the later forms of eudæmonistic ethics. Shaftesbury, *e.g.*, regards inner satisfaction as the end of morals; Lotze

¹ Preface to *Critique of Pure Reason*.

claims feeling as the only real and final standard of value; while the utilitarians find the goal of all moral action in the greatest happiness of the greatest number. There is no question that happiness, especially in the wider and deeper sense now generally given to it, is a legitimate end of human action. But, when it is claimed that it is the only end, the claim must be resisted. There are many ends which are entirely legitimate objects of pursuit, altogether independently of the feelings which they may excite. No system of ethics will satisfy which fails to take these into account.

3. Theological.—On the theological side of our inquiry subjectivity may be defined as that theory which finds the organ and criterion of religious truth in the intimations of the religious consciousness rather than in history or revelation. All mystical theology, *e.g.*, tends to exaggerate the subjective element, in so far as it rests on a direct, secret, and incommunicable knowledge of God, as opposed to that which is mediated through creatures or through revelation. Mystical experience, however, has this peculiarity, viz. that it implies a type of consciousness the end of which is to fuse subject and object into an undifferentiated one, or to absorb the individual in the whole. It involves union of the soul with God, though God is known only in and to the religious consciousness. It was Schleiermacher among theologians who first formulated this principle and so emphasized the function of the religious consciousness as to vindicate the independent reality of religion apart from knowledge and morality. He did so by insisting that religion belongs, not to the region of reason, conscience, or will, but to that of feeling—the feeling of absolute dependence. It is through this feeling, or consciousness, that God makes Himself known to man. The appeal, therefore, in the first instance, is not to history or Scripture, but to Christian experience. ‘True religion is sense (*Sinn*) and taste for the Infinite,’ Schleiermacher was by no means consistent in his subjective interpretation of religion, for he always regarded it as a historical phenomenon and held that it could not be rightly understood apart from history. He laid special stress on the importance of the historical person of Jesus Christ for Christianity and finds in the redemption wrought by Him the essence of His religion.

At the same time, as Höffding says, ‘He never abandoned the conviction that the innermost life of men must be lived in feeling, and that this, and this alone, can bring men into immediate relation to the Highest.’¹

Schleiermacher's doctrine has had immense influence on all subsequent theology, especially in the importance that it assigned to religious experience. Ritschl is at one with him on this point, and finds the materials for Christian theology in the consciousness of redemption, though with him it is the consciousness of the community rather than of the individual that is concerned. But he differs from Schleiermacher in arguing that the whole basis of the Christian system is the definite historical revelation in the Person of Jesus Christ. At the same time he still further emphasizes the subjective element in theology in contending that religious beliefs are invariably judgments of value. By this he means that they are to be estimated by their worth or value for the percipient self, according to the pleasure or pain which they arouse. He says:

‘Religious knowledge moves in independent value-judgments, which relate to man's attitude to the world, and call forth feelings of pleasure or pain, in which man either enjoys the dominion over the world vouchsafed to him by God, or feels grievously the lack of God's help to that end.’²

Largely under the influence of Ritschl and his followers there has arisen a marked tendency in modern theology to lay stress on the experimental process. To some extent this has been a reaction against the excessive objectivism of the older orthodoxy, which interpreted Christianity purely in terms of a supernatural revelation. Human nature was regarded as essentially alien to the divine, and needing some powerful influence or impression from without in order to arouse its latent spiritual capacities. In contrast to this, emphasis is now laid rather on the fact that religion is natural to man and is to be found in the development of his religious consciousness. Great importance is therefore attached to the study of this development both in the individual and in the race. This has given quite a new place to the psychology of religion, particularly in the adolescent stages of human development. There is no doubt as to the weight to be assigned to this subjective process, but the reaction in its favour goes too far when it is suggested that we can find here a complete explanation of religious phenomena. Experience can be truly gauged only when it is possible to give an answer to the question, Experience of what, or of whom? ‘The immediate deliverances of the Christian consciousness’ are really meaningless apart from the historic facts on which they rest and which have called them forth. Nor is man's proved capacity for religion a sufficient basis on which to build, apart from the action of objective forces without, which serve to elicit it and regulate the course of its action. In other words, God must be taken into account and something like revelation allowed for before the full story can be told. It is no doubt a great gain to have escaped from the old rigid supernaturalism, which seemed to impose religion on man as something from without, and essentially alien to his being; but it is an equally false view of the situation to regard religion as a mere emanation of man's consciousness without any objective reality to which it can correspond. The right solution of the problem is to be found in giving the proper emphasis to both the subjective and the objective elements, and not enhancing the one at the expense of the other.

SUBLAPSARIANISM.—Sublapsarianism is the name given to that milder form of Calvinistic predestinarian doctrine (called also infralapsarianism) in which the act of God, in decreeing to save some (election) and pass by others, is presumed to have in view mankind as already fallen, and sunk in corruption, in contrast with the supralapsarian form of the same doctrine, in which mankind are supposed to be regarded simply as creatures, not having done either good or evil. The distinction is not made by Calvin, but appears in the theologians who immediately succeeded him. By help of it the grace of God is thought to be enhanced to those that are saved, and His justice vindicated in the passing over of others, since, the whole race being already a *massa*

JAMES ORR.

SUBORDINATION. — Subordination (*subordinatio*, ὑποταγή τάξεως) is a technical term used in Christian theology to describe a relationship existing between the Son and the Father, and more rarely a relationship of the Spirit to the Father and the Son.

The doctrine of subordination was, as Dorner affirms, 'an auxiliary doctrine,'¹ and assumed various forms before a satisfactory theological formulation of it was achieved by the Nicene theologians. The Nicene doctrine is thus defined by R. L. Ottley:

'The Father (ὁ θεός, αὐτόθεος) is the fountain-head or root of Deity (πηγή or ῥίζα τῆς θεότητος). The Son and the Spirit, though co-eternal and co-equal, are subordinate in rank, because the Divine essence in them is derived from the Father. So in the language of Nicene theologians, the Father alone is αἰώνιος, the Son is γεννητός: the Father αἰετός, the Son αἰετήτος: the Father is ὁ θεός: the Son is of Divine essence (θεός). . . . As the original source of the Son's Deity, the Father may be termed "greater" than the Son. . . . The subordination is a τάξις not of time, but involved in the relationship of cause and effect. Such subordination is entirely compatible with equality of essence and majesty. So far the Nicene theology recognises the subordinationist views which had prevailed and had been carried to excess in third century writers.'²

Episcopus (the 17th cent. Arminian theologian) has briefly summarized it thus:

'Generatio divina est fundamentum subordinationis inter P. et F. Plus est esse a nullo quam esse ab alio, generare quam generari.'³

Although the dogmatic theologians have been inclined to base their doctrine on metaphysical grounds and to find it in the notion of generation or derivation, its basis is primarily Scriptural. Apart from the numerous passages in the Synoptic Gospels which set forth the Son as obedient to the Father in His incarnate life and as living on earth only to accomplish His Father's will, there are many other passages which set forth this filial subordination as being a feature of the eternal (not merely of the temporal and mundane) relations of the Son to the Father. NT writers who are in no sense Adoptianist,⁴ but hold the Logos Christology and believe in an eternal and pre-existent Christ, are explicit teachers of this subordination. Thus the author of the Fourth Gospel cites Jesus as saying, 'I and the Father are one' (10³⁰; cf. 1¹ 17⁵) and also 'The Father is greater than I' (14²⁸). St. Paul, although in Ph 2⁶ he writes of the Son that He was originally 'in the form of God'⁵ and is 'before all things' (Col 1¹⁷), yet affirms that at the conclusion of His redemptive mission 'shall the Son also himself be subjected unto him that did subject all things unto him, that God may be all in all' (1 Co 15²⁸). The writer of the Hebrews, while affirming, on the one hand, that the Son is the effulgence (ἀπαύλασμα) of His Father's glory and the very image of His substance (χαρακτήρ τῆς ὑποστάσεως) (1³), yet asserts, on the other hand, that he, 'though he was a Son, yet learned obedience by the things which he suffered' (5⁸; cf. 210⁴). Thus, although the text of Scripture plainly taught the subordination, subjection, or obedience of the Son to the Father, yet it was a belief never held strongly without some danger to Christian orthodoxy, as is evident from a study of the Fathers of the 2nd and 3rd centuries. This was due to the tendency to interpret the obedience

of the Son as denoting some inferiority in the divine nature of the Son. This was a note of Arian teaching, and it was able to claim not a few of the orthodox writers of the 3rd cent. as giving some support to its contention—e.g., Tertullian, Hippolytus, Origen. This Arian emphasis on subordination produced a natural reaction in orthodox circles, especially in the West, the Western orthodox tendency being to interpret the Son's subordination as having reference only to His manhood. Hence the *Quicumque Vult* affirms that the Son is 'equal to the Father as touching His Godhead, but inferior to the Father as touching His manhood,'¹ and that 'in this Trinity there is nothing before or after, nothing greater or less, but the whole three Persons are co-eternal and co-equal.'² Herein it goes farther than the great Nicene theologians of the East would have ventured to go, and is perilously near eliminating the Nicene doctrine of subordination altogether. That this is not a misinterpretation of the Western orthodox tendency as exhibited in the *Quicumque* is proved by the rise of the doctrine of the double procession of the Holy Spirit a little later in the same theological circles.

The history of the doctrine indicates that there is danger in regarding subordination as possessing a metaphysical significance. The metaphysical inferiority of the Son may not properly be deduced from it. Orthodoxy affirms that the substance, essence, and nature of Father and Son are identical (ὁμοούσιος). The subordination of the Son ought not to be regarded metaphysically. It is entirely moral. Although identical in substance and equal in nature, the will of the Son is subject to the will of the Father, and this subjection is a voluntary subjection.

In the world of mundane standards obedience and subordination may seem to denote inferiority; in the realm of divine ideas there is no necessary connexion between the two. The Son is obedient to the Father for no such metaphysical reason as that the Father is the πηγή τῆς θεότητος, or *fons et principium divinitatis*, and generates the Son eternally (i.e. above and outside time). The Son is obedient because of the moral perfection of the Father. The will of the Father is that which the Son, with every moral and rational being, is morally bound to obey, not because the Father is ingenerate, but because His will is supremely good. Subordination in the form of voluntary and rational obedience, so far from being a mark of inferiority of nature, is the mark of identity with the divine nature. Christ exhibited this identity by the perfection of His obedience. In the case of men who are potentially sons of God, subordination becomes increasingly the dominant note of their nature as they grow into the divine likeness. The notion that subordination denotes inferiority of nature is essentially unchristian and subversive of the whole ideal of Christian ethics. 'He that is greatest among you let him be your servant.' On the other hand, the denial of subordination can be maintained only in the face of all the significant NT utterances on this point, and such denial tends to break up the *μοναρχία* by making it merely a metaphysical and not a moral unity.

The *μοναρχία* (or unity of the divine nature in the three Persons of the Trinity) is preserved on its metaphysical side by the doctrine of the identity of substance (ὁμοούσιος) of the three divine Persons, but on its moral side it is preserved by the doctrine of the subordination of the will of the Son to the

will of the Father, and the will of the Spirit to that of the Father and the Son.

Origen's doctrine of the eternal generation of the Son, when combined with the doctrine of the Son's moral subordination to the Father, seems to provide that way of regarding the hypostasis of the Son and His relation to the Father which satisfies both the Christian intellect and the Christian conscience.

It would save confusion if the term 'subordination' were always limited in Christian dogmatics to the Nicene doctrine, and 'subordinationism' used of its heretical travesty or exaggeration.

H. D. A. MAJOR.

SUBSTANCE.—There have been many attempts in modern philosophy to interpret experience intelligibly without the aid of the category of substance, but, even when it has been denied in words, it has not been possible to deny it in thought. Those who rid themselves of it in particular forms or meanings to which exception could be taken are mistaken in supposing that they have thereby got away from the category itself. For the notion of substance as 'a sort of Kantian *Ding-an-sich*' is one from which we simply cannot get away. It will suffice at present to recall the position of Leibniz, that a correct view of substance is the key to philosophy, and the view of Kant that substance is the supreme and first principle of nature, which alone secures unity of experience.

1. Definition and rise.—The presupposition of the real is being. The principle of being gives rise to the distinction of substance and attribute. The attribute exists only in and through the substance in which it inheres. The notion of substance arises in experience as that of something which has being, or exists in itself (*ποῦτα, ens in se subsistens*). It is viewed as distinct from phenomenon. But there is the further notion of substance as a support or subject (*ὑποκείμενον, substantia*) of accidents, as the old logicians called them. Ontologically, the former is clearly that which has the greater fundamental importance. Existing in itself is an absolute perfection of substance; supporting accidents or temporary modes is but a relative perfection.

Greek philosophy 'is dominated from beginning to end by the problem of reality (*τὸ ὄν*).'¹ True reality or being is accordingly our theme, as the notion of such substance has been developed from Aristotle onwards. An ever-identical substance, immutable and homogeneous throughout, was sought, no doubt, by the Eleatics, but such an inactive, changeless substance, though supposed to be psychically animated, could not give an absolute substance. For its general ground of pure being was such as to negate the very essentials of substance, which must be a unitary substrate of manifold modes or accidents. What the view, therefore, gained in logical consistency it lacked in philosophical value, and the Eleatics were driven to the denial of the phenomenal world.

The interest largely centres in the discussions of the Scholastic philosophers, and these were based on Aristotle. We have seen that substance is *per se*, accident is *in altero*. The relation of the accidents proved very troublesome to the Scholastics. Of these we shall now mention only two, in addition to Aquinas: Gilbert de la Porrée and Albertus

Magnus. The position of Aquinas (*q.v.*) amounted to this, that a substance is a thing whose nature is not to exist in another, while an accident is a thing whose nature is to exist in another. But the notion of substance, taken as inclusive of existing in itself and also of supporting accidents, is very abstract and generic in character, and must not be simply transferred or applied to the real order of things. Indeed, the being denoted by substance is essential, and not merely existential, being. For all that, it was in respect of finite or created being that the substance category was applied by the Scholastic philosophers. Substance, or being, may be thought of as a regulative notion in the mind, whose content, as objectively affirmed, is determined only in the course of speculation. This is not to say that the corporeal world, and our experience of it, have not to do with the way in which we gain our hold on the concept of substance; nor is it to suggest in any way that substance is not a category of the real. The world of positive phenomena is the foundation of the world of metaphysics, but the force postulated by metaphysics is not to be identified, for all that, with physical forces. Metaphysics deals with being in itself—not in its empirical suchness. It is only in and through form that substance is intelligible; and form disappears with substance. Substance is, in fact, the persistent value which we find subsisting throughout all the transformations of phenomena, and it is often regarded as the most important of the categories. But where, or how, is this substance to be found? A substantial entity which shall meet the case is what philosophy has sought from its earliest beginnings up to the present—in vain. No existent has been found in nature, or within the whole range of human knowledge, that could really remain identical with itself while undergoing changes and transformations. It thus becomes evident how the substance concept took its rise. It was abstracted from cause, was in origin psychological, and is in character anthropomorphic. The law of causality could not suffice; some basis in eternal fact still remained necessary; but no act of perception could give such necessary or eternal fact as was required. It could only be embodied in some entity that deserved to be called a substance; it could only be witnessed to by reason itself. Philosophers who believed in a single substance called it God; those who preferred a plurality of substances still made God the supreme substance, and treated other existences as substantial only in a secondary or derivative sense. Thus it was that the doctrine of substance came to be the keystone of Continental rationalism, and we shall presently glance at the way in which the doctrine worked.

Thought was further driven to find the source of the substance concept at last in the notion of the self-identical Ego or subject, whose varying states are but attributes of this self-identical Ego. In the unity of this self or subject, amid its changing states, has been found the substance so long sought for by philosophy, unique and incomparable as it is among the substances of the world. Aristotle had already placed the primal ground in pure self-activity, *actus purus*, although this in itself could be no final resting-place for thought. His doctrine of substance as a self-active principle is fundamental in our cognitive experience. It is an intellectual intuition. It springs up in experience every time my self-activity is inhibited by anything whatsoever. It is but the inevitable making real of that which I must so interpret in terms of my real self. Substance is thus an ultimate in experience, beyond or behind which we cannot go.

Descartes viewed substance as existing *per se*, but his inveterate dualism led to two disparate

¹ J. Burnet, *Greek Philosophy*, pt. i., London, 1914, p. 11.

hypothetical substances, each of which he wrongly conceived as essentially inert. His 'thinking substance' (*res cogitans*) was being whose essence is thought; in thinking, the spirit passively received ideas; its manifestations were accidents of a non-extended substance, which was the matrix of intensive or psychical modes. Then his 'extended substance' (*res extensa*) was matter extended in three dimensions and conceived as inert; it was the substratum of physical modes; and its manifestations were accidents of an unconscious space-filling substance. It was evidently hopeless for Descartes and his followers rationally to account for the connexion or intercommunication that appeared to subsist between those two disparate substances. They overlooked that such material extension, and the modes of motion found therein, are, in our actual awareness, psychical manifestations—part of conscious content, as Berkeley was not slow to perceive. Berkeley himself, however, gave no satisfactory account—no self-consistent one—of his two substances, the finite and the infinite Spirit. The other substance of Descartes, the psychical form, was attacked by Hume, who argued that our conscious awareness is only of psychical states or particulars, and these of purely experiential origin; from all which it is clear that we cannot conclude to a permanent psychical or thinking substance. But Hume's view overlooked that our conscious states are transient, and lacking in power, agency, and enduring consistency. Such a thoroughgoing phenomenalism as that of Hume is really out of the question, and would render an intelligible theory of things impossible. The fact is that, whatever he may have done with the notion of an unknowable substratum—and substance in this sense he roundly denied—Hume did not do away with substance in the sense of something which exists in itself. He says:

'We may well ask, *What causes induce us to believe in the existence of body?* but 'tis vain to ask, *Whether there be body or not?* That is a point, which we must take for granted in all our reasonings.'¹

Not only so, but he goes on in the same work to assume the extraordinary position of substantializing the accidents.

As for Locke, he no more denied substances than did Descartes, but he held that all our ideas of substances come short of exact correspondence to their objects. Substance meant for him only a supposed, but unknown, support for accidents, for a proper definition of substance he never reached. Substances were for him supposed to carry with them the supposition of some real being, and substances and modes alike were constructs (see below).

At this point some notice must be taken of Spinoza's position. Spinoza tried to prove that the two substances of Descartes, the thinking and the extended, were but attributes of one and the same substance—a substantial One-and-All.

All things and individuals he merged in this universal substance. Descartes had defined substance in an ambiguous manner, though he doubtless meant it in the Scholastic sense of that which exists of itself. His definition is: 'By substance, I mean that which is in itself, and is conceived through itself: in other words, that of which a conception can be formed independently of any other conception.'² This meant necessary being, or what the Scholastics called *ens a se*. To him God alone was substance, all was in God, and moved by Him. In Spinoza attributes are those necessary attributes which express essence. Of course the Spinozan transition from the two passive and opposed substances of Descartes to one absolute, timeless, ever-identical substance was intelligible enough. But his consistency was doubtful enough when he postulated for it a power of self-determination whereby it became (logically or not) differentiated into attributes and modes, with whatever result to its ever-identical perfection. Says Spinoza, in a formula of not very explicable character, after all the discussion expended upon it: 'By attribute, I mean that which the intellect perceives as constituting the essence of substance.'³

Spinoza might, no doubt, get substance, as one and indivisible and containing an endless multiplicity, in this way, but there was a great deal to be said against his turning the term 'substance' aside from the meaning that it had borne. Spinoza also misused the category of causation, wherein cause is an essentially relative and temporal term, to style his absolute substance 'self-caused' (*causa sui*). In this way is set up his absolute substance or God-Nature (*Deus sive Natura*), but in a manner obviously open to criticism. Then, having so gained his absolute substance, he treats it, in his artificial system, as the *ratio* or logical ground of all reality.

Leibniz made substance not one, but many. He took self-acting force or power to be substance, made substance indestructible and immaterial, and broke up the one thinking substance into a multiplicity of individuated thinking atoms. These simple and unextended substances were his windowless monads, impenetrable and indestructible. They constituted essentially active entities. Activity was his basal note. But he left his self-acting force unexplained; and his monads, with no real interaction between them, were not satisfactorily accounted for either. Logical contradiction there may not be, but his supposed harmony without real interaction breaks down in the actual universe. From Leibniz, however, the individualistic character of substance—its essential character, in the concrete sense, as individuality—may be said really to date. Of course, Aristotle had regarded as the pure form not substance, applied to actual things, but individual substance—the concrete individual. But Leibniz took the conception away from its Cartesian domination by the idea of space. To him each monad is a microcosm—a mirror of the universe. Rational monads are, in the hierarchy of substances, God's agents, while sub-rational monads are His instruments. Activity, as an ideal-spiritual function, was, for him, of the essence of substantial being. But there are inherent difficulties in his theory of the relation of individual substances to the Supreme Monad, which he has left unresolved. By his dynamical conceptions, however, he had prepared the way for Kant.

2. Kantian and post-Kantian developments.—The substance notion began in Kant to shape itself in the form of a subject-activity; that is to say, imperfectly or unconsciously the substance notion was passing away from the idea of mere dead substrate into the conception of a living subject. Substance was, for Kant, that which may be conceived as subject, without itself being predicate of anything else. He had got so far beyond the substance concept as to make it a category. Kant laid an epistemological basis for the substance doctrine, which cannot be discussed here; he showed how metaphysically unfruitful was the tendency to treat thing and property in independence; he tried—and it was a new thing—to make substance one of the constitutive elements of experience. Even if he carried his work only half through, he merits gratitude for doing as much for experience as he did.

In opposing Berkeley's identification of being and the perception, Kant merely the permanence of time. The protensive and the intensive. Kant viewed this persistent or permanent background as a necessary demand on thought, whereby change or alteration could be understood. Upon this permanent the notion of change rests, and the paradoxical position of Kant accordingly was that only the permanent is subject to change. But it is doubtful whether our conception of substance and quality is so much a matter of pure thought as Kant supposed, for substance is objectively real in all being as perceived and known by reason. The element of permanence, however important for philosophy, must not be regarded, in the case of specific substances, as being so much of the essence of substance as it has been by Kant, Green, and others. Substance as subject, and sub-

¹ *A Treatise of Human Nature*, London, 1739, bk. i. pt. iv. sect. ii.

² *Ethics*, bk. i. def. iii. ³ *Ib.* bk. i. def. iv.

stance as the permanent—Kant but ill connects these two. The primary and essential idea or notion of substance is that of substance—that which has a proper being of its own. It was essentially by the help of the substance category that Kant thought his thing-in-itself. It is not in accord with Kant's teaching that a recent philosopher¹ has treated substance and the unconditioned as identical, in Spinozan style. Kant held that substance belongs to the category of relation, although it has been ably argued that he ought to have held more firmly to pure substance (not being put together out of parts) as pure intuition (*Anschauung*, not *Begriff*), and ought not to have made it belong to his doctrine of the categories. The substance conception, it is urged, first makes experience possible, and cannot be got from experience, which at most yields its *Vorstellung*. Against these positions it may be remarked that substance is being, and that a *Begriff* of substance is therefore possible, even if we call it an abstraction, and challenge its place in the Kantian categories.

Hegel held substance to be the absolute form-category. Metaphysics had, for him, no higher category than that of actuality: the actual is the system of phenomena; this actual is a concrete universal; it is a self-subsistent unity, like the substance of rationalistic philosophers. But the march of Hegel's thought is from substance to subject, a thought-unity which breaks itself up into its own particulars. Thought, his self-actualizing universal, became constituted through its own immanent dialectic, but with a one-sided neglect of *Erfahrung*. When it came to the absolute spirit, however, Hegel had the merit to make it a person (*einer*), not a substance (*eines*). In the infinite positiveness of the substantial this living substance, which is the eternal, is immanent and present, in his view, within the appearances of the temporal and transitory.

Schopenhauer rested the fact of change upon substance as its unchangeable substratum. To him the law of causality held only for phenomena, not for substances themselves. The world is my presentation, he says, and the ground or reason is Will. Universal, all-pervading Will is the true ground or reason of all phenomena; this, as blind and unconscious, is obviously not without affinities to the one universal substance of Spinoza.

Lotze makes substance matter of experience, and emphasizes the aspect of the self as subject in our knowledge of substance—a term which is rather ill-defined in his treatment. He has a good deal to say of an infinite substance, which encloses all things, and in which every event has its ground. His monism is resolute, but not thought out to the end. His infinite substance is conceived as in constant change: he conceives it as world-idea or animating soul of world-culture. His attempt to set out the spirituality of the infinite substance left it in too indeterminate a form. His basal insistence, however, was that the world is a unity, with one soul Being conditioning and enclosing all other being. His conception is too abstract, the inner essence of the unity not being defined. It does not seem that those who have ascribed a substantialized concept of the soul to Lotze are really right, for the substance was to him a *Schein*, and the soul was nothing.

Hartmann took substance, in the metaphysical sphere, to be pure subject of activity, and the metaphysical subject of such activity was to him, before all things, a substantial unity. The necessity for a permanent, unchangeable, non-spatial, supra-temporal substance Hartmann founds upon the fact of change. Substance for him subsists in itself and for itself, and is therefore of itself and through itself. It seems, indeed, on his full account, to be the last miracle of all. A concrete, substantial monism is what he postulates, and the modes are the changing accidents of the one concrete substance. His stress on the dynamic theory of matter led him to emphasize intensity instead of extension, as Spinoza had done. But it was on

very inadequate grounds that he sought to raise the Unconscious to the position of the Absolute, or a thoroughgoing world principle. Renouvier, in the final phase of his thought, used the term 'substance' for the monad. But this spiritual substance is for him only a sign or symbol to mark the co-ordination of phenomena co-existent and successive—the continuity of memory and revolvings in time having their place. There is obviously nothing of the old term 'substance' here except the name; no absolute unity excluding every multiplicity of distinct facts, nothing but just the soul as the theory of actuality thinks of it. To the critical realism of Wundt substance is the concept which springs from the attribute of permanence. The underlying substratum of things is being, unchanging and absolute. But the concept has no great metaphysical justice from Wundt; he does not allow it to be an original concept, but takes it as ground of experience, and of purely logical import. He fails to do justice to the part played by the activity of the object, and he objects to the substance concept being applied to inner experience. Wundt and Paulsen apply it only to the corporeal world, where the atoms are the absolutely permanent substratum of all corporeal reality.

3. Conclusion.—In our discussion it has been shown that extension and motion are, in our actual awareness, of purely psychical significance. This is an important result for substance, from the metaphysical point of view. Of course, the permanence of substance amid all changes is, nevertheless, taken by science as a postulate, for it is an axiom with which the scientific mind cannot dispense. Hence Haeckel finds the last unity in substance, but his substance is too much a play of pluralistic-mechanistic elements to be a real monism. The law of substance is for him, however, fundamental, and in the idea of substance he finds matter and energy inseparably bound together. But he unsatisfactorily confounds matter and energy with matter and spirit or mind. It is, however, clear that the notion of an ultimate material substance is as completely discarded by modern science as Berkeley could have wished. In metaphysics the substance category has survived every metaphysical attack in a way which proves the term to meet something ineradicably planted in our cognitive being or experience. The fact is here, so to speak, its own ground: mere 'groundedness' is absent; the character of *essentiality* makes the concept of substance. Substance, in its most generic concept, is to be taken as real, although substance has always, in metaphysics, been non-perceptible. We can, by metaphysical abstraction, reach a notion of substance that appears, in a sense, accordant with that which is fundamentally present in modern physics, as reducible to persistent forms of energy. But Ostwald substantializes energy, holds it for substance because existing in space and time, and claims his logically over-weighted energy concept to be the most universal in science. Hartmann allows energy to be a real, objective appearance, as much as matter. But Riehl urges against Ostwald that energy is an abstraction, and that the forms of energy are concrete, so far as known to sense, and bound to spatial things. He objects to energy as a single magnitude, because every form of energy is, in his view, a product of two magnitudes, both of them real—a factor of capacity and a factor of intensity. The metaphysical implications of his energy concept have not been worked out by Ostwald in any satisfactory way.¹ It must suffice to say that experi-

ence shows that, in analyzing any empirical substance, we are dealing with something that occurs in our consciousness, and has its factors there, so that our view of the world is modified by this metaphysical reflexion. One notion of substance is that it is due to the activity of an object given us in sense-perception—an activity independent and causal in its working. This self-asserting individuality of substance has been emphasized by realistic philosophers.

From the standpoint of the realist, 'the relation of mind and object is comparable to that between table and floor, and the cognitive relation—if you abstract, as you may, from the distinctive character of the mental term—is merely the simplest and most universal relation between finite things in the universe.' 'Hence such errors as that we impute substance or causality to things on the analogy of mind, instead of actually finding them there.'¹

Substantiality is then an objective implication of our experience—in this connexion, our object-subject experience. Hence the claim of science to have established an objective synthesis of cosmical relations, whose existence does not depend simply on human perception. Nevertheless, substance must be sought, not only in the changing *continuum* of sense, but also in the self, which attests itself as substantial being behind all its activities. The transcendent substance which we seek must be found in the subject, whose consciousness of the object is so exhausted in knowledge of the object itself as not to know that it knows its object. But this knowing subject, this highest unity of transcendental apperception, is itself substance, and the support of all being, as we know it. In other words, what we are yields the fullest consciousness of substance that we have, in virtue of its self-identical Ego amid changing states or manifestations. That Ego or consciousness already carries within itself, in virtue of its own rational intuition, the whole idea of being, apprehended as substance and quality. Even Locke did not fail to incorporate the idea of the self in his views on substance, albeit in a scattered and unsystematic fashion, which deprived his philosophy of the full unity which it might have possessed.

Of course, the whole system of objects, whether persons or things, must be related substantially, or grounded in real being. Such is the basis of knowledge—the basis of science and philosophy, which are thereby made possible to us. This objectivism has need to be kept in view from the metaphysical side itself, with its deep demand for a problematic substance. For insistence is sometimes made on the permanence, singularity, and activity of substance, as attributes of substance due simply to man's projection of his own perduring, unified, and active self. In other words, the substance concept is accused of being really anthropomorphic. But an unconditioned knowledge is certainly impossible, and the world known by us may still be an honest world. Our knowledge is of the objective—the real; and knowledge is always of that which transcends what is given in mere sense-perception.² Knowledge of the objectively real can never be satisfactory so long as it is regarded merely as a multiplicity of parts, without being taken up into the unity of the subject. Knowledge of substance we have seen to be through its attributes or predicable qualities: there is for us no knowing substance without knowing quality; the substance so known is that which underlies or binds substance and attributes together. Our knowledge of substance is thus not of substance *per se*, as contrasted with its attributes. But, if we make substance merely a unity of the qualities, we get only a bare abstract unity,

² See ART. EPISTEMOLOGY.

which cannot help us in any concrete fashion. Hence the real must be held, as Hegel insisted to be the individual—the self-fulfilling subject in the manner already shown. It is scarcely necessary to refer to the peculiar use of the substance category by J. E. McTaggart, who makes minds or spirits find their metaphysical satisfaction in substance, not in self-consciousness. To him the self is substance existing in its own right, and spirits have their self-identity in their substance and its persistence. The theory is not one that is likely to appeal to many minds.

In view of all that has been advanced, the concept of substance is here taken to be that of an absolute form-concept—the absolute self-determining activity, in fact, and foundational in importance for metaphysics. We cannot get along metaphysically without this concept of substance, in some form or other, be it as matter, or energy, or soul. The substance category has yielded to that of spirit; the substance conception has been replaced by that of subject, for the substance concept has been shown to be no adequate or exhaustive one for our ultimate consciousness of what we are; and there is opened up the discovery of a real Absolute, whom, as externalized, we know as existential counterpart of the unity of experience. The way to a spiritualistic monism is thus reached, on which no more need now be said.

ŚUDRA.—Śudras are the fourth, or servile, class in ancient Hindu society, as contrasted with Brāhmins, or priests, Ksatriyas, or warriors, and Vaiśyas, the common folk.

I. Name.—The derivation of the term is uncertain. Native writers derive it from Skr. *sudh*, 'to be afflicted.' It has been supposed that it was originally the name of a tribe living near the Indus, and it has been compared with that of the town Σούδος tribe in N.

Arakhosia.¹ They have also been identified with the Abhiras and Nishādhas, a black, long-haired race of aborigines, not originally a component part of the Aryan race, but brought under its influence by conquest; and it has been supposed that, the Śūdras being thus the first tribe reduced to servitude by the Aryans, on the further occupation of India by the Aryans the name was extended to all the servile classes. The name Dasyu or Mlechchha was then applied to the unsubdued foreign tribes, who did not speak Sanskrit and had not been influenced by Aryan culture.² Zimmer identifies them with the Brāhūi of Baluchistān. The latest view is that the term was probably applied by the Vedic Indians to the nations opposing them who ranked as slaves, and also to various classes of humble position who supplied the needs of the village communities, and it included Aryans who, on account of some offence against tribal discipline or for other reasons, were excluded from the Aryan community.³ Fustel de Coulanges⁴ compares the position of the Roman plebeians with that of the Śūdras, as the former had no *sacra* or ancestors, and did not belong to a family or gens.

2. **Legendary accounts.**—The uncertainty felt regarding the meaning of the name is reflected in the contradictory legends accounting for their origin.

In the hymn known as the *Puruṣa Sūkta*,⁵ when the primal male, Puruṣa, was cut into pieces, 'the Brāhman was his mouth; the Rājanya was made his arms; that which was the Vaiśya was his thighs; the Śūdra sprang from his feet.' The same story is told in the *Bhāgavata Purāṇa*, ii. 5. 37. The *Bṛhad Aranyaka Upaniṣad* states that Brāhmā created the caste of the Śūdras 'as the nourisher. The earth is the nourisher.'⁶ The *Taittirīya Brāhmaṇa* says: 'The Brāhman is a caste derived from the gods; the Śūdra is one derived from the Asuras, or demons.'⁷ According to Manu, 'for the sake of the prosperity of the worlds, he [the Creator] caused the Brāhmaṇa, the Kṣatriya, the Vaiśya and the Śūdra to proceed from his mouth, his arms, his thighs, and his feet.'⁸ In a later passage, however, he says that 'the Śūdras are of a low and despicable barbarian, lions, tigers, and other beasts, states, caused by the quality of the earth, in the *Vāyu Purāṇa* we are told that "those who were cleansers (?), and ran about on service, and had little vigour or strength, he [Brāhmā] called Śūdras . . . he assigned the practice of the mechanical arts and service to the Śūdras.'¹⁰ According to the *Harivamśa*, the Śūdras were formed 'from a modification of smoke . . . the Śūdras spread over the earth are unserviceable owing to their birth with all its circumstances, to their want of initiatory rites, and the ceremonies ordained by the Vedas.'¹¹ Finally, in the *Mahābhārata*¹² another theory is suggested: 'Those red-limbed Brāhmans [twice-born] who were fond of sensual pleasure, . . . had forsaken their duty . . . The yellow Brāhmans . . . from cows and agriculture, and did not practise their duties, fell into the state of Vaiśyas. The Brāhmans [twice-born] who were addicted to violence and lying, who were covetous, and subsisted by all kinds of work, fell into the position of Śūdras. . . . He who is unclean, is addicted constantly to all kinds of food, performs all kinds of work, has abandoned the Veda, and is destitute of pure observance, is called a Śūdra.'¹³

One point seems to be clear from this medley of priestly legend—that the Śūdras, from the fact of their creation, though it was from the feet of Brāhmā, and in spite of the contempt with which they were regarded, were acknowledged to be members of the Hindu polity, in contrast to the outer non-Aryan barbarians, the Dasyus or Mlechchhas.¹⁴

3. **Position of Śūdras in the law literature.**—While theoretically the Śūdras were included in the Aryan society, it became the leading principle

of their overlords to reduce them to a condition of degraded servitude. This was probably due to two leading motives: (1) the desire to preserve the purity of the dominant whiter race, and thus prevent as far as possible *connubium* between the two peoples, by inflicting degrading punishments for violation of the laws of marriage, and by reducing the offspring of such unions to a condition of humiliation; (2) as in the case of the Helots of Sparta, the desire to guard the ruling race from the danger of insurrection on the part of their slaves, who were numerically superior to their rulers, and thus constituted a perpetual source of danger. The position of the Śūdras under Brāhman legislators is clearly stated in the law-books—the *Laws of Manu*,¹ and the *Sacred Laws of the Āryas* as taught in the schools of Āpastamba, Gautama, Vāsiṣṭha, and Baudhāyana.²

'A Śūdra, whether bought or unbought, a Brāhmaṇa may compel to do servile work; for he was created by the Self-existent (Svayambhū) to be the slave of a Brāhmaṇa. A Śūdra, though emancipated by his master, is not released from servitude; since that is innate in him, who can set him free from it?'³ 'A low-caste man who tries to place himself on the same seat with a man of high caste, shall be branded on his hip and be banished, or the king shall cause his buttock to be gashed.'⁴ 'If a Śūdra has intercourse with a woman of the twice-born class, if she was unguarded, he shall be mutilated; if she was guarded, he shall lose his life.'⁵ 'If a Śūdra intentionally listens to a recitation of the Veda, his ears shall be filled with molten tin or lac; if he recites Vedic texts, his tongue shall be cut out; if he remembers them, his body shall be split in twain.'⁶ The slaying of a Śūdra by a Brāhmaṇa is a minor offence, causing loss of caste (*upapātaka*).⁷ The penalty for killing a Śūdra is the same as that for killing a flamingo, a crow, an owl, a muskrat, or a dog.⁸ Another text fixes the penalty for slaying a Vaiśya at one hundred, and a Śūdra at ten cows.⁹ Eating with a Śūdra is strictly forbidden; if a Brāhmaṇa dies with the food of a Śūdra in his stomach, he will become a village pig in his next birth, or be born in the family of that Śūdra.¹⁰ Food which has been brought by an impure Śūdra, whether he has or has not touched it, must not be eaten.¹¹ If a Śūdra touches a Brāhmaṇa, the latter shall cease eating.¹²

Among other disabilities of the Śūdra the following may be mentioned.

He cannot be initiated,¹³ be a judge,¹⁴ receive leaveings at the mind-rite for the dead (*śrāddha*),¹⁵ receive spiritual advice from a Brāhmaṇa,¹⁶ sacrifice,¹⁷ or travel with a *śātaka* (a Brāhmaṇa who has completed his studentship).¹⁸ According to the same authority, his duties are to serve meekly the other three castes,¹⁹ but he may not carry out a dead Brāhmaṇa, if men of the same caste are at hand for the burnt offering which is defiled by a Śūdra's touch.²⁰ A Brāhmaṇa with a breeder of dogs, a falconer, one who defiles maidens, and him who delights in injuring living creatures.²¹ But, with his habitual inconsistency, the lawgiver rules that, among Śūdras, a Brāhmaṇa may eat the food of his friend, cow-herd, farm-labourer, slave, or barber.²² A Brāhmaṇa may confidently seize the goods of his Śūdra slave, for that slave can possess no property.²³ While intercourse of a Śūdra with a Brāhmaṇa woman is sternly forbidden, a Brāhmaṇa may have a Śūdra wife, and her son receives a share of the inheritance.²⁴

4. **The Śūdra in modern times.**—The position of the Śūdra in N. India differs from that in the South.

In Bengal a distinction is drawn between what are known as 'clean' and 'unclean' Śūdras. This is explained by Jogendra Nath Bhattacharya thus:

'To form an idea of the exact status of these [the artisan castes] and other clean Śūdras, the reader should bear in mind the following rules of the Hindu caste system:—1. A man of any of the superior castes may drink such water as is fetched or touched by a clean Śūdra, whether the water be of the river

ence shows that, in analyzing any empirical substance, we are dealing with something that occurs in our consciousness, and has its factors there, so that our view of the world is modified by this metaphysical reflexion. One notion of substance is that it is due to the activity of an object given us in sense-perception—an activity independent and causal in its working. This self-asserting individuality of substance has been emphasized by realistic philosophers.

From the standpoint of the realist, 'the relation of mind and object is comparable to that between table and floor, and the cognitive relation—if you abstract, as you may, from the distinctive character of the mental term—is merely the simplest and most universal relation between finite things in the universe.' 'Hence such errors as that we impute substance or causality to things on the analogy of mind, instead of actually finding them there.'¹

Substantiality is then an objective implication of our experience—in this connexion, our object-subject experience. Hence the claim of science to have established an objective synthesis of cosmical relations, whose existence does not depend simply on human perception. Nevertheless, substance must be sought, not only in the changing *continuum* of sense, but also in the self, which attests itself as substantial being behind all its activities. The transcendent substance which we seek must be found in the subject, whose consciousness of the object is so exhausted in knowledge of the object itself as not to know that it knows its object. But this knowing subject, this highest unity of transcendental apperception, is itself substance, and the support of all being, as we know it. In other words, what we are yields the fullest consciousness of substance that we have, in virtue of its self-identical Ego amid changing states or manifestations. That Ego or consciousness already carries within itself, in virtue of its own rational intuition, the whole idea of being, apprehended as substance and quality. Even Locke did not fail to incorporate the idea of the self in his views on substance, albeit in a scattered and unsystematic fashion, which deprived his philosophy of the full unity which it might have possessed.

Of course, the whole system of objects, whether persons or things, must be related substantially, or grounded in real being. Such is the basis of knowledge—the basis of science and philosophy, which are thereby made possible to us. This objectivism has need to be kept in view from the metaphysical side itself, with its deep demand for a problematic substance. For insistence is sometimes made on the permanence, singularity, and activity of substance, as attributes of substance due simply to man's projection of his own perduring, unified, and active self. In other words, the substance concept is accused of being really anthropomorphic. But an unconditioned knowledge is certainly impossible, and the world known by us may still be an honest world. Our knowledge is of the objective—the real; and knowledge is always of that which transcends what is given in mere sense-perception.² Knowledge of the objectively real can never be satisfactory so long as it is regarded merely as a multiplicity of parts, without being taken up into the unity of the subject. Knowledge of substance we have seen to be through its attributes or predicable qualities: there is for us no knowing substance without knowing quality; the substance so known is that which underlies or binds substance and attributes together. Our knowledge of substance is thus not of substance *per se*, as contrasted with its attributes. But, if we make substance merely a unity of the qualities, we get only a bare abstract unity,

which cannot help us in any concrete fashion. Hence the real must be held, as Hegel insisted to be the individual—the self-fulfilling subject in the manner already shown. It is scarcely necessary to refer to the peculiar use of the substance category by J. E. McTaggart, who makes minds or spirits find their metaphysical satisfaction in substance, not in self-consciousness. To him the self is substance existing in its own right, and spirits have their self-identity in their substance and its persistence. The theory is not one that is likely to appeal to many minds.

In view of all that has been advanced, the concept of substance is here taken to be that of an absolute form-concept—the absolute self-determining activity, in fact, and foundational in importance for metaphysics. We cannot get along metaphysically without this concept of substance, in some form or other, be it as matter, or energy, or soul. The substance category has yielded to that of spirit; the substance conception has been replaced by that of subject, for the substance concept has been shown to be no adequate or exhaustive one for our ultimate consciousness of what we are; and there is opened up the discovery of a real Absolute, whom, as externalized, we know as existential counterpart of the unity of experience. The way to a spiritualistic monism is thus reached, on which no more need now be said.

Westaway, *Scientific Method: its Philosophy and Practice*, London, 1912, with some relevant works on physics mentioned therein. JAMES LINDSAY.

ŚUDRA.—Śudras are the fourth, or servile, class in ancient Hindu society, as contrasted with Brāhmins, or priests, Kṣatriyas, or warriors, and Vaiśyas, the common folk.

i. **Name.**—The derivation of the term is uncertain. Native writers derive it from Skr. *such*, 'to be afflicted.' It has been supposed that it was originally the name of a tribe living near the Indus, and it has been compared with that of the town *Sūdras* N.

Ganges, or from any other source. 2. The water of the river Ganges, though fetched by an unclean Sudra, is not thereby rendered unfit for the high caste Hindu's drinking purposes. But every other kind of water is polluted by the touch of an unclean Sudra. 3. Even the water of the sacred Ganges is rendered useless to a Hindu by the touch of a non-Hindu. 4. The touch of non-Hindus and unclean Sudras being contaminating, it is only the clean Sudras that can render the necessary personal service to the high caste Hindus like the Brahmins, Rajputs, Vaidyas, and Kayasthas. 5. The twice-born castes cannot, without rendering themselves liable to expiation, eat any cooked food touched by a Sudra. The result of this rule is that a Sudra menial, whether clean or unclean, can be of no use to a high caste Hindu for the actual cooking of his food, or the serving of it. In fact, in the absence of his Brahman cook, the high caste Hindu has himself to cook the food of his servant. For the actual cuisine work, the clean and the unclean Sudra stand on the same footing. But while the clean Sudra can assist in the process in various ways, the unclean Sudra is not allowed even to enter the cook-room. It is for this reason that the clean Sudras alone are usually appointed menials in Hindu households. Another important difference between the clean and the unclean Sudras lies in the fact, that while a Brahman can minister to the former without losing his Brahmanism, he cannot show such honour to the latter without being degraded for ever. Further, though the Shastras forbid the acceptance of the Sudra's gifts without any reference to his status, yet in practice the best Brahmins do not hesitate to accept the bounty of the Nava Sayakas (or clean Sudras), when the amount offered is a large one.¹

The author seems to be unconscious of the strange picture which he draws of the caste system in Bengal at the present day. It attempts to adhere to the primitive four-group system of Vedic times; but this has become gradually broken down when certain of the so-called menial groups secure a position of wealth and authority. They retain the name of Śūdra, but they become 'clean,' as contrasted with their humbler brethren who accept a position of servitude. As he points out, the greed of the Brāhman priests is tending, by the acceptance of gifts from classes which they hold to be impure, to render the archaic system, under modern conditions, unworkable.

In S. India, on the other hand, especially by Brāhmins and by those Europeans who take their caste nomenclature from Brāhmins, the term Śūdra is applied to the mass of the Dravidian population, including many castes which claim a high social position and enforce rigid precautions

¹ *Hindu Castes and Sects*, Calcutta, 1896, p. 225.

to secure personal purity, such as an exaggerated fear of pollution not merely by the touch but even from the immediate neighbourhood of out-castes.¹

'Whilst it is evident that the entire mass of the Dravidians were regarded by Manu and the authors of the Mahābhārata and the Purāṇas as Kshatriyas by birth, it is remarkable that the Brāhmins who settled among the Dravidians and formed them into castes, in imitation of the castes of the North, seem never at any time to have given the Dravidians—with the exception perhaps of the royal houses—a higher title than that of Śūdra. They might have styled the agricultural classes Vaiśyas, and reserved the name of Śūdra for the village servants and the unenslaved low castes; but acting apparently on the principle that none ought to be called either Kshatriyas or Vaiśyas but Aryans, and that the Dravidians were not Aryans, they seem always to have called them Śūdras, however respectable their position. In consequence of this the title Śūdra conveys a higher meaning in Southern than in Northern India. . . . In Southern India it was upon the middle and higher classes of the Dravidians that the title Śūdra was conferred. . . . The Brāhmins, "who came in peaceably and obtained the kingdom by flatteries," may probably have persuaded the Dravidians that in calling them Śūdra they were conferring upon them a title of honour. If so, this policy was perfectly successful; for the title of Śūdra has never been resisted by the Dravidian castes; and hence while in Northern India the Śūdra is supposed to be a low-caste man, in Southern India he generally ranks next to the Brāhman. The term Śūdra, however, is really as inappropriate to any class of Dravidians as the term Kshatriya or Vaiśya. It is better to designate each Dravidian caste simply by its own name.'²

In deference, however, to popular sentiment, at the Madras census of 1901 the use of the term 'Śūdra' by enumerators was forbidden. The difficulty arising from the use of the term is shown by the necessity of dividing the ill-organized Nāyar group into high, intermediate, and low-caste Śūdras.³

LITERATURE.—The chief authorities have been quoted in the course of the article. For the Bengal Śūdras see H. H. Risley, *Tribes and Castes of Bengal*, 2 vols., Calcutta, 1891; and for S. India E. Thurston, *Castes and Tribes of S. India*, 7 vols., Madras, 1909; G. Oppert, *On the Original Inhabitants of Bharatavarsa or India*, Westminster and Leipzig, 1893.
